An Anarchist FAQ after ten years **43**

Introduction **48**

Welcome to our FAQ on anarchism **50**

An Anarchist FAQ: Introduction to Volume 1 **53**

A Summation **58**

Section A — What is Anarchism? **59**

A.1 What is anarchism? **63**
A.1.1 What does "anarchy" mean? 64
A.1.2 What does "anarchism" mean? 66
A.1.3 Why is anarchism also called libertarian socialism? 68
A.1.4 Are anarchists socialists? 70
A.1.5 Where does anarchism come from? 73

A.2 What does anarchism stand for? **77**
A.2.1 What is the essence of anarchism? 79
A.2.2 Why do anarchists emphasise liberty? 80
A.2.3 Are anarchists in favour of organisation? 82
A.2.4 Are anarchists in favour of "absolute" liberty? 85
A.2.5 Why are anarchists in favour of equality? 85
A.2.6 Why is solidarity important to anarchists? 89
A.2.7 Why do anarchists argue for self-liberation? 91
A.2.8 Is it possible to be an anarchist without opposing hierarchy? 94
A.2.9 What sort of society do anarchists want? 97
A.2.10 What will abolishing hierarchy mean and achieve? 100
A.2.11 Why are most anarchists in favour of direct democracy? 101
A.2.12 Is consensus an alternative to direct democracy? 105

A.2.13 Are anarchists individualists or collectivists? . . . 107
A.2.14 Why is voluntarism not enough? . . . 109
A.2.15 What about "human nature"? . . . 111
A.2.16 Does anarchism require "perfect" people to work? . . . 115
A.2.17 Aren't most people too stupid for a free society to work? . . . 118
A.2.18 Do anarchists support terrorism? . . . 121
A.2.19 What ethical views do anarchists hold? . . . 126
A.2.20 Why are most anarchists atheists? . . . 130

A.3 What types of anarchism are there? 134
A.3.1 What are the differences between individualist and social anarchists? . . . 136
A.3.2 Are there different types of social anarchism? . . . 142
A.3.3 What kinds of green anarchism are there? . . . 145
A.3.4 Is anarchism pacifistic? . . . 149
A.3.5 What is Anarcha-Feminism? . . . 152
A.3.6 What is Cultural Anarchism? . . . 159
A.3.7 Are there religious anarchists? . . . 160
A.3.8 What is *"anarchism without adjectives"*? . . . 165
A.3.9 What is anarcho-primitivism? . . . 167

A.4 Who are the major anarchist thinkers? 176
A.4.1 Are there any thinkers close to anarchism? . . . 183
A.4.2 Are there any liberal thinkers close to anarchism? . . . 186
A.4.3 Are there any socialist thinkers close to anarchism? . . . 190
A.4.4 Are there any Marxist thinkers close to anarchism? . . . 192

A.5 What are some examples of "Anarchy in Action"? 197
A.5.1 The Paris Commune . . . 199
A.5.2 The Haymarket Martyrs . . . 203
A.5.3 Building the Syndicalist Unions . . . 207
A.5.4 Anarchists in the Russian Revolution . . . 210
A.5.5 Anarchists in the Italian Factory Occupations . . . 221
A.5.6 Anarchism and the Spanish Revolution . . . 230
A.5.7 The May-June Revolt in France, 1968 . . . 233

Section B — Why do anarchists oppose the current system? 237

B.1 Why are anarchists against authority and hierarchy? 241
B.1.1 What are the effects of authoritarian social relationships? . . . 245
B.1.2 Is capitalism hierarchical? . . . 251
B.1.3 What kind of hierarchy of values does capitalism create? . . . 254
B.1.4 Why do racism, sexism and homophobia exist? . . . 256
B.1.5 How is the mass-psychological basis for authoritarian civilisation created? . . . 261
B.1.6 Can hierarchy be ended? . . . 266

B.2 Why are anarchists against the state? 272
B.2.1 What is main function of the state? . . . 278
B.2.2 Does the state have subsidiary functions? . . . 281
B.2.3 How does the ruling class maintain control of the state? . . . 285
B.2.4 How does state centralisation affect freedom? . . . 291
B.2.5 Who benefits from centralisation? . . . 295
B.2.6 Can the state be an independent power within society? . . . 300

B.3 Why are anarchists against private property? 304
B.3.1 What is the difference between private property and possession? . . . 307
B.3.2 What kinds of property does the state protect? . . . 310
B.3.3 Why is property exploitative? . . . 318
B.3.4 Can private property be justified? . . . 320
B.3.5 Is state owned property different from private property? . . . 324

B.4 How does capitalism affect liberty? 326
B.4.1 Is capitalism based on freedom? . . . 329
B.4.2 Is capitalism based on self-ownership? . . . 332
B.4.3 But no one forces you to work for them! . . . 338
B.4.4 But what about periods of high demand for labour? . . . 342
B.4.5 But I want to be "left alone"! . . . 345

B.5 Is capitalism empowering and based on human action? 348

B.6 But won't decisions made by individuals with their own money be the best? 352

B.7 What classes exist within modern society? 354
B.7.1 But do classes actually exist? . . . 355
B.7.2 Does social mobility make up for class inequality? . . . 360
B.7.3 Why is the existence of classes denied? . . . 364
B.7.4 What do anarchists mean by *"class consciousness"*? . . . 365

Section C — What are the myths of capitalist economics? 369

C.1 What is wrong with economics? 376
C.1.1 Is economics really value free? . . . 385
C.1.2 Is economics a science? . . . 394
C.1.3 Can you have an economics based on individualism? . . . 398
C.1.4 What is wrong with equilibrium analysis? . . . 404
C.1.5 Does economics really reflect the reality of capitalism? . . . 409
C.1.6 Is it possible to a non-equilibrium based capitalist economics? . . . 417

C.2 Why is capitalism exploitative? 426
C.2.1 What is *"surplus value"*? . . . 429
C.2.2 How does exploitation happen? . . . 433

C.2.3 Is owning capital sufficient reason to justify profits? . . . 437
C.2.4 Is profit the reward for the productivity of capital? . . . 442
C.2.5 Do profits represent the contribution of capital to production? . . . 447
C.2.6 Does interest represent the "time value" of money? . . . 453
C.2.7 Are interest and profit not the reward for waiting? . . . 460
C.2.8 Are profits the result of entrepreneurial activity and innovation? . . . 468
C.2.9 Do profits reflect a reward for risk? . . . 477

C.3 What determines the distribution between labour and capital? 483

C.4 Why does the market become dominated by Big Business? 489
C.4.1 How extensive is Big Business? . . . 492
C.4.2 What are the effects of Big Business on society? . . . 494
C.4.3 What does the existence of Big Business mean for economic theory and wage labour? . . . 497

C.5 Why does Big Business get a bigger slice of profits? 502
C.5.1 Aren't the super-profits of Big Business due to its higher efficiency? . . . 505

C.6 Can market dominance by Big Business change? 510

C.7 What causes the capitalist business cycle? 513
C.7.1 What role does class struggle play in the business cycle? . . . 516
C.7.2 What role does the market play in the business cycle? . . . 521
C.7.3 What role does investment play in the business cycle? . . . 525

C.8 Is state control of money the cause of the business cycle? 532
C.8.1 Does this mean that Keynesianism works? . . . 543
C.8.2 What happened to Keynesianism in the 1970s? . . . 547
C.8.3 How did capitalism adjust to the crisis in Keynesianism? . . . 551

C.9 Would laissez-faire capitalism reduce unemployment? 559
C.9.1 Would cutting wages reduce unemployment? . . . 568
C.9.2 Is unemployment caused by wages being too high? . . . 578
C.9.3 Are "flexible" labour markets the answer to unemployment? . . . 585
C.9.4 Is unemployment voluntary? . . . 595

C.10 Is "free market" capitalism the best way to reduce poverty? 599
C.10.1 Hasn't neo-liberalism benefited the world's poor? . . . 605
C.10.2 Does "free trade" benefit everyone? . . . 612
C.10.3 Does "free market" capitalism benefit everyone, *especially* working class people? 617
C.10.4 Does growth automatically mean people are better off? . . . 622

C.11 Doesn't neo-liberalism in Chile prove that the free market benefits everyone? 631
C.11.1 Who benefited from Chile's "economic miracle"? . . . 637
C.11.2 What about Chile's economic growth and low inflation? . . . 641

C.11.3 Did neo-liberal Chile confirm capitalist economics? . . . 643

C.12 Doesn't Hong Kong show the potentials of "free market" capitalism? 649

Section D — How do statism and capitalism affect society? 657

D.1 Why does state intervention occur? 660
D.1.1 Does state intervention cause the problems to begin with? . . . 665
D.1.2 Is state intervention the result of democracy? . . . 668
D.1.3 Is state intervention socialistic? . . . 674
D.1.4 Is laissez-faire capitalism actually without state intervention? . . . 677
D.1.5 Do anarchists support state intervention? . . . 679

D.2 What influence does wealth have over politics? 686
D.2.1 Is capital flight really that powerful? . . . 688
D.2.2 How extensive is business propaganda? . . . 691

D.3 How does wealth influence the mass media? 694
D.3.1 How does the structure of the media affect its content? . . . 696
D.3.2 What is the effect of advertising on the mass media? . . . 697
D.3.3 Why do the media rely on government and business "experts" for information? 698
D.3.4 How is "flak" used as a means of disciplining the media? . . . 700
D.3.5 Why is "anticommunism" used as control mechanism? . . . 701
D.3.6 Isn't the "propaganda model" a conspiracy theory? . . . 702
D.3.7 Isn't the model contradicted by the media reporting government and business failures? . . . 703

D.4 What is the relationship between capitalism and the ecological crisis? 706

D.5 What causes imperialism? 709
D.5.1 How has imperialism changed over time? . . . 715
D.5.2 Is imperialism just a product of private capitalism? . . . 722
D.5.3 Does globalisation mean the end of imperialism? . . . 726
D.5.4 What is the relationship between imperialism and the social classes within capitalism? . . . 732

D.6 Are anarchists against Nationalism? 736

D.7 Are anarchists opposed to National Liberation struggles? 740

D.8 What causes militarism and what are its effects? 746

D.9 Why does political power become concentrated under capitalism? 751
D.9.1 What is the relationship between wealth polarisation and authoritarian government? . . . 756
D.9.2 Why is government surveillance of citizens on the increase? . . . 758

D.9.3 What causes justifications for racism to appear? 762

D.10 How does capitalism affect technology? 766

D.11 Can politics and economics be separated from each other? 776
D.11.1 What does Chile tell us about the right and its vision of liberty? 779
D.11.2 But surely Chile proves that "economic freedom" creates political freedom? . . 782

Section E — What do anarchists think causes ecological problems? 787

E.1 What are the root causes of our ecological problems? 793
E.1.1 Is industry the cause of environmental problems? 798
E.1.2 What is the difference between environmentalism and ecology? 800

E.2 What do eco-anarchists propose instead of capitalism? 803

E.3 Can private property rights protect the environment? 811
E.3.1 Will privatising nature save it? 816
E.3.2 How does economic power contribute to the ecological crisis? 823
E.3.3 Can capitalism's focus on short-term profitability deal with the ecological crisis? 831

E.4 Can laissez-faire capitalism protect the environment? 835
E.4.1 Will laissez-faire capitalism actually end pollution? 839
E.4.2 Can wilderness survive under laissez-faire capitalism? 843

E.5 Can ethical consumerism stop the ecological crisis? 850

E.6 What is the population myth? 857

Section F — Is "anarcho"-capitalism a type of anarchism? 865

F.1 Are "anarcho"-capitalists really anarchists? 872

F.2 What do "anarcho"-capitalists mean by freedom? 882
F.2.1 How does private property affect freedom? 886
F.2.2 Do "libertarian"-capitalists support slavery? 889

F.3 Why do anarcho"-capitalists place little or no value on equality? 896
F.3.1 Why is this disregard for equality important? 902
F.3.2 Can there be harmony of interests in an unequal society? 906

F.4 What is the right-"libertarian" position on private property? 913
F.4.1 What is wrong with a "homesteading" theory of property? 918

F.5 Will privatising "the commons" increase liberty? 922

F.6 Is "anarcho"-capitalism against the state? 926
F.6.1 What's wrong with this "free market" justice? . . . 927
F.6.2 What are the social consequences of such a system? . . . 932
F.6.3 But surely market forces will stop abuses by the rich? . . . 934
F.6.4 Why are these "defence associations" states? . . . 939

F.7 How does the history of "anarcho"-capitalism show that it is not anarchist? 942
F.7.1 Are competing governments anarchism? . . . 944
F.7.2 Is government compatible with anarchism? . . . 948
F.7.3 Can there be a "right-wing" anarchism? . . . 954

F.8 What role did the state take in the creation of capitalism? 958
F.8.1 What social forces lay behind the rise of capitalism? . . . 965
F.8.2 What was the social context of the statement "laissez-faire?" . . . 968
F.8.3 What other forms did state intervention in creating capitalism take? . . . 971
F.8.4 Aren't the enclosures a socialist myth? . . . 977
F.8.5 What about the lack of enclosures in the Americas? . . . 980
F.8.6 How did working people view the rise of capitalism? . . . 986

Appendix — The Symbols of Anarchy 992
Introduction . . . 992
1 What is the history of the Black Flag? . . . 993
2 Why the red-and-black flag? . . . 999
3 Where does the circled-A come from? . . . 1002

Introduction to Volume 2 1003

Section G — Is individualist anarchism capitalistic? 1011

G.1 Are individualist anarchists anti-capitalist? 1018
G.1.1 What about their support of the free market? . . . 1026
G.1.2 What about their support of "private property"? . . . 1033
G.1.3 What about their support for wage labour? . . . 1038
G.1.4 Why is the social context important in evaluating Individualist Anarchism? . . . 1047

G.2 Why do individualist anarchists reject social anarchism? 1053
G.2.1 Is communist-anarchism compulsory? . . . 1054
G.2.2 Is communist-anarchism violent? . . . 1059
G.2.3 Does communist-anarchism aim to destroy individuality? . . . 1063
G.2.4 What other reasons do individualists give for rejecting communist-anarchism? . . . 1066
G.2.5 Do most anarchists agree with the individualists on communist-anarchism? . . . 1070

G.3 Is "anarcho"-capitalism a new form of individualist anarchism? 1072
G.3.1 Is "anarcho"-capitalism American anarchism? . . . 1077

G.3.2 What are the differences between "anarcho"-capitalism and individualist anarchism? . . . 1082
G.3.3 What about "anarcho"-capitalists' support of "defence associations"? . . . 1089
G.3.4 Why is individualist anarchist support for equality important? . . . 1094
G.3.5 Would individualist anarchists have accepted "Austrian" economics? . . . 1096
G.3.6 Would mutual banking simply cause inflation? . . . 1099

G.4 Why do social anarchists reject individualist anarchism? 1107

G.5 Benjamin Tucker: Capitalist or Anarchist? 1137

G.6 What are the ideas of Max Stirner? 1145

G.7 Lysander Spooner: right-"libertarian" or libertarian socialist? 1154

Section H — Why do anarchists oppose state socialism? 1165

H.1 Have anarchists always opposed state socialism? 1172
H.1.1 What was Bakunin's critique of Marxism? . . . 1176
H.1.2 What are the key differences between Anarchists and Marxists? . . . 1188
H.1.3 Why do anarchists wish to abolish the state *"overnight"*? . . . 1194
H.1.4 Do anarchists have *"absolutely no idea"* of what to put in place of the state? . . . 1197
H.1.5 Why do anarchists reject *"utilising the present state"*? . . . 1201
H.1.6 Why do anarchists try to *"build the new world in the shell of the old"*? . . . 1206
H.1.7 Haven't you read Lenin's *"State and Revolution"*? . . . 1211

H.2 What parts of anarchism do Marxists particularly misrepresent? 1220
H.2.1 Do anarchists reject defending a revolution? . . . 1225
H.2.2 Do anarchists reject *"class conflict"* and *"collective struggle"*? . . . 1232
H.2.3 Does anarchism yearn *"for what has gone before"*? . . . 1238
H.2.4 Do anarchists think *"the state is the main enemy"*? . . . 1243
H.2.5 Do anarchists think *"full blown"* socialism will be created overnight? . . . 1248
H.2.6 How do Marxists misrepresent Anarchist ideas on mutual aid? . . . 1251
H.2.7 Who do anarchists see as their *"agents of social change"*? . . . 1255
H.2.8 What is the relationship of anarchism to syndicalism? . . . 1261
H.2.9 Do anarchists have *"liberal"* politics? . . . 1265
H.2.10 Are anarchists against leadership? . . . 1268
H.2.11 Are anarchists *"anti-democratic"*? . . . 1272
H.2.12 Does anarchism survive only in the absence of a strong workers' movement? . . . 1282
H.2.13 Do anarchists reject *"political"* struggles and action? . . . 1288
H.2.14 Are anarchist organisations *"ineffective," "elitist"* or *"downright bizarre"*? . . . 1290

H.3 What are the myths of state socialism? 1298
H.3.1 Do Anarchists and Marxists want the same thing? . . . 1301
H.3.2 Is Marxism *"socialism from below"*? . . . 1309

H.3.3 Is Leninism *"socialism from below"*? . . . 1315
H.3.4 Don't anarchists just quote Marxists selectively? . . . 1320
H.3.5 Has Marxist appropriation of anarchist ideas changed it? . . . 1323
H.3.6 Is Marxism the only revolutionary politics which have worked? . . . 1331
H.3.7 What is wrong with the Marxist theory of the state? . . . 1332
H.3.8 What is wrong with the Leninist theory of the state? . . . 1342
H.3.9 Is the state simply an agent of economic power? . . . 1350
H.3.10 Has Marxism always supported the idea of workers' councils? . . . 1361
H.3.11 Does Marxism aim to give power to workers organisations? . . . 1375
H.3.12 Is big business the precondition for socialism? . . . 1380
H.3.13 Why is state socialism just state capitalism? . . . 1388
H.3.14 Don't Marxists believe in workers' control? . . . 1396

H.4 Didn't Engels refute anarchism in *"On Authority"*? 1404
H.4.1 Does organisation imply the end of liberty? . . . 1408
H.4.2 Does free love show the weakness of Engels' argument? . . . 1410
H.4.3 How do anarchists propose to run a factory? . . . 1412
H.4.4 How does the class struggle refute Engels' arguments? . . . 1414
H.4.5 Is the way industry operates *"independent of all social organisation"*? . . . 1416
H.4.6 Why does Engels' "On Authority" harm Marxism? . . . 1420
H.4.7 Is revolution *"the most authoritarian thing there is"*? . . . 1422

H.5 What is vanguardism and why do anarchists reject it? 1425
H.5.1 Why are vanguard parties anti-socialist? . . . 1427
H.5.2 Have vanguardist assumptions been validated? . . . 1431
H.5.3 Why does vanguardism imply party power? . . . 1433
H.5.4 Did Lenin abandon vanguardism? . . . 1437
H.5.5 What is *"democratic centralism"*? . . . 1443
H.5.6 Why do anarchists oppose *"democratic centralism"*? . . . 1445
H.5.7 Is the way revolutionaries organise important? . . . 1448
H.5.8 Are vanguard parties effective? . . . 1449
H.5.9 What are vanguard parties effective at? . . . 1452
H.5.10 Why does *"democratic centralism"* produce *"bureaucratic centralism"*? . . . 1453
H.5.11 Can you provide an example of the negative nature of vanguard parties? . . . 1457
H.5.12 Surely the Russian Revolution proves that vanguard parties work? . . . 1460

H.6 Why did the Russian Revolution fail? 1470
H.6.1 Can objective factors explain the failure of the Russian Revolution? . . . 1475
H.6.2 Did Bolshevik ideology influence the outcome of the Russian Revolution? . . . 1483
H.6.3 Were the Russian workers "declassed" and "atomised"? . . . 1496

Section I — What would an anarchist society look like? 1511

I.1 Isn't libertarian socialism an oxymoron? 1519
I.1.1 Is socialism impossible? . . . 1524
I.1.2 Is libertarian communism impossible? . . . 1534
I.1.3 What is wrong with markets anyway? . . . 1546
I.1.4 If capitalism is exploitative, then isn't socialism as well? . . . 1552
I.1.5 Does capitalism efficiently allocate resources? . . . 1555

I.2 Is this a blueprint for an anarchist society? 1569
I.2.1 Why discuss what an anarchist society would be like at all? . . . 1573
I.2.2 Will it be possible to go straight to an anarchist society from capitalism? . . . 1575
I.2.3 How is the framework of an anarchist society created? . . . 1579

I.3 What could the economic structure of anarchy look like? 1587
I.3.1 What is a *"syndicate"*? . . . 1591
I.3.2 What is workers' self-management? . . . 1598
I.3.3 What does socialisation mean? . . . 1604
I.3.4 What relations would exist between individual syndicates? . . . 1610
I.3.5 What would confederations of syndicates do? . . . 1614
I.3.6 What about competition between syndicates? . . . 1621
I.3.7 What about people who do not want to join a syndicate? . . . 1626
I.3.8 Do anarchists seek *"small autonomous communities, devoted to small scale production"*? . . . 1627

I.4 How could an anarchist economy function? 1632
I.4.1 What is the point of economic activity in anarchy? . . . 1636
I.4.2 Why do anarchists desire to abolish work? . . . 1638
I.4.3 How do anarchists intend to abolish work? . . . 1641
I.4.4 What economic decision making criteria could be used in anarchy? . . . 1648
I.4.5 What about *"supply and demand"*? . . . 1654
I.4.6 Surely anarchist-communism would just lead to demand exceeding supply? . . . 1659
I.4.7 What will stop producers ignoring consumers? . . . 1663
I.4.8 What about investment decisions? . . . 1666
I.4.9 Should technological advance be seen as anti-anarchistic? . . . 1670
I.4.10 What would be the advantage of a wide basis of surplus distribution? . . . 1675
I.4.11 If socialism eliminates the profit motive, won't performance suffer? . . . 1682
I.4.12 Won't there be a tendency for capitalist enterprise to reappear? . . . 1685
I.4.13 Who will do the dirty or unpleasant work? . . . 1691
I.4.14 What about the person who will not work? . . . 1696
I.4.15 What will the workplace of tomorrow look like? . . . 1698
I.4.16 Won't a libertarian communist society be inefficient? . . . 1700

I.5 What could the social structure of anarchy look like? 1703
I.5.1 What are participatory communities? . . . 1706

I.5.2 Why are confederations of participatory communities needed? . . . 1711
I.5.3 Would confederations produce bureaucrats and politicians? . . . 1715
I.5.4 How will anything ever be decided by all these meetings? . . . 1718
I.5.5 Aren't participatory communities and confederations just new states? . . . 1721
I.5.6 Won't there be a danger of a *"tyranny of the majority"* under libertarian socialism? 1724
I.5.7 What if I don't want to join a commune? . . . 1730
I.5.8 What about crime? . . . 1733
I.5.9 What about Freedom of Speech under Anarchism? . . . 1740
I.5.10 What about political parties, interest groups and professional bodies? . . . 1745
I.5.11 How will an anarchist society defend itself against the power hungry? . . . 1748
I.5.12 Would an anarchist society provide health care and other public services? . . . 1752

I.6 What about the *"Tragedy of the Commons"*? 1757
I.6.1 How can property *"owned by everyone in the world"* be used? . . . 1761
I.6.2 Doesn't communal ownership involve restricting individual liberty? . . . 1764

I.7 Won't Libertarian Socialism destroy individuality? 1769
I.7.1 Do tribal cultures indicate that communalism defends individuality? . . . 1773
I.7.2 Do anarchists worship the past or the "noble savage"? . . . 1775
I.7.3 Is the law required to protect individual rights? . . . 1778
I.7.4 Does capitalism protect individuality? . . . 1781

I.8 Does revolutionary Spain show that libertarian socialism can work in practice? 1784
I.8.1 Is the Spanish Revolution inapplicable as a model for modern societies? . . . 1787
I.8.2 How were the anarchists able to obtain mass popular support in Spain? . . . 1789
I.8.3 How were Spanish industrial collectives organised? . . . 1793
I.8.4 How were the Spanish industrial collectives co-ordinated? . . . 1795
I.8.5 How were the Spanish agricultural co-operatives organised and co-ordinated? . . . 1798
I.8.6 What did the agricultural collectives accomplish? . . . 1800
I.8.7 Were the rural collectives created by force? . . . 1802
I.8.8 But did the Spanish collectives innovate? . . . 1811
I.8.9 Why, if it was so good, did it not survive? . . . 1812
I.8.10 Why did the CNT collaborate with the state? . . . 1813
I.8.11 Was the decision to collaborate a product of anarchist theory? . . . 1817
I.8.12 Was the decision to collaborate imposed on the CNT's membership? . . . 1827
I.8.13 What political lessons were learned from the revolution? . . . 1831
I.8.14 What economic lessons were learned from the revolution? . . . 1835

Section J — What do anarchists do? 1839

J.1 Are anarchists involved in social struggles? 1843
J.1.1 Why are social struggles important? . . . 1846
J.1.2 Are anarchists against reforms? . . . 1848
J.1.3 Why are anarchists against reformism? . . . 1850

J.1.4 What attitude do anarchists take to "single-issue" campaigns? 1854
J.1.5 Why do anarchists try to generalise social struggles? 1856

J.2 What is direct action? 1859
J.2.1 Why do anarchists favour using direct action to change things? 1861
J.2.2 Why do anarchists reject voting as a means for change? 1862
J.2.3 What are the political implications of voting? 1868
J.2.4 Surely voting for radical parties will be effective? 1870
J.2.5 Why do anarchists support abstentionism and what are its implications? 1871
J.2.6 What are the effects of radicals using electioneering? 1873
J.2.7 Surely we should vote for reformist parties in order to expose them? 1878
J.2.8 Will abstentionism lead to the right winning elections? 1879
J.2.9 What do anarchists do instead of voting? 1881
J.2.10 Does rejecting electioneering mean that anarchists are apolitical? 1885

J.3 What kinds of organisation do anarchists build? 1890
J.3.1 What are affinity groups? 1892
J.3.2 What are "synthesis" federations? 1895
J.3.3 What is the "Platform"? 1898
J.3.4 Why do many anarchists oppose the "Platform"? 1902
J.3.5 Are there other kinds of anarchist federation? 1907
J.3.6 What role do these groups play in anarchist theory? 1908
J.3.7 Doesn't Bakunin's *"Invisible Dictatorship"* prove that anarchists are secret authoritarians? 1914
J.3.8 What is anarcho-syndicalism? 1921
J.3.9 Why are many anarchists not anarcho-syndicalists? 1926

J.4 What trends in society aid anarchist activity? 1933
J.4.1 Why is social struggle a good sign? 1934
J.4.2 Won't social struggle do more harm than good? 1937
J.4.3 Are the new social movements a positive development for anarchists? 1945
J.4.4 What is the *"economic structural crisis"*? 1948
J.4.5 Why is this *"economic structural crisis"* important to social struggle? 1953
J.4.6 What are implications of anti-government and anti-big business feelings? 1956
J.4.7 What about the communications revolution? 1957

J.5 What alternative social organisations do anarchists create? 1962
J.5.1 What is community unionism? 1965
J.5.2 Why do anarchists support industrial unionism? 1970
J.5.3 What attitude do anarchists take to existing unions? 1975
J.5.4 What are industrial networks? 1978
J.5.5 What forms of co-operative credit do anarchists support? 1981
J.5.6 Why are mutual credit schemes important? 1982
J.5.7 Do most anarchists think mutual credit is sufficient to abolish capitalism? 1984
J.5.8 What would a modern system of mutual banking look like? 1986

J.5.9 How does mutual credit work? . . . 1987
J.5.10 Why do anarchists support co-operatives? . . . 1989
J.5.11 If workers really want self-management then why are there so few co-operatives? 1993
J.5.12 If self-management were more efficient then surely the market would force capitalists to introduce it? . . . 1999
J.5.13 What are Modern Schools? . . . 2006
J.5.14 What is Libertarian Municipalism? . . . 2010
J.5.15 What attitude do anarchists take to the welfare state? . . . 2013
J.5.16 Are there any historical examples of collective self-help? . . . 2018

J.6 What methods of child rearing do anarchists advocate? 2023
J.6.1 What are the main obstacles to raising free children? . . . 2025
J.6.2. What are some examples of libertarian child-rearing methods? . . . 2027
J.6.3 If children have nothing to fear, how can they be good? . . . 2030
J.6.3 But how will a free child ever learn unselfishness? . . . 2033
J.6.4 Isn't "libertarian child-rearing" just another name for spoiling the child? . . . 2034
J.6.5 What is the anarchist position on teenage sexual liberation? . . . 2036
J.6.6 But isn't this concern with sexual liberation just a distraction from revolution? . 2039

J.7 What do anarchists mean by social revolution? 2042
J.7.1 Why are most anarchists revolutionaries? . . . 2045
J.7.2 Is social revolution possible? . . . 2048
J.7.3 Doesn't revolution mean violence? . . . 2051
J.7.4 What would a social revolution involve? . . . 2053
J.7.5 What is the role of anarchists in a social revolution? . . . 2060
J.7.6 How could an anarchist revolution defend itself? . . . 2062

Bibliography for FAQ 2067

Anarchist Anthologies 2069

Anarchist and Libertarian Works 2070

Works about Anarchism 2089

Non-Anarchist Works 2092

Supplementary Material 2117

Appendix: Anarchism and Marxism 2119
Reply to errors and distortions in David McNally's pamphlet *"Socialism from Below"* . 2119
1. Introduction . . . 2120
2. Is anarchism the politics of the *"small property owner"*? . . . 2122
3. Does anarchism *"glorify values from the past"*? . . . 2127

4. Why are McNally's comments on Proudhon a distortion of his ideas? 2133
5. Why are McNally's comments on Bakunin a distortion of his ideas? 2149
6. Are these *"quirks of personality"* or *"rooted in the very nature of anarchist doctrine"*? 2155
7. Are anarchists against democracy? 2158
8. Are Leninists in favour of democracy? 2168
9. Why is McNally wrong on the relation of syndicalism to anarchism? 2181
10. Do syndicalists reject working class political action? 2184
11. Why is McNally's claim that Leninism supports working class self-emancipation wrong? 2188
12. Why is Marxist "class analysis" of anarchism contradictory? 2193
13. If Marxism is *"socialism from below,"* why do anarchists reject it? 2202
14. Why is McNally's use of the term *"socialism from below"* dishonest? 2211
15. Did Trotsky keep alive Leninism's *"democratic essence"*? 2217
Marxists and Spanish Anarchism 2232
1. Were the Spanish Anarchists *"Primitive Rebels"*? 2233
2. How accurate is Felix Morrow's book on the Spanish Revolution? 2242
3. Did a *"highly centralised"* FAI control the CNT? 2243
4. What is the history of the CNT and the Communist International? 2246
5. Why did the CNT not join the Workers' Alliance? 2251
6. Was the October 1934 revolt sabotaged by the CNT? 2257
7. Were the Friends of Durruti Marxists? 2264
8. Did the Friends of Durruti *"break with"* anarchism? 2266
9. Were the Friends of Durruti influenced by Trotskyists? 2272
10. What does the Friends of Durruti's programme tell us about Trotskyism? . . 2273
11. Why is Morrow's comments against the militarisation of the Militias ironic? 2275
12. What is ironic about Morrow's vision of revolution? 2283
13. Why do anarchists reject the Marxist "workers' state"? 2292
14. What is wrong with Morrow's *"fundamental tenet"* of anarchism? 2296
15. Did Spanish Anarchism aim for the creation of *"collectives"* before the revolution? 2300
16. How does the development of the collectives indicate the differences between Bolshevism and anarchism? 2307
17. Why is Morrow's support for *"proletarian methods of production"* ironic? . . 2311
18. Were the federations of collectives an *"abandonment"* of anarchist ideas? . . 2312
19. Did the experience of the rural collectives refute anarchism? 2314
20. Does the experience of the Spanish Revolution indicate the failure of anarchism or the failure of anarchists? 2317
Reply to errors and distortions in Phil Mitchinson's ***Marxism and direct action*** . . 2331
1. How does Mitchinson impoverish the politics of the direct action groups? . . 2331
2. Does anarchism *"juxtapose"* theory and action? 2332
3. How does Mitchinson distort the London May Day demo? 2333
4. Do anarchists really think *"the bosses will do nothing to defend their system"*? . 2334
5. How does Mitchinson misrepresent anarchist organisation? 2334
6. How does Mitchinson define anarchism wrongly? 2338

7. Does anarchism reject fighting for reforms? . . . 2339
8. Does anarchism see the state as the root of all problems? . . . 2340
9. Why is Mitchinson wrong about the *"Abolishion [i.e. Abolition] of the state"*? 2341
10. Why is Mitchinson's comment that we face either *"socialism or barbarism"* actually undermine his case? . . . 2342
11. Why is Mitchinson wrong to assert anarchists do not believe in defending a revolution? . . . 2343
12. Would the "workers' state" really be different, as Mitchinson claims? . . . 2345
13. Is the Marxist "worker's state" really the rule of one class over another? . . . 2349
14. Why do anarchists reject the Marxist notion of *"conquest of power"*? . . . 2353
15. What caused the degeneration of the Russian Revolution? . . . 2355
16. Did anarchists reject *"the need for organisation in the shape of trade unions"*? 2359
17. Why do anarchists reject political activity? . . . 2361
18. How do anarchists struggle for reforms under capitalism? . . . 2363
19. How does Mitchinson distorts the use of the term *"Self-reliance"*? . . . 2366
20. Is anarchism an example of *"Philosophical idealism"*? . . . 2367
21. How is Mitchinson's critique self-contradictory? . . . 2369
22. How did Trotsky make the trains run on time? . . . 2369
23. Can centralised planning meet the needs of the whole of society? . . . 2371
24. Is technology neutral? . . . 2373
25. Do anarchists ignore the *"strength of the working class"*? . . . 2374
26. What does Mitchinson's article tell about the nature of Trotskyism? . . . 2375

Reply to errors and distortions in the SWP's *"Marxism and Anarchism"* . . . 2376
1. What does the anti-globalisation movement tell us about the effectiveness of the "vanguard" parties like the SWP? . . . 2376
2. What does the SWP miss out in its definition of anarchism? . . . 2378
3. Why does mentioning the history of anarchism weaken the SWP's argument? 2380
4. How is the SWP wrong about centralisation? . . . 2381
5. Why does the SWP's *"picket line is 'authoritarian'"* argument totally miss the point? . . . 2383
6. Why are the SWP's examples of *"state functions"* wrong? . . . 2384
7. What is ironic about the SWP's comment that workers' councils must *"break up"* the capitalist state? . . . 2386
8. How do the SWP re-write the history of the Russian Revolution? . . . 2389
9. How do the SWP re-write the history of the Spanish Revolution? . . . 2393
10. Do anarchists ignore the fact that ideas change through struggle? . . . 2395
11. Why do anarchists oppose the Leninist "revolutionary party"? . . . 2396
12. Why do the SWP make a polemical fetish of *"unity"* and *"democracy"* to the expense of common sense and freedom? . . . 2399
13. How does the Battle of Prague expose the SWP as hypocrites? . . . 2401
14. Is the Leninist tradition actually as democratic as the SWP like to claim? . . . 2405
15. Why is the SWP's support for centralisation anti-socialist? . . . 2407
16. Why is the SWP wrong about the A16 Washington D.C. demo? . . . 2411
17. Why does the SWP's Washington example refute the SWP's own argument and not anarchism? . . . 2412

18. Why is a "revolutionary party" a contradiction in terms? . . . 2413
19. Do anarchists operate *"in secret"*? . . . 2415
20. Why is the SWP wrong about Bakunin's organisation? . . . 2415
21. Why is the SWP's attack on Bakunin's organisation ironic? . . . 2418
22. Was the F.A.I. a *"centralised and secret"* organisation that shunned *"open debate and common struggle"*? . . . 2424
23. Do anarchists wait for *"spontaneous upsurges by workers"*? . . . 2427
24. Do anarchists blame workers *"for being insufficiently revolutionary"*? . . . 2430
25. Why does the history of centralised parties refute the SWP's arguments? . . . 2431
Reply to errors and distortions in John Fisher's *"Why we must further Marxism and not Anarchism"* . . . 2432
1. Why should *"the so-called Anarchistic youth of today"* be concerned that Trotskyists consider them allies? . . . 2432
2. What else do people learn about when they discover anarchism is not *"utter rebellion"*? . . . 2433
3. What do anarchists think will *"replace the smashed state machine"*? . . . 2435
4. What did Trotsky and Lenin think must replace the bourgeois state? . . . 2437
5. Is the "proletarian 'state'" really a new kind of state? . . . 2439
6. Do anarchists *"hope the capitalists do not make any attempts of counterrevolution"*? 2442
7. Are Anarchists simply *"potential Marxists"*? . . . 2444
8. Is Marxism scientific? . . . 2445
9. What does the Russian Revolution tell us about Trotskyism? . . . 2445
10. Do anarchists reject "leadership"? . . . 2448
11. Does the Spanish Revolution show anarchism is flawed? . . . 2451
12. Does anarchism believe in spontaneous revolution? . . . 2452

Appendix — The Russian Revolution **2455**
What happened during the Russian Revolution? . . . 2455
1 Can you give a short summary of what happened in 1917? . . . 2460
2 How did the Bolsheviks gain mass support? . . . 2460
3 Surely the Russian Revolution proves that vanguard parties work? . . . 2460
4 Was Lenin's "State and Revolution" applied after October? . . . 2470
5 Did the Bolsheviks really aim for Soviet power? . . . 2479
6 What happened to the soviets after October? . . . 2484
7 How did the factory committee movement develop? . . . 2498
8 What was the Bolshevik position on "workers' control" in 1917? . . . 2498
9 What happened to the factory committees after October? . . . 2498
10 What were the Bolshevik economic policies in 1918? . . . 2498
11 Did Bolshevik economic policies work? . . . 2498
12 Was there an alternative to Lenin's "state capitalism" and "war communism"? 2498
13 Did the Bolsheviks allow independent trade unions? . . . 2498
14 Was the Red Army really a revolutionary army? . . . 2498
15 Was the Red Army "filled with socialist consciousness"? . . . 2498
16 How did the civil war start and develop? . . . 2498
17 Was the civil war between just Reds and Whites? . . . 2498

18 How extensive was imperialist intervention? . . . 2498
19 Did the end of the civil war change Bolshevik policies? . . . 2498
20 Can the Red Terror and the Cheka be justified? . . . 2498
21 Did Bolshevik peasant policies work? . . . 2498
22 Was there an alternative to grain requisition? . . . 2498
23 Was the repression of the socialist opposition justified? . . . 2498
24 What did the anarchists do during the revolution? . . . 2498
25 Did the Russian revolution refute anarchism? . . . 2498
What was the Kronstadt Rebellion? . . . 2498
1 Why is the Kronstadt rebellion important? . . . 2505
2 What was the context of the Kronstadt revolt? . . . 2510
3 What was the Kronstadt Programme? . . . 2519
4 Did the Kronstadt rebellion reflect *"the exasperation of the peasantry"*? . . . 2523
5 What lies did the Bolsheviks spread about Kronstadt? . . . 2530
6 Was the Kronstadt revolt a White plot? . . . 2535
7 What was the **real** relationship of Kronstadt to the Whites? . . . 2539
8 Did the rebellion involve new sailors? . . . 2545
9 Was Kronstadt different politically in 1921? . . . 2557
10 Why did the Petrograd workers not support Kronstadt? . . . 2562
11 Were the Whites a threat during the Kronstadt revolt? . . . 2567
12 Was the country too exhausted to allow soviet democracy? . . . 2571
13 Was there a real alternative to Kronstadt's *"Third Revolution"*? . . . 2580
14 How do modern day Trotskyists misrepresent Kronstadt? . . . 2593
15 What does Kronstadt tell us about Bolshevism? . . . 2598
What caused the degeneration of the Russian Revolution? . . . 2610
1 Do anarchists ignore the objective factors facing the Russian revolution? . . . 2616
2 Can "objective factors" really explain the failure of Bolshevism? . . . 2622
3 Can the civil war explain the failure of Bolshevism? . . . 2628
4 Did economic collapse and isolation destroy the revolution? . . . 2636
5 Was the Russian working class atomised or "declassed"? . . . 2642
6 Did the Bolsheviks blame "objective factors" for their actions? . . . 2665
7 What role does "objective factors" play in Leninist ideology? . . . 2674
8 Do Leninists usually deny the importance of ideology? . . . 2676
How did Bolshevik ideology contribute to the failure of the Revolution? . . . 2681
1 How did the Marxist historical materialism affect Bolshevism? . . . 2686
2 Why did the Marxist theory of the state undermine working class power? . . . 2688
3 How did Engels' essay *"On Authority"* affect the revolution? . . . 2695
4 How did the Bolshevik vision of "democracy" affect the revolution? . . . 2702
5 What was the effect of the Bolshevik vision of "socialism"? . . . 2707
6 How did Bolshevik preference for nationalisation affect the revolution? . . . 2711
7 How did Bolshevik preference for centralism affect the revolution? . . . 2716
8 How did the aim for party power undermine the revolution? . . . 2727
Were any of the Bolshevik oppositions a real alternative? . . . 2734
1 Were the "Left Communists" of 1918 an alternative? . . . 2735
2 What were the limitations of the "Workers' Opposition" of 1920? . . . 2740

3 What about Trotsky's "Left Opposition" in the 1920s? . . . 2744
4 What do these oppositions tell us about the essence of Leninism? . . . 2757
Why does the Makhnovist movement show there is an alternative to Bolshevism? . . 2763
1 Who was Nestor Makhno? . . . 2767
2 Why was the movement named after Makhno? . . . 2772
3 Why was Makhno called *"Batko"*? . . . 2773
4 Can you give a short overview of the Makhnovist movement? . . . 2775
5 How were the Makhnovists organised? . . . 2786
6 Did the Makhnovists have a constructive social programme? . . . 2789
7 Did they apply their ideas in practice? . . . 2792
8 Weren't the Makhnovists just Kulaks? . . . 2800
9 Were the Makhnovists anti-Semitic and pogromists? . . . 2806
10 Did the Makhnovists hate the city and city workers? . . . 2814
11 Were the Makhnovists nationalists? . . . 2817
12 Did the Makhnovists support the Whites? . . . 2820
13 What was the relationship of the Bolsheviks to the movement? . . . 2822
14 How did the Makhnovists and Bolsheviks differ? . . . 2830
15 How do the modern followers of Bolshevism slander the Makhnovists? . . . 2838
16 What lessons can be learned from the Makhnovists? . . . 2860

Appendix : Anarchism and "anarcho"-capitalism 2866
Replies to Some Errors and Distortions in Bryan Caplan's "Anarchist Theory FAQ" version 5.2 . . . 2867
1 — Individualist Anarchists and the socialist movement. . . . 2867
2 — Why is Caplan's definition of socialism wrong? . . . 2868
3 — Was Proudhon a socialist or a capitalist? . . . 2874
4 — Tucker on Property, Communism and Socialism. . . . 2878
5 — Anarchism and "anarcho"-capitalism . . . 2882
6 — Appendix: Defining Anarchism . . . 2886
Replies to Some Errors and Distortions in Bryan Caplan's "Anarchist Theory FAQ" version 4.1.1. . . . 2892
1 Is anarchism purely negative? . . . 2893
2 Anarchism and Equality . . . 2895
3 Is anarchism the same thing as socialism? . . . 2897
4 Anarchism and dissidents . . . 2898
5 How would anarcho-capitalism work? . . . 2900

Appendix — Is "anarcho"-capitalism a type of anarchism? 2918
1 Are "anarcho"-capitalists really anarchists? . . . 2921
1.1 Why is the failure to renounce hierarchy the Achilles Heel of right-wing libertarianism . . . 2926
1.2 How libertarian is right-Libertarian theory? . . . 2928
1.3 Is right-Libertarian theory scientific in nature? . . . 2932
1.4 Is "anarcho"-capitalism a new form of individualist anarchism? . . . 2939
2.1 What are the implications of defining liberty in terms of (property) rights? . 2950

2.2 How does private property affect freedom? . . . 2954
2.3 Can "anarcho"-capitalist theory justify the state? . . . 2956
2.4 But surely transactions on the market are voluntary? . . . 2959
2.5 But surely circumstances are the result of liberty and so cannot be objected to? 2962
2.6 Do Libertarian-capitalists support slavery? . . . 2964
2.7 But surely abolishing capitalism would restrict liberty? . . . 2969
2.8 Why should we reject the "anarcho"-capitalist definitions of freedom and justice? . . . 2971
3 Why do anarcho"-capitalists place little or no value on "equality"? . . . 2974
3.1 Why is this disregard for equality important? . . . 2979
3.2 But what about "anarcho"-capitalist support for charity? . . . 2983
4 What is the right-libertarian position on private property? . . . 2984
4.1 What is wrong with a "homesteading" theory of property? . . . 2986
4.2 Why is the "Lockean Proviso" important? . . . 2990
4.3 How does private property effect individualism? . . . 2992
4.4 How does private property affect relationships? . . . 2994
4.5 Does private property co-ordinate without hierarchy? . . . 2995
5 Will privatising "the commons" increase liberty? . . . 2997
6 Is "anarcho"-capitalism against the state? . . . 3000
6.1 What's wrong with this "free market" justice? . . . 3002
6.2 What are the social consequences of such a system? . . . 3004
6.3 But surely market forces will stop abuses by the rich? . . . 3005
6.4 Why are these "defence associations" states? . . . 3011
6.5 What other effects would "free market" justice have? . . . 3013
7 How does the history of "anarcho"-capitalism show that it is not anarchist? . . . 3016
7.1 Are competing governments anarchism? . . . 3018
7.2 Is government compatible with anarchism? . . . 3022
7.3 Can there be a "right-wing" anarchism? . . . 3026
8 What role did the state take in the creation of capitalism? . . . 3029
8.1 What social forces lay behind the rise of capitalism? . . . 3032
8.2 What was the social context of the statement "laissez-faire?" . . . 3035
8.3 What other forms did state intervention in creating capitalism take? . . . 3037
8.4 Aren't the enclosures a socialist myth? . . . 3040
8.5 What about the lack of enclosures in the Americas? . . . 3041
8.6 How did working people view the rise of capitalism? . . . 3044
8.7 Why is the history of capitalism important? . . . 3046
9 Is Medieval Iceland an example of "anarcho"-capitalism working in practice? . . . 3049
10 Would laissez-faire capitalism be stable? . . . 3056
10.1 Would privatising banking make capitalism stable? . . . 3057
10.2 How does the labour market effect capitalism? . . . 3065
10.3 Was laissez-faire capitalism stable? . . . 3070
11 What is the myth of "Natural Law"? . . . 3072
11.1 Why the term "Natural Law" in the first place? . . . 3073

11.2 But “Natural Law” provides protection for individual rights from violation by the State. Those who are against Natural Law desire total rule by the state. 3075
11.3 Why is “Natural Law” authoritarian? 3076
11.4 Does “Natural Law” actually provides protection for individual liberty? . . 3077
11.5 But Natural Law was discovered, not invented! 3079
11.6 Why is the notion of “discovery” contradictory? 3080

This is an anarchist FAQ. Its aim is to present what anarchism really stands for and indicate why you should become an anarchist.

An Anarchist FAQ after 21 years

For reasons too unimportant to discuss here, the 20th anniversary blog for *An Anarchist FAQ* (AFAQ) ended up on my personal blog rather than AFAQ's "official" one. Now I correct this by reposting it here as well as taking the opportunity to preface it with a few comments to mark 21 years since AFAQ was officially launched.

This year, 2017, marks numerous anarchist related anniversaries besides AFAQ's — most obviously, 100 years since the Russian Revolution (see section A.5.4). Given subsequent events, it is easy to forget that the overthrow of the Tsar was initially — and rightly — viewed as great event by all on the left. As information of the increasing *social* nature of the revolt — what Voline termed *The Unknown Revolution* — became better known, the far-left was increasingly enthused by the revolution: workers had formed soviets and were starting to organise unions and factory committees, peasants were taking back the land, and so on. The revolution — as Anarchists alone had argued during the failed revolution of 1905 — was going beyond political reform into a social revolution. Reports of the new, radical and functionally based democracy were avidly read across the Left and especially by Anarchists – it appeared that our vision of social revolution was coming true.

By the early 1920s, Anarchists had broken with the new regime. Accounts of the dictatorial nature of the Bolsheviks could no longer be ignored – particularly when coming from eye-witnesses like Emma Goldman and Alexander Berkman as well as the reports of the delegates from syndicalist unions sent to the Second Congress of the *Communist International* and that of the newly formed *Red International of Labour Unions*. However, what Berkman termed *The Bolshevik Myth* held sway in the non-Anarchist left in spite of these facts becoming available. While this myth was slowly eroded as the evils of the regime became harder and harder to ignore, the damage had been done: the liberatory promise of revolution and of socialism became associated with its opposite.

Anarchists were not surprised that State socialism became a new class system — we had, after all, predicted this from Proudhon and Bakunin onwards. However, this did not stop many on the left believing *The Bolshevik Myth* and today there are still many grouplets on the left (with impressive names which reflect aspirations rather than reality) which denounce Stalinism while seeking the "genuine" socialism of the Bolsheviks. As part of its goal to be a resource for Anarchists, AFAQ sought to show the links between the regime of Lenin and Trotsky and that of Stalin. It sought to show the ideological roots of the degeneration of the Revolution and to show that the post-hoc explanations first postulated by Trotsky and regurgitated by Leninists to this day were inadequate.

This was part of the aim of section H (on Marxism) and I think it was successful. Originally, it was going to be much bigger, too big as it turned out. So sections on the Russian Revolution which were originally planned to be in section H (including ones on Kronstadt and the Makhnovists) were moved to an appendix. This appendix, as noted in the 20th anniversary blog, is still incomplete but its most important points have been placed in section H, particularly in section

H.6 which summarises *why* the Russian Revolution failed and, just as importantly, that anarchist warnings were proven correct. It shows how that favourite post-hoc excuse of Marxists – "objective circumstances" — does not explain what happened and how ideological and structural factors are much more significant.

Ideological, for the politics of the Bolsheviks played a key role. For example: their vision of socialism was impoverished, their analysis of the State was flawed and their vanguardist perspective inherently hierarchical (see section H.5). Some of these ideological positions were unique to the Bolsheviks, many were simply Marxism (or at least social-democratic) as we show (not least, the prejudices in favour of centralisation and economic central-planning).

Structural, for the prejudices of Bolshevik ideology played their part in the organisations and solutions they favoured. A perspective which assumes centralisation is "proletarian" and inherently "efficient" builds certain types of organisation. These structures, in turn, produce certain forms of social relationships — namely, a division between rulers and ruled. Centralised bodies also produce a bureaucracy around them in order to make decisions and implement them.

So the interaction of ideology and structure played its part and the "objective circumstances" pushed the embryonic bureaucratic class system in certain ways but they did not create it. In other words, while some kind of new class system was inevitable, the horrors of Stalinism can be said to be the product of the specific factors facing the Russian Revolution. A shorter civil war, for example, may have resulted in a less brutal regime in the 1930s. Note, *less* brutal — for Lenin's regime *was* a bureaucratic State-capitalist party dictatorship and had been within six months of the October Revolution.

Hopefully, AFAQ has shown that the real turning point of the revolution was not Kronstadt in 1921 but the spring of 1918 when the Bolsheviks made explicit what had always been implicit: that party power was more important than soviet democracy. It also shows that recent research confirms that Berkman and Goldman were right (see my "From Russia with Critique," *Anarcho-Syndicalist Review*, No. 69) and are far better guides to understanding what went wrong than turn-coats like Serge (see my "Victor Serge: The Worst of the Anarchists," *Anarcho-Syndicalist Review*, No. 61).

We need to learn the lessons of history rather than seek post-hoc rationalisations which will inevitably lead to a similar outcome in the unlikely event of a Bolshevik-style party gaining popular support as in 1917. I must stress unlikely, for as well as Leninists having little grasp on the actual course of the revolution after October, as discussed in section H.5.12 they also fail to understand that the Bolshevik party in 1917 did not act like modern-day vanguardists think it did. For if it had, as in 1905, then it would have been as counter-productive — when not irrelevant — as modern-day Leninist sects are. This does not mean there was no party bureaucracy – there was, with an obvious negative impact before *and* after it seized power — but that it was usually ignored by the rank-and-file while being fought by Lenin: it was revolutionary during 1917 in spite of itself, its structures and its perspectives.

Anarchists, of course, did not need to come up with post-hoc explanations for the failure of the Revolution. Our predictions and warnings were confirmed — the State is not simply an instrument of economic class but has its own interests, nationalisation does not end capitalism but just replaces the boss by the bureaucrat, the State is centralised to ensure minority rule and cannot be used to abolish it, and so on. If Marxism paid anything other than lip-service to the idea of "scientific socialism" then all socialists would be anarchists.

Talking of Marxism, the first volume of *Capital* was published 150 years ago, in 1867, twenty years after Marx's disgraceful diatribe against Proudhon, *The Poverty of Philosophy*. Looking at both works is interesting, not least because Marx singularly failed in 1867 to apply the methodology he denounced Proudhon for not following in 1847. Instead, he uses the very one he mocked the Frenchman for utilising – namely building an abstract model of capitalism — while also taking up Proudhon's theory of exploitation he had likewise once ridiculed (see my "The Poverty of (Marx's) Philosophy", *Anarcho-Syndicalist Review*, No. 70). Ironically, if you ignore the facts and accept *The Poverty of Philosophy* as a valid critique of Proudhon then you also have to admit it is also a valid critique of *Capital*, which is *not* the book he criticised Proudhon for not writing in 1847.

In many ways, *The Poverty of Philosophy* is the template of subsequent Marxist polemics on Anarchism (see section H.2 for a critique of the most common claims). It is full of so many distortions that it is nearly impossible to answer them all, not to mention the postulating of some notion — in this case, amongst many others, labour notes and idealism — that are just inventions. Take the latter. As one ex-Marxist academic noted:

> "Despite Marx's scornful criticism, it is not the case that Proudhon regarded actual social conditions and economic forces as the embodiment of abstract philosophical categories antecedent to social reality. On the contrary, he is at pains to state that the intellectual organisation of social reality in abstract categories is secondary to that reality." (Leszek Kolakowski, *Main Currents of Marxism* [Oxford: Oxford University Press, 1978], vol. 1, p. 205)

Which raises the obvious question: why did Marx suggest Proudhon was an idealist given that he obviously was not? Then again, this is hardly an isolated case and most Marxists have tended to follow this example when trying to critique anarchism. As informed readers of Marxist polemics against Anarchism will know, the notion of post-truth has existed far longer than most acknowledge.

Given the level of nonsense in it, it is perhaps understandable why Proudhon did not bother replying — if personal and political events had not made responding difficult, he surely would have thought no one who has read his book would take it seriously. He was right — except that the two volumes of *System of Economic Contradictions* are not an easy book and few readers of Marx bother to compare him to what Proudhon actually wrote. All in all, the words of scientist (and, obviously, non-anarchist) Richard Dawkins against one of his critics are applicable here:

> "we are in danger of assuming that nobody would dare to be so rude without taking the elementary precaution of being right". ("In Defence of Selfish Genes," pp. 556–573, *Philosophy*, Vol. 56, No. 218, p. 556)

Given that many Marxists regurgitate previous attacks on anarchism when putting pen to paper, it is not academic or obscure to discuss things like this. The echoes of Marx's 1847 book are still being heard today and it aids our current activity and theory to understand what was wrong with that critique and subsequent ones. To not know our own history, to not know our own theorists, means being at a disadvantage against those who pretend to do.

Beyond the dishonesty, Marx's work is of note for the alternative he sketched to Proudhon's market socialism — and "sketched" is being generous. It amounts to a few sentences and is rooted

in generalising from an example of two workers and two products to an economy of millions of workers and products. Given this, perhaps it is not surprising that the Bolshevik experiment failed so spectacularly — Marx clearly had no notion of the need for gathering, processing and implementing the information required for central planning. He and Engels always presented this process as simple rather than the bureaucratic nightmare it would be.

It should be said that Marx did make contributions to socialism and the understanding of capitalism. Even Bakunin recognised this and said so, repeatedly. This should not stop us recognising that he built upon an analysis started by others (not least, Proudhon) and that his arguments for practical activity were deeply flawed. Bakunin, not Marx, was right about the fate of "political action" (in reformism) and the "dictatorship of the proletariat" (in tyranny).

So on the 100th anniversary of the Russian Revolution, we can but hope that socialists will reflect on the ideological roots for the failure rather than seek solace in the post-hoc rationalisations began by Trotsky. After all, the Bolsheviks remained true to the vision of a centralised economic system based on nationalisation. As with Marx, workers' self-management of production did not figure highly (if at all) in Bolshevik visions of "socialism" — unlike anarchists from Proudhon onwards. Similarly, they remained true to the vision of centralised, hierarchical and unitarian political structure even if it were based, nominally, on working class organisations, the soviets (workers councils), rather than the orthodox Marxist position of capturing and transforming the current State (see section H.3.10). As Kropotkin put it:

> "It is therefore essential that to free themselves the masses who produce everything without being allowed to control the consumption of what they produce, find the means which enable them to display their creative forces and to develop themselves new, egalitarian, forms of consumption and of production.
>
> "The State and national representation cannot find these forms. It is the very *life* of the consumer and of the producer, his intellect, his organising spirit which must find them and improve them by applying them to the daily needs of life.
>
> "It is the same for forms of political organisation. In order to free themselves from the exploitation they are subjected to under the supervision of the State, the masses cannot remain under the domination of the forms which prevent the blossoming of popular initiative. These were developed by governments to perpetuate the servitude of the people, to *prevent it from letting its creative force blossom* and to develop institutions of egalitarian mutual aid. New forms must be found to serve the opposite goal." (*La Science moderne et l'anarchie* [Paris: Stock, 1913], p. 323)

This means that the Russian experience has confirmed that socialism has to be free — libertarian — or not at all. Sadly, unlike when AFAQ was started 21 years ago, "libertarian" has become increasingly associated with the right in Britain as it has in the United States. This is of obvious concern for all genuine libertarians. I have addressed the history of libertarian in *AFAQ* and its blog, which — like the revision of non-published appendices — has been somewhat quiet of late. An obvious exception was the posting of *160 years of Libertarian* this year to mark the coining of *libertaire* by Joseph Déjacque. As well as including a new and complete translation of Déjacque's 1857 "Open Letter" to Proudhon, it covers anarchist use of the term and the right's attempt to steal the word.

Suffice to say, the mess which is Wikipedia's entry on "libertarian" shows how distinct Anarchism is from Liberalism — unsurprisingly, given that Proudhon's seminal *What is Property?* and other works are obviously an extended critique of (classical) liberalism. For the right, "liberty" means little more than those with private power being able to restrict the freedom of the rest. What is annoying is that they use the good word "libertarian" to describe this regime of private power. Kropotkin's words from 1913 are still as relevant now as then:

> "In today's society, where no one is allowed to use the field, the factory, the instruments of labour, unless he acknowledge himself the inferior, the subject of some Sir — servitude, submission, lack of freedom, the practice of the whip are *imposed* by the very form of society. By contrast, in a communist society which recognises the right of everyone, on an egalitarian basis, to all the instruments of labour and to all the means of existence that society possesses, the only men on their knees in front of others are those who are by their nature voluntary serfs. Each being equal to everyone else as far as the right to well-being is concerned, he does not have to kneel before the will and arrogance of others and so secures equality in all personal relationships with his co-members.
>
> "[...] We finally realise now that without communism man will never be able to reach that full development of individuality which is, perhaps, the most powerful desire of every thinking being. It is highly probably that this essential point would have been recognised for some time if we had not always confused *individuation* — that is to say, the complete development of individuality — with *individualism*. Now, individualism – it is high time to understand this — is nothing but the *Every man for himself, and the Devil take the hindmost* of the bourgeoisie, who believed to find in it the means of freeing himself from society by imposing on workers economic serfdom under the protection of the State" (Op. Cit., pp. 163–5)

Of course, thanks to Bolshevism, "communism" is usually viewed to mean central-planning (or what Anarchists more accurately call State-capitalism — see section H.3.13) but we should not forget that Kropotkin simply meant distribution according to *need* rather than *deed*: which was what Joseph Déjacque had argued for in 1857 against Proudhon's market socialism (distribution according to the products of labour). Nor should we forget the desire for genuine freedom, for the free association of equals rather than that of master-servants driven by economic necessity, which inspired the coining of the term "libertarian" in 1857 and its subsequent embrace by Anarchists world-wide. Hopefully recounting the origins of the word, showing how and why the propertarians stole it, will make more people refuse to let the right use it — we can only hope that by 40th anniversary of AFAQ they will be called propertarians by all...

Finally, it is also 175 years from Kropotkin's birth. I'm glad to note that the all-too-common notion of Kropotkin as "the gentle sage" is being replaced by a more accurate account of his politics. Rather than being one of the best served Anarchist thinkers in terms of their works, only a fraction of his writings is available in English. His articles for French, British and Russian anarchist papers are still mostly unknown and even his final book, the last book published in his lifetime, 1913's *La Science moderne et l'anarchie* has never been translated in full (although I have been working to remedy that and next year, 2018, will see AK Press finally publish *Modern Science and Anarchy* in English translation).

So our understanding of Kropotkin's works is to some degree incomplete. Many accounts of his ideas are based on his most general works, which cannot help but skew our understanding of his ideas. In short, his works most focused on the labour movement have not generally been published as pamphlets and when they have (such as the English-language work "Politics and Socialism") they have rarely been reprinted. These articles help flesh out why Anarchists are against the State, against using it to abolish capitalism, and what our alternative to electioneering is (see section J).

Rather than oppose the State for idealistic reasons, Anarchist anti-Statism is based on a class analysis of it — the recognition that it exists to impose minority class rule and has developed specific features to do so. This means that utilising the bourgeois State — or a State, like the Bolsheviks, marked by centralisation and unitarian structures — will not create socialism. This is because the modern State is first and foremost a *bourgeois* structure:

> "the State, with its hierarchy of functionaries and the weight of its historical traditions, could only delay the dawning of a new society freed from monopolies and exploitation [...] what means can the State provide to abolish this monopoly that the working class could not find in its own strength and groups? [...] what advantages could the State provide for abolishing these same privileges? Could its governmental machine, developed for the creation and upholding of these privileges, now be used to abolish them? Would not the new function require new organs? And these new organs would they not have to be created by the workers themselves, in *their* unions, *their* federations, completely outside the State?" (Kropotkin, Op. Cit., pp. 91–2)

This shows the alternative to social democracy, namely militant labour struggle: what became known as syndicalism — although, as *Direct Struggle Against Capital* shows, Kropotkin had advocated it in the late 1870s and early 1880s. The notion that there is a fundamental difference between anarchism and syndicalism cannot be supported (see section H.2.8). True, anarchism was initially reformist (Proudhon was opposed to strikes) but modern, revolutionary, anarchism was born in the First International and took a syndicalist position from the start. Kropotkin, like other revolutionary anarchists, took this "Bakuninist" position — although, like Bakunin, he did not think unions *by themselves* would *inevitably* be revolutionary and so also saw the need for anarchists to organise as anarchists to influence the class struggle (see section J.3).

Likewise, we should not become fixated on unions for in 1905 — twelve years before Lenin — Kropotkin saw the possibility of the soviets as a means of fighting capitalism and statism and explicitly linked them to the Paris Commune:

> "the workers' Council [...] had been appointed by the workers themselves – just like the insurrectional Commune of August 10, 1792 — [...] This very much reminds us of the Central Committee which preceded the Paris Commune of 1871, and it is certain that workers across the country should organise on this model [...] these councils represent the revolutionary strength of the working class. [...]
>
> "This is direct action at work [...] Let it not then be said that the workers of the Latin nations, by preaching the general strike and direct action, have taken the wrong path. The Russian working people, by applying these for themselves, have proven

> that their brothers in the West were perfectly right. [...] it is certain that the workers who succeeded in forcing the autocracy to capitulate will also force capitalism to do so. They will do more. They will be able to find forms of communal industrial organisation. But first they must first send packing the hypnotisers [*endormeurs*] who tell them: 'Just make the political revolution; it is too early for the social revolution.' [...] and while the socialist theoreticians strove to prove the impossibility of any general strike, they, the workers, began to go through the workshops, putting a stop to work everywhere. [...] After a few days, the strike was absolutely general [...] It was a whole people going on strike [...]
>
> "A new force was thus established by the strike: the force of the workers asserting themselves for the first time and setting in motion this lever of any revolution — *direct action.* [...] It is equally obvious, furthermore, that the revolution will not be the work of a few months, but of several years. At the very least, what has been accomplished so far proves that this revolution will be of a social nature [...] bourgeois elements have already faded behind the two great forces of the peasants and the workers, and the two great means of action have been the general strike and direct action.
>
> "There is every reason to believe that the workers of the cities will understand the strength conferred by direct action added to the general strike and, imitating in this the peasant rebels, they will likely be led to get their hands on all that is necessary to live and produce. Then they can lay in the cities the initial foundations of the communist commune." ("L'Action directe et la Grève générale en Russie," *Les Temps Nouveaux*, 2 December 1905)

This, obviously, is echoed in *La Science moderne et l'anarchie* but it has its origins in the Bakunin and the Federalist wing of the First International, as reflected Kropotkin's writings on the labour movement from the 1870s onwards (see *Direct Struggle Against Capital* for a representative selection across the decades) and ably explored by Robert Graham in *'We Do Not Fear Anarchy – We Invoke It': The First International and the Origins of the Anarchist Movement* (Oakland/Edinburgh: AK Press, 2015). As Bakunin put it:

> "Workers, no longer count on anyone but yourselves [...] Abstain from all participation in bourgeois radicalism and organise outside of it the forces of the proletariat. The basis of that organisation is entirely given: the workshops and the federation of the workshops; the creation of funds for resistance, instruments of struggle against the bourgeoisie, and their federation not just nationally, but internationally. The creation of Chambers of Labour [...] the liquidation of the State and of bourgeois society [...] Anarchy, that it to say the true, the open popular revolution [...] organisation, from top to bottom and from the circumference to the centre" ("Letter to Albert Richard", *Anarcho-Syndicalist Review* No. 62, p. 18)

Kropotkin also pointed to the neighbourhood assemblies, or sections, of the Great French Revolution as a form of popular self-organisation which anarchists today could learn from (see chapters XXIV and XXV of *The Great French Revolution*, both included in *Direct Struggle Against Capital*). In this way would develop "independent Communes for the *territorial* groupings, and

vast federations of trade unions for groupings *by social functions* — the two interwoven and providing support to each to meet the needs of society". Added to these are the "groupings *by personal affinities* — groupings without number, infinitely varied, long-lasting or fleeting, emerging according to the needs of the moment for all possible purposes". These "three kinds of groupings" would ensure "the satisfaction of all social needs: consumption, production and exchange, communications, sanitary arrangements, education, mutual protection against aggression, mutual aid, territorial defence; the satisfaction, finally, of scientific, artistic, literacy, entertainment needs." (Kropotkin, *La Science moderne et l'anarchie*, pp. 92–3)

So Kropotkin is very clear that the link between now and the future is forged in the struggle and so — see section I.2.3 — we build the framework of Anarchism by our struggles against Capital, State and other forms of hierarchy (such as patriarchy, racism, homophobia, xenophobia, etc.). Also of note is his comment that the revolution would not take months, but years. This shows that notions of "overnight" revolution habitually flung at anarchists by Marxists — see section I.2.2 — are nonsense. As such, we must remember that Anarchism is something for the here-and-now and that we must think in terms of a long-term strategy.

All of which points to Kropotkin as a realistic revolutionary and advocate of class struggle as the means of creating a better world rather than some sort of "gentle sage" with utopian visions, as some seem to think (see my

Anarcho-Syndicalist Review No. 64/5 for a summary). Yet this does not mean we have an "unknown" Kropotkin for his revolutionary class struggle politics were there to be found even in his well-known "general" works if you were prepared to look: sadly, neither the British reformist Anarchists of the post-war period nor the Marxists were going to do that!

So 21 years on, we have a better notion of the Anarchist tradition than ever before and I hope AFAQ played its part in that. Simplistic accounts – which seem to be based on little more than looking up "Anarchism" in the dictionary — should be harder to produce. It will take a particularly studious ignorance to proclaim Anarchism is just "anti-State" given its actual history as a theory and a movement. Still, we can sadly expect the right and left — for their own reasons — to continue to ignore Anarchism's socialist core. At least we have resources like AFAQ to show the accuracy of such claims.

When AFAQ was started, in the early 1990s, neo-liberalism appeared to be triumphant, "socialism" (i.e., Stalinism) had just collapsed and the "great moderation" was proclaimed. Yet the triumphalism could not hide the problems facing society — not least, the ever-increasing inequality as well as ecological crisis. Come the financial crisis of 2007–8 – caused, in part, because the neo-liberal assault on the working class had been *too* successful — the critique of capitalism and various economic theories developed to defend it AFAQ had summarised proved its usefulness (see section C)

After a rush to State-intervention — blowing the dust of Keynes and, for a few, even Marx — to stabilise the situation (at least for the few), the rush to austerity (at least for the many) began. AFAQ had summarised (in section C.9.1) why cutting wages would be counter-productive — and so it was. Austerity was proven to be counter-productive, making the situation worse as predicted by anyone who did not worship the holy textbooks of neo-classical or "Austrian" economics — even the most neo-classical Keynesian economist grasped the situation. Yet class interests and its ideologues proved — as would be expected — more significant.

In the UK, the Tories rushed to inflict austerity onto society and blamed a crisis caused by the elite on welfare provision for the many. Unlike in Greece and elsewhere in Europe, austerity was

not imposed upon the government by the heavy hand of the EU but was embraced willingly – so killing off a recovery and stalling the economy for two years. When growth finally returned, austerity was proclaimed vindicated in spite of the critics being proven correct. Worse, it returned to trend growth without the higher growth usually associated with an exit from recession. Still, the utter failure of austerity did not stop Tory politicians in the UK proclaiming its necessity years later — while holding up austerity-struck Greece to warn against the horrors of not imposing austerity. Logic and reality will always come a distant last when defending the powers and the profits of the few. Little has changed since 1846 when Proudhon sarcastically noted:

> "Political economy — that is, proprietary despotism — can never be in the wrong: it must be the proletariat." (*Property is Theft!*, p. 187)

The crisis produced popular resistance, although obviously not enough. Anarchists took part in these struggles against austerity. This caused some commentators problems — why were Anarchists protesting against governments seeking to reduce the State? Yet Anarchism has never been just anti-State (surely "property is theft" shows that?). We are against the State because it defends that property and theft, so using economic crisis to impose austerity is State activity simply as a weapon for the few against the many.

Anarchists do not side with the State against its subjects. Rather we fight with our fellow workers against attempts by governments to save capitalism by pushing the costs of so doing onto the general population. This does not mean we favour State welfare any more than any other State activity. Welfare, like the State itself, must be abolished *from below* by the many, not from above by the few seeking to increase their wealth and power (see section J.5.15). Similarly, the alternative to nationalisation (or bailouts) is not privatisation but rather *socialisation* — workers' control. As Kropotkin suggested, echoing Proudhon (*General Idea of the Revolution*, p. 151), there is a lack of imagination and class analysis in State socialism:

> "Well, it is to increase the capital owned by the modern bourgeois States that the radicals and socialists are working today. They did not even bother to discuss — like English co-operators asked me one day — if there were no way to hand over the railways *directly* to the railway-workers' trade-unions, to free the enterprise from the yoke of the capitalist, instead of creating a new capitalist, even more dangerous than the bourgeois companies, the State." (Op. Cit., p. 325)

Needless to say, the much more extensive welfare State for the rich should be targeted for reduction and eventual elimination long before anything else is even considered for reform.

Such popular struggles against privatisation or austerity — against the decisions and actions of the State against its subjects, never forget – will build the confidence and organisations needed to *really* change things, to *really* reduce the authority of the State and win improvements in the here-and-now. Indeed, the UK anti-union laws show that our masters know this, know where *our* real power lies: not in Parliament but in our workplaces and streets. This — direct action and solidarity — is what creates the possibility for revolution.

Neo-liberalism has singularly failed in terms of the promises it made ("trickle down," its anti-union arguments, productivity growth has trended down since the 1980s, the private profiteering associated with previously nationalised industries, etc., etc., etc.) — however, it did make the

rich richer, its usually unstated goal, and all that can be forgiven and forgotten. However, its limitations are being felt — it is in danger of so hollowing out society that capitalism itself is threatened. This is being reflected in the ballot box. As discussed in section D.1, we may be at one of those points where, thanks to popular discontent and the pressing need to maintain the system, the State is used more to repair the damage that an inherently unstable capitalism inflicts on society than it is used to bolster the property and power of the few.

Yet we must never forget the nature of the State as an instrument of minority classes and that there are vested interests at work (see section B.2). This means that leaving change to politicians will result in little improvement. We need an anti-parliamentary movement:

> "We see in the incapacity of the statist socialist to understand the true historical problem of socialism a gross error of judgement [...] To tell the workers that they will be able to introduce the socialist system *while retaining the machine of the State* and only changing the men in power; to prevent, instead of aiding, the mind of the workers progressing towards *the search for new forms of life* that would be *their* own — that is in our eyes a historic mistake which borders on the criminal." (Kropotkin, Op. Cit., pp. 124–5)

The lesson of both the rise of social democracy at the end of the nineteenth and Bolshevik success in 1917 is that Anarchists need to organise to influence the class struggle, to present a real alternative both in terms of visions of tomorrow *and* how to win improvements today. The latter is more important in many ways for without that we will never be in a position to create the former: we will be an isolated sect complaining from the side-lines rather a key factor in moving society towards freedom. As 1917 shows, without an effective organised anarchist movement then others will take advantage of the situation — by using ideas and actions previously raised by Anarchists — for non-Anarchist ends.

The key, then, is to find positive areas to apply anarchist ideas, to encourage those subject to hierarchies to assert themselves and change themselves while changing their conditions. Only the struggle for freedom can make us able to live as free and equal individuals: that means we need be part of social struggle and self-organisation, in other words we need "Anarchy in Action" (see section J). Without that, Anarchy remains a dream — and the powers of State and Capital will continue to crush what little freedom we have. Resistance is fertile — and why direct action is always opposed by the authorities and their ideological shrills.

In 2017 it is clear we Anarchists have much to do. Time will tell if we are up to the challenge — but one thing is sure, as Kropotkin said only those who do nothing make no mistakes.

An Anarchist FAQ after 20 years

It is now 20 years since *An Anarchist FAQ* (AFAQ) was officially launched and six years since the core of it was completed (version 14.0). It has been published by AK Press as well as translated into numerous languages. It has been quoted and referenced by other works. So it has been a success — although when it was started I had no idea what it would end up like.

I am particularly happy that AK Press took the time and invested the resources to turn it into a book. Volume 1 of AFAQ (sections A to F plus the appendix on "The Symbols of Anarchy") was published in 2008 followed by volume 2 (sections H to J, slightly abridged) in 2012. Both volumes are impressive in both size and presentation — they look lovely.

Since then, though, there has been little done — a revision of an appendix about a laughingly bad Marxist anti-anarchist diatribe (more or less a copy of Hal Draper's equally bad *Two Souls of Socialism*). The unfinished appendix on the Russian Revolution remains so and the other appendices need to be revised. I hope to correct this by the 30th anniversary of AFAQ but no promises!

In my defence, I have been busy. Numerous other articles and reviews have been produced thanks to the work embodied into AFAQ and it has produced two other books: anthologies of Proudhon's and Kropotkin's works (*Property is Theft!* and *Direct Struggle Against Capital*, respectively). Both came about due to the research AFAQ needed — it showed that the picture we had of both key thinkers was not completely accurate. Both confirm the analysis of AFAQ on the nature of anarchism (i.e., libertarian *socialism*) and its history. Both would have been helpful in days-past when debating propertarians (right-wing "libertarians") and Marxists.

Taking Proudhon, before *Property is Theft!* very little of his voluminous writings had been translated into English and much of his writings — particularly his journalism and polemics during the 1848 revolution — were unknown. We now have a better idea of his ideas and contribution to anarchism as well as allowing various false, but commonplace, assertions about his ideas to be refuted.[1] Marx's claim that he advocated "Labour Notes" (i.e., pricing and payment by hours worked) was simply a baseless assertion made in the face of clear evidence in *System of Economic Contradictions* to the opposite (he advocated generalising "bills of exchange" as many commentators correctly noted).[2] *The Poverty of Philosophy* is, as Proudhon noted at the time, "the libel of one doctor Marx" and should be dismissed as "a tissue of crudities, slanders, falsifications, and plagiarism."[3] Sadly, this deeply dishonest work has shaped our perception of Proudhon (even in the anarchist movement) but hopefully the real Proudhon — advocate of self-managed (market) socialism — will become better known.[4]

[1] See my *"Proudhon on Race and the Civil War: Neither Washington nor Richmond"*, **Anarcho-Syndicalist Review**, No. 60

[2] See my *"Proudhon's constituted value and the myth of labour notes"*, **Anarchist Studies**, forthcoming 2017. [now published: *"Proudhon's Constituted Value and the Myth of Labour Notes"*, **Anarchist Studies**, vol. 25, No. 1]

[3] **Correspondance** (Paris: Lacroix, 1875) II: 267–8

[4] See my *"Laying the Foundations: Proudhon's Contribution to Anarchist Economics"*, **Accumulation of Freedom: Writings on Anarchist Economics** (Oakland/Edinburgh/Baltimore: AK Press, 2012), Anthony J. Nocella, Deric Shannon and John Asimakopoulos (Editors), 64–78

It also became clear that those who most loudly proclaimed their allegiance to Proudhon, namely Benjamin Tucker and other (but not all) individualist anarchists, were very selective in what they took from him. Proudhon's critique of wage-labour and corresponding advocacy of self-management and socialisation were lost on Tucker.[5] Revolutionary anarchism is closer to Proudhon's ideas than those who claimed his mantle — but this championing of Proudhon by Tucker shaped how many viewed the Frenchman and yet another false image (albeit less false than the one Marx invented) was created.

Similarly with Kropotkin — while more of his writings were available in English, these were the more general introductions to anarchism and his "day-to-day" journalism in the anarchist press (particularly the French) was unknown. This gave a somewhat skewed impression of his ideas and helped those seeking to portray him as a utopian or reformist (whether Marxists or self-proclaimed anarchists). This was because while the key texts on *ends* were readily available, the texts on *means* were less so. This does not excuse those — like the reformist ("liberal") wing of British anarchism in the 1960s onwards (and who were readily echoed by Marxists) — who portrayed Kropotkin as anything other than the revolutionary, class struggle anarchist he was for even these general works included references to unions, strikes, insurrections and so forth. Moreover, Caroline Cahm's excellent book *Kropotkin and the Rise of Revolutionary Anarchism, 1872–1886* has shown this aspect of anarchism since 1989 — indeed, *Direct Struggle Against Capital* owes a great deal to her research in tracking down numerous key articles from Kropotkin's early journalism.

These two works also indicate another improvement over the past 20 years – the increase in good quality research on anarchism and anarchists. We have had Emma Goldman's papers published while AK Press has just started the publication of Errico Malatesta's *Collected Works*. Shawn Wilbur continues his sterling work making Proudhon accessible and, moreover, has translated Bakunin's *Collected Works* for PM Press. Nestor Makhno's writings and autobiographies are also available in English. To name just a few amongst a host of excellent histories of movements and individuals.

All this is very welcome but more is needed — thinkers like Luigi Fabbri need their works available in English and key source materials (such as James Guillaume's *L'internationale: documents et souvenirs*) are also in need of translation. Even for figures like Kropotkin, a whole wealth of material in French, Russian and English which remains inaccessible and/or untranslated in archives.[6] However, such research and translation is time and resource consuming and few anarchists have much of either (being working class people in the main, we need to both earn a living and have a social life). Yet compared to where the movement was when AFAQ was started, we have seen significant progress. I hope that my work has helped this in some way. One thing is sure, AFAQ does save a lot of time because it can be referenced when the all-too-often myths about anarchism are raised (yet again!) by Marxists, propertarians and others.

As with any project, once it was completed I realised how I should have started. What is clear now is that the usual account of anarchism which starts in the distant past before discussing William Godwin and Max Stirner is not right. Regardless of their merits, neither of these people influenced the rise of anarchism as a theory or a movement. Indeed, both were discovered by a

[5] See my *"Proudhon, Property and Possession"*, **Anarcho-Syndicalist Review**, No. 66

[6] See my *"Sages and movements: An incomplete Peter Kropotkin bibliography"*, **Anarchist Studies**, Vol. 22 No. 1 and *"Kropotkin, Woodcock and Les Temps Nouveaux"*, **Anarchist Studies**, Vol. 23. No. 1)

fully developed anarchist movement in the 1890s and, ironically, the only impact Stirner had in his lifetime was on Marx and what became Marxism (needless to say, Marx distorted Stirner's ideas just as much as he did Proudhon's or Bakunin's).

Anarchism developed in the context of the French workers' movement and so embodied the legacies of the French Revolution (and its "Anarchists") as well as the critique of liberalism and capitalism current within French radical circles. Proudhon's seminal *What is Property?* was not written in a social vacuum nor did his ideas develop without a social and intellectual context. Anarchism, then, was born in the context of the rising labour movement. It flows from the associationist ideas raised by French workers faced with industrialisation — that is, proletarianisation. They rejected the inequalities and hierarchies associated with the rise of capitalism as sought to apply democratic ideas within the workplace and so abolish wage-labour by association.

This reflected workers during the Great French Revolution about whom one building employer moaned, "by an absurd parody of the government, regard their work as their property, the building site as a Republic of which they are jointly citizens, and believe in consequence that it belongs to them to name their own bosses, their inspectors and arbitrarily to share out the work amongst themselves."[7] Proudhon echoed this position repeatedly throughout his works:

> "Workers' Associations are the locus of a new principle and model of production that must replace present-day corporations [...] The principle that prevailed there, in place of that of employers and employees [...] is participation [...] There is mutuality, in fact, when in an industry, all the workers, instead of working for an owner who pays them and keeps their product, work for one another and thereby contribute to a common product from which they share the profit."[8]

Workers' self-management of production by means of associations has been a part of anarchism *from the start* (from *What is Property?*: "leaders [...] must be chosen from the workers by the workers themselves"[9]) and any form of "anarchism" which rejects this in favour of factory fascism (wage-labour) is hardly libertarian.

This means that the all-too-common notion of anarchism being a fusion (confusion!) of "socialism" (presumably Marxism) and liberalism is simply wrong. Anarchism is a school of socialism ("the no-government system of socialism", to quote Kropotkin[10]) and cut its teeth critiquing liberalism and the class-ridden, unequal and unfree society it was creating. It was then members of this well-defined movement who could look back at the likes of Godwin and popular movements note similarities between their ideas on the state, property, etc. and those which had arisen later and, crucially, independently of them. These pre-1840 thinkers and movements can be better described as anarchistic rather than anarchist as such.

This analysis of where anarchism comes from is relevant to current events. Take inequality, or more correctly the recognition within mainstream politics and journalism that massive inequality exists and is rising. When AFAQ was started, this was generally denied but now the recognition of reality is at least acknowledged and, often, deplored, by some of the elite (usually politicians

seeking votes). The denials of reality could be surreal — I remember reading an edition of the *Economist* at the turn of the millennium which had editorialised that the 20th century had shown Marx's predictions of a tiny minority of wealthy capitalists surrounded by a sea of impoverished proletarians to be false while, a few pages elsewhere, had a report on how inequality in America and elsewhere in the West had exploded so resulting in a few very wealthy people and the rest stagnating. The contradiction between ideology (faith) and reality (facts) could not have been more obvious — at least if you weren't the editors or a true believer in capitalism.

Perhaps needless to say, the reasons why this has happened have been much discussed but as it has been within a neo-classical framework it has not gotten very far. This is understandable as that ideology was developed precisely to rationalise and justify the inequalities of capitalism and not to explain them (see section C). Taking an anarchist analysis (as first expounded by Proudhon before being taken up by Marx) it is easy to understand why inequality has expounded. As section C.2 indicates, labour is exploited by capital and the former has been weakened over the last four decades by neo-liberalism (not least by increased state regulation of unions) and so workers cannot retain more of the value we produce as the product is monopolised by the owning class and senior management.

This means, for example, that the exploding wages of CEOs is *not* an example of "market failure" as some claim but rather an expression of how the capitalist market *is meant to work*.[11] Which all flows back to where anarchism came from, namely the (French) workers' movement, and what it was born fighting, namely a rising capitalism and its ideological expression of (classical) liberalism.

Thus we find John Locke's *just-so* story justifying property results "by a tacit and voluntary consent" to "a disproportionate and unequal Possession of the Earth"[12] Yet any agreement between the owners and proletariat would favour the former and once the worker has consented to being under the authority of the wealthy then her labour and its product is no longer hers: "Thus the grass my horse has bit;

the Turfs my Servant has cut; and the Ore I have digg'd... become my *Property*." The workers' labour "hath fixed my [the employer's] property" in both the product and common resources worked upon.[12] Locke's defence of property as resting on labour becomes the means to derive the worker of the full product of her labour[13] — as intended.

Compare this with anarchism. Proudhon's analysis brings him into conflict with Locke and the liberal tradition. Rejecting the notion that master-servant contracts were valid, he dismisses its basis of property in the person in a few words: "To tell a poor man that he has property because he has arms and legs, — that the hunger from which he suffers, and his power to sleep in the open air are his property, — is to play with words, and add insult to injury." Property, then, is solely material things — land, workplaces, etc. — and their monopolisation results in authoritarian relationships. To "recognise the right of territorial property is to give up labour, since it is to relinquish the means of labour", which results in the worker having "sold and surrendered his liberty" to the proprietor. This alienation of liberty is the means by which exploitation happens. Whoever "labours becomes a proprietor" of his product but by that Proudhon did "not mean simply (as do our hypocritical economists)" — and Locke — the "proprietor of his allowance, his

[11] See my *"Pay Inequality: Where it comes from and what to do about it"*, **Anarcho-Syndicalist Review**, No. 58

[12] Locke, 289

[13] C. B Macpherson, **The Political Theory of Possessive Individualism: Hobbes to Locke** (Oxford: Oxford University Press, 1964), 214–5

salary, his wages" but "proprietor of the value which he creates, and by which the master alone profits." Locke is also clearly the target for Proudhon's comment that "the horse [...] and ox [...] produce with us, but are not associated with us; we take their product, but do not share it with them. The animals and workers whom we employ hold the same relation to us."[14]

As noted, the rise in inequality is even acknowledged by those who helped create it. Thus we find the *Economist*[15] admitting that "Liberalism depends on a belief in progress but, for many voters, progress is what happens to other people. While American GDP per person grew by 14% in 2001–15, median wages grew by only 2%." The journal also states that "liberals also need to restore social mobility and ensure that economic growth translates into rising wages" yet social mobility falling while inequality rises should be unsurprising (it is easier to climb a hill than a mountain) as is the awkward fact that the least "liberal" nations (continental Europe) have higher social mobility than the USA or UK ("liberal" nations). As for increasing wages, the neo-liberal agenda has been to regulate workers and our unions by anti-union laws to stop just that happening which makes a mockery of the claim that "[i]n the 1970s liberals concluded that the embrace of the state had become smothering and oppressive."[16] It is not hard to conclude that for "liberals" state intervention against workers is just normal — just like defence of capitalist property-rights is not oppressive. Rest assured, their solution to the problems caused by neo-liberalism is yet more neo-liberalism: "a relentless focus on dismantling privilege by battling special interests, exposing incumbent companies to competition and breaking down restrictive practices." Which was, as discussed in section J.4.2, the rhetoric used to increase state regulation of unions which, in turn, produced all the evils the journal is bemoaning now and which are the opposite outcome to those promised to justify this onslaught on working people and our organisations.

We should not be surprised. Let us not forget that belief is defined as "an acceptance that something exists or is true, especially one without proof" (such as Locke's stories which underlie liberalism in all its forms, particularly propertarianism). Anarchists, however, prefer to study the facts and draw conclusions based on them. The facts of the last few decades clearly support Proudhon's analysis — rising productivity and level wages show that workers are exploited in production and allows the few to monopolise the gains derived from productivity increases. He also indicated in *System of Economic Contradictions* how the favoured "solution" of liberalism — more competition — resulted in monopolies (i.e., big companies) which meant that the amount of investment needed to enter the market was an objective barrier which, as well as reducing competition, turned the bulk of the population into wage-workers who have "sold their arms and parted with their liberty" to the few.[17]

Thus the social question remains fundamentally the same as when Proudhon took pen to paper. As is its answer: to end these social problems means ending master-servant relations within the workplace by means of association and abolishing the state that protects them by means of federalism. An account of anarchism which ignores all this would be a travesty and produce false picture of what anarchism is and *what counts as anarchist*.[18] Sadly, this false picture still exists in academic and other works — based on little more than if someone calls themselves an

anarchist then they are. Few (bar the propertarians who fail to recognise the oxymoronic nature of "anarcho"-capitalism) would tolerate adding Nazism to accounts of socialism based on them having "socialist" in their party name — but even this low bar seems to be considered too high for some when it comes to discussing anarchism!

AFAQ was started in the early 1990s, just after the collapse of Stalinism ("socialism" or "communism") and the corresponding triumphalism of neo-liberals. Japanese-style corporate capitalism was in its "lost decade" and neo-liberalism was being accepted as "common-sense" within the leadership of the "official" opposition (the British Labour Party and its equivalents elsewhere). Yet within ten years, we had the bursting of the dot com bubble and a deep crisis in East-Asia. The latter saw economies previously praised by advocates of capitalism as being a heaven of "free-market" policies become, overnight, statist nightmares. Such is the power of ideology.

Then came the crisis of 2007–8, a crisis caused by neo-liberal policies which — incredible as it may seem — became the means of imposing more of said policies in the name of "Austerity". The Tories in the UK were particularly good (if that is the right word!) at turning a crisis caused by the 1% and their favoured policies into one apparently caused by New Labour not letting single mothers starve. While the narrative of the crisis turned the facts on their head, they could not stop the policies being implemented dragging out the crisis and turning it into the slowest recovery on record. So the financial crisis showed the bankruptcy of neo-classical economics in two senses. First, mainstream economists did not predict it (while post-Keynesian economists did). Second, the notion of "expansionary austerity" was tried and proven to be as nonsensical as even the mainstream ("bastard") Keynesians predicted. This resulted in a downward spiral whenever it was tried – whether Greece or the UK (so confirming section C.9 of AFAQ). However, the critics being proven correct was not considered good enough and so when growth — finally! — returned to the UK, the architects of this harmful policy were proclaimed by the much of mainstream press (including the *Financial Times*) to have been vindicated! Why? Simply because, as with Milton Friedman (see section C.8), the Tories made the rich richer and skewed state intervention even further towards the few.[19]

The global economic crisis rolls on — a classic example, as per section C.7, of a crisis caused by labour being too weak. We have seen the "traditional" left ride the wave of protest in many countries and divert it into parliamentarian avenues — were it quickly died. The example of Greece is the classic example with a left-wing anti-austerity party (Syriza) elected only for it to end up imposing even more stringent austerity measures than before. This confirmed our analysis in section J.2 of AFAQ on why anarchists reject electioneering and support direct action. The pressures on left-wing governments from big business and capital, the willingness the state bureaucracy (the civil service, etc.) to frustrate the policies and decisions of popularly elected governments, all played their role even without the years of campaigning for votes which have traditionally watered-down radical parties long before they achieve office (but not *real* power). Still, we are sure the true-believers will proclaim that *next* time they will not make the same mistakes as the Social Democrats, the Greens, and now Syriza. And state socialists call anarchists utopians…

So while proclaiming itself "Scientific Socialism" (an expression, like so much of Marxism, appropriated from Proudhon), it adherents seem wonderfully immune from learning from experience. Marxism continues, albeit in smaller numbers, to put countless numbers off socialism by

[19] See my *"Boomtime in Poundland: Has Austerity Worked?"*, **Anarcho-Syndicalist Review,** No. 63

presenting the cure (socialism) as being worse than the disease (capitalism). This may explain why Marxists so regularly distort anarchist ideas — if Marxism were so robust they would have no need to invent nonsense about anarchism. Yet they do — and section H.2 continues to be of use in replying to them. It may also explain why some Marxists prefer to invoke the Spanish Revolution than the Russian (understandably given how bad Lenin's regime was!) or seek to associate their ideology with far more appealing forms of socialism (such as syndicalism[20]). Again, AFAQ is there to show the flaws in such attempts — and to show that much of what passes for "Marxism" was first expounded by anarchists[21] but without the authoritarian and metaphysical baggage.

Anarchists have long critiqued state socialism but on the assumption (sometimes unstated or mentioned in passing) that we were the genuine socialists. The logic is simple enough — the state is a hierarchical body and so based on inequality and so state socialism violated socialist principles (namely, equality) and could not, therefore, produce a socialist society. This was based on empirical evidence which shows that states developed to impose minority rule and the conclusion that, as a result, it cannot be used to end it. As Proudhon argued:

> "And who benefits from this regime of unity? The people? No, the upper classes [...] Unity, today and since 1815, is quite simply a form of bourgeois exploitation under the protection of bayonets. Yes, political unity, in the great States, is bourgeois: the positions which it creates, the intrigues which it causes, the influences which it cherishes, all that is bourgeois and goes to the bourgeois."[22]

Even if we smash the existing state and replace it with a new one (marked, like all states, by centralisation and hierarchy, even an elected one) then it will just reproduce a new class system (this is a major theme of section H). The centralised, hierarchical, state is "the cornerstone of bourgeois despotism and exploitation"[23] and "nothing resembles a monarchy more than a unitarian republic [*république unitaire*]."[24] It would be wishful thinking to conclude that an institutional structure so well suited to minority rule could produce a classless society and, as the Bolshevik regime showed (section H.6), we anarchists were proven correct.

Yet with Leninism and Social-Democracy becoming so dominant, anarchists often stopped calling themselves socialists or communists in order to distance themselves (understandably!) from both. If most people understood "communism" to be the Soviet Union then talking about a libertarian, or free, communism may be confusing. Similarly, if "socialism" meant centralisation and nationalisation (rather than federalism and workers' self-management) or slowly making capitalism slightly better (rather than replacing it with something better) then it is understandable that some anarchists would drop the term. Simply put the anarchist vision of socialism was at odds with what most people considered it to mean:

> "socialism is... the extinction of poverty, the elimination of capitalism and of wage labour, the transformation of property, the decentralisation of government, the organisation of universal suffrage, the effective and direct sovereignty of the workers,

[20] See my *"Another View: Syndicalism, Anarchism and Marxism"*, **Anarchist Studies**, Vol. 20 No. 1 for one example.

[22] **La fédération et l'unité en Italie** (Paris: E. Dentu, 1862), 27–8

[23] Proudhon, **Op. Cit.**, 33

[24] Proudhon, **Du principe fédératif** (Paris: E. Dentu, 1862), 140

> the balance of economic forces, the substitution of the contractual regime for the legal regime, etc., etc."[25]

Sadly, some took anti-statism as the defining characteristic of anarchism and forgot the underlying assumption of socialism. AFAQ showed that this was not the case. It also debunked the nonsense of "anarcho"-capitalism (in section F) and subsequent research has shown that the notion of a non-socialist "anarchism" is at odds with the history of anarchism as both a theory and a movement. Even the individualist anarchists — who were the closest to classical liberalism — rejected capitalist property-rights and recognised that capitalism exploited the worker (see section G). Ignoring this Proudhon-influenced analysis and the rough equality its advocate's expected it to produce results in something very much at odds with their aspirations. However, "anarcho"-capitalists are, as when AFAQ was started, just an annoyance for a few zealots on the internet and some academics funded by propertarian "think-tanks" or wealthy backers does not equate to a movement — particularly given the obvious theoretical contradiction between claiming to be "libertarian" while supporting *authoritarian* social relationships (namely, private hierarchies — section B.1). As Kropotkin summarised:

> "They understand that, as they live amidst *sociable* creatures, such as men are, they never would free themselves if they tried to free *themselves alone*, individually, without taking the others into account. To have the individual free, they must strive to constitute *a society of equals*, wherein *every one* would be possessed of *equal rights* to the treasuries of knowledge and to the immense wealth accumulated by mankind and its civilisation, *wherein nobody should be compelled to sell his labour* (and consequently, to a certain degree, his personality) to those who intend to exploit him.
>
> "This is why Anarchy necessarily is *Communist*, why it was born amidst the international Socialist movement, and why an individualist, if he intends to remain Individualist, cannot be an Anarchist.
>
> "He who intends to retain *for himself* the monopoly of any piece of land or property, or any other portion of the social wealth, *will be bound to look for some authority* which could guarantee to him possession of this piece of land, or this portion of the modern machinery — so as to enable him to compel others to work for him.
>
> "Either the individual will join a society of which all the members own, all together, such a territory, such machinery, such roads, and so on, and utilise them for the life of all — *and then he will be a Communist*; or he will apply to some sort of authority, placed above society, and obtain from it the right of taking, for his *own exclusive and permanent use*, such a portion of the territory or the social wealth. *And then he will NOT be an Anarchist: he will be an authoritarian.*"[26]

Hopefully academics will do their research and start to exclude "anarcho"-capitalism from accounts of anarchism and start to note how right-wing "libertarians" have twisted the meaning of the word in order to defend various *private* authoritarian social relationships (not least those

[25] Proudhon, *"Les Confessions d'un révolutionnaire"*, **Oeuvres complètes de P.-J. Proudhon** 9: 306

[26] *"A Few Thoughts on the Essence of Anarchism"*, **Direct Action Against Capital: A Peter Kropotkin Anthology**, 202–3

associated with property). Sadly, given the quality of most works on anarchism, this hope may be unfilled — but at least AFAQ exists to show those interested what anarchism really stands for.

Still, there seems to be an improvement within academic circles – perhaps because there has been an increase in anarchist academics? This can be seen by many important works which have increased our understanding of both anarchist thinkers and movements and which have been published, often by AK Press, in cheaper editions. So in terms of serious research, anarchism is being better served than was often the case in the past — myths are being debunked and I hope AFAQ has played its part in that.

Yet theory without practice is of little use and producing accurate accounts of past anarchists and movements, while important, does not bring anarchy closer. Twenty years is a long time and there is still no sign of the social revolution — although social revolts continue aplenty! Does this mean AFAQ was a waste of time? Far from it! To think that misunderstands what anarchism is — it is not a vision of a "perfect" society but rather a movement aiming to change the world for the better. Sometimes our resistance — like the class struggle it is part of — is small-scale, invisible, securing minor victories or just slowing down the decisions of the powerful (whether the state or the boss). Sometimes our resistance explodes into the public and the revolt becomes newsworthy. Regardless of the size of activity, anarchists work today to make the world a bit more libertarian. As Kropotkin put it:

> "Anarchists are thus forced to work without respite and without delay [...]
>
> "They must reaffirm the main philosophical cornerstones of Anarchy. They must incorporate scientific methods, for these will help to reshape ideas: the myths of history will be debunked, along with those of social economy and philosophy [...]
>
> "They must participate in the daily struggle against oppression and prejudice in order to maintain a spirit of revolt everywhere people feel oppressed and possess the courage to rise up.
>
> "They must thwart the clever machinations of all those parties who were once allies but who now are hostile, who seek now to divert onto authoritarian paths those movements which were originally spawned in revolt against the oppression of Capital and State.
>
> "And finally [...] they have to find, within the practice of life itself and indeed working through their own experiences, new ways in which social formations can be organised, be they centred on work, community or region, and how these might emerge in a liberated society, freed from the authority of governments and those who would subject us to poverty and hunger."[27]

If AFAQ has helped some people to join the struggle, to defend and extend what freedoms we have, to combat inequality in wealth and power, then it has been a worthwhile project even if an anarchist society remains an inspiration rather than a reality. It has brought that society a bit closer by showing the world what anarchism actually is, by debunking myths, by showing that there is an alternative and how the struggles of today create it to some degree.

For never forget that we create the new world when we resist the old. Even today we have the choice of acting in a libertarian manner or in an authoritarian one: we can organise with

[27] *"The Anarchist Principle"*, **Op Cit.**, 200

our fellow workers to resist the oppression and exploitation of our bosses — or be servile, know our place and grumble over low wages; we can resist the decisions of politicians by organising our communities — or wait quietly for four years to vote for the lesser evil; we can take to the streets in protest at the murderous results of racism — or just turn the channel and hope you will remain unaffected; we can struggle against patriarchy — or remain quiet; we can fight to ensure everyone can be themselves — or acquiesce to "popular" prejudices; we can encourage co-operative alternatives to wage-labour, landlordism and officialdom — or quietly consume while muttering about being ripped off.

Choose!

Iain McKay

An Anarchist FAQ after ten years

It is now ten years since "An Anarchist FAQ" (AFAQ) was officially released. A lot has happened over that time, unfortunately finishing it has not been one of them!

Over that decade, AFAQ has changed considerably. It was initially conceived as a energy-saving device to stop anarchists having to continually make the same points against claims that "anarcho"-capitalism was a form of anarchism. As would be expected, the quality of the initial versions and sections were pretty mixed. Most of it was extremely good (even if we do say so ourselves!) and has required little change over the decade (mostly we have built upon and expanded the original material). A few bits were less good and have been researched more and rewritten. We have also, of course, made mistakes and corrected them when we have been informed about them or have discovered them ourselves. In general, though, our initial work has stood up well and while we were occasionally wrong on a few details, the general thrust of even these areas has been proven correct. Overall, our aim to produce an FAQ which reflected the majority of anarchist thought, both currently and historically from an international perspective, has been a success as shown by the number of mirrors, links and translations AFAQ has seen (being published by AK Press confirms this).

Since the official release, AFAQ has changed. When we released it back in 1996, we had already decided to make it a FAQ about anarchism rather than an FAQ on why anarchism is anti-capitalist. However, the first versions still bore the marks of its origins. We realised that this limited it somewhat and we have slowly revised the AFAQ so that it has become a resource about anarchism (indeed, if it were to be started again the section on "anarcho"-capitalism would be placed into an appendix, where it belongs). This means that the aim of AFAQ has changed. I would say that it has two related goals:

1. To present the case for anarchism, to convince people they should become anarchists.
2. To be a resource for existing anarchists, to use to bolster their activism and activities by presenting facts and arguments to allow them to defend anarchism against those opposed to it (Marxists, capitalists, etc.).

Te second goal explains why, for example, we spend a lot of time refuting capitalist economics and Marxism/Leninism (partly, because many of the facts and arguments are in academic books which are unavailable to the general public). We hope that AFAQ has proved useful to our comrades as much as we hope we have convinced non-anarchists, at best, to become anarchists, or, at worse, to take our ideas seriously. Hopefully, the two aims are mutually complementary.

Not only has AFAQ changed over the last ten years, so has the anarchist and general political landscape on the internet. When AFAQ was being initially created, the number of anarchists on-line was small. There were not that many anarchist webpages and, relatively speaking, right-wing "libertarians" were un-opposed in arguing that "anarcho"-capitalism was a form of

anarchism (the only FAQ was Caplan's biased and inaccurate "Anarchist Theory FAQ"). As a non-American, I was surprised that this oxymoron even existed (I still am, as are all the anarchists I mention it to). Anarchism has always been a **socialist** theory and the concept of an "anarchism" which supported the economic system anarchism was born opposing is nonsense. Arguing with its supporters and reading up on it convinced me that the only real link it has with anarchism is simply its attempted appropriation of the name.[1] Hence the pressing need for a **real** anarchist FAQ, a need AFAQ successfully met.

Luckily, over the 1990s things changed. More anarchists went online, anarchist organisations created a web presence and the balance of forces changed to reflect reality (i.e. there are far more anarchists than "anarcho"-capitalists). The anti-capitalist movement helped, putting anarchists back in the news (the BBC even linked to AFAQ for those interested in finding out what anarchists wanted!) Even in the USA, things got better and after Seattle genuine anarchism could no longer be ignored. This produced some articles by "anarcho"-capitalists, explaining how there are two forms of anarchism and that the two have nothing or little in common (if that is the case, why call your ideology anarchism?). Anarchist organisations and activism increased and the awareness that anarchism was anti-hierarchy, anti-state **and** anti-capitalist increased. As an added bonus, some genuine individualist anarchists appeared, refuting the claim that "anarcho"-capitalism was merely a form of "updated" individualist anarchism. All these developments were welcomed, as were the words of praise and encouragement we received for our work on AFAQ from many anarchists (including, it must be stressed, individualist ones). Today, genuine anarchism in all its forms has a much greater profile, as is anarchist opposition to "anarcho"-capitalism and its claims. We hope AFAQ played a role, however small, in that process.

Of course, the battle is not over. On Wikipedia, for example, right-"libertarians" are busy trying to rewrite the history of anarchism. Some anarchists have tried to counteract this attempt, and have meant with differing degrees of success. We urge you to get involved, if you have the time and energy as numbers, sadly, do seem to count. This is because we anarchists are up against people who, apparently, do not have a life and so can wage a war of attrition against those who try and include relevant facts to the entries (such as the obvious anti-capitalism of "traditional" anarchism, that anarchism is **not** compatible with government or hierarchy — hence an-**archy**! — or that calling yourself an anarchist does not necessarily make it so). It is a shame that such a promising project has been derailed by ideologues whose ignorance of the subject matter is matched only by their hatred of AFAQ which they deny is a "credible" or valid reference on anarchism.

I am not surprised that AFAQ is hated by the "libertarian" right (nor will I be surprised if it is equally hated by the authoritarian left). After all, it presents the case for genuine anarchism, exposes the claims of a capitalist "anarchism" for the nonsense they are and shows how deeply authoritarian right-wing "libertarianism" actually is. That the FAQ can be called "biased" by these people goes without saying (it is, after all, a FAQ about anarchism written by anarchists). What seems funny is that they just do not comprehend that anarchists take offence to their pretensions of labelling their ideology "anarchism," that we would seek to refute such claims and that their notion that "anarcho"-capitalism is anarchist is far more biased. Let us hope that more academics

[1] While "anarcho"-capitalism has some overlap with individualist anarchism, it lacks the radical and socialist sensibility and aims of the likes of Tucker which makes the latter anarchist, albeit a flawed and inconsistent form. Unlike the former, individualist anarchism **can** become consistent anarchism by simply applying its own principles in a logical manner.

will pay attention to this and the obvious fact that there is a very long list of anarchists, famous and not-so-famous, who consider the whole concept an oxymoron.

Equally unsurprising is the attempt to deny that AFAQ is a valid reference on Wikipedia. This boils down to the claim that the authors are "nobodies." Given that Kropotkin always stressed that anarchism was born from the people, I take that intended insult as a badge of pride. I have always taken the position that it is not who says something that counts, but what they say. In other words, I would far sooner quote a "nobody" who knows what they are talking about than a "somebody" who does not. As AFAQ indicates with its many refutations of straw man arguments against anarchism, there are plenty of the latter. Ultimately, the logical conclusion of such an argument is that anarchists are not qualified to discuss anarchism, an inherently silly position but useful if you are seeking to turn anarchism into something it is not.

Given that even such an usually reliable expert as the late, great, Paul Avrich made mistakes, this position is by far the most sensible. Between what a suitably qualified "expert" writes and what actual anarchists say and do, I always go for the latter. Any serious scientist would do so, but sadly many do not — instead, we get ideology. A classic example is Eric Hobsbawm's thesis on **"Primitive Rebels"** which he decided to illustrate, in part, with the example of Spanish anarchism. As we recount as part of our appendix on "Marxism and Spanish Anarchism" while being undoubtedly a "somebody" and immensely qualified to write on the subject, his account was utter nonsense. This was proven beyond doubt when an anthologist interviewed the survivors of the Casas Viejas massacre. Their account of the event had only appeared previously in anarchist papers at the time and both, needless to say, refuted Hobsbawm.

So, to be called a "nobody" is quite a complement, given how many of the "somebodies" have not stopped being ignorant of anarchism from putting pen to paper and exposing that ignorance to the world (the worse recent example of this, outside of Marxism, must be George Monbiot's terrible comments in his **"Age of Consent"**). So, when it comes to saying what anarchism is, I turn to anarchists. This is what the "experts" should be doing anyway if they were doing their job.

Are we "qualified" to write about anarchism? Well, the the collective has always been made up of anarchists, so we have an anarchist FAQ written by anarchists. It has always been a popular site, given the number of mirrors, translations and links it has been given (one mirror called it "world famous"). It is being published by AK Press, one of the leading anarchist publishers in the world.

I am the main editor and contributor to AFAQ. While one contributor to Wikipedia claimed I as an American academic, this is not the case. I have a "real" job and work on AFAQ in my spare time (I do despair when people, particularly leftists, assume that wage slaves are incapable of producing works like AFAQ). I have been always been an anarchist since becoming politically aware which means I have been an anarchist activist for approximately 20 years (time flies when you are having fun!). I have been a member of numerous anarchist groups and have contributed to many anarchist publications and websites. As can be seen from my personal webpage,[2] I regularly contribute articles to **Freedom** (the leading English-language anarchist newspaper). Rarely does an issue come out without something by me it in. Moreover, some of the longer articles have appeared in **Black Flag** (before and after I joined its editorial committee). My

[2] Under my pseudonym "Anarcho" (given what's on it, I'm surprised I bother using "Anarcho" these days as it is obvious who writes the articles). It is available here: `http://anarchism.ws/writers/anarcho.html`

works have also been published in **Scottish Anarchist**, **Anarcho-Syndicalist Review** and **Free Voices** and some have been translated into other languages. I am also an invited columnist for the www.infoshop.org and www.anarkismo.net webpages (neither of which I am otherwise involved with). In addition, I have been invited to speak at anarchist conferences in Scotland and Ireland, as well as by Marxist parties to debate the merits of anarchism. Due to family commitments, my specifically anarchist activities are pretty much limited to writing these days, but I remain a reasonably active trade unionist.

I will leave it up to the reader to decide whether we are "qualified" to write about anarchism or not!

But as I said, I always consider what is said more important than who says it. The fact that AFAQ is so popular with anarchists is what counts and I hope that we continue to be. We are always looking for help and suggestions, so if you want to get involved or want something added or changed, please contact us — we consider AFAQ as a resource for anarchists and we want it to reflect what anarchists think and do.[3] However, if you do want something changed or added be prepared to do some or all of the work yourself as we have our own plans on future developments and may not be able to provide the time or energy for other changes. Also, if you spot a mistake or a typo, please inform us as no matter how often we check errors do creep in. We take our task seriously and correct all errors when informed of them (differences in interpretation or terminology are not, of course, errors).[4]

Speaking personally, I have enjoyed being part of this project. I have learned a lot and have gained a better understanding of many anarchist thinkers and historical events. For example, I can now understand why Daniel Guerin was so interested in Proudhon and why it has been a crying shame that Voltairine de Cleyre's works have been unavailable for 8 decades. As such, my understanding and appreciation of anarchism has been enriched by working on AFAQ and I hope that others have had a similar experience reading it. On the negative side, I've had to read some terrible books and articles but very few, if any, of those were anarchist. But this is minor. The work has been worth it and while it has taken longer than any of us had imagined at the start, I'm glad that we are still working on it ten years later as AFAQ is much improved for all that time and energy. If nothing else, this work has reinforced my belief in the positive ideas and ideals of anarchism and confirmed why I became an anarchist so long ago. And, let me be honest, I would not do it unless I enjoyed it!

What of the future? Obviously, we know that AFAQ is not the final word on anarchism (we have always stressed that this is **An** Anarchist FAQ and not "The Anarchist FAQ," although some do call it that). The immediate aim is to revise the existing main sections of AFAQ for publication, which we are slowly doing. In the process some previous work is being added to and, in some cases, totally revised. After ten years, our knowledge of many subjects has expanded considerably. We have also asked a couple of individualist anarchist comrades to have a look over

[3] Apologies for those who sent emails over the years and never received a reply — some were lost and, given how much busy we are, emails are always the first to suffer.

[4] For a discussion of one early incident, mentioned in the Wikipedia entry on AFAQ, see my article (*"An Anarchist FAQ, David Friedman and Medieval Iceland"* on my webpage). Suffice to say, once we became aware of his new criticism this year (Friedman did not bother to inform us directly), we sped up our planned revision and expansion of that section and corrected the few mistakes that had remained. In summary, it can be said our original critique remained valid in spite of some serious errors in details caused by a failure to check sources in a rush to officially release it. We learned our lesson and try not to make the same mistake again (and have not, as far as I am aware).

section G and hopefully their input will flesh out that section when it comes to be revised (for all its flaws, individualist anarchism deserves far more than to be appropriated by the right and social anarchists should be helping its modern supporters attempts to reclaim their radical tradition).[5] Once the revision of the main body of AFAQ is complete, the appendix on the Russian Revolution will be finished and then all the appendices will be revised.

After that, AFAQ will be added to once new information becomes available and new anarchist social movements and ideas develop. We have not covered everything nor does AFAQ discussed all developments within anarchism in all countries. If you think we have missed something, then contact us and we can arrange to include the subject and issues missing. As noted above, though, do **not** expect us to do all the work for you. This is a resource for the movement and, as such, we expect fellow anarchists to help out beyond merely suggesting things they expect **others** to do!

Hopefully, after summarising 19th and 20th century anarchism, the anarchists of the 21st century will use that to build and develop new ideas and movements and create both viable anarchist alternatives under statism and capitalism and, eventually, a free society. Whether we do so or not is, ultimately, up to us. Let us hope we can rise to the challenge! I do hope that anarchists can rise above the often silly arguments that we often inflict on each other and concentrate on the 90%+ that unites us rather than the often insignificant differences some consider so important. One thing is sure, if we do not then the worse will happen.

Finally, another personal note. On the way to work, I go past a little park. This little oasis of green in the city is a joy to behold, more so since someone has added this piece of graffiti to one of its walls:

*"Resistance is **never** futile! Have a nice day, y'all. Love Friday, XXX"*

With that in mind, we dedicate the ten year anniversary release of "An Anarchist FAQ" to all those "nobodies," all those anarchists who are not famous or have the appropriate "qualifications", but whose activity, thoughts, ideas, ideals, dreams and hopes give the "somebodies" something to write about (even if they fail to get some, or even all of it, right).

Iain McKay

[5] A few people have said that AFAQ does not give equal billing to individualist anarchism. However, in terms of numbers and influence it has always been very much a minority trend in anarchism outside of America. By the 1880s, this was probably the case in America as well and by the turn of the 20th century it was definitely the case (as noted by, among others, Paul Avrich). As such, it is hardly a flaw that AFAQ has presented the majority position on anarchism (social anarchism), particularly as this is the position of the people involved.

Introduction

"Proletarians of the world, look into the depths of your own beings, seek out the truth and realise it yourselves: you will find it nowhere else"
- Peter Arshinov
The History of the Makhnovist Movement

Welcome to our FAQ on anarchism

This FAQ was written by anarchists across the world in an attempt to present anarchist ideas and theory to those interested in it. It is a co-operative effort, produced by a (virtual) working group and it exists to present a useful organising tool for anarchists on-line and, hopefully, in the real world. It desires to present arguments on why you should be an anarchist as well as refuting common arguments against anarchism and other proposed solutions to the social problems we face.

As anarchist ideas seem so at odds with "common-sense" (such as "of course we need a state and capitalism") we need to indicate **why** anarchists think like we do. Unlike many political theories, anarchism rejects flip answers and instead bases its ideas and ideals in an in-depth analysis of society and humanity. In order to do both anarchism and the reader justice we have summarised our arguments as much as possible without making them simplistic. We know that it is a lengthy document and may put off the casual observer but its length is unavoidable.

Readers may consider our use of extensive quoting as being an example of a *"quotation [being] a handy thing to have about, saving one the trouble of thinking for oneself."* (A.A. Milne) This is not the case of course. We have included extensive quotations by many anarchist figures for three reasons. Firstly, to indicate that we are **not** making up our claims of what certain anarchists thought or argued for. Secondly, and most importantly, it allows us to link the past voices of anarchism with its present adherents. And lastly, the quotes are used for their ability to convey ideas succinctly rather than as an appeal to "authority."

In addition, many quotes are used in order to allow readers to investigate the ideas of those quoted and to summarise facts and so save space. For example, a quote by Noam Chomsky on the development of capitalism by state protection ensures that we base our arguments on facts without having to present all the evidence and references Chomsky uses. Similarly, we quote experts on certain subjects (such as economics, for example) to support and bolster our analysis and claims.

We should also indicate the history of this FAQ. It was started in 1995 when a group of anarchists got together in order to write an FAQ refuting the claims of certain "libertarian" capitalists to being anarchists. Those who were involved in this project had spent many an hour on-line refuting claims by these people that capitalism and anarchism could go together. Finally, a group of net-activists decided the best thing was to produce an FAQ explaining why anarchism hates capitalism and why "anarcho" capitalists are not anarchists. However, after the suggestion of Mike Huben (who maintains the ***"Critiques of Libertarianism"*** web-page) it was decided that a pro-Anarchist FAQ would be a better idea than an anti-"anarcho"-capitalist one. So the Anarchist FAQ was born. It still bears some of the signs of its past-history. For example it gives the likes of Ayn Rand, Murray Rothbard, and so on, far too much space outside of Section F — they really are not that important. However, as they present extreme examples of everyday capitalist ideology and assumptions, they do have their uses – they state clearly the authoritarian implications of capitalist ideology which its more moderate supporters try to hide or minimise.

We think that we have produced a useful on-line resource for anarchists and other anti-capitalists to use. Perhaps, in light of this, we should dedicate this anarchist FAQ to the many on-line "libertarian" capitalists who, because of their inane arguments, prompted us to start this work. Then again, that would give them too much credit. Outside the net they are irrelevant and on the net they are just annoying. As you may guess, sections F and G contain the bulk of this early anti-Libertarian FAQ and are included purely to refute the claim that an anarchist can be a supporter of capitalism that is relatively common on the net (in the real world this would not be required as almost all anarchists think that "anarcho"-capitalism is an oxymoron and that its supporters are not part of the anarchist movement).

So, while coming from a very specific reason, the FAQ has expanded into more than we originally imagined. It has become a general introduction about anarchism, its ideas and history. Because anarchism recognises that there are no easy answers and that freedom must be based on individual responsibility the FAQ is quite in-depth. As it also challenges a lot of assumptions, we have had to cover a lot of ground. We also admit that some of the "frequently asked questions" we have included are more frequently asked than others. This is due to the need to include relevant arguments and facts which otherwise may not have been included.

We are sure that many anarchists will not agree 100% with what we have written in the FAQ. That is to be expected in a movement based upon individual freedom and critical thought. However, we are sure that most anarchists will agree with most of what we present and respect those parts with which they do disagree with as genuine expressions of anarchist ideas and ideals. The anarchist movement is marked by wide-spread disagreement and argument about various aspects of anarchist ideas and how to apply them (but also, we must add, a wide-spread tolerance of differing viewpoints and a willingness to work together in spite of minor disagreements). We have attempted to reflect this in the FAQ and hope we have done a good job in presenting the ideas of all the anarchist tendencies we discuss.

We have no desire to write in stone what anarchism is and is not. Instead the FAQ is a starting point for people to read and learn for themselves about anarchism and translate that learning into direct action and self-activity. By so doing, we make anarchism a living theory, a product of individual and social self-activity. Only by applying our ideas in practice can we find their strengths and limitations and so develop anarchist theory in new directions and in light of new experiences. We hope that the FAQ both reflects and aids this process of self-activity and self-education.

We are sure that there are many issues that the FAQ does not address. If you think of anything we could add or feel you have a question and answer which should be included, get in contact with us. The FAQ is not our "property" but belongs to the whole anarchist movement and so aims to be an organic, living creation. We desire to see it grow and expand with new ideas and inputs from as many people as possible. If you want to get involved with the FAQ then contact us. Similarly, if others (particularly anarchists) want to distribute all or part of it then feel free. It is a resource for the movement. For this reason we have "copylefted" An Anarchist FAQ (see `http://www.gnu.org/copyleft/copyleft.html` for details). By so doing we ensure that the FAQ remains a free product, available for use by all.

One last point. Language has changed a lot over the years and this applies to anarchist thinkers too. The use of the term "man" to refer to humanity is one such change. Needless to say, in today's world such usage is inappropriate as it effectively ignores half the human race. For this reason the FAQ has tried to be gender neutral. However, this awareness is relatively recent and many

anarchists (even the female ones like Emma Goldman) used the term "man" to refer to humanity as a whole. When we are quoting past comrades who use "man" in this way, it obviously means humanity as a whole rather than the male sex. Where possible, we add "woman", "women", "her" and so on but if this would result in making the quote unreadable, we have left it as it stands. We hope this makes our position clear.

So we hope that this FAQ entertains you and makes you think. Hopefully it will produce a few more anarchists and speed up the creation of an anarchist society. If all else fails, we have enjoyed ourselves creating the FAQ and have shown anarchism to be a viable, coherent political idea.

We dedicate this work to the millions of anarchists, living and dead, who tried and are trying to create a better world. An Anarchist FAQ was officially released on July 19th, 1996 for that reason — to celebrate the Spanish Revolution of 1936 and the heroism of the Spanish anarchist movement. We hope that our work here helps make the world a freer place.

The following self-proclaimed anarchists are (mostly) responsible for this FAQ:

Iain McKay (main contributor and editor)
Gary Elkin
Dave Neal
Ed Boraas

We would like to thank the following for their contributions and feedback:

Andrew Flood
Mike Ballard
Francois Coquet
Jamal Hannah
Mike Huben
Greg Alt
Chuck Munson
Pauline McCormack
Nestor McNab
Kevin Carson
Shawn Wilber

and our comrades on the anarchy, oneunion and organise! mailing lists.

An Anarchist FAQ: Introduction to Volume 1

As many anarchists have noted, our ideal must be one of the most misunderstood and misrepresented political theories on the planet. "An Anarchist FAQ" (AFAQ) aims to change this by presenting the basics of anarchist theory and history, refuting the most common distortions and nonsense about it and providing anarchists with a resource they can use to aid their arguments and struggles for freedom. This is important, as much of the ground covered in AFAQ was provoked by having to critique other theories and refute attacks on anarchism.

Anarchism has changed over the years and will continue to evolve and change as circumstances do likewise and new struggles are fought and (hopefully) won. It is not some fixed ideology, but rather a means of understanding an evolving world and to change it in libertarian directions. As such, AFAQ seeks to place specific aspects of anarchism into their historical context. For example, certain aspects of Proudhon's ideas can only be understood by remembering that he lived at a time when the vast majority of working people were peasants and artisans. Many commentators (particularly Marxist ones) seem to forget this (and that he supported cooperatives for large-scale industry). Much the same can be said of Bakunin, Tucker and so on. I hope AFAQ will help anarchism continue to develop to meet new circumstances by summarising what has gone before so that we can build on it.

We also seek to draw out what anarchists have in common while not denying their differences. After all, individualist-anarchist Benjamin Tucker would have agreed with communist-anarchist Peter Kropotkin when he stated that anarchism was the *"no government form of socialism."* While some anarchists seem to take more time in critiquing and attacking their comrades over (ultimately) usually minor differences than fighting oppression, I personally think that this activity while, at times, essential is hardly the most fruitful use of our limited resources — particularly when it is about possible future developments (whether it is on the economic nature of a free society or our attitude to a currently non-existing syndicalist union!). So we have discussed the differences between anarchist schools of thought as well as within them, but we have tried to build bridges by stressing where they agree rather than create walls.

Needless to say, not all anarchists will agree with what is in AFAQ (it is, after all, as we have always stressed "An Anarchist FAQ", not "The Anarchist FAQ" as some comrades flatteringly call it). From my experience, most anarchists agree with most of it even if they have quibbles about certain aspects of it. I know that comrades do point others to it (I once saw a Marxist complain that anarchists always suggested he read AFAQ, so I explained to him that this was what having a "Frequency Asked Questions" was all about). So AFAQ is only a guide, you need to discover anarchism for yourself and develop and apply it in your own way. Hopefully AFAQ will help that process by presenting an overview of anarchism and indicating what it is, what it is not and where to find out more.

Some may object to the length of many of the answers and that is a valid point. However, some questions and issues cannot be dealt with quickly and be considered as remotely convincing. For example, simply stating that anarchists think that capitalism is exploitative and that claims otherwise are wrong may be both correct and short but it hardly a convincing reply to someone aware of the various defences of profit, interest and rent invented by capitalist economists. Similarly, stating that Marxist ideology helped destroy the Russian Revolution is, again, both correct and short but it would never convince a Leninist who stresses the impact of civil war on Bolshevik practice. Then there is the issue of sources. We have tried to let anarchists speak for themselves on most issues and that can take space. Some of the evidence we use is from books and articles the general reader may not have easy access so we have tried to present full quotes to show that

our use is correct (the number of times I've tracked down references only to discover they did not say what was suggested is, sadly, quite numerous).

Moreover, refuting distortions and inventions about anarchism can be lengthy simply because of the necessity of providing supporting evidence. Time and again, the same mistakes and straw man arguments are regurgitated by those unwilling or unable to look at the source material (Marxists are particularly bad at this, simply repeating *ad nauseum* the assertions of Marx and Engels as if they were accurate). Assumptions are piled onto assumptions, assertions repeated as if they were factual. AFAQ seeks to address these and present evidence to refute them once and for all. Simply saying that some statement is false may be correct, but hardly convincing unless you already know a lot about the subject. So I hope that readers will understand and find even the longest answers interesting and informative (one of the advantages of a FAQ format is that people can simply go to the sections they are interested in and skip others).

This volume covers what anarchism is, where it comes from, what it has done, what it is against (and why) as well as what anarchism is not (i.e., showing why "anarcho"-capitalism is not a form of anarchism).

The latter may come as a surprise to most. Few anarchists, never mind the general population, have heard of that specific ideology (it is US based, in the main) and those who have heard of it may wonder why we bothered given its obvious non-anarchist nature. Sadly, we need to cover this ground simply because some academics insist in listing it alongside genuine forms of anarchism and that needs to be exposed for the nonsense it is. Few serious thinkers would list fascism along side socialism, regardless of whether its supporters call their ideology "National Socialism" or "National Syndicalism" (unsurprisingly, right-"libertarians" do precisely that). No one took the Soviet bloc states seriously when they described themselves as "peoples' democracies" nor considered their governments democratic. Anarchism seems to be excluded from such commonsense and so we find academics discussing "anarcho"-capitalists along side anarchism simply, I suspect, because they ***call*** themselves "anarchists." That almost all anarchists reject their claims to being anarchists does not seem to be a sufficient warning about taking such statements at face value! For obvious reasons, we have not wasted space in explaining why another US based ideology, "National Anarchism", is not anarchism. While some individual anarchists were racist, the notion that anarchism has anything in common with those who aim for racially pure nationalist communities is ridiculous. Even academics have not fallen for ***that***, although for almost all genuine anarchists "anarcho"-capitalism makes as little sense as "anarcho"-nationalism.

Then there is the history of AFAQ. As indicated in the original introduction, AFAQ was prompted by battles with "anarcho"-capitalists on-line in the early 1990s. However, while AFAQ may have started as a reply to the "anarcho"-capitalists it is no longer that. It would be a mistake to think that they are more significant than they actually are or that many anarchists bother with them (most, I am sure, have never heard of it). I did consider whether it was wiser to simply exclude section F from the book but, in the end, I decided it should remain. Partly, for the reasons above and partly because it does serve another, more useful, purpose. Neo-liberalism is based, in many ways, on right-"libertarian" dogmas so critiquing those helps our struggle against "actually existing" capitalism and the current attacks by the ruling class.

I do not wish anarchism to go the same way that "libertarian" has gone in the US (and, to a lesser extent, in the UK). Between the 1890s and 1970s, libertarian was simply a pseudonym for anarchist or similar socialist theories. However, the American free-market right appropriated the label in the 1970s and now it means supporters of minimal state (or private-state) capital-

ism. Such is the power having ideas that bolster the wealthy! The change in "libertarian" is such that some people talk about "libertarian anarchism" — as if you can have an "authoritarian anarchism"! That these people include "anarcho"-capitalists simply shows how ignorant of anarchism they actually are and how alien the ideology is to our movement (I've seen quite a few of them proclaim anarchism is simply a "new" form of Marxism, which shows their grasp of the subject). Equally bizarrely, these self-proclaimed "libertarian anarchists" are also those who most fervently defend the **authoritarian** social relationships inherent within capitalism! In other words, if "authoritarian anarchists" ***could*** exist then the "libertarian anarchists" would be them!

As AFAQ explains, being opposed to the state is a necessary, but not sufficient, condition for being an anarchist. Not only is this clear from the works of anarchist thinkers and anarchism as a social movement, but also from the nature of the idea itself. To be an anarchist you must also be a socialist (i.e. opposed to capitalist property and the exploitation of labour). It is no coincidence that Godwin and Proudhon independently analysed private property from a libertarian perspective and drew similar conclusions or that Kropotkin and Tucker considered themselves socialists. To deny this critique is to deny anarchism as a movement and as a socio-political theory never mind its history and the aims of anarchists across the years.

Furthermore, as AFAQ stresses, to be a ***consistent*** anarchist you must recognise that freedom is more than simply the ability to change masters. Anarchism means "no authority" (anarchy) and to support social relationships marked by authority (hier-***archy***) produces a self-contradictory mess (such as supporting forms of domination, such as wage labour, which are essentially identical to those produced by the state — and, sometimes, admitted as such!). Anarchism is, fundamentally, a theory of organisation based on individuals associating together without restricting, and so denying and limiting, their freedom and individuality. This means that a consistent anarchism is rooted in free association within a context of self-management, decentralisation and "bottom-up" decision-making (i.e., it is rooted in political, economic and social equality). While it is possible to be an anarchist while opposing exploitation but not all forms of hierarchical social relationships, it is hardly logical nor a convincing position.

AFAQ also seeks to go into subjects anarchists have, traditionally, been weak on, such as economics (which is ironic, as Proudhon made his name by his economic critiques). In this sense, it is a resource for anarchists both in terms of our own history and ideas but also on subjects which we inevitably come across in our struggles (hopefully, the critiques we provide of capitalism, neo-liberalism and so forth will also be useful to other radicals). We have tried to indicate the quoted source is an anarchist or libertarian. If in doubt, please look at the bibliography on the webpage. This breaks references down into libertarian (anarchist and non-anarchist) thinkers (or sympathetic accounts of anarchism) and non-libertarians (which, needless to say, includes right-"libertarians"). It should go without saying that quoting an expert on one subject does not mean anarchists subscribe to their opinions on other matters. Thus if we quote, say, a Keynesian or post-Keynesian economist on how capitalism works it does not imply we support their specific political recommendations.

Some have criticised AFAQ for not including some of the more recent developments within anarchism, which is fair enough. I have asked on numerous occasions for such critics to contribute a section on these and, of course, for referenced corrections for any mistakes others think we have done. Nothing has been forthcoming and we have usually discovered mistakes ourselves and corrected them (although a steady flow of emails pointing out typos has come our way). We

have always been a small collective and we cannot do everything. This also explains why important social events like, say, the turn of the century Argentinean revolt against neo-liberalism is not discussed in section A.5 (this is a wonderful example of anarchist ideas being spontaneously applied in practice during a mass revolt). Suffice to say, anarchistic tendencies, ideas and practices develop all the time and anarchism is growing in influence but if we continually added to AFAQ to reflect this then it would never have become ready for publication! As it is, we have excluded most of the appendices from the book version (these remain available on the website along with a lengthy links page).

I would like to thank everybody who has helped and contributed (directly and indirectly, knowingly and unknowingly) to AFAQ. As for authorship, AFAQ started as a collective effort and remained so for many years. I have been the only person involved from the start and have done the bulk of the work on it. Moreover, the task of getting it ready and revised for publication has fallen to me. I have enjoyed it, in the main. This explains why the book has my name on it rather than a collective. I feel I have earned that right. As such, I claim responsibility for any typos and examples of bad grammar that remain. I have substantially revised AFAQ for publication and while I have tried to find them all, I am sure I have failed (particularly in sections that were effectively rewritten). I hope these do not detract from the book too much.

Finally, on a personal note I would like to dedicate this book to my partner and two lovely children. They are a constant source of inspiration, love, support and hope (not to mention patience!). If this work makes the world we live in better for them then it has been more than worthwhile. For, when it comes down to it, anarchism is simply about making the world a freer and better place. If we forget that, then we forget what makes us anarchists in the first place.

Iain McKay
An Anarchist FAQ

A Summation

"No question, the word anarchy freaks people. Yet anarchy — rule by no one — has always struck me as the same as democracy carried to its logical and reasonable conclusions. Of course those who rule — bosses and politicians, capital and the state — cannot imagine that people could rule themselves, for to admit that people can live without authority and rulers pulls out the whole underpinnings of their ideology. Once you admit that people can — and do, today, in many spheres of their lives — run things easier, better and more fairly than the corporation and the government can, there's no justification for the boss and the premier. I think most of us realise and understand that, in our guts, but schools, culture, the police, all the authoritarian apparatuses, tell us we need bosses, we need to be controlled 'for our own good.' It's not for our own good — it's for the good of the boss, plain and simple."

"Anarchism is a demand for real freedom and real autonomy"

"But I also remain convinced that something like an anarchist future, a world of no bosses or politicians, one in which people, all people, can live full and meaningful lives, is possible and desirable. We see glimpses of it all around us in our day-to-day lives, as people organise much of their lives without depending on someone to tell them what to do. We see it in that spirit of revolt — a spirit that is often twisted by anger and despair, but nonetheless shows us that people have not given up. We see it in the political activism, the social lives, the demands for decency and respect and autonomy people put forward, the desire to be individuals while still being part of a community.

"No, I don't think bowling leagues are the anarchist utopia, but they, like much of our lives outside of the workplace, are organised without hierarchy and oppression; the most meaningful, truly human parts of our lives already work best when organised on anarchist principles. Yet I also believe that in its function as critique and as a vision of the future — perhaps the only one that doesn't end in our extinction as a species, or, as Orwell put it, as a jackboot smashing a human face, forever — anarchism is not only desirable but possible and necessary."

Mark Leier: **The Case for Anarchy**

Section A — What is Anarchism?

Modern civilisation faces three potentially catastrophic crises: (1) social breakdown, a shorthand term for rising rates of poverty, homelessness, crime, violence, alienation, drug and alcohol abuse, social isolation, political apathy, dehumanisation, the deterioration of community structures of self-help and mutual aid, etc.; (2) destruction of the planet's delicate ecosystems on which all complex forms of life depend; and (3) the proliferation of weapons of mass destruction, particularly nuclear weapons.

Orthodox opinion, including that of Establishment "experts," mainstream media, and politicians, generally regards these crises as separable, each having its own causes and therefore capable of being dealt with on a piecemeal basis, in isolation from the other two. Obviously, however, this "orthodox" approach isn't working, since the problems in question are getting worse. Unless some better approach is taken soon, we are clearly headed for disaster, either from catastrophic war, ecological Armageddon, or a descent into urban savagery — or all of the above.

Anarchism offers a unified and coherent way of making sense of these crises, by tracing them to a common source. This source is the principle of **hierarchical authority**, which underlies the major institutions of all "civilised" societies, whether capitalist or "communist." Anarchist analysis therefore starts from the fact that all of our major institutions are in the form of hierarchies, i.e. organisations that concentrate power at the top of a pyramidal structure, such as corporations, government bureaucracies, armies, political parties, religious organisations, universities, etc. It then goes on to show how the authoritarian relations inherent in such hierarchies negatively affect individuals, their society, and culture. In the first part of this FAQ (**sections A to E**) we will present the anarchist analysis of hierarchical authority and its negative effects in greater detail.

It should not be thought, however, that anarchism is just a critique of modern civilisation, just "negative" or "destructive." Because it is much more than that. For one thing, it is also a proposal for a free society. Emma Goldman expressed what might be called the "anarchist question" as follows: *"The problem that confronts us today... is how to be one's self and yet in oneness with others, to feel deeply with all human beings and still retain one's own characteristic qualities."* [**Red Emma Speaks**, pp. 158–159] In other words, how can we create a society in which the potential for each individual is realised but not at the expense of others? In order to achieve this, anarchists envision a society in which, instead of being controlled ***"from the top down"*** through hierarchical structures of centralised power, the affairs of humanity will, to quote Benjamin Tucker, *"be managed by individuals or voluntary associations."* [**Anarchist Reader**, p. 149] While later sections of the FAQ (**sections I and J**) will describe anarchism's positive proposals for organising society in this way, "from the bottom up," some of the constructive core of anarchism will be seen even in the earlier sections. The positive core of anarchism can even be seen in the anarchist critique of such flawed solutions to the social question as Marxism and right-wing "libertarianism" (**sections F and H**, respectively).

As Clifford Harper elegantly puts it, *"[l]ike all great ideas, anarchism is pretty simple when you get down to it — human beings are at their best when they are living free of authority, deciding things among themselves rather than being ordered about."* [**Anarchy: A Graphic Guide**, p. vii] Due to their desire to maximise individual and therefore social freedom, anarchists wish to dismantle all institutions that repress people:

> *"Common to all Anarchists is the desire to free society of all political and social coercive institutions which stand in the way of the development of a free humanity."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 9]

As we'll see, all such institutions are hierarchies, and their repressive nature stems directly from their hierarchical form.

Anarchism is a socio-economic and political theory, but not an ideology. The difference is **very** important. Basically, theory means you have ideas; an ideology means ideas have you. Anarchism is a body of ideas, but they are flexible, in a constant state of evolution and flux, and open to modification in light of new data. As society changes and develops, so does anarchism. An ideology, in contrast, is a set of "fixed" ideas which people believe dogmatically, usually ignoring reality or "changing" it so as to fit with the ideology, which is (by definition) correct. All such "fixed" ideas are the source of tyranny and contradiction, leading to attempts to make everyone fit onto a Procrustean Bed. This will be true regardless of the ideology in question — Leninism, Objectivism, "Libertarianism," or whatever — all will all have the same effect: the destruction of real individuals in the name of a doctrine, a doctrine that usually serves the interest of some ruling elite. Or, as Michael Bakunin puts it:

> *"Until now all human history has been only a perpetual and bloody immolation of millions of poor human beings in honour of some pitiless abstraction — God, country, power of state, national honour, historical rights, judicial rights, political liberty, public welfare."* [**God and the State**, p. 59]

Dogmas are static and deathlike in their rigidity, often the work of some dead "prophet," religious or secular, whose followers erect his or her ideas into an idol, immutable as stone. Anarchists want the living to bury the dead so that the living can get on with their lives. The living should rule the dead, not vice versa. Ideologies are the nemesis of critical thinking and consequently of freedom, providing a book of rules and "answers" which relieve us of the "burden" of thinking for ourselves.

In producing this FAQ on anarchism it is not our intention to give you the "correct" answers or a new rule book. We will explain a bit about what anarchism has been in the past, but we will focus more on its modern forms and why **we** are anarchists today. The FAQ is an attempt to provoke thought and analysis on your part. If you are looking for a new ideology, then sorry, anarchism is not for you.

While anarchists try to be realistic and practical, we are not "reasonable" people. "Reasonable" people uncritically accept what the "experts" and "authorities" tell them is true, and so they will always remain slaves! Anarchists know that, as Bakunin wrote:

> *"[a] person is strong only when he stands upon his own truth, when he speaks and acts from his deepest convictions. Then, whatever the situation he may be in, he always knows what he must say and do. He may fall, but he cannot bring shame upon himself or his causes."* [quoted in Albert Meltzer, **I couldn't Paint Golden Angels**, p. 2]

What Bakunin describes is the power of independent thought, which is the power of freedom. We encourage you not to be "reasonable," not to accept what others tell you, but to think and act for yourself!

One last point: to state the obvious, this is **not** the final word on anarchism. Many anarchists will disagree with much that is written here, but this is to be expected when people think for themselves. All we wish to do is indicate the **basic** ideas of anarchism and give our analysis

of certain topics based on how we understand and apply these ideas. We are sure, however, that all anarchists will agree with the core ideas we present, even if they may disagree with our application of them here and there.

A.1 What is anarchism?

Anarchism is a political theory which aims to create anarchy, *"the absence of a master, of a sovereign."* [P-J Proudhon, **What is Property** , p. 264] In other words, anarchism is a political theory which aims to create a society within which individuals freely co-operate together as equals. As such anarchism opposes all forms of hierarchical control — be that control by the state or a capitalist — as harmful to the individual and their individuality as well as unnecessary.

In the words of anarchist L. Susan Brown:

> *"While the popular understanding of anarchism is of a violent, anti-State movement, anarchism is a much more subtle and nuanced tradition then a simple opposition to government power. Anarchists oppose the idea that power and domination are necessary for society, and instead advocate more co-operative, anti-hierarchical forms of social, political and economic organisation."* [**The Politics of Individualism**, p. 106]

However, "anarchism" and "anarchy" are undoubtedly the most misrepresented ideas in political theory. Generally, the words are used to mean "chaos" or "without order," and so, by implication, anarchists desire social chaos and a return to the "laws of the jungle."

This process of misrepresentation is not without historical parallel. For example, in countries which have considered government by one person (monarchy) necessary, the words "republic" or "democracy" have been used precisely like "anarchy," to imply disorder and confusion. Those with a vested interest in preserving the status quo will obviously wish to imply that opposition to the current system cannot work in practice, and that a new form of society will only lead to chaos. Or, as Errico Malatesta expresses it:

> *"since it was thought that government was necessary and that without government there could only be disorder and confusion, it was natural and logical that anarchy, which means absence of government, should sound like absence of order."* [**Anarchy**, p. 16]

Anarchists want to change this "common-sense" idea of "anarchy," so people will see that government and other hierarchical social relationships are both harmful **and** unnecessary:

> *"Change opinion, convince the public that government is not only unnecessary, but extremely harmful, and then the word anarchy, just because it means absence of government, will come to mean for everybody: natural order, unity of human needs and the interests of all, complete freedom within complete solidarity."* [**Op. Cit.**, pp. 16]

This FAQ is part of the process of changing the commonly-held ideas regarding anarchism and the meaning of anarchy. But that is not all. As well as combating the distortions produced by the "common-sense" idea of "anarchy", we also have to combat the distortions that anarchism and anarchists have been subjected to over the years by our political and social enemies. For,

as Bartolomeo Vanzetti put it, anarchists are *"the radical of the radical — the black cats, the terrors of many, of all the bigots, exploiters, charlatans, fakers and oppressors. Consequently we are also the more slandered, misrepresented, misunderstood and persecuted of all."* [Nicola Sacco and Bartolomeo Vanzetti, **The Letters of Sacco and Vanzetti**, p. 274]

Vanzetti knew what he was talking about. He and his comrade Nicola Sacco were framed by the US state for a crime they did not commit and were, effectively, electrocuted for being foreign anarchists in 1927. So this FAQ will have to spend some time correcting the slanders and distortions that anarchists have been subjected to by the capitalist media, politicians, ideologues and bosses (not to mention the distortions by our erstwhile fellow radicals like liberals and Marxists). Hopefully once we are finished you will understand why those in power have spent so much time attacking anarchism — it is the one idea which can effectively ensure liberty for all and end all systems based on a few having power over the many.

A.1.1 What does "anarchy" mean?

The word ***"anarchy"*** is from the Greek, prefix **an** (or **a**), meaning *"not," "the want of," "the absence of,"* or *"the lack of"*, plus **archos**, meaning *"a ruler," "director", "chief," "person in charge,"* or *"authority."* Or, as Peter Kropotkin put it, Anarchy comes from the Greek words meaning *"contrary to authority."* [**Anarchism**, p. 284]

While the Greek words ***anarchos*** and ***anarchia*** are often taken to mean *"having no government"* or *"being without a government,"* as can be seen, the strict, original meaning of anarchism was not simply *"no government."* ***"An-archy"*** means *"without a ruler,"* or more generally, *"without authority,"* and it is in this sense that anarchists have continually used the word. For example, we find Kropotkin arguing that anarchism *"attacks not only capital, but also the main sources of the power of capitalism: law, authority, and the State."* [**Op. Cit.**, p. 150] For anarchists, anarchy means *"not necessarily absence of order, as is generally supposed, but an absence of rule."* [Benjamin Tucker, **Instead of a Book**, p. 13] Hence David Weick's excellent summary:

> *"Anarchism can be understood as the **generic** social and political idea that expresses negation of **all** power, sovereignty, domination, and hierarchical division, and a will to their dissolution... Anarchism is therefore more than anti-statism ... [even if] government (the state) ... is, appropriately, the central focus of anarchist critique."* [**Reinventing Anarchy**, p. 139]

For this reason, rather than being purely anti-government or anti-state, anarchism is primarily a movement against ***hierarchy.*** Why? Because hierarchy is the organisational structure that embodies authority. Since the state is the "highest" form of hierarchy, anarchists are, by definition, anti-state; but this is **not** a sufficient definition of anarchism. This means that real anarchists are opposed to all forms of hierarchical organisation, not only the state. In the words of Brian Morris:

> *"The term anarchy comes from the Greek, and essentially means 'no ruler.' Anarchists are people who reject all forms of government or coercive authority, all forms of hierarchy and domination. They are therefore opposed to what the Mexican anarchist Flores Magon called the 'sombre trinity' — state, capital and the church. Anarchists are thus*

> *opposed to both capitalism and to the state, as well as to all forms of religious authority. But anarchists also seek to establish or bring about by varying means, a condition of anarchy, that is, a decentralised society without coercive institutions, a society organised through a federation of voluntary associations."* [*"Anthropology and Anarchism,"* pp. 35–41, **Anarchy: A Journal of Desire Armed**, no. 45, p. 38]

Reference to "hierarchy" in this context is a fairly recent development – the "classical" anarchists such as Proudhon, Bakunin and Kropotkin did use the word, but rarely (they usually preferred "authority," which was used as short-hand for "authoritarian"). However, it's clear from their writings that theirs was a philosophy against hierarchy, against any inequality of power or privileges between individuals. Bakunin spoke of this when he attacked *"official"* authority but defended *"natural influence,"* and also when he said:

> *"Do you want to make it impossible for anyone to oppress his fellow-man? Then make sure that no one shall possess power."* [**The Political Philosophy of Bakunin**, p. 271]

As Jeff Draughn notes, *"while it has always been a latent part of the 'revolutionary project,' only recently has this broader concept of anti-hierarchy arisen for more specific scrutiny. Nonetheless, the root of this is plainly visible in the Greek roots of the word 'anarchy.'"* [**Between Anarchism and Libertarianism: Defining a New Movement**]

We stress that this opposition to hierarchy is, for anarchists, not limited to just the state or government. It includes all authoritarian economic and social relationships as well as political ones, particularly those associated with capitalist property and wage labour. This can be seen from Proudhon's argument that *"**Capital** ... in the political field is analogous to **government** ... The economic idea of capitalism, the politics of government or of authority, and the theological idea of the Church are three identical ideas, linked in various ways. To attack one of them is equivalent to attacking all of them ... What capital does to labour, and the State to liberty, the Church does to the spirit. This trinity of absolutism is as baneful in practice as it is in philosophy. The most effective means for oppressing the people would be simultaneously to enslave its body, its will and its reason."* [quoted by Max Nettlau, **A Short History of Anarchism**, pp. 43–44] Thus we find Emma Goldman opposing capitalism as it meant *"that man [or woman] must sell his [or her] labour"* and, therefore, *"that his [or her] inclination and judgement are subordinated to the will of a master."* [**Red Emma Speaks**, p. 50] Forty years earlier Bakunin made the same point when he argued that under the current system *"the worker sells his person and his liberty for a given time"* to the capitalist in exchange for a wage. [**Op. Cit.**, p. 187]

Thus "anarchy" means more than just "no government," it means opposition to all forms of authoritarian organisation and hierarchy. In Kropotkin's words, *"the origin of the anarchist inception of society ... [lies in] the criticism ... of the hierarchical organisations and the authoritarian conceptions of society; and ... the analysis of the tendencies that are seen in the progressive movements of mankind."* [**Op. Cit.**, p. 158] For Malatesta, anarchism *"was born in a moral revolt against social injustice"* and that the *"specific causes of social ills"* could be found in *"capitalistic property and the State."* When the oppressed *"sought to overthrow both State and property — then it was that anarchism was born."* [**Errico Malatesta: His Life and Ideas**, p. 19]

Thus any attempt to assert that anarchy is purely anti-state is a misrepresentation of the word and the way it has been used by the anarchist movement. As Brian Morris argues, *"when one*

examines the writings of classical anarchists... as well as the character of anarchist movements... it is clearly evident that it has never had this limited vision [of just being against the state]. It has always challenged all forms of authority and exploitation, and has been equally critical of capitalism and religion as it has been of the state." [**Op. Cit.**, p. 40]

And, just to state the obvious, anarchy does not mean chaos nor do anarchists seek to create chaos or disorder. Instead, we wish to create a society based upon individual freedom and voluntary co-operation. In other words, order from the bottom up, not disorder imposed from the top down by authorities. Such a society would be a true anarchy, a society without rulers.

While we discuss what an anarchy could look like in section I, Noam Chomsky sums up the key aspect when he stated that in a truly free society *"any interaction among human beings that is more than personal — meaning that takes institutional forms of one kind or another — in community, or workplace, family, larger society, whatever it may be, should be under direct control of its participants. So that would mean workers' councils in industry, popular democracy in communities, interaction between them, free associations in larger groups, up to organisation of international society."* [**Anarchism Interview**] Society would no longer be divided into a hierarchy of bosses and workers, governors and governed. Rather, an anarchist society would be based on free association in participatory organisations and run from the bottom up. Anarchists, it should be noted, try to create as much of this society today, in their organisations, struggles and activities, as they can.

A.1.2 What does "anarchism" mean?

To quote Peter Kropotkin, Anarchism is *"the no-government system of socialism."* [**Anarchism**, p. 46] In other words, *"the abolition of exploitation and oppression of man by man, that is the abolition of private property [i.e. capitalism] and government."* [Errico Malatesta, **Towards Anarchism,"**, p. 75]

Anarchism, therefore, is a political theory that aims to create a society which is without political, economic or social hierarchies. Anarchists maintain that anarchy, the absence of rulers, is a viable form of social system and so work for the maximisation of individual liberty and social equality. They see the goals of liberty and equality as mutually self-supporting. Or, in Bakunin's famous dictum:

> "*We are convinced that freedom without Socialism is privilege and injustice, and that Socialism without freedom is slavery and brutality.*" [**The Political Philosophy of Bakunin**, p. 269]

The history of human society proves this point. Liberty without equality is only liberty for the powerful, and equality without liberty is impossible and a justification for slavery.

While there are many different types of anarchism (from individualist anarchism to communist-anarchism — see section A.3 for more details), there has always been two common positions at the core of all of them — opposition to government and opposition to capitalism. In the words of the individualist-anarchist Benjamin Tucker, anarchism insists *"on the abolition of the State and the abolition of usury; on no more government of man by man, and no more exploitation of man by man."* [cited by Eunice Schuster, **Native American Anarchism**, p. 140]

All anarchists view profit, interest and rent as **usury** (i.e. as exploitation) and so oppose them and the conditions that create them just as much as they oppose government and the State.

More generally, in the words of L. Susan Brown, the *"unifying link"* within anarchism *"is a universal condemnation of hierarchy and domination and a willingness to fight for the freedom of the human individual."* [**The Politics of Individualism**, p. 108] For anarchists, a person cannot be free if they are subject to state or capitalist authority. As Voltairine de Cleyre summarised:

> *"Anarchism ... teaches the possibility of a society in which the needs of life may be fully supplied for all, and in which the opportunities for complete development of mind and body shall be the heritage of all ... [It] teaches that the present unjust organisation of the production and distribution of wealth must finally be completely destroyed, and replaced by a system which will insure to each the liberty to work, without first seeking a master to whom he [or she] must surrender a tithe of his [or her] product, which will guarantee his liberty of access to the sources and means of production... Out of the blindly submissive, it makes the discontented; out of the unconsciously dissatisfied, it makes the consciously dissatisfied ... Anarchism seeks to arouse the consciousness of oppression, the desire for a better society, and a sense of the necessity for unceasing warfare against capitalism and the State."* [**Anarchy! An Anthology of Emma Goldman's Mother Earth**, pp. 23–4]

So Anarchism is a political theory which advocates the creation of anarchy, a society based on the maxim of *"no rulers."* To achieve this, *"[i]n common with all socialists, the anarchists hold that the private ownership of land, capital, and machinery has had its time; that it is condemned to disappear: and that all requisites for production must, and will, become the common property of society, and be managed in common by the producers of wealth. And... they maintain that the ideal of the political organisation of society is a condition of things where the functions of government are reduced to minimum... [and] that the ultimate aim of society is the reduction of the functions of government to nil — that is, to a society without government, to an-archy"* [Peter Kropotkin, **Op. Cit.**, p. 46]

Thus anarchism is both positive and negative. It analyses and critiques current society while at the same time offering a vision of a potential new society — a society that fulfils certain human needs which the current one denies. These needs, at their most basic, are liberty, equality and solidarity, which will be discussed in section A.2.

Anarchism unites critical analysis with hope, for, as Bakunin (in his pre-anarchist days) pointed out, *"the urge to destroy is a creative urge."* One cannot build a better society without understanding what is wrong with the present one.

However, it must be stressed that anarchism is more than just a means of analysis or a vision of a better society. It is also rooted in struggle, the struggle of the oppressed for their freedom. In other words, it provides a means of achieving a new system based on the needs of people, not power, and which places the planet before profit. To quote Scottish anarchist Stuart Christie:

> *"Anarchism is a movement for human freedom. It is concrete, democratic and egalitarian ... Anarchism began — and remains — a direct challenge by the underprivileged to their oppression and exploitation. It opposes both the insidious growth of state power and the pernicious ethos of possessive individualism, which, together or separately, ultimately serve only the interests of the few at the expense of the rest.*

"Anarchism is both a theory and practice of life. Philosophically, it aims for the maximum accord between the individual, society and nature. Practically, it aims for us to organise and live our lives in such a way as to make politicians, governments, states and their officials superfluous. In an anarchist society, mutually respectful sovereign individuals would be organised in non-coercive relationships within naturally defined communities in which the means of production and distribution are held in common.

"Anarchists are not dreamers obsessed with abstract principles and theoretical constructs ... Anarchists are well aware that a perfect society cannot be won tomorrow. Indeed, the struggle lasts forever! However, it is the vision that provides the spur to struggle against things as they are, and for things that might be ...

"Ultimately, only struggle determines outcome, and progress towards a more meaningful community must begin with the will to resist every form of injustice. In general terms, this means challenging all exploitation and defying the legitimacy of all coercive authority. If anarchists have one article of unshakeable faith, it is that, once the habit of deferring to politicians or ideologues is lost, and that of resistance to domination and exploitation acquired, then ordinary people have a capacity to organise every aspect of their lives in their own interests, anywhere and at any time, both freely and fairly.

"Anarchists do not stand aside from popular struggle, nor do they attempt to dominate it. They seek to contribute practically whatever they can, and also to assist within it the highest possible levels of both individual self-development and of group solidarity. It is possible to recognise anarchist ideas concerning voluntary relationships, egalitarian participation in decision-making processes, mutual aid and a related critique of all forms of domination in philosophical, social and revolutionary movements in all times and places." [**My Granny made me an Anarchist**, pp. 162–3]

Anarchism, anarchists argue, is simply the theoretical expression of our capacity to organise ourselves and run society without bosses or politicians. It allows working class and other oppressed people to become conscious of our power as a class, defend our immediate interests, and fight to revolutionise society as a whole. Only by doing this can we create a society fit for human beings to live in.

It is no abstract philosophy. Anarchist ideas are put into practice everyday. Wherever oppressed people stand up for their rights, take action to defend their freedom, practice solidarity and co-operation, fight against oppression, organise themselves without leaders and bosses, the spirit of anarchism lives. Anarchists simply seek to strengthen these libertarian tendencies and bring them to their full fruition. As we discuss in section J, anarchists apply their ideas in many ways within capitalism in order to change it for the better until such time as we get rid of it completely. Section I discusses what we aim to replace it with, i.e. what anarchism aims for.

A.1.3 Why is anarchism also called libertarian socialism?

Many anarchists, seeing the negative nature of the definition of *"anarchism,"* have used other terms to emphasise the inherently positive and constructive aspect of their ideas. The most common terms used are *"free socialism," "free communism," "libertarian socialism,"* and *"libertarian*

communism." For anarchists, libertarian socialism, libertarian communism, and anarchism are virtually interchangeable. As Vanzetti put it:

> *"After all we are socialists as the social-democrats, the socialists, the communists, and the I.W.W. are all Socialists. The difference — the fundamental one — between us and all the other is that they are authoritarian while we are libertarian; they believe in a State or Government of their own; we believe in no State or Government."* [Nicola Sacco and Bartolomeo Vanzetti, **The Letters of Sacco and Vanzetti**, p. 274]

But is this correct? Considering definitions from the **American Heritage Dictionary**, we find:

> **LIBERTARIAN:** *one who believes in freedom of action and thought; one who believes in free will.*
>
> **SOCIALISM:** *a social system in which the producers possess both political power and the means of producing and distributing goods.*

Just taking those two first definitions and fusing them yields:

> **LIBERTARIAN SOCIALISM:** *a social system which believes in freedom of action and thought and free will, in which the producers possess both political power and the means of producing and distributing goods.*

(Although we must add that our usual comments on the lack of political sophistication of dictionaries still holds. We only use these definitions to show that "libertarian" does not imply "free market" capitalism nor "socialism" state ownership. Other dictionaries, obviously, will have different definitions — particularly for socialism. Those wanting to debate dictionary definitions are free to pursue this unending and politically useless hobby but we will not).

However, due to the creation of the Libertarian Party in the USA, many people now consider the idea of *"libertarian socialism"* to be a contradiction in terms. Indeed, many "Libertarians" think anarchists are just attempting to associate the "anti-libertarian" ideas of "socialism" (as Libertarians conceive it) with Libertarian ideology in order to make those "socialist" ideas more "acceptable" — in other words, trying to steal the "libertarian" label from its rightful possessors.

Nothing could be further from the truth. Anarchists have been using the term "libertarian" to describe themselves and their ideas since the 1850's. According to anarchist historian Max Nettlau, the revolutionary anarchist Joseph Dejacque published **Le Libertaire, Journal du Mouvement Social** in New York between 1858 and 1861 while the use of the term *"libertarian communism"* dates from November, 1880 when a French anarchist congress adopted it. [Max Nettlau, **A Short History of Anarchism**, p. 75 and p. 145] The use of the term "Libertarian" by anarchists became more popular from the 1890s onward after it was used in France in an attempt to get round anti-anarchist laws and to avoid the negative associations of the word "anarchy" in the popular mind (Sebastien Faure and Louise Michel published the paper **Le Libertaire** – **The Libertarian** — in France in 1895, for example). Since then, particularly outside America, it has **always** been associated with anarchist ideas and movements. Taking a more recent example, in the USA, anarchists organised ***"The Libertarian League"*** in July 1954, which had staunch

anarcho-syndicalist principles and lasted until 1965. The US-based "Libertarian" Party, on the other hand has only existed since the early 1970's, well over 100 years after anarchists first used the term to describe their political ideas (and 90 years after the expression "libertarian communism" was first adopted). It is that party, not the anarchists, who have "stolen" the word. Later, in Section B, we will discuss why the idea of a "libertarian" capitalism (as desired by the Libertarian Party) is a contradiction in terms.

As we will also explain in Section I, only a libertarian-socialist system of ownership can maximise individual freedom. Needless to say, state ownership — what is commonly **called** "socialism" — is, for anarchists, not socialism at all. In fact, as we will elaborate in Section H, state "socialism" is just a form of capitalism, with no socialist content whatever. As Rudolf Rocker noted, for anarchists, socialism is *"not a simple question of a full belly, but a question of culture that would have to enlist the sense of personality and the free initiative of the individual; without freedom it would lead only to a dismal state capitalism which would sacrifice all individual thought and feeling to a fictitious collective interest."* [quoted by Colin Ward, *"Introduction"*, Rudolf Rocker, **The London Years**, p. 1]

Given the anarchist pedigree of the word "libertarian," few anarchists are happy to see it stolen by an ideology which shares little with our ideas. In the United States, as Murray Bookchin noted, the *"term 'libertarian' itself, to be sure, raises a problem, notably, the specious identification of an anti-authoritarian ideology with a straggling movement for 'pure capitalism' and 'free trade.' This movement never created the word: it appropriated it from the anarchist movement of the [nineteenth] century. And it should be recovered by those anti-authoritarians ... who try to speak for dominated people as a whole, not for personal egotists who identify freedom with entrepreneurship and profit."* Thus anarchists in America should *"restore in practice a tradition that has been denatured by"* the free-market right. [**The Modern Crisis**, pp. 154–5] And as we do that, we will continue to call our ideas libertarian socialism.

A.1.4 Are anarchists socialists?

Yes. All branches of anarchism are opposed to capitalism. This is because capitalism is based upon oppression and exploitation (see sections B and C). Anarchists reject the *"notion that men cannot work together unless they have a driving-master to take a percentage of their product"* and think that in an anarchist society *"the real workmen will make their own regulations, decide when and where and how things shall be done."* By so doing workers would free themselves *"from the terrible bondage of capitalism."* [Voltairine de Cleyre, *"Anarchism"*, **Exquisite Rebel**, p. 75 and p. 79]

(We must stress here that anarchists are opposed to **all** economic forms which are based on domination and exploitation, including feudalism, Soviet-style "socialism" — better called "state capitalism" –, slavery and so on. We concentrate on capitalism because that is what is dominating the world just now).

Individualists like Benjamin Tucker along with social anarchists like Proudhon and Bakunin proclaimed themselves ***"socialists."*** They did so because, as Kropotkin put it in his classic essay *"Modern Science and Anarchism,"* *"[s]o long as Socialism was understood in its wide, generic, and true sense — as an effort to* ***abolish*** *the exploitation of Labour by Capital — the Anarchists were marching hand-in-hands with the Socialists of that time."* [**Evolution and Environment**, p. 81]

Or, in Tucker's words, *"the bottom claim of Socialism [is] that labour should be put in possession of its own,"* a claim that both *"the two schools of Socialistic thought ... State Socialism and Anarchism"* agreed upon. [**The Anarchist Reader**, p. 144] Hence the word *"socialist"* was originally defined to include *"all those who believed in the individual's right to possess what he or she produced."* [Lance Klafta, *"Ayn Rand and the Perversion of Libertarianism,"* in **Anarchy: A Journal of Desire Armed**, no. 34] This opposition to exploitation (or usury) is shared by all true anarchists and places them under the socialist banner.

For most socialists, *"the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour."* [Peter Kropotkin, **The Conquest of Bread**, p. 145] For this reason Proudhon, for example, supported workers' co-operatives, where *"every individual employed in the association ... has an undivided share in the property of the company"* because by *"participation in losses and gains ... the collective force [i.e. surplus] ceases to be a source of profits for a small number of managers: it becomes the property of all workers."* [**The General Idea of the Revolution**, p. 222 and p. 223] Thus, in addition to desiring the end of exploitation of labour by capital, true socialists also desire a society within which the producers own and control the means of production (including, it should be stressed, those workplaces which supply services). The means by which the producers will do this is a moot point in anarchist and other socialist circles, but the desire remains a common one. Anarchists favour direct workers' control and either ownership by workers' associations or by the commune (see section A.3 on the different types of anarchists).

Moreover, anarchists also reject capitalism for being authoritarian **as well as** exploitative. Under capitalism, workers do not govern themselves during the production process nor have control over the product of their labour. Such a situation is hardly based on equal freedom for all, nor can it be non-exploitative, and is so opposed by anarchists. This perspective can best be found in the work of Proudhon's (who inspired both Tucker and Bakunin) where he argues that anarchism would see *"[c]apitalistic and proprietary exploitation stopped everywhere [and] the wage system abolished"* for *"either the workman.. . will be simply the employee of the proprietor-capitalist-promoter; or he will participate ... In the first case the workman is subordinated, exploited: his permanent condition is one of obedience... In the second case he resumes his dignity as a man and citizen... he forms part of the producing organisation, of which he was before but the slave ... we need not hesitate, for we have no choice... it is necessary to form an ASSOCIATION among workers ... because without that, they would remain related as subordinates and superiors, and there would ensue two... castes of masters and wage-workers, which is repugnant to a free and democratic society."* [**Op. Cit.**, p. 233 and pp. 215–216]

Therefore **all** anarchists are anti-capitalist (*"If labour owned the wealth it produced, there would be no capitalism"* [Alexander Berkman, **What is Anarchism?**, p. 44]). Benjamin Tucker, for example — the anarchist most influenced by liberalism (as we will discuss later) — called his ideas *"Anarchistic-Socialism"* and denounced capitalism as a system based upon *"the usurer, the receiver of interest, rent and profit."* Tucker held that in an anarchist, non-capitalist, free-market society, capitalists will become redundant and exploitation of labour by capital would cease, since *"labour... will... secure its natural wage, its entire product."* [**The Individualist Anarchists**, p. 82 and p. 85] Such an economy will be based on mutual banking and the free exchange of products between co-operatives, artisans and peasants. For Tucker, and other Individualist anarchists, capitalism is not a true free market, being marked by various laws and monopolies which ensure that capitalists have the advantage over working people, so ensuring the latter's exploitation via

profit, interest and rent (see section G for a fuller discussion). Even Max Stirner, the arch-egoist, had nothing but scorn for capitalist society and its various "spooks," which for him meant ideas that are treated as sacred or religious, such as private property, competition, division of labour, and so forth.

So anarchists consider themselves as socialists, but socialists of a specific kind — ***libertarian socialists***. As the individualist anarchist Joseph A. Labadie puts it (echoing both Tucker and Bakunin):

> *"It is said that Anarchism is not socialism. This is a mistake. Anarchism is voluntary Socialism. There are two kinds of Socialism, archistic and anarchistic, authoritarian and libertarian, state and free. Indeed, every proposition for social betterment is either to increase or decrease the powers of external wills and forces over the individual. As they increase they are archistic; as they decrease they are anarchistic."* [**Anarchism: What It Is and What It Is Not**]

Labadie stated on many occasions that *"all anarchists are socialists, but not all socialists are anarchists."* Therefore, Daniel Guerin's comment that *"Anarchism is really a synonym for socialism. The anarchist is primarily a socialist whose aim is to abolish the exploitation of man by man"* is echoed throughout the history of the anarchist movement, be it the social or individualist wings. [**Anarchism**, p. 12] Indeed, the Haymarket Martyr Adolph Fischer used almost exactly the same words as Labadie to express the same fact — *"every anarchist is a socialist, but every socialist is not necessarily an anarchist"* — while acknowledging that the movement was *"divided into two factions; the communistic anarchists and the Proudhon or middle-class anarchists."* [**The Autobiographies of the Haymarket Martyrs**, p. 81]

So while social and individualist anarchists do disagree on many issues – for example, whether a true, that is non-capitalist, free market would be the best means of maximising liberty — they agree that capitalism is to be opposed as exploitative and oppressive and that an anarchist society must, by definition, be based on associated, not wage, labour. Only associated labour will *"decrease the powers of external wills and forces over the individual"* during working hours and such self-management of work by those who do it is the core ideal of real socialism. This perspective can be seen when Joseph Labadie argued that the trade union was *"the exemplification of gaining freedom by association"* and that *"[w]ithout his union, the workman is much more the slave of his employer than he is with it."* [**Different Phases of the Labour Question**]

However, the meanings of words change over time. Today "socialism" almost always refers to **state** socialism, a system that all anarchists have opposed as a denial of freedom and genuine socialist ideals. All anarchists would agree with Noam Chomsky's statement on this issue:

> *"If the left is understood to include 'Bolshevism,' then I would flatly dissociate myself from the left. Lenin was one of the greatest enemies of socialism."* [**Marxism, Anarchism, and Alternative Futures**, p. 779]

Anarchism developed in constant opposition to the ideas of Marxism, social democracy and Leninism. Long before Lenin rose to power, Mikhail Bakunin warned the followers of Marx against the *"Red bureaucracy"* that would institute *"the worst of all despotic governments"* if Marx's state-socialist ideas were ever implemented. Indeed, the works of Stirner, Proudhon and especially Bakunin all predict the horror of state Socialism with great accuracy. In addition, the

anarchists were among the first and most vocal critics and opposition to the Bolshevik regime in Russia.

Nevertheless, being socialists, anarchists do share **some** ideas with **some** Marxists (though none with Leninists). Both Bakunin and Tucker accepted Marx's analysis and critique of capitalism as well as his labour theory of value (see section C). Marx himself was heavily influenced by Max Stirner's book **The Ego and Its Own**, which contains a brilliant critique of what Marx called "vulgar" communism as well as state socialism. There have also been elements of the Marxist movement holding views very similar to social anarchism (particularly the anarcho-syndicalist branch of social anarchism) — for example, Anton Pannekoek, Rosa Luxembourg, Paul Mattick and others, who are very far from Lenin. Karl Korsch and others wrote sympathetically of the anarchist revolution in Spain. There are many continuities from Marx to Lenin, but there are also continuities from Marx to more libertarian Marxists, who were harshly critical of Lenin and Bolshevism and whose ideas approximate anarchism's desire for the free association of equals.

Therefore anarchism is basically a form of socialism, one that stands in direct opposition to what is usually defined as "socialism" (i.e. state ownership and control). Instead of "central planning," which many people associate with the word "socialism," anarchists advocate free association and co-operation between individuals, workplaces and communities and so oppose "state" socialism as a form of state capitalism in which *"[e]very man [and woman] will be a wage-receiver, and the State the only wage payer."* [Benjamin Tucker, **The Individualist Anarchists**, p. 81] Thus anarchists reject Marxism (what most people think of as "socialism") as just *"[t]he idea of the State as Capitalist, to which the Social-Democratic fraction of the great Socialist Party is now trying to reduce Socialism."* [Peter Kropotkin, **The Great French Revolution**, vol. 1, p. 31] The anarchist objection to the identification of Marxism, "central planning" and State Socialism/ Capitalism with socialism will be discussed in section H.

It is because of these differences with state socialists, and to reduce confusion, most anarchists just call themselves "anarchists," as it is taken for granted that anarchists are socialists. However, with the rise of the so-called "libertarian" right in the USA, some pro-capitalists have taken to calling themselves "anarchists" and that is why we have laboured the point somewhat here. Historically, and logically, anarchism implies anti-capitalism, i.e. socialism, which is something, we stress, that all anarchists have agreed upon (for a fuller discuss of why "anarcho"-capitalism is not anarchist see section F).

A.1.5 Where does anarchism come from?

Where does anarchism come from? We can do no better than quote **The Organisational Platform of the Libertarian Communists** produced by participants of the Makhnovist movement in the Russian Revolution (see Section A.5.4). They point out that:

> *"The class struggle created by the enslavement of workers and their aspirations to liberty gave birth, in the oppression, to the idea of anarchism: the idea of the total negation of a social system based on the principles of classes and the State, and its replacement by a free non-statist society of workers under self-management.*
>
> *"So anarchism does not derive from the abstract reflections of an intellectual or a philosopher, but from the direct struggle of workers against capitalism, from the needs and necessities of the workers, from their aspirations to liberty and equality, aspirations which*

become particularly alive in the best heroic period of the life and struggle of the working masses.

"The outstanding anarchist thinkers, Bakunin, Kropotkin and others, did not invent the idea of anarchism, but, having discovered it in the masses, simply helped by the strength of their thought and knowledge to specify and spread it." [pp. 15–16]

Like the anarchist movement in general, the Makhnovists were a mass movement of working class people resisting the forces of authority, both Red (Communist) and White (Tsarist/Capitalist) in the Ukraine from 1917 to 1921. As Peter Marshall notes *"anarchism ... has traditionally found its chief supporters amongst workers and peasants."* [**Demanding the Impossible**, p. 652]

Anarchism was created in, and by, the struggle of the oppressed for freedom. For Kropotkin, for example, *"Anarchism ... originated in everyday struggles"* and *"the Anarchist movement was renewed each time it received an impression from some great practical lesson: it derived its origin from the teachings of life itself."* [**Evolution and Environment**, p. 58 and p. 57] For Proudhon, *"the proof"* of his mutualist ideas lay in the *"current practice, revolutionary practice"* of *"those labour associations ... which have spontaneously ... been formed in Paris and Lyon ... [show that the] organisation of credit and organisation of labour amount to one and the same."* [**No Gods, No Masters**, vol. 1, pp. 59–60] Indeed, as one historian argues, there was *"close similarity between the associational ideal of Proudhon ... and the program of the Lyon Mutualists"* and that there was *"a remarkable convergence [between the ideas], and it is likely that Proudhon was able to articulate his positive program more coherently because of the example of the silk workers of Lyon. The socialist ideal that he championed was already being realised, to a certain extent, by such workers."* [K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 164]

Thus anarchism comes from the fight for liberty and our desires to lead a fully human life, one in which we have time to live, to love and to play. It was not created by a few people divorced from life, in ivory towers looking down upon society and making judgements upon it based on their notions of what is right and wrong. Rather, it was a product of working class struggle and resistance to authority, oppression and exploitation. As Albert Meltzer put it:

"There were never theoreticians of Anarchism as such, though it produced a number of theoreticians who discussed aspects of its philosophy. Anarchism has remained a creed that has been worked out in action rather than as the putting into practice of an intellectual idea. Very often, a bourgeois writer comes along and writes down what has already been worked out in practice by workers and peasants; he [or she] is attributed by bourgeois historians as being a leader, and by successive bourgeois writers (citing the bourgeois historians) as being one more case that proves the working class relies on bourgeois leadership." [**Anarchism: Arguments for and against**, p. 18]

In Kropotkin's eyes, *"Anarchism had its origins in the same creative, constructive activity of the masses which has worked out in times past all the social institutions of mankind — and in the revolts ... against the representatives of force, external to these social institutions, who had laid their hands on these institutions and used them for their own advantage."* More recently, *"Anarchy was brought forth by the same critical and revolutionary protest which gave birth to Socialism in general."* Anarchism, unlike other forms of socialism, *"lifted its sacrilegious arm, not only against Capitalism,*

but also against these pillars of Capitalism: Law, Authority, and the State." All anarchist writers did was to *"work out a general expression of [anarchism's] principles, and the theoretical and scientific basis of its teachings"* derived from the experiences of working class people in struggle as well as analysing the evolutionary tendencies of society in general. [**Op. Cit.**, p. 19 and p. 57]

However, anarchistic tendencies and organisations in society have existed long before Proudhon put pen to paper in 1840 and declared himself an anarchist. While anarchism, as a specific political theory, was born with the rise of capitalism (Anarchism *"emerged at the end of the eighteenth century ...[and] took up the dual challenge of overthrowing both Capital and the State."* [Peter Marshall, **Op. Cit.**, p. 4]) anarchist writers have analysed history for libertarian tendencies. Kropotkin argued, for example, that *"from all times there have been Anarchists and Statists."* [**Op. Cit.**, p. 16] In **Mutual Aid** (and elsewhere) Kropotkin analysed the libertarian aspects of previous societies and noted those that successfully implemented (to some degree) anarchist organisation or aspects of anarchism. He recognised this tendency of actual examples of anarchistic ideas to predate the creation of the "official" anarchist movement and argued that:

> *"From the remotest, stone-age antiquity, men [and women] have realised the evils that resulted from letting some of them acquire personal authority... Consequently they developed in the primitive clan, the village community, the medieval guild ... and finally in the free medieval city, such institutions as enabled them to resist the encroachments upon their life and fortunes both of those strangers who conquered them, and those clansmen of their own who endeavoured to establish their personal authority."* [**Anarchism**, pp. 158–9]

Kropotkin placed the struggle of working class people (from which modern anarchism sprung) on par with these older forms of popular organisation. He argued that *"the labour combinations... were an outcome of the same popular resistance to the growing power of the few — the capitalists in this case"* as were the clan, the village community and so on, as were *"the strikingly independent, freely federated activity of the 'Sections' of Paris and all great cities and many small 'Communes' during the French Revolution"* in 1793. [**Op. Cit.**, p. 159]

Thus, while anarchism as a political theory is an expression of working class struggle and self-activity against capitalism and the modern state, the ideas of anarchism have continually expressed themselves in action throughout human existence. Many indigenous peoples in North America and elsewhere, for example, practised anarchism for thousands of years before anarchism as a specific political theory existed. Similarly, anarchistic tendencies and organisations have existed in every major revolution — the New England Town Meetings during the American Revolution, the Parisian 'Sections' during the French Revolution, the workers' councils and factory committees during the Russian Revolution to name just a few examples (see Murray Bookchin's **The Third Revolution** for details). This is to be expected if anarchism is, as we argue, a product of resistance to authority then any society with authorities will provoke resistance to them and generate anarchistic tendencies (and, of course, any societies without authorities cannot help but being anarchistic).

In other words, anarchism is an expression of the struggle against oppression and exploitation, a generalisation of working people's experiences and analyses of what is wrong with the current system and an expression of our hopes and dreams for a better future. This struggle existed before it was called anarchism, but the historic anarchist movement (i.e. groups of people calling

their ideas anarchism and aiming for an anarchist society) is essentially a product of working class struggle against capitalism and the state, against oppression and exploitation, and **for** a free society of free and equal individuals.

A.2 What does anarchism stand for?

These words by Percy Bysshe Shelley gives an idea of what anarchism stands for in practice and what ideals drive it:

The man
Of virtuous soul commands not, nor obeys:
Power, like a desolating pestilence,
Pollutes whate'er it touches, and obedience,
Bane of all genius, virtue, freedom, truth,
Makes slaves of men, and, of the human frame,
A mechanised automaton.

As Shelley's lines suggest, anarchists place a high priority on liberty, desiring it both for themselves and others. They also consider individuality — that which makes one a unique person — to be a most important aspect of humanity. They recognise, however, that individuality does not exist in a vacuum but is a **social** phenomenon. Outside of society, individuality is impossible, since one needs other people in order to develop, expand, and grow.

Moreover, between individual and social development there is a reciprocal effect: individuals grow within and are shaped by a particular society, while at the same time they help shape and change aspects of that society (as well as themselves and other individuals) by their actions and thoughts. A society not based on free individuals, their hopes, dreams and ideas would be hollow and dead. Thus, *"the making of a human being... is a collective process, a process in which both community and the individual **participate**."* [Murray Bookchin, **The Modern Crisis**, p. 79] Consequently, any political theory which bases itself purely on the social or the individual is false.

In order for individuality to develop to the fullest possible extent, anarchists consider it essential to create a society based on three principles: **liberty**, **equality** and **solidarity**. These principles are shared by all anarchists. Thus we find, the communist-anarchist Peter Kropotkin talking about a revolution inspired by *"the beautiful words, Liberty, Equality and Solidarity."* [**The Conquest of Bread**, p. 128] Individualist-anarchist Benjamin Tucker wrote of a similar vision, arguing that anarchism *"insists on Socialism ... on true Socialism, Anarchistic Socialism: the prevalance on earth of Liberty, Equality, and Solidarity."* [**Instead of a Book**, p. 363] All three principles are interdependent.

Liberty is essential for the full flowering of human intelligence, creativity, and dignity. To be dominated by another is to be denied the chance to think and act for oneself, which is the only way to grow and develop one's individuality. Domination also stifles innovation and personal responsibility, leading to conformity and mediocrity. Thus the society that maximises the growth of individuality will necessarily be based on voluntary association, not coercion and authority. To quote Proudhon, *"All associated and all free."* Or, as Luigi Galleani puts it, anarchism is *"the autonomy of the individual within the freedom of association"* [**The End of Anarchism?**, p. 35] (See further section A.2.2 — Why do anarchists emphasise liberty?).

If liberty is essential for the fullest development of individuality, then equality is essential for genuine liberty to exist. There can be no real freedom in a class-stratified, hierarchical society riddled with gross inequalities of power, wealth, and privilege. For in such a society only a few — those at the top of the hierarchy — are relatively free, while the rest are semi-slaves. Hence without equality, liberty becomes a mockery — at best the "freedom" to choose one's master (boss), as under capitalism. Moreover, even the elite under such conditions are not really free, because they must live in a stunted society made ugly and barren by the tyranny and alienation of the majority. And since individuality develops to the fullest only with the widest contact with other free individuals, members of the elite are restricted in the possibilities for their own development by the scarcity of free individuals with whom to interact. (See also section A.2.5 — Why are anarchists in favour of equality?)

Finally, solidarity means mutual aid: working voluntarily and co-operatively with others who share the same goals and interests. But without liberty and equality, society becomes a pyramid of competing classes based on the domination of the lower by the higher strata. In such a society, as we know from our own, it's "dominate or be dominated," "dog eat dog," and "everyone for themselves." Thus "rugged individualism" is promoted at the expense of community feeling, with those on the bottom resenting those above them and those on the top fearing those below them. Under such conditions, there can be no society-wide solidarity, but only a partial form of solidarity within classes whose interests are opposed, which weakens society as a whole. (See also section A.2.6 — Why is solidarity important to anarchists?)

It should be noted that solidarity does not imply self-sacrifice or self-negation. As Errico Malatesta makes clear:

> *"we are all egoists, we all seek our own satisfaction. But the anarchist finds his greatest satisfaction in struggling for the good of all, for the achievement of a society in which he [sic] can be a brother among brothers, and among healthy, intelligent, educated, and happy people. But he who is adaptable, who is satisfied to live among slaves and draw profit from the labour of slaves, is not, and cannot be, an anarchist."* [**Errico Malatesta: His Life and Ideas**, p. 23]

For anarchists, **real** wealth is other people and the planet on which we live. Or, in the words of Emma Goldman, it *"consists in things of utility and beauty, in things which help to create strong, beautiful bodies and surroundings inspiring to live in ... [Our] goal is the freest possible expression of all the latent powers of the individual . .. Such free display of human energy being possible only under complete individual and social freedom,"* in other words *"social equality."* [**Red Emma Speaks**, pp. 67–8]

Also, honouring individuality does not mean that anarchists are idealists, thinking that people or ideas develop outside of society. Individuality and ideas grow and develop within society, in response to material and intellectual interactions and experiences, which people actively analyse and interpret. Anarchism, therefore, is a **materialist** theory, recognising that ideas develop and grow from social interaction and individuals' mental activity (see Michael Bakunin's **God and the State** for the classic discussion of materialism versus idealism).

This means that an anarchist society will be the creation of human beings, not some deity or other transcendental principle, since *"[n]othing ever arranges itself, least of all in human relations. It is men [sic] who do the arranging, and they do it according to their attitudes and understanding of things."* [Alexander Berkman, **What is Anarchism?**, p. 185]

Therefore, anarchism bases itself upon the power of ideas and the ability of people to act and transform their lives based on what they consider to be right. In other words, liberty.

A.2.1 What is the essence of anarchism?

As we have seen, *"an-archy"* implies *"without rulers"* or *"without (hierarchical) authority."* Anarchists are not against "authorities" in the sense of experts who are particularly knowledgeable, skilful, or wise, though they believe that such authorities should have no power to force others to follow their recommendations (see section B.1 for more on this distinction). In a nutshell, then, anarchism is anti-authoritarianism.

Anarchists are anti-authoritarians because they believe that no human being should dominate another. Anarchists, in L. Susan Brown's words, *"believe in the inherent dignity and worth of the human individual."* [**The Politics of Individualism**, p. 107] Domination is inherently degrading and demeaning, since it submerges the will and judgement of the dominated to the will and judgement of the dominators, thus destroying the dignity and self-respect that comes only from personal autonomy. Moreover, domination makes possible and generally leads to exploitation, which is the root of inequality, poverty, and social breakdown.

In other words, then, the essence of anarchism (to express it positively) is free co-operation between equals to maximise their liberty and individuality.

Co-operation between equals is the key to anti-authoritarianism. By co-operation we can develop and protect our own intrinsic value as unique individuals as well as enriching our lives and liberty for *"[n]o individual can recognise his own humanity, and consequently realise it in his lifetime, if not by recognising it in others and co-operating in its realisation for others ... My freedom is the freedom of all since I am not truly free in thought and in fact, except when my freedom and my rights are confirmed and approved in the freedom and rights of all men [and women] who are my equals."* [Michael Bakunin, quoted by Errico Malatesta, **Anarchy**, p. 30]

While being anti-authoritarians, anarchists recognise that human beings have a social nature and that they mutually influence each other. We cannot escape the "authority" of this mutual influence, because, as Bakunin reminds us:

> *"The abolition of this mutual influence would be death. And when we advocate the freedom of the masses, we are by no means suggesting the abolition of any of the natural influences that individuals or groups of individuals exert on them. What we want is the abolition of influences which are artificial, privileged, legal, official."* [quoted by Malatesta, **Anarchy**, p. 51]

In other words, those influences which stem from hierarchical authority.

This is because hierarchical systems like capitalism deny liberty and, as a result, people's *"mental, moral, intellectual and physical qualities are dwarfed, stunted and crushed"* (see section B.1 for more details). Thus one of *"the grand truths of Anarchism"* is that *"to be really free is to allow each one to live their lives in their own way as long as each allows all to do the same."* This is why anarchists fight for a better society, for a society which respects individuals and their freedom. Under capitalism, *"[e]verything is upon the market for sale: all is merchandise and commerce"* but there are *"certain things that are priceless. Among these are life, liberty and happiness, and these are things which the society of the future, the free society, will guarantee to all."* Anarchists, as a

result, seek to make people aware of their dignity, individuality and liberty and to encourage the spirit of revolt, resistance and solidarity in those subject to authority. This gets us denounced by the powerful as being breakers of the peace, but anarchists consider the struggle for freedom as infinitely better than the peace of slavery. Anarchists, as a result of our ideals, *"believe in peace at any price — except at the price of liberty. But this precious gift the wealth-producers already seem to have lost. Life ... they have; but what is life worth when it lacks those elements which make for enjoyment?"* [Lucy Parsons, **Liberty, Equality & Solidarity**, p. 103, p. 131, p. 103 and p. 134]

So, in a nutshell, Anarchists seek a society in which people interact in ways which enhance the liberty of all rather than crush the liberty (and so potential) of the many for the benefit of a few. Anarchists do not want to give others power over themselves, the power to tell them what to do under the threat of punishment if they do not obey. Perhaps non-anarchists, rather than be puzzled why anarchists are anarchists, would be better off asking what it says about themselves that they feel this attitude needs any sort of explanation.

A.2.2 Why do anarchists emphasise liberty?

An anarchist can be regarded, in Bakunin's words, as a *"fanatic lover of freedom, considering it as the unique environment within which the intelligence, dignity and happiness of mankind can develop and increase."* [**Michael Bakunin: Selected Writings**, p. 196] Because human beings are thinking creatures, to deny them liberty is to deny them the opportunity to think for themselves, which is to deny their very existence as humans. For anarchists, freedom is a product of our humanity, because:

> *"The very fact... that a person has a consciousness of self, of being different from others, creates a desire to act freely. The craving for liberty and self-expression is a very fundamental and dominant trait."* [Emma Goldman, **Red Emma Speaks**, p. 439]

For this reason, anarchism *"proposes to rescue the self-respect and independence of the individual from all restraint and invasion by authority. Only in freedom can man [sic!] grow to his full stature. Only in freedom will he learn to think and move, and give the very best of himself. Only in freedom will he realise the true force of the social bonds which tie men together, and which are the true foundations of a normal social life."* [**Op. Cit.**, pp. 72–3]

Thus, for anarchists, freedom is basically individuals pursuing their own good in their own way. Doing so calls forth the activity and power of individuals as they make decisions for and about themselves and their lives. Only liberty can ensure individual development and diversity. This is because when individuals govern themselves and make their own decisions they have to exercise their minds and this can have no other effect than expanding and stimulating the individuals involved. As Malatesta put it, *"[f]or people to become educated to freedom and the management of their own interests, they must be left to act for themselves, to feel responsibility for their own actions in the good or bad that comes from them. They'd make mistakes, but they'd understand from the consequences where they'd gone wrong and try out new ways."* [**Fra Contadini**, p. 26]

So, liberty is the precondition for the maximum development of one's individual potential, which is also a social product and can be achieved only in and through community. A healthy, free community will produce free individuals, who in turn will shape the community and enrich the social relationships between the people of whom it is composed. Liberties, being socially

produced, *"do not exist because they have been legally set down on a piece of paper, but only when they have become the ingrown habit of a people, and when any attempt to impair them will meet with the violent resistance of the populace ... One compels respect from others when one knows how to defend one's dignity as a human being. This is not only true in private life; it has always been the same in political life as well."* In fact, we *"owe all the political rights and privileges which we enjoy today in greater or lesser measures, not to the good will of their governments, but to their own strength."* [Rudolf Rocker, **Anarcho-syndicalism**, p. 75]

It is for this reason anarchists support the tactic of ***"Direct Action"*** (see section J.2) for, as Emma Goldman argued, we have *"as much liberty as [we are] willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social, and moral."* It requires *"integrity, self-reliance, and courage. In short, it calls for free, independent spirits"* and *"only persistent resistance"* can *"finally set [us] free. Direct action against the authority in the shop, direct action against the authority of the law, direct action against the invasive, meddlesome authority of our moral code, is the logical, consistent method of Anarchism."* [**Red Emma Speaks**, pp. 76–7]

Direct action is, in other words, the application of liberty, used to resist oppression in the here and now as well as the means of creating a free society. It creates the necessary individual mentality and social conditions in which liberty flourishes. Both are essential as liberty develops only within society, not in opposition to it. Thus Murray Bookchin writes:

> *"What freedom, independence, and autonomy people have in a given historical period is the product of long social traditions and ... a* ***collective*** *development — which is not to deny that individuals play an important role in that development, indeed are ultimately obliged to do so if they wish to be free."* [**Social Anarchism or Lifestyle Anarchism**, p. 15]

But freedom requires the right **kind** of social environment in which to grow and develop. Such an environment **must** be decentralised and based on the direct management of work by those who do it. For centralisation means coercive authority (hierarchy), whereas self-management is the essence of freedom. Self-management ensures that the individuals involved use (and so develop) all their abilities — particularly their mental ones. Hierarchy, in contrast, substitutes the activities and thoughts of a few for the activities and thoughts of all the individuals involved. Thus, rather than developing their abilities to the full, hierarchy marginalises the many and ensures that their development is blunted (see also section B.1).

It is for this reason that anarchists oppose both capitalism and statism. As the French anarchist Sebastien Faure noted, authority *"dresses itself in two principal forms: the political form, that is the State; and the economic form, that is private property."* [cited by Peter Marshall, **Demanding the Impossible**, p. 43] Capitalism, like the state, is based on centralised authority (i.e. of the boss over the worker), the very purpose of which is to keep the management of work out of the hands of those who do it. This means *"that the serious, final, complete liberation of the workers is possible only upon one condition: that of the appropriation of capital, that is, of raw material and all the tools of labour, including land, by the whole body of the workers."* [Michael Bakunin, quoted by Rudolf Rocker, **Op. Cit.**, p. 50]

Hence, as Noam Chomsky argues, a *"consistent anarchist must oppose private ownership of the means of production and the wage slavery which is a component of this system, as incompatible with*

the principle that labour must be freely undertaken and under the control of the producer." [*"Notes on Anarchism"*, **For Reasons of State**, p. 158]

Thus, liberty for anarchists means a non-authoritarian society in which individuals and groups practice self-management, i.e. they govern themselves. The implications of this are important. First, it implies that an anarchist society will be non-coercive, that is, one in which violence or the threat of violence will not be used to "convince" individuals to do anything. Second, it implies that anarchists are firm supporters of individual sovereignty, and that, because of this support, they also oppose institutions based on coercive authority, i.e. hierarchy. And finally, it implies that anarchists' opposition to "government" means only that they oppose centralised, hierarchical, bureaucratic organisations or government. They do not oppose self-government through confederations of decentralised, grassroots organisations, so long as these are based on direct democracy rather than the delegation of power to "representatives" (see section A.2.9 for more on anarchist organisation). For authority is the opposite of liberty, and hence any form of organisation based on the delegation of power is a threat to the liberty and dignity of the people subjected to that power.

Anarchists consider freedom to be the only social environment within which human dignity and diversity can flower. Under capitalism and statism, however, there is no freedom for the majority, as private property and hierarchy ensure that the inclination and judgement of most individuals will be subordinated to the will of a master, severely restricting their liberty and making impossible the *"full development of all the material, intellectual and moral capacities that are latent in every one of us."* [Michael Bakunin, **Bakunin on Anarchism**, p. 261] That is why anarchists seek to ensure *"that real justice and real liberty might come on earth"* for it is *"all false, all unnecessary, this wild waste of human life, of bone and sinew and brain and heart, this turning of people into human rags, ghosts, piteous caricatures of the creatures they had it in them to be, on the day they were born; that what is called 'economy', the massing up of things, is in reality the most frightful spending — the sacrifice of the maker to the made — the lose of all the finer and nobler instincts in the gain of one revolting attribute, the power to count and calculate."* [Voltairine de Cleyre, **The First Mayday: The Haymarket Speeches 1895–1910**, pp, 17–18]

(See section B for further discussion of the hierarchical and authoritarian nature of capitalism and statism).

A.2.3 Are anarchists in favour of organisation?

Yes. Without association, a truly human life is impossible. Liberty **cannot** exist without society and organisation. As George Barrett pointed out:

> "To get the full meaning out of life we must co-operate, and to co-operate we must make agreements with our fellow-men. But to suppose that such agreements mean a limitation of freedom is surely an absurdity; on the contrary, they are the exercise of our freedom.
>
> "If we are going to invent a dogma that to make agreements is to damage freedom, then at once freedom becomes tyrannical, for it forbids men to take the most ordinary everyday pleasures. For example, I cannot go for a walk with my friend because it is against the principle of Liberty that I should agree to be at a certain place at a

> certain time to meet him. I cannot in the least extend my own power beyond myself, because to do so I must co-operate with someone else, and co-operation implies an agreement, and that is against Liberty. It will be seen at once that this argument is absurd. I do not limit my liberty, but simply exercise it, when I agree with my friend to go for a walk.
>
> "If, on the other hand, I decide from my superior knowledge that it is good for my friend to take exercise, and therefore I attempt to compel him to go for a walk, then I begin to limit freedom. This is the difference between free agreement and government." [**Objections to Anarchism**, pp. 348–9]

As far as organisation goes, anarchists think that *"far from creating authority, [it] is the only cure for it and the only means whereby each of us will get used to taking an active and conscious part in collective work, and cease being passive instruments in the hands of leaders."* [Errico Malatesta, **Errico Malatesta: His Life and Ideas**, p. 86] Thus anarchists are well aware of the need to organise in a structured and open manner. As Carole Ehrlich points out, while anarchists *"aren't opposed to structure"* and simply *"want to abolish **hierarchical** structure"* they are *"almost always stereotyped as wanting no structure at all."* This is not the case, for *"organisations that would build in accountability, diffusion of power among the maximum number of persons, task rotation, skill-sharing, and the spread of information and resources"* are based on *"good social anarchist principles of organisation!"* [*"Socialism, Anarchism and Feminism"*, **Quiet Rumours: An Anarcha-Feminist Reader**, p. 47 and p. 46]

The fact that anarchists are in favour of organisation may seem strange at first, but it is understandable. *"For those with experience only of authoritarian organisation,"* argue two British anarchists, *"it appears that organisation can only be totalitarian or democratic, and that those who disbelieve in government must by that token disbelieve in organisation at all. That is not so."* [Stuart Christie and Albert Meltzer, **The Floodgates of Anarchy**, p. 122] In other words, because we live in a society in which virtually all forms of organisation are authoritarian, this makes them appear to be the only kind possible. What is usually not recognised is that this mode of organisation is historically conditioned, arising within a specific kind of society — one whose motive principles are domination and exploitation. According to archaeologists and anthropologists, this kind of society has only existed for about 5,000 years, having appeared with the first primitive states based on conquest and slavery, in which the labour of slaves created a surplus which supported a ruling class.

Prior to that time, for hundreds of thousands of years, human and proto-human societies were what Murray Bookchin calls *"organic,"* that is, based on co-operative forms of economic activity involving mutual aid, free access to productive resources, and a sharing of the products of communal labour according to need. Although such societies probably had status rankings based on age, there were no hierarchies in the sense of institutionalised dominance-subordination relations enforced by coercive sanctions and resulting in class-stratification involving the economic exploitation of one class by another (see Murray Bookchin, **The Ecology of Freedom**).

It must be emphasised, however, that anarchists do **not** advocate going "back to the Stone Age." We merely note that since the hierarchical-authoritarian mode of organisation is a relatively recent development in the course of human social evolution, there is no reason to suppose that it is somehow "fated" to be permanent. We do not think that human beings are genetically "programmed" for authoritarian, competitive, and aggressive behaviour, as there is no credible ev-

idence to support this claim. On the contrary, such behaviour is socially conditioned, or **learned**, and as such, can be **unlearned** (see Ashley Montagu, **The Nature of Human Aggression**). We are not fatalists or genetic determinists, but believe in free will, which means that people can change the way they do things, including the way they organise society.

And there is no doubt that society needs to be better organised, because presently most of its wealth — which is produced by the majority — and power gets distributed to a small, elite minority at the top of the social pyramid, causing deprivation and suffering for the rest, particularly for those at the bottom. Yet because this elite controls the means of coercion through its control of the state (see section B.2.3), it is able to suppress the majority and ignore its suffering — a phenomenon that occurs on a smaller scale within all hierarchies. Little wonder, then, that people within authoritarian and centralised structures come to hate them as a denial of their freedom. As Alexander Berkman puts it:

> *"Any one who tells you that Anarchists don't believe in organisation is talking nonsense. Organisation is everything, and everything is organisation. The whole of life is organisation, conscious or unconscious ... But there is organisation and organisation. Capitalist society is so badly organised that its various members suffer: just as when you have a pain in some part of you, your whole body aches and you are ill... , not a single member of the organisation or union may with impunity be discriminated against, suppressed or ignored. To do so would be the same as to ignore an aching tooth: you would be sick all over."* [**Op. Cit.**, p. 198]

Yet this is precisely what happens in capitalist society, with the result that it is, indeed, *"sick all over."*

For these reasons, anarchists reject authoritarian forms of organisation and instead support associations based on free agreement. Free agreement is important because, in Berkman's words, *"[o]nly when each is a free and independent unit, co-operating with others from his own choice because of mutual interests, can the world work successfully and become powerful."* [**Op. Cit.**, p. 199] As we discuss in section A.2.14, anarchists stress that free agreement has to be complemented by direct democracy (or, as it is usually called by anarchists, self-management) within the association itself otherwise "freedom" become little more than picking masters.

Anarchist organisation is based on a massive decentralisation of power back into the hands of the people, i.e. those who are directly affected by the decisions being made. To quote Proudhon:

> *"Unless democracy is a fraud and the sovereignty of the People a joke, it must be admitted that each citizen in the sphere of his [or her] industry, each municipal, district or provincial council within its own territory ... should act directly and by itself in administering the interests which it includes, and should exercise full sovereignty in relation to them."* [**The General Idea of the Revolution**, p. 276]

It also implies a need for federalism to co-ordinate joint interests. For anarchism, federalism is the natural complement to self-management. With the abolition of the State, society *"can, and must, organise itself in a different fashion, but not from top to bottom ... The future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great*

federation, international and universal. Then alone will be realised the true and life-giving order of freedom and the common good, that order which, far from denying, on the contrary affirms and brings into harmony the interests of individuals and of society." [Bakunin, **Michael Bakunin: Selected Writings**, pp. 205–6] Because a *"truly popular organisation begins ... from below"* and so *"federalism becomes a political institution of Socialism, the free and spontaneous organisation of popular life."* Thus libertarian socialism *"is federalistic in character."* [Bakunin, **The Political Philosophy of Bakunin**, pp. 273–4 and p. 272]

Therefore, anarchist organisation is based on direct democracy (or self-management) and federalism (or confederation). These are the expression and environment of liberty. Direct (or participatory) democracy is essential because liberty and equality imply the need for forums within which people can discuss and debate as equals and which allow for the free exercise of what Murray Bookchin calls *"the creative role of dissent."* Federalism is necessary to ensure that common interests are discussed and joint activity organised in a way which reflects the wishes of all those affected by them. To ensure that decisions flow from the bottom up rather than being imposed from the top down by a few rulers.

Anarchist ideas on libertarian organisation and the need for direct democracy and confederation will be discussed further in sections A.2.9 and A.2.11.

A.2.4 Are anarchists in favour of "absolute" liberty?

No. Anarchists do not believe that everyone should be able to *"do whatever they like,"* because some actions invariably involve the denial of the liberty of others.

For example, anarchists do not support the "freedom" to rape, to exploit, or to coerce others. Neither do we tolerate authority. On the contrary, since authority is a threat to liberty, equality, and solidarity (not to mention human dignity), anarchists recognise the need to resist and overthrow it.

The exercise of authority is not freedom. No one has a "right" to rule others. As Malatesta points out, anarchism supports *"freedom for everybody ... with the only limit of the equal freedom for others; which does **not** mean ... that we recognise, and wish to respect, the 'freedom' to exploit, to oppress, to command, which is oppression and certainly not freedom."* [**Errico Malatesta: His Life and Ideas**, p. 53]

In a capitalist society, resistance to all forms of hierarchical authority is the mark of a free person — be it private (the boss) or public (the state). As Henry David Thoreau pointed out in his essay on **"Civil Disobedience"** (1847)

> *"Disobedience is the true foundation of liberty. The obedient must be slaves."*

A.2.5 Why are anarchists in favour of equality?

As mentioned in above, anarchists are dedicated to social equality because it is the only context in which individual liberty can flourish. However, there has been much nonsense written about "equality," and much of what is commonly believed about it is very strange indeed. Before discussing what anarchist **do** mean by equality, we have to indicate what we **do not** mean by it.

Anarchists do **not** believe in *"equality of endowment,"* which is not only non-existent but would be **very** undesirable if it could be brought about. Everyone is unique. Biologically determined human differences not only exist but are *"a cause for joy, not fear or regret."* Why? Because *"life among clones would not be worth living, and a sane person will only rejoice that others have abilities that they do not share."* [Noam Chomsky, **Marxism, Anarchism, and Alternative Futures**, p. 782]

That some people **seriously** suggest that anarchists means by "equality" that everyone should be **identical** is a sad reflection on the state of present-day intellectual culture and the corruption of words — a corruption used to divert attention from an unjust and authoritarian system and side-track people into discussions of biology. *"The uniqueness of the self in no way contradicts the principle of equality,"* noted Erich Fromm, *"The thesis that men are born equal implies that they all share the same fundamental human qualities, that they share the same basic fate of human beings, that they all have the same inalienable claim on freedom and happiness. It furthermore means that their relationship is one of solidarity, not one of domination-submission. What the concept of equality does not mean is that all men are alike."* [**The Fear of Freedom**, p. 228] Thus it would be fairer to say that anarchists seek equality **because** we recognise that everyone is different and, consequently, seek the full affirmation and development of that uniqueness.

Nor are anarchists in favour of so-called *"equality of outcome."* We have **no** desire to live in a society were everyone gets the same goods, lives in the same kind of house, wears the same uniform, etc. Part of the reason for the anarchist revolt against capitalism and statism is that they standardise so much of life (see George Reitzer's **The McDonaldisation of Society** on why capitalism is driven towards standardisation and conformity). In the words of Alexander Berkman:

> *"The spirit of authority, law, written and unwritten, tradition and custom force us into a common grove and make a man [or woman] a will-less automation without independence or individuality... All of us are its victims, and only the exceptionally strong succeed in breaking its chains, and that only partly."* [**What is Anarchism?**, p. 165]

Anarchists, therefore, have little to desire to make this *"common grove"* even deeper. Rather, we desire to destroy it and every social relationship and institution that creates it in the first place.

"Equality of outcome" can only be introduced and maintained by force, which would **not** be equality anyway, as some would have more power than others! *"Equality of outcome"* is particularly hated by anarchists, as we recognise that every individual has different needs, abilities, desires and interests. To make all consume the same would be tyranny. Obviously, if one person needs medical treatment and another does not, they do not receive an "equal" amount of medical care. The same is true of other human needs. As Alexander Berkman put it:

> "equality does not mean an equal amount but equal **opportunity**... Do not make the mistake of identifying equality in liberty with the forced equality of the convict camp. True anarchist equality implies freedom, not quantity. It does not mean that every one must eat, drink, or wear the same things, do the same work, or live in the same manner. Far from it: the very reverse in fact."
>
> "Individual needs and tastes differ, as appetites differ. It is **equal opportunity to satisfy** them that constitutes true equality.

> "Far from levelling, such equality opens the door for the greatest possible variety of activity and development. For human character is diverse ... Free opportunity of expressing and acting out your individuality means development of natural dissimilarities and variations." [**Op. Cit.**, pp. 164–5]

For anarchists, the "concepts" of "equality" as "equality of outcome" or "equality of endowment" are meaningless. However, in a hierarchical society, "equality of opportunity" and "equality of outcome" **are** related. Under capitalism, for example, the opportunities each generation face are dependent on the outcomes of the previous ones. This means that under capitalism "equality of opportunity" without a rough "equality of outcome" (in the sense of income and resources) becomes meaningless, as there is no real equality of opportunity for the off-spring of a millionaire and that of a road sweeper. Those who argue for "equality of opportunity" while ignoring the barriers created by previous outcomes indicate that they do not know what they are talking about — opportunity in a hierarchical society depends not only on an open road but also upon an equal start. From this obvious fact springs the misconception that anarchists desire "equality of outcome" — but this applies to a hierarchical system, in a free society this would not the case (as we will see).

Equality, in anarchist theory, does not mean denying individual diversity or uniqueness. As Bakunin observes:

> *"once equality has triumphed and is well established, will various individuals' abilities and their levels of energy cease to differ? Some will exist, perhaps not so many as now, but certainly some will always exist. It is proverbial that the same tree never bears two identical leaves, and this will probably be always be true. And it is even more truer with regard to human beings, who are much more complex than leaves. But this diversity is hardly an evil. On the contrary... it is a resource of the human race. Thanks to this diversity, humanity is a collective whole in which the one individual complements all the others and needs them. As a result, this infinite diversity of human individuals is the fundamental cause and the very basis of their solidarity. It is all-powerful argument for equality."* [*"All-Round Education"*, **The Basic Bakunin**, pp. 117–8]

Equality for anarchists means **social** equality, or, to use Murray Bookchin's term, the ***"equality of unequals"*** (some like Malatesta used the term ***"equality of conditions"*** to express the same idea). By this he means that an anarchist society recognises the differences in ability and need of individuals but does not allow these differences to be turned into power. Individual differences, in other words, *"would be of no consequence, because inequality in fact is lost in the collectivity when it cannot cling to some legal fiction or institution."* [Michael Bakunin, **God and the State**, p. 53]

If hierarchical social relationships, and the forces that create them, are abolished in favour of ones that encourage participation and are based on the principle of "one person, one vote" then natural differences would not be able to be turned into hierarchical power. For example, without capitalist property rights there would not be means by which a minority could monopolise the means of life (machinery and land) and enrich themselves by the work of others via the wages system and usury (profits, rent and interest). Similarly, if workers manage their own work, there is no class of capitalists to grow rich off their labour. Thus Proudhon:

> "Now, what can be the origin of this inequality?
>
> "As we see it, ... that origin is the realisation within society of this triple abstraction: capital, labour and talent.
>
> "It is because society has divided itself into three categories of citizen corresponding to the three terms of the formula... that caste distinctions have always been arrived at, and one half of the human race enslaved to the other... socialism thus consists of reducing the aristocratic formula of capital-labour-talent into the simpler formula of labour!... in order to make every citizen simultaneously, equally and to the same extent capitalist, labourer and expert or artist." [**No Gods, No Masters**, vol. 1, pp. 57–8]

Like all anarchists, Proudhon saw this integration of functions as the key to equality and freedom and proposed self-management as the means to achieve it. Thus self-management is the key to social equality. Social equality in the workplace, for example, means that everyone has an equal say in the policy decisions on how the workplace develops and changes. Anarchists are strong believers in the maxim "that which touches all, is decided by all."

This does not mean, of course, that expertise will be ignored or that everyone will decide everything. As far as expertise goes, different people have different interests, talents, and abilities, so obviously they will want to study different things and do different kinds of work. It is also obvious that when people are ill they consult a doctor — an expert — who manages his or her own work rather than being directed by a committee. We are sorry to have to bring these points up, but once the topics of social equality and workers' self-management come up, some people start to talk nonsense. It is common sense that a hospital managed in a socially equal way will **not** involve non-medical staff voting on how doctors should perform an operation!

In fact, social equality and individual liberty are inseparable. Without the collective self-management of decisions that affect a group (equality) to complement the individual self-management of decisions that affect the individual (liberty), a free society is impossible. For without both, some will have power over others, making decisions **for** them (i.e. governing them), and thus some will be more free than others. Which implies, just to state the obvious, anarchists seek equality in **all** aspects of life, not just in terms of wealth. Anarchists *"demand for every person not just his [or her] entire measure of the wealth of society but also his [or her] portion of social power."* [Malatesta and Hamon, **No Gods, No Masters**, vol. 2, p. 20] Thus self-management is needed to ensure both liberty **and** equality.

Social equality is required for individuals to both govern and express themselves, for the self-management it implies means *"people working in face-to-face relations with their fellows in order to bring the uniqueness of their own perspective to the business of solving common problems and achieving common goals."* [George Benello, **From the Ground Up**, p. 160] Thus equality allows the expression of individuality and so is a necessary base for individual liberty.

Section F.3 ("Why do 'anarcho'-capitalists place little or no value on equality?") discusses anarchist ideas on equality further. Noam Chomsky's essay *"Equality"* (contained in **The Chomsky Reader**) is a good summary of libertarian ideas on the subject.

A.2.6 Why is solidarity important to anarchists?

Solidarity, or mutual aid, is a key idea of anarchism. It is the link between the individual and society, the means by which individuals can work together to meet their common interests in an environment that supports and nurtures both liberty and equality. For anarchists, mutual aid is a fundamental feature of human life, a source of both strength and happiness and a fundamental requirement for a fully human existence.

Erich Fromm, noted psychologist and socialist humanist, points out that the *"human desire to experience union with others is rooted in the specific conditions of existence that characterise the human species and is one of the strongest motivations of human behaviour."* [**To Be or To Have**, p.107]

Therefore anarchists consider the desire to form "unions" (to use Max Stirner's term) with other people to be a natural need. These unions, or associations, must be based on equality and individuality in order to be fully satisfying to those who join them — i.e. they must be organised in an anarchist manner, i.e. voluntary, decentralised, and non-hierarchical.

Solidarity — co-operation between individuals — is necessary for life and is far from a denial of liberty. Solidarity, observed Errico Malatesta, *"is the only environment in which Man can express his personality and achieve his optimum development and enjoy the greatest possible wellbeing."* This *"coming together of individuals for the wellbeing of all, and of all for the wellbeing of each,"* results in *"the freedom of each not being limited by, but complemented — indeed finding the necessary* ***raison d'etre*** *in — the freedom of others."* [**Anarchy**, p. 29] In other words, solidarity and co-operation means treating each other as equals, refusing to treat others as means to an end and creating relationships which support freedom for all rather than a few dominating the many. Emma Goldman reiterated this theme, noting *"what wonderful results this unique force of man's individuality has achieved when strengthened by co-operation with other individualities . .. co-operation — as opposed to internecine strife and struggle — has worked for the survival and evolution of the species... . only mutual aid and voluntary co-operation ... can create the basis for a free individual and associational life."* [**Red Emma Speaks**, p. 118]

Solidarity means associating together as equals in order to satisfy our common interests and needs. Forms of association not based on solidarity (i.e. those based on inequality) will crush the individuality of those subjected to them. As Ret Marut points out, liberty needs solidarity, the recognition of common interests:

> *"The most noble, pure and true love of mankind is the love of oneself.* ***I*** *want to be free!* ***I*** *hope to be happy!* ***I*** *want to appreciate all the beauties of the world. But my freedom is secured* ***only*** *when all other people around me are free. I can only be happy when all other people around me are happy. I can only be joyful when all the people I see and meet look at the world with joy-filled eyes. And* ***only*** *then can I eat my fill with pure enjoyment when I have the secure knowledge that other people, too, can eat their fill as I do. And for that reason it is a question of* ***my own contentment****, only of* ***my own self****, when I rebel against every danger which threatens my freedom and my happiness..."* [Ret Marut (a.k.a. B. Traven), **The BrickBurner** magazine quoted by Karl S. Guthke, **B. Traven: The life behind the legends**, pp. 133–4]

To practice solidarity means that we recognise, as in the slogan of **Industrial Workers of the World**, that *"an injury to one is an injury to all."* Solidarity, therefore, is the means to protect individuality and liberty and so is an expression of self-interest. As Alfie Kohn points out:

> *"when we think about co-operation... we tend to associate the concept with fuzzy-minded idealism... This may result from confusing co-operation with altruism... Structural co-operation defies the usual egoism/altruism dichotomy. It sets things up so that by helping you I am helping myself at the same time. Even if my motive initially may have been selfish, our fates now are linked. We sink or swim together. Co-operation is a shrewd and highly successful strategy — a pragmatic choice that gets things done at work and at school even more effectively than competition does... There is also good evidence that co-operation is more conductive to psychological health and to liking one another."* [**No Contest: The Case Against Competition**, p. 7]

And, within a hierarchical society, solidarity is important not only because of the satisfaction it gives us, but also because it is necessary to resist those in power. Malatesta's words are relevant here:

> *"the oppressed masses who have never completely resigned themselves to oppress and poverty, and who ... show themselves thirsting for justice, freedom and wellbeing, are beginning to understand that they will not be able to achieve their emancipation except by union and solidarity with all the oppressed, with the exploited everywhere in the world."* [**Anarchy**, p. 33]

By standing together, we can increase our strength and get what we want. Eventually, by organising into groups, we can start to manage our own collective affairs together and so replace the boss once and for all. *"**Unions** will... multiply the individual's means and secure his assailed property."* [Max Stirner, **The Ego and Its Own**, p. 258] By acting in solidarity, we can also replace the current system with one more to our liking: *"in union there is strength."* [Alexander Berkman, **What is Anarchism?**, p. 74]

Solidarity is thus the means by which we can obtain and ensure our own freedom. We agree to work together so that we will not have to work for **another**. By agreeing to share with each other we increase our options so that we may enjoy **more**, not less. Mutual aid is in my self-interest — that is, I see that it is to my advantage to reach agreements with others based on mutual respect and social equality; for if I dominate someone, this means that the conditions exist which allow domination, and so in all probability I too will be dominated in turn.

As Max Stirner saw, solidarity is the means by which we ensure that our liberty is strengthened and defended from those in power who want to rule us: *"Do you yourself count for nothing then?"*, he asks. *"Are you bound to let anyone do anything he wants to you? Defend yourself and no one will touch you. If millions of people are behind you, supporting you, then you are a formidable force and you will win without difficulty."* [quoted in Luigi Galleani's **The End of Anarchism?**, p. 79 — different translation in **The Ego and Its Own**, p. 197]

Solidarity, therefore, is important to anarchists because it is the means by which liberty can be created and defended against power. Solidarity is strength and a product of our nature as social beings. However, solidarity should not be confused with "herdism," which implies passively

following a leader. In order to be effective, solidarity must be created by free people, co-operating together as **equals**. The "big WE" is **not** solidarity, although the desire for "herdism" is a product of our need for solidarity and union. It is a "solidarity" corrupted by hierarchical society, in which people are conditioned to blindly obey leaders.

A.2.7 Why do anarchists argue for self-liberation?

Liberty, by its very nature, cannot be given. An individual cannot be freed by another, but must break his or her own chains through their own effort. Of course, self-effort can also be part of collective action, and in many cases it has to be in order to attain its ends. As Emma Goldman points out:

> *"History tells us that every oppressed class [or group or individual] gained true liberation from its masters by its own efforts."* [**Red Emma Speaks**, p. 167]

This is because anarchists recognise that hierarchical systems, like any social relationship, shapes those subject to them. As Bookchin argued, "*class societies organise our psychic structures for command or obedience.*" This means that people ***internalise*** the values of hierarchical and class society and, as such, *"the State is not merely a constellation of bureaucratic and coercive instituions. It is also a state of mind, an instilled mentality for ordering reality ... Its capacity to rule by brute force has always been limited ... Without a high degree of co-operation from even the most victimised classes of society such as chattel slaves and serfs, its authority would eventually dissipate. Awe and apathy in the face of State power are products of social conditioning that renders this very power possible."* [**The Ecology of Freedom**, p. 159 and pp. 164–5] Self-liberation is the means by which we break down both internal ***and*** external chains, freeing ourselves mentally as well as physically.

Anarchists have long argued that people can only free themselves by their own actions. The various methods anarchists suggest to aid this process will be discussed in section J ("What Do Anarchists Do?") and will not be discussed here. However, these methods all involve people organising themselves, setting their own agendas, and acting in ways that empower them and eliminate their dependence on leaders to do things for them. Anarchism is based on people *"acting for themselves"* (performing what anarchists call ***"direct action"*** — see section J.2 for details).

Direct action has an empowering and liberating effect on those involved in it. Self-activity is the means by which the creativity, initiative, imagination and critical thought of those subjected to authority can be developed. It is the means by which society can be changed. As Errico Malatesta pointed out:

> "Between man and his social environment there is a reciprocal action. Men make society what it is and society makes men what they are, and the result is therefore a kind of vicious circle. To transform society men [and women] must be changed, and to transform men, society must be changed ... Fortunately existing society has not been created by the inspired will of a dominating class, which has succeeded in reducing all its subjects to passive and unconscious instruments of its interests. It

> is the result of a thousand internecine struggles, of a thousand human and natural factors ...
>
> "From this the possibility of progress ... We must take advantage of all the means, all the possibilities and the opportunities that the present environment allows us to act on our fellow men [and women] and to develop their consciences and their demands ... to claim and to impose those major social transformations which are possible and which effectively serve to open the way to further advances later ... We must seek to get all the people ... to make demands, and impose itself and take for itself all the improvements and freedoms it desires as and when it reaches the state of wanting them, and the power to demand them ... we must push the people to want always more and to increase its pressures [on the ruling elite], until it has achieved complete emancipation." [**Errico Malatesta: His Life and Ideas**, pp. 188–9]

Society, while shaping all individuals, is also created by them, through their actions, thoughts, and ideals. Challenging institutions that limit one's freedom is mentally liberating, as it sets in motion the process of questioning authoritarian relationships in general. This process gives us insight into how society works, changing our ideas and creating new ideals. To quote Emma Goldman again: *"True emancipation begins... in woman's soul."* And in a man's too, we might add. It is only here that we can *"begin [our] inner regeneration, [cutting] loose from the weight of prejudices, traditions and customs."* [**Op. Cit.**, p. 167] But this process must be self-directed, for as Max Stirner notes, *"the man who is set free is nothing but a freed man... a dog dragging a piece of chain with him."* [**The Ego and Its Own**, p. 168] By changing the world, even in a small way, we change ourselves.

In an interview during the Spanish Revolution, the Spanish anarchist militant Durutti said, *"we have a new world in our hearts."* Only self-activity and self-liberation allows us to create such a vision and gives us the confidence to try to actualise it in the real world.

Anarchists, however, do not think that self-liberation must wait for the future, after the "glorious revolution." The personal is political, and given the nature of society, how we act in the here and now will influence the future of our society and our lives. Therefore, even in pre-anarchist society anarchists try to create, as Bakunin puts it, *"not only the ideas but also the facts of the future itself."* We can do so by creating alternative social relationships and organisations, acting as free people in a non-free society. Only by our actions in the here and now can we lay the foundation for a free society. Moreover, this process of self-liberation goes on all the time:

> *"Subordinates of all kinds exercise their capacity for critical self-reflection every day — that is why masters are thwarted, frustrated and, sometimes, overthrown. But unless masters are overthrown, unless subordinates engage in political activity, no amount of critical reflection will end their subjection and bring them freedom."* [Carole Pateman, **The Sexual Contract**, p. 205]

Anarchists aim to encourage these tendencies in everyday life to reject, resist and thwart authority and bring them to their logical conclusion – a society of free individuals, co-operating as equals in free, self-managed associations. Without this process of critical self-reflection, resistance and self-liberation a free society is impossible. Thus, for anarchists, anarchism comes from the natural resistance of subordinated people striving to act as free individuals within a

hierarchical world. This process of resistance is called by many anarchists the ***"class struggle"*** (as it is working class people who are generally the most subordinated group within society) or, more generally, ***"social struggle."*** It is this everyday resistance to authority (in all its forms) and the desire for freedom which is the key to the anarchist revolution. It is for this reason that *"anarchists emphasise over and over that the class struggle provides the only means for the workers [and other oppressed groups] to achieve control over their destiny."* [Marie-Louise Berneri, **Neither East Nor West**, p. 32]

Revolution is a process, not an event, and every *"spontaneous revolutionary action"* usually results from and is based upon the patient work of many years of organisation and education by people with "utopian" ideas. The process of "creating the new world in the shell of the old" (to use another **I.W.W.** expression), by building alternative institutions and relationships, is but one component of what must be a long tradition of revolutionary commitment and militancy.

As Malatesta made clear, *"to encourage popular organisations of all kinds is the logical consequence of our basic ideas, and should therefore be an integral part of our programme... anarchists do not want to emancipate the people; we want the people to emancipate themselves... , we want the new way of life to emerge from the body of the people and correspond to the state of their development and advance as they advance."* [**Op. Cit.**, p. 90]

Unless a process of self-emancipation occurs, a free society is impossible. Only when individuals free themselves, both materially (by abolishing the state and capitalism) and intellectually (by freeing themselves of submissive attitudes towards authority), can a free society be possible. We should not forget that capitalist and state power, to a great extent, is power over the minds of those subject to them (backed up, of course, with sizeable force if the mental domination fails and people start rebelling and resisting). In effect, a spiritual power as the ideas of the ruling class dominate society and permeate the minds of the oppressed. As long as this holds, the working class will acquiesce to authority, oppression and exploitation as the normal condition of life. Minds submissive to the doctrines and positions of their masters cannot hope to win freedom, to revolt and fight. Thus the oppressed must overcome the mental domination of the existing system before they can throw off its yoke (and, anarchists argue, direct action is the means of doing both — see sections J.2 and J.4). Capitalism and statism must be beaten spiritually and theoretically before it is beaten materially (many anarchists call this mental liberation ***"class consciousness"*** — see section B.7.4). And self-liberation through struggle against oppression is the only way this can be done. Thus anarchists encourage (to use Kropotkin's term) ***"the spirit of revolt."***

Self-liberation is a product of struggle, of self-organisation, solidarity and direct action. Direct action is the means of creating anarchists, free people, and so *"Anarchists have always advised taking an active part in those workers' organisations which carry on the **direct** struggle of Labour against Capital and its protector, — the State."* This is because *"[s]uch a struggle ... better than any indirect means, permits the worker to obtain some temporary improvements in the present conditions of work, while it opens his [or her] eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his [or her] thoughts concerning the possibility of organising consumption, production and exchange without the intervention of the capitalist and the state,"* that is, see the possibility of a free society. Kropotkin, like many anarchists, pointed to the Syndicalist and Trade Union movements as a means of developing libertarian ideas within existing society (although he, like most anarchists, did not limit anarchist activity exclusively to them). Indeed, any movement which *"permit[s] the working men [and women] to realise their solidarity and to*

feel the community of their interests ... prepare[s] the way for these conceptions" of communist-anarchism, i.e. the overcoming the spiritual domination of existing society within the minds of the oppressed. [**Evolution and Environment**, p. 83 and p. 85]

For anarchists, in the words of a Scottish Anarchist militant, the *"history of human progress [is] seen as the history of rebellion and disobedience, with the individual debased by subservience to authority in its many forms and able to retain his/her dignity only through rebellion and disobedience."* [Robert Lynn, **Not a Life Story, Just a Leaf from It**, p. 77] This is why anarchists stress self-liberation (and self-organisation, self-management and self-activity). Little wonder Bakunin considered *"rebellion"* as one of the *"three fundamental principles [which] constitute the essential conditions of all human development, collective or individual, in history."* [**God and the State**, p. 12] This is simply because individuals and groups cannot be freed by others, only by themselves. Such rebellion (self-liberation) is the **only** means by which existing society becomes more libertarian and an anarchist society a possibility.

A.2.8 Is it possible to be an anarchist without opposing hierarchy?

No. We have seen that anarchists abhor authoritarianism. But if one is an anti-authoritarian, one must oppose all hierarchical institutions, since they embody the principle of authority. For, as Emma Goldman argued, *"it is not only government in the sense of the state which is destructive of every individual value and quality. It is the whole complex authority and institutional domination which strangles life. It is the superstition, myth, pretence, evasions, and subservience which support authority and institutional domination."* [**Red Emma Speaks**, p. 435] This means that *"there is and will always be a need to discover and overcome structures of hierarchy, authority and domination and constraints on freedom: slavery, wage-slavery [i.e. capitalism], racism, sexism, authoritarian schools, etc."* [Noam Chomsky, **Language and Politics**, p. 364]

Thus the consistent anarchist must oppose hierarchical relationships as well as the state. Whether economic, social or political, to be an anarchist means to oppose hierarchy. The argument for this (if anybody needs one) is as follows:

> *"All authoritarian institutions are organised as pyramids: the state, the private or public corporation, the army, the police, the church, the university, the hospital: they are all pyramidal structures with a small group of decision-makers at the top and a broad base of people whose decisions are* ***made for them*** *at the bottom. Anarchism does not demand the changing of labels on the layers, it doesn't want different people on top, it wants* ***us*** *to clamber out from underneath."* [Colin Ward, **Anarchy in Action**, p. 22]

Hierarchies *"share a common feature: they are organised systems of command and obedience"* and so anarchists seek *"to eliminate hierarchy per se, not simply replace one form of hierarchy with another."* [Bookchin, **The Ecology of Freedom**, p. 27] A hierarchy is a pyramidally-structured organisation composed of a series of grades, ranks, or offices of increasing power, prestige, and (usually) remuneration. Scholars who have investigated the hierarchical form have found that the two primary principles it embodies are domination and exploitation. For example, in his classic article *"What Do Bosses Do?"* (**Review of Radical Political Economy**, Vol. 6, No. 2), a study of the modern factory, Steven Marglin found that the main function of the corporate hierarchy

is not greater productive efficiency (as capitalists claim), but greater control over workers, the purpose of such control being more effective exploitation.

Control in a hierarchy is maintained by coercion, that is, by the threat of negative sanctions of one kind or another: physical, economic, psychological, social, etc. Such control, including the repression of dissent and rebellion, therefore necessitates centralisation: a set of power relations in which the greatest control is exercised by the few at the top (particularly the head of the organisation), while those in the middle ranks have much less control and the many at the bottom have virtually none.

Since domination, coercion, and centralisation are essential features of authoritarianism, and as those features are embodied in hierarchies, all hierarchical institutions are authoritarian. Moreover, for anarchists, any organisation marked by hierarchy, centralism and authoritarianism is state-like, or "statist." And as anarchists oppose both the state and authoritarian relations, anyone who does not seek to dismantle **all** forms of hierarchy cannot be called an anarchist. This applies to capitalist firms. As Noam Chomsky points out, the structure of the capitalist firm is extremely hierarchical, indeed fascist, in nature:

> "a fascist system... [is] absolutist — power goes from top down ... the ideal state is top down control with the public essentially following orders.
>
> "Let's take a look at a corporation... [I]f you look at what they are, power goes strictly top down, from the board of directors to managers to lower managers to ultimately the people on the shop floor, typing messages, and so on. There's no flow of power or planning from the bottom up. People can disrupt and make suggestions, but the same is true of a slave society. The structure of power is linear, from the top down." [**Keeping the Rabble in Line**, p. 237]

David Deleon indicates these similarities between the company and the state well when he writes:

> *"Most factories are like military dictatorships. Those at the bottom are privates, the supervisors are sergeants, and on up through the hierarchy. The organisation can dictate everything from our clothing and hair style to how we spend a large portion of our lives, during work. It can compel overtime; it can require us to see a company doctor if we have a medical complaint; it can forbid us free time to engage in political activity; it can suppress freedom of speech, press and assembly — it can use ID cards and armed security police, along with closed-circuit TVs to watch us; it can punish dissenters with 'disciplinary layoffs' (as GM calls them), or it can fire us. We are forced, by circumstances, to accept much of this, or join the millions of unemployed... In almost every job, we have only the 'right' to quit. Major decisions are made at the top and we are expected to obey, whether we work in an ivory tower or a mine shaft."* [*"For Democracy Where We Work: A rationale for social self-management"*, **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), pp. 193–4]

Thus the consistent anarchist must oppose hierarchy in all its forms, including the capitalist firm. Not to do so is to support ***archy*** — which an anarchist, by definition, cannot do. In other words, for anarchists, *"[p]romises to obey, contracts of (wage) slavery, agreements requiring the*

acceptance of a subordinate status, are all illegitimate because they do restrict and restrain individual autonomy." [Robert Graham, *"The Anarchist Contract*, **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 77] Hierarchy, therefore, is against the basic principles which drive anarchism. It denies what makes us human and *"divest[s] the personality of its most integral traits; it denies the very notion that the individual is* ***competent*** *to deal not only with the management of his or her personal life but with its most important context: the* ***social*** *context."* [Murray Bookchin, **Op. Cit.**, p. 202]

Some argue that as long as an association is voluntary, whether it has a hierarchical structure is irrelevant. Anarchists disagree. This is for two reasons. Firstly, under capitalism workers are driven by economic necessity to sell their labour (and so liberty) to those who own the means of life. This process re-enforces the economic conditions workers face by creating *"massive disparities in wealth ... [as] workers... sell their labour to the capitalist at a price which does not reflect its real value."* Therefore:

> *"To portray the parties to an employment contract, for example, as free and equal to each other is to ignore the serious inequality of bargaining power which exists between the worker and the employer. To then go on to portray the relationship of subordination and exploitation which naturally results as the epitome of freedom is to make a mockery of both individual liberty and social justice."* [Robert Graham, **Op. Cit.**, p. 70]

It is for this reason that anarchists support collective action and organisation: it increases the bargaining power of working people and allows them to assert their autonomy (see section J).

Secondly, if we take the key element as being whether an association is voluntary or not we would have to argue that the current state system must be considered as "anarchy." In a modern democracy no one forces an individual to live in a specific state. We are free to leave and go somewhere else. By ignoring the hierarchical nature of an association, you can end up supporting organisations based upon the denial of freedom (including capitalist companies, the armed forces, states even) all because they are "voluntary." As Bob Black argues, *"[t]o demonise state authoritarianism while ignoring identical albeit contract-consecrated subservient arrangements in the large-scale corporations which control the world economy is fetishism at its worst."* [*The Libertarian as Conservative,* **The Abolition of Work and other essays**, p. 142] Anarchy is more than being free to pick a master.

Therefore opposition to hierarchy is a key anarchist position, otherwise you just become a "voluntary archist" — which is hardly anarchistic. For more on this see section A.2.14 (Why is voluntarism not enough?).

Anarchists argue that organisations do not need to be hierarchical, they can be based upon co-operation between equals who manage their own affairs directly. In this way we can do without hierarchical structures (i.e. the delegation of power in the hands of a few). Only when an association is self-managed by its members can it be considered truly anarchistic.

We are sorry to belabour this point, but some capitalist apologists, apparently wanting to appropriate the "anarchist" name because of its association with freedom, have recently claimed that one can be both a capitalist and an anarchist at the same time (as in so-called "anarcho" capitalism). It should now be clear that since capitalism is based on hierarchy (not to mention statism and exploitation), "anarcho"-capitalism is a contradiction in terms. (For more on this, see Section F)

A.2.9 What sort of society do anarchists want?

Anarchists desire a decentralised society, based on free association. We consider this form of society the best one for maximising the values we have outlined above — liberty, equality and solidarity. Only by a rational decentralisation of power, both structurally and territorially, can individual liberty be fostered and encouraged. The delegation of power into the hands of a minority is an obvious denial of individual liberty and dignity. Rather than taking the management of their own affairs away from people and putting it in the hands of others, anarchists favour organisations which minimise authority, keeping power at the base, in the hands of those who are affected by any decisions reached.

Free association is the cornerstone of an anarchist society. Individuals must be free to join together as they see fit, for this is the basis of freedom and human dignity. However, any such free agreement must be based on decentralisation of power; otherwise it will be a sham (as in capitalism), as only equality provides the necessary social context for freedom to grow and development. Therefore anarchists support directly democratic collectives, based on "one person one vote" (for the rationale of direct democracy as the political counterpart of free agreement, see section A.2.11 — Why do most anarchists support direct democracy?).

We should point out here that an anarchist society does not imply some sort of idyllic state of harmony within which everyone agrees. Far from it! As Luigi Galleani points out, *"[d]isagreements and friction will always exist. In fact they are an essential condition of unlimited progress. But once the bloody area of sheer animal competition — the struggle for food — has been eliminated, problems of disagreement could be solved without the slightest threat to the social order and individual liberty."* [**The End of Anarchism?**, p. 28] Anarchism aims to *"rouse the spirit of initiative in individuals and in groups."* These will *"create in their mutual relations a movement and a life based on the principles of free understanding"* and recognise that *"**variety, conflict even, is life and that uniformity is death.**"* [Peter Kropotkin, **Anarchism**, p. 143]

Therefore, an anarchist society will be based upon co-operative conflict as *"[c]onflict, per se, is not harmful... disagreements exist [and should not be hidden] ... What makes disagreement destructive is not the fact of conflict itself but the addition of competition."* Indeed, *"a rigid demand for agreement means that people will effectively be prevented from contributing their wisdom to a group effort."* [Alfie Kohn, **No Contest: The Case Against Competition**, p. 156] It is for this reason that most anarchists reject consensus decision making in large groups (see section A.2.12).

So, in an anarchist society associations would be run by mass assemblies of all involved, based upon extensive discussion, debate and co-operative conflict between equals, with purely administrative tasks being handled by elected committees. These committees would be made up of mandated, recallable and temporary delegates who carry out their tasks under the watchful eyes of the assembly which elected them. Thus in an anarchist society, *"we'll look after our affairs ourselves and decide what to do about them. And when, to put our ideas into action, there is a need to put someone in charge of a project, we'll tell them to do [it] in such and such a way and no other ... nothing would be done without our decision. So our delegates, instead of people being individuals whom we've given the right to order us about, would be people ... [with] no authority, only the duty to carry out what everyone involved wanted."* [Errico Malatesta, **Fra Contadini**, p. 34] If the delegates act against their mandate or try to extend their influence or work beyond that already decided by the assembly (i.e. if they start to make policy decisions), they can be instantly recalled

and their decisions abolished. In this way, the organisation remains in the hands of the union of individuals who created it.

This self-management by the members of a group at the base and the power of recall are essential tenets of any anarchist organisation. The **key** difference between a statist or hierarchical system and an anarchist community is who wields power. In a parliamentary system, for example, people give power to a group of representatives to make decisions for them for a fixed period of time. Whether they carry out their promises is irrelevant as people cannot recall them till the next election. Power lies at the top and those at the base are expected to obey. Similarly, in the capitalist workplace, power is held by an unelected minority of bosses and managers at the top and the workers are expected to obey.

In an anarchist society this relationship is reversed. No one individual or group (elected or unelected) holds power in an anarchist community. Instead decisions are made using direct democratic principles and, when required, the community can elect or appoint delegates to carry out these decisions. There is a clear distinction between policy making (which lies with everyone who is affected) and the co-ordination and administration of any adopted policy (which is the job for delegates).

These egalitarian communities, founded by free agreement, also freely associate together in confederations. Such a free confederation would be run from the bottom up, with decisions following from the elemental assemblies upwards. The confederations would be run in the same manner as the collectives. There would be regular local regional, "national" and international conferences in which all important issues and problems affecting the collectives involved would be discussed. In addition, the fundamental, guiding principles and ideas of society would be debated and policy decisions made, put into practice, reviewed, and co-ordinated. The delegates would simply *"take their given mandates to the relative meetings and try to harmonise their various needs and desires. The deliberations would always be subject to the control and approval of those who delegated them"* and so *"there would be no danger than the interest of the people [would] be forgotten."* [Malatesta, **Op. Cit.**, p. 36]

Action committees would be formed, if required, to co-ordinate and administer the decisions of the assemblies and their congresses, under strict control from below as discussed above. Delegates to such bodies would have a limited tenure and, like the delegates to the congresses, have a fixed mandate — they are not able to make decisions on behalf of the people they are delegates for. In addition, like the delegates to conferences and congresses, they would be subject to instant recall by the assemblies and congresses from which they emerged in the first place. In this way any committees required to co-ordinate join activities would be, to quote Malatesta's words, *"always under the direct control of the population"* and so express the *"decisions taken at popular assemblies."* [**Errico Malatesta: His Life and Ideas**, p. 175 and p. 129]

Most importantly, the basic community assemblies can overturn any decisions reached by the conferences and withdraw from any confederation. Any compromises that are made by a delegate during negotiations have to go back to a general assembly for ratification. Without that ratification any compromises that are made by a delegate are not binding on the community that has delegated a particular task to a particular individual or committee. In addition, they can call confederal conferences to discuss new developments and to inform action committees about changing wishes and to instruct them on what to do about any developments and ideas.

In other words, any delegates required within an anarchist organisation or society are **not** representatives (as they are in a democratic government). Kropotkin makes the difference clear:

> *"The question of true delegation versus representation can be better understood if one imagines a hundred or two hundred men [and women], who meet each day in their work and share common concerns ... who have discussed every aspect of the question that concerns them and have reached a decision. They then choose someone and send him [or her] to reach an agreement with other delegates of the same kind... The delegate is not authorised to do more than explain to other delegates the considerations that have led his [or her] colleagues to their conclusion. Not being able to impose anything, he [or she] will seek an understanding and will return with a simple proposition which his mandatories can accept or refuse. This is what happens when true delegation comes into being."* [**Words of a Rebel**, p. 132]

Unlike in a representative system, **power** is not delegated into the hands of the few. Rather, any delegate is simply a mouthpiece for the association that elected (or otherwise selected) them in the first place. All delegates and action committees would be mandated and subject to instant recall to ensure they express the wishes of the assemblies they came from rather than their own. In this way government is replaced by anarchy, a network of free associations and communities co-operating as equals based on a system of mandated delegates, instant recall, free agreement and free federation from the bottom up.

Only this system would ensure the *"free organisation of the people, an organisation from below upwards."* This *"free federation from below upward"* would start with the basic *"association"* and their federation *"first into a commune, then a federation of communes into regions, of regions into nations, and of nations into an international fraternal association."* [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 298] This network of anarchist communities would work on three levels. There would be *"independent Communes for the territorial organisation, and of federations of Trade Unions [i.e. workplace associations] for the organisation of men [and women] in accordance with their different functions... [and] free combines and societies ... for the satisfaction of all possible and imaginable needs, economic, sanitary, and educational; for mutual protection, for the propaganda of ideas, for arts, for amusement, and so on."* [Peter Kropotkin, **Evolution and Environment**, p. 79] All would be based on self-management, free association, free federation and self-organisation from the bottom up.

By organising in this manner, hierarchy is abolished in all aspects of life, because the people at the base of the organisation are in control, **not** their delegates. Only this form of organisation can replace government (the initiative and empowerment of the few) with anarchy (the initiative and empowerment of all). This form of organisation would exist in all activities which required group work and the co-ordination of many people. It would be, as Bakunin said, the means *"to integrate individuals into structures which they could understand and control."* [quoted by Cornelius Castoriadis, **Political and Social Writings**, vol. 2, p. 97] For individual initiatives, the individual involved would manage them.

As can be seen, anarchists wish to create a society based upon structures that ensure that no individual or group is able to wield power over others. Free agreement, confederation and the power of recall, fixed mandates and limited tenure are mechanisms by which power is removed from the hands of governments and placed in the hands of those directly affected by the decisions.

For a fuller discussion on what an anarchist society would look like see section I. Anarchy, however, is not some distant goal but rather an aspect of current struggles against oppression and exploitation. Means and ends are linked, with direct action generating mass participatory

organisations and preparing people to directly manage their own personal and collective interests. This is because anarchists, as we discuss in section I.2.3, see the framework of a free society being based on the organisations created by the oppressed in their struggle against capitalism in the here and now. In this sense, collective struggle creates the organisations as well as the individual attitudes anarchism needs to work. The struggle against oppression is the school of anarchy. It teaches us not only how to be anarchists but also gives us a glimpse of what an anarchist society would be like, what its initial organisational framework could be and the experience of managing our own activities which is required for such a society to work. As such, anarchists try to create the kind of world we want in our current struggles and do not think our ideas are only applicable "after the revolution." Indeed, by applying our principles today we bring anarchy that much nearer.

A.2.10 What will abolishing hierarchy mean and achieve?

The creation of a new society based upon libertarian organisations will have an incalculable effect on everyday life. The empowerment of millions of people will transform society in ways we can only guess at now.

However, many consider these forms of organisation as impractical and doomed to failure. To those who say that such confederal, non-authoritarian organisations would produce confusion and disunity, anarchists maintain that the statist, centralised and hierarchical form of organisation produces indifference instead of involvement, heartlessness instead of solidarity, uniformity instead of unity, and privileged elites instead of equality. More importantly, such organisations destroy individual initiative and crush independent action and critical thinking. (For more on hierarchy, see section B.1 — "Why are anarchists against authority and hierarchy?").

That libertarian organisation can work and is based upon (and promotes) liberty was demonstrated in the Spanish Anarchist movement. Fenner Brockway, Secretary of the British Independent Labour Party, when visiting Barcelona during the 1936 revolution, noted that *"the great solidarity that existed among the Anarchists was due to each individual relying on his [sic] own strength and not depending upon leadership.... The organisations must, to be successful, be combined with free-thinking people; not a mass, but free individuals"* [quoted by Rudolf Rocker, **Anarcho-syndicalism**, p. 67f]

As sufficiently indicated already, hierarchical, centralised structures restrict freedom. As Proudhon noted: *"the centralist system is all very well as regards size, simplicity and construction: it lacks but one thing — the individual no longer belongs to himself in such a system, he cannot feel his worth, his life, and no account is taken of him at all."* [quoted by Martin Buber, **Paths in Utopia**, p. 33]

The effects of hierarchy can be seen all around us. It does not work. Hierarchy and authority exist everywhere, in the workplace, at home, in the street. As Bob Black puts it, *"[i]f you spend most of your waking life taking orders or kissing ass, if you get habituated to hierarchy, you will become passive-aggressive, sado-masochistic, servile and stupefied, and you will carry that load into every aspect of the balance of your life."* [*"The Libertarian as Conservative,"* **The Abolition of Work and other essays**, pp. 147–8]

This means that the end of hierarchy will mean a **massive** transformation in everyday life. It will involve the creation of individual-centred organisations within which all can exercise,

and so develop, their abilities to the fullest. By involving themselves and participating in the decisions that affect them, their workplace, their community and society, they can ensure the full development of their individual capacities.

With the free participation of all in social life, we would quickly see the end of inequality and injustice. Rather than people existing to make ends meet and being used to increase the wealth and power of the few as under capitalism, the end of hierarchy would see (to quote Kropotkin) *"the well-being of all"* and it is *"high time for the worker to assert his [or her] right to the common inheritance, and to enter into possession of it."* [**The Conquest of Bread**, p. 35 and p. 44] For only taking possession of the means of life (workplaces, housing, the land, etc.) can ensure *"liberty and justice, for liberty and justice are not decreed but are the result of economic independence. They spring from the fact that the individual is able to live without depending on a master, and to enjoy ... the product of his [or her] toil."* [Ricardo Flores Magon, **Land and Liberty**, p. 62] Therefore liberty requires the abolition of capitalist private property rights in favour of ***"use rights."*** (see section B.3 for more details). Ironically, the *"abolition of property will free the people from homelessness and nonpossession."* [Max Baginski, *"Without Government,"* **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 11] Thus anarchism promises *"both requisites of happiness — liberty and wealth."* In anarchy, *"mankind will live in freedom and in comfort."* [Benjamin Tucker, **Why I am an Anarchist**, p. 135 and p. 136]

Only self-determination and free agreement on every level of society can develop the responsibility, initiative, intellect and solidarity of individuals and society as a whole. Only anarchist organisation allows the vast talent which exists within humanity to be accessed and used, enriching society by the very process of enriching and developing the individual. Only by involving everyone in the process of thinking, planning, co-ordinating and implementing the decisions that affect them can freedom blossom and individuality be fully developed and protected. Anarchy will release the creativity and talent of the mass of people enslaved by hierarchy.

Anarchy will even be of benefit for those who are said to benefit from capitalism and its authority relations. Anarchists *"maintain that **both** rulers and ruled are spoiled by authority; **both** exploiters and exploited are spoiled by exploitation."* [Peter Kropotkin, **Act for Yourselves**, p. 83] This is because *"[i]n any hierarchical relationship the dominator as well as the submissive pays his dues. The price paid for the 'glory of command' is indeed heavy. Every tyrant resents his duties. He is relegated to drag the dead weight of the dormant creative potential of the submissive all along the road of his hierarchical excursion."* [For Ourselves, **The Right to Be Greedy**, Thesis 95]

A.2.11 Why are most anarchists in favour of direct democracy?

For most anarchists, direct democratic voting on policy decisions within free associations is the political counterpart of free agreement (this is also known as ***"self-management"***). The reason is that *"many forms of domination can be carried out in a 'free.' non-coercive, contractual manner... and it is naive... to think that mere opposition to political control will in itself lead to an end of oppression."* [John P. Clark, **Max Stirner's Egoism**, p. 93] Thus the relationships we create **within** an organisation is as important in determining its libertarian nature as its voluntary nature (see section A.2.14 for more discussion).

It is obvious that individuals must work together in order to lead a fully human life. And so, *"[h]aving to join with others humans"* the individual has three options: *"he [or she] must submit*

to the will of others (be enslaved) or subject others to his will (be in authority) or live with others in fraternal agreement in the interests of the greatest good of all (be an associate). Nobody can escape from this necessity." [Errico Malatesta, **Life and Ideas**, p. 85]

Anarchists obviously pick the last option, association, as the only means by which individuals can work together as free and equal human beings, respecting the uniqueness and liberty of one another. Only within direct democracy can individuals express themselves, practice critical thought and self-government, so developing their intellectual and ethical capacities to the full. In terms of increasing an individual's freedom and their intellectual, ethical and social faculties, it is far better to be sometimes in a minority than be subject to the will of a boss all the time. So what is the theory behind anarchist direct democracy?

As Bertrand Russell noted, the anarchist *"does not wish to abolish government in the sense of collective decisions: what he does wish to abolish is the system by which a decision is enforced upon those who oppose it."* [**Roads to Freedom**, p. 85] Anarchists see self-management as the means to achieve this. Once an individual joins a community or workplace, he or she becomes a "citizen" (for want of a better word) of that association. The association is organised around an assembly of all its members (in the case of large workplaces and towns, this may be a functional sub-group such as a specific office or neighbourhood). In this assembly, in concert with others, the contents of his or her political obligations are defined. In acting within the association, people must exercise critical judgement and choice, i.e. manage their own activity. Rather than promising to obey (as in hierarchical organisations like the state or capitalist firm), individuals participate in making their own collective decisions, their own commitments to their fellows. This means that political obligation is not owed to a separate entity above the group or society, such as the state or company, but to one's fellow "citizens."

Although the assembled people collectively legislate the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed. Collectively, the associated "citizens" constitute a political "authority", but as this "authority" is based on horizontal relationships between themselves rather than vertical ones between themselves and an elite, the "authority" is non-hierarchical ("rational" or "natural," see section B.1 — "Why are anarchists against authority and hierarchy?" — for more on this). Thus Proudhon:

> *"In place of laws, we will put contracts [i.e. free agreement]. — No more laws voted by a majority, nor even unanimously; each citizen, each town, each industrial union, makes its own laws."* [**The General Idea of the Revolution**, pp. 245–6]

Such a system does not mean, of course, that everyone participates in every decision needed, no matter how trivial. While any decision can be put to the assembly (if the assembly so decides, perhaps prompted by some of its members), in practice certain activities (and so purely functional decisions) will be handled by the association's elected administration. This is because, to quote a Spanish anarchist activist, *"a collectivity as such cannot write a letter or add up a list of figures or do hundreds of chores which only an individual can perform."* Thus the need *"to* ***organise the administration.****"* Supposing an association is *"organised without any directive council or any hierarchical offices"* which *"meets in general assembly once a week or more often, when it settles all matters needful for its progress"* it still *"nominates a commission with* ***strictly administrative functions.****"* However, the assembly *"prescribes a definite line of conduct for this commission or*

*gives it an **imperative mandate**"* and so *"would be **perfectly anarchist.**"* As it *"follows that **delegating** these tasks to qualified individuals, who are **instructed in advance how to proceed,** ... does not mean an abdication of that collectivity's own liberty."* [Jose Llunas Pujols, quoted by Max Nettlau, **A Short History of Anarchism**, p. 187] This, it should be noted, follows Proudhon's ideas that within the workers' associations *"all positions are elective, and the by-laws subject to the approval of the members."* [Proudhon, **Op. Cit.**, p. 222]

Instead of capitalist or statist hierarchy, self-management (i.e. direct democracy) would be the guiding principle of the freely joined associations that make up a free society. This would apply to the federations of associations an anarchist society would need to function. *"All the commissions or delegations nominated in an anarchist society,"* correctly argued Jose Llunas Pujols, *"must be subject to replacement and recall at any time by the permanent suffrage of the section or sections that elected them."* Combined with the *"imperative mandate"* and *"purely administrative functions,"* this *"make[s] it thereby impossible for anyone to arrogate to himself [or herself] a scintilla of authority."* [quoted by Max Nettlau, **Op. Cit.**, pp. 188–9] Again, Pujols follows Proudhon who demanded twenty years previously the *"implementation of the binding mandate"* to ensure the people do not *"adjure their sovereignty."* [**No Gods, No Masters**, vol. 1, p. 63]

By means of a federalism based on mandates and elections, anarchists ensure that decisions flow from the bottom-up. By making our own decisions, by looking after our joint interests ourselves, we exclude others ruling over us. Self-management, for anarchists, is essential to ensure freedom within the organisations so needed for any decent human existence.

Of course it could be argued that if you are in a minority, you are governed by others (*"Democratic rule is still rule"* [L. Susan Brown, **The Politics of Individualism**, p. 53]). Now, the concept of direct democracy as we have described it is not necessarily tied to the concept of majority rule. If someone finds themselves in a minority on a particular vote, he or she is confronted with the choice of either consenting or refusing to recognise it as binding. To deny the minority the opportunity to exercise its judgement and choice is to infringe its autonomy and to impose obligation upon it which it has not freely accepted. The coercive imposition of the majority will is contrary to the ideal of self-assumed obligation, and so is contrary to direct democracy and free association. Therefore, far from being a denial of freedom, direct democracy within the context of free association and self-assumed obligation is the only means by which liberty can be nurtured (*"Individual autonomy limited by the obligation to hold given promises."* [Malatesta, quoted by quoted by Max Nettlau, **Errico Malatesta: The Biography of an Anarchist**]). Needless to say, a minority, if it remains in the association, can argue its case and try to convince the majority of the error of its ways.

And we must point out here that anarchist support for direct democracy does not suggest we think that the majority is always right. Far from it! The case for democratic participation is not that the majority is always right, but that no minority can be trusted not to prefer its own advantage to the good of the whole. History proves what common-sense predicts, namely that anyone with dictatorial powers (by they a head of state, a boss, a husband, whatever) will use their power to enrich and empower themselves at the expense of those subject to their decisions.

Anarchists recognise that majorities can and do make mistakes and that is why our theories on association place great importance on minority rights. This can be seen from our theory of self-assumed obligation, which bases itself on the right of minorities to protest against majority decisions and makes dissent a key factor in decision making. Thus Carole Pateman:

> *"If the majority have acted in bad faith... [then the] minority will have to take political action, including politically disobedient action if appropriate, to defend their citizenship and independence, and the political association itself... Political disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based ... The social practice of promising involves the right to refuse or change commitments; similarly, the practice of self-assumed political obligation is meaningless without the practical recognition of the right of minorities to refuse or withdraw consent, or where necessary, to disobey."* [**The Problem of Political Obligation**, p. 162]

Moving beyond relationships within associations, we must highlight how different associations work together. As would be imagined, the links between associations follow the same outlines as for the associations themselves. Instead of individuals joining an association, we have associations joining confederations. The links between associations in the confederation are of the same horizontal and voluntary nature as within associations, with the same rights of "voice and exit" for members and the same rights for minorities. In this way society becomes an association of associations, a community of communities, a commune of communes, based upon maximising individual freedom by maximising participation and self-management.

The workings of such a confederation are outlined in section A.2.9 (What sort of society do anarchists want?) and discussed in greater detail in section I (What would an anarchist society look like?).

This system of direct democracy fits nicely into anarchist theory. Malatesta speaks for all anarchists when he argued that *"anarchists deny the right of the majority to govern human society in general."* As can be seen, the majority has no right to enforce itself on a minority – the minority can leave the association at any time and so, to use Malatesta's words, do not have to *"submit to the decisions of the majority before they have even heard what these might be."* [**The Anarchist Revolution**, p. 100 and p. 101] Hence, direct democracy within voluntary association does not create "majority rule" nor assume that the minority must submit to the majority no matter what. In effect, anarchist supporters of direct democracy argue that it fits Malatesta's argument that:

> *"Certainly anarchists recognise that where life is lived in common it is often necessary for the minority to come to accept the opinion of the majority. When there is an obvious need or usefulness in doing something and, to do it requires the agreement of all, the few should feel the need to adapt to the wishes of the many ... But such adaptation on the one hand by one group must be on the other be reciprocal, voluntary and must stem from an awareness of need and of goodwill to prevent the running of social affairs from being paralysed by obstinacy. It cannot be imposed as a principle and statutory norm..."* [**Op. Cit.**, p. 100]

As the minority has the right to secede from the association as well as having extensive rights of action, protest and appeal, majority rule is not imposed as a principle. Rather, it is purely a decision making tool which allows minority dissent and opinion to be expressed (and acted upon) while ensuring that no minority forces its will on the majority. In other words, majority decisions are not binding on the minority. After all, as Malatesta argued:

> *"one cannot expect, or even wish, that someone who is firmly convinced that the course taken by the majority leads to disaster, should sacrifice his [or her] own convictions and*

passively look on, or even worse, should support a policy he [or she] considers wrong."
[**Errico Malatesta: His Life and Ideas**, p. 132]

Even the Individual Anarchist Lysander Spooner acknowledged that direct democracy has its uses when he noted that *"[a]ll, or nearly all, voluntary associations give a majority, or some other portion of the members less than the whole, the right to use some **limited** discretion as to the **means** to be used to accomplish the ends in view."* However, only the unanimous decision of a jury (which would *"judge the law, and the justice of the law"*) could determine individual rights as this *"tribunal fairly represent[s] the whole people"* as *"no law can rightfully be enforced by the association in its corporate capacity, against the goods, rights, or person of any individual, except it be such as **all** members of the association agree that it may enforce"* (his support of juries results from Spooner acknowledging that it *"would be impossible in practice"* for **all** members of an association to agree) [**Trial by Jury**, p. 130-1f, p. 134, p. 214, p. 152 and p. 132]

Thus direct democracy and individual/minority rights need not clash. In practice, we can imagine direct democracy would be used to make most decisions within most associations (perhaps with super-majorities required for fundamental decisions) plus some combination of a jury system and minority protest/direct action and evaluate/protect minority claims/rights in an anarchist society. The actual forms of freedom can only be created through practical experience by the people directly involved.

Lastly, we must stress that anarchist support for direct democracy does not mean that this solution is to be favoured in all circumstances. For example, many small associations may favour consensus decision making (see the next section on consensus and why most anarchists do not think that it is a viable alternative to direct democracy). However, most anarchists think that direct democracy within free association is the best (and most realistic) form of organisation which is consistent with anarchist principles of individual freedom, dignity and equality.

A.2.12 Is consensus an alternative to direct democracy?

The few anarchists who reject direct democracy within free associations generally support consensus in decision making. Consensus is based upon everyone on a group agreeing to a decision before it can be put into action. Thus, it is argued, consensus stops the majority ruling the minority and is more consistent with anarchist principles.

Consensus, although the "best" option in decision making, as all agree, has its problems. As Murray Bookchin points out in describing his experience of consensus, it can have authoritarian implications:

"In order... to create full consensus on a decision, minority dissenters were often subtly urged or psychologically coerced to decline to vote on a troubling issue, inasmuch as their dissent would essentially amount to a one-person veto. This practice, called 'standing aside' in American consensus processes, all too often involved intimidation of the dissenters, to the point that they completely withdrew from the decision-making process, rather than make an honourable and continuing expression of their dissent by voting, even as a minority, in accordance with their views. Having withdrawn, they ceased to be political beings–so that a 'decision' could be made... . 'consensus' was ulti-

mately achieved only after dissenting members nullified themselves as participants in the process.

"On a more theoretical level, consensus silenced that most vital aspect of all dialogue, ***dissensus****. The ongoing dissent, the passionate dialogue that still persists even after a minority accedes temporarily to a majority decision,... [can be] replaced... .by dull monologues – and the uncontroverted and deadening tone of consensus. In majority decision-making, the defeated minority can resolve to overturn a decision on which they have been defeated — they are free to openly and persistently articulate reasoned and potentially persuasive disagreements. Consensus, for its part, honours no minorities, but mutes them in favour of the metaphysical 'one' of the 'consensus' group."* [*"Communalism: The Democratic Dimension of Anarchism"*, **Democracy and Nature**, no. 8, p. 8]

Bookchin does not *"deny that consensus may be an appropriate form of decision-making in small groups of people who are thoroughly familiar with one another."* But he notes that, in practical terms, his own experience has shown him that *"when larger groups try to make decisions by consensus, it usually obliges them to arrive at the lowest common intellectual denominator in their decision-making: the least controversial or even the most mediocre decision that a sizeable assembly of people can attain is adopted– precisely because everyone must agree with it or else withdraw from voting on that issue"* [**Op. Cit.**, p.7]

Therefore, due to its potentially authoritarian nature, most anarchists disagree that consensus is the political aspect of free association. While it is advantageous to try to reach consensus, it is usually impractical to do so — especially in large groups — regardless of its other, negative effects. Often it demeans a free society or association by tending to subvert individuality in the name of community and dissent in the name of solidarity. Neither true community nor solidarity are fostered when the individual's development and self-expression are aborted by public disapproval and pressure. Since individuals are all unique, they will have unique viewpoints which they should be encouraged to express, as society evolves and is enriched by the actions and ideas of individuals.

In other words, anarchist supporters of direct democracy stress the *"**creative** role of dissent"* which, they fear, *"tends to fade away in the grey uniformity required by consensus."* [**Op. Cit.**, p. 8]

We must stress that anarchists are **not** in favour of a mechanical decision making process in which the majority just vote the minority away and ignore them. Far from it! Anarchists who support direct democracy see it as a dynamic debating process in which majority and minority listen to and respect each other as far possible and create a decision which all can live with (if possible). They see the process of participation within directly democratic associations as the means of creating common interests, as a process which will encourage diversity, individual and minority expression and reduce any tendency for majorities to marginalise or oppress minorities by ensuring discussion and debate occurs on important issues.

A.2.13 Are anarchists individualists or collectivists?

The short answer is: neither. This can be seen from the fact that liberal scholars denounce anarchists like Bakunin for being "collectivists" while Marxists attack Bakunin and anarchists in general for being "individualists."

This is hardly surprising, as anarchists reject both ideologies as nonsense. Whether they like it or not, non-anarchist individualists and collectivists are two sides of the same capitalist coin. This can best shown be by considering modern capitalism, in which "individualist" and "collectivist" tendencies continually interact, often with the political and economic structure swinging from one pole to the other. Capitalist collectivism and individualism are both one-sided aspects of human existence, and like all manifestations of imbalance, deeply flawed.

For anarchists, the idea that individuals should sacrifice themselves for the "group" or "greater good" is nonsensical. Groups are made up of individuals, and if people think only of what's best for the group, the group will be a lifeless shell. It is only the dynamics of human interaction within groups which give them life. "Groups" cannot think, only individuals can. This fact, ironically, leads authoritarian "collectivists" to a most particular kind of "individualism," namely the *"cult of the personality"* and leader worship. This is to be expected, since such collectivism lumps individuals into abstract groups, denies their individuality, and ends up with the need for someone with enough individuality to make decisions — a problem that is "solved" by the leader principle. Stalinism and Nazism are excellent examples of this phenomenon.

Therefore, anarchists recognise that individuals are the basic unit of society and that only individuals have interests and feelings. This means they oppose "collectivism" and the glorification of the group. In anarchist theory the group exists only to aid and develop the individuals involved in them. This is why we place so much stress on groups structured in a libertarian manner — only a libertarian organisation allows the individuals within a group to fully express themselves, manage their own interests directly and to create social relationships which encourage individuality and individual freedom. So while society and the groups they join shapes the individual, the individual is the true basis of society. Hence Malatesta:

> *"Much has been said about the respective roles of individual initiative and social action in the life and progress of human societies ... [E]verything is maintained and kept going in the human world thanks to individual initiative ... The real being is man, the individual. Society or the collectivity — and the* ***State*** *or government which claims to represent it — if it is not a hollow abstraction, must be made up of individuals. And it is in the organism of every individual that all thoughts and human actions inevitably have their origin, and from being individual they become collective thoughts and acts when they are or become accepted by many individuals. Social action, therefore, is neither the negation nor the complement of individual initiatives, but is the resultant of initiatives, thoughts and actions of all individuals who make up society ... [T]he question is not really changing the relationship between society and the individual ... [I]t is a question of preventing some individuals from oppressing others; of giving all individuals the same rights and the same means of action; and of replacing the initiative to the few [which Malatesta defines as a key aspect of government/hierarchy], which inevitably results in the oppression of everyone else ... "* [**Anarchy**, pp. 38–38]

These considerations do not mean that "individualism" finds favour with anarchists. As Emma Goldman pointed out, *"'rugged individualism'... is only a masked attempt to repress and defeat the individual and his individuality. So-called Individualism is the social and economic* ***laissez-faire****: the exploitation of the masses by the [ruling] classes by means of legal trickery, spiritual debasement and systematic indoctrination of the servile spirit ... That corrupt and perverse 'individualism' is the straitjacket of individuality .. [It] has inevitably resulted in the greatest modern slavery, the crassest class distinctions driving millions to the breadline. 'Rugged individualism' has meant all the 'individualism' for the masters, while the people are regimented into a slave caste to serve a handful of self-seeking 'supermen.'"* [**Red Emma Speaks**, p. 112]

While groups cannot think, individuals cannot live or discuss by themselves. Groups and associations are an essential aspect of individual life. Indeed, as groups generate social relationships by their very nature, they help **shape** individuals. In other words, groups structured in an authoritarian way will have a negative impact on the freedom and individuality of those within them. However, due to the abstract nature of their "individualism," capitalist individualists fail to see any difference between groups structured in a libertarian manner rather than in an authoritarian one — they are both "groups". Because of their one-sided perspective on this issue, "individualists" ironically end up supporting some of the most "collectivist" institutions in existence — capitalist companies — and, moreover, always find a need for the state despite their frequent denunciations of it. These contradictions stem from capitalist individualism's dependence on individual contracts in an unequal society, i.e. **abstract** individualism.

In contrast, anarchists stress **social** "individualism" (another, perhaps better, term for this concept could be ***"communal individuality"***). Anarchism *"insists that the centre of gravity in society is the individual — that he [sic] must think for himself, act freely, and live fully... . If he is to develop freely and fully, he must be relieved from the interference and oppression of others... . [T]his has nothing in common with... 'rugged individualism.' Such predatory individualism is really flabby, not rugged. At the least danger to its safety, it runs to cover of the state and wails for protection... .Their 'rugged individualism' is simply one of the many pretences the ruling class makes to mask unbridled business and political extortion."* [Emma Goldman, **Op. Cit.**, pp. 442–3]

Anarchism rejects the **abstract** individualism of capitalism, with its ideas of "absolute" freedom of the individual which is constrained by others. This theory ignores the social context in which freedom exists and grows. *"The freedom we want,"* Malatesta argued, *"for ourselves and for others, is not an absolute metaphysical, abstract freedom which in practice is inevitably translated into the oppression of the weak; but it is a real freedom, possible freedom, which is the conscious community of interests, voluntary solidarity."* [**Anarchy**, p. 43]

A society based on abstract individualism results in an inequality of power between the contracting individuals and so entails the need for an authority based on laws above them and organised coercion to enforce the contracts between them. This consequence is evident from capitalism and, most notably, in the "social contract" theory of how the state developed. In this theory it is assumed that individuals are "free" when they are isolated from each other, as they allegedly were originally in the "state of nature." Once they join society, they supposedly create a "contract" and a state to administer it. However, besides being a fantasy with no basis in reality (human beings have **always** been social animals), this "theory" is actually a justification for the state's having extensive powers over society; and this in turn is a justification of the capitalist system, which requires a strong state. It also mimics the results of the capitalist economic relations upon which this theory is built. Within capitalism, individuals "freely" contract together, but in practice the

owner rules the worker for as long as the contract is in place. (See sections A.2.14 and B.4 for further details).

Thus anarchists reject capitalist "individualism" as being, to quote Kropotkin, *"a narrow and selfish individualism"* which, moreover, is *"a foolish egoism which belittles the individual"* and is *"not individualism at all. It will not lead to what was established as a goal; that is the complete broad and most perfectly attainable development of individuality."* The hierarchy of capitalism results in *"the impoverishment of individuality"* rather than its development. To this anarchists contrast *"the individuality which attains the greatest individual development possible through the highest communist sociability in what concerns both its primordial needs and its relationships with others in general."* [**Selected Writings on Anarchism and Revolution**, p. 295, p. 296 and p. 297] For anarchists, our freedom is enriched by those around us when we work with them as equals and not as master and servant.

In practice, both individualism and collectivism lead to a denial of both individual liberty and group autonomy and dynamics. In addition, each implies the other, with collectivism leading to a particular form of individualism and individualism leading to a particular form of collectivism.

Collectivism, with its implicit suppression of the individual, ultimately impoverishes the community, as groups are only given life by the individuals who comprise them. Individualism, with its explicit suppression of community (i.e. the people with whom you live), ultimately impoverishes the individual, since individuals do not exist apart from society but can only exist within it. In addition, individualism ends up denying the "select few" the insights and abilities of the individuals who make up the rest of society, and so is a source of self-denial. This is Individualism's fatal flaw (and contradiction), namely *"the impossibility for the individual to attain a really full development in the conditions of oppression of the mass by the 'beautiful aristocracies'. His [or her] development would remain uni-lateral."* [Peter Kropotkin, **Anarchism**, p. 293]

True liberty and community exist elsewhere.

A.2.14 Why is voluntarism not enough?

Voluntarism means that association should be voluntary in order maximise liberty. Anarchists are, obviously, voluntarists, thinking that only in free association, created by free agreement, can individuals develop, grow, and express their liberty. However, it is evident that under capitalism voluntarism is not enough in itself to maximise liberty.

Voluntarism implies promising (i.e. the freedom to make agreements), and promising implies that individuals are capable of independent judgement and rational deliberation. In addition, it presupposes that they can evaluate and change their actions and relationships. Contracts under capitalism, however, contradict these implications of voluntarism. For, while technically "voluntary" (though as we show in section B.4, this is not really the case), capitalist contracts result in a denial of liberty. This is because the social relationship of wage-labour involves promising to obey in return for payment. And as Carole Pateman points out, *"to promise to obey is to deny or to limit, to a greater or lesser degree, individuals' freedom and equality and their ability to exercise these capacities [of independent judgement and rational deliberation]. To promise to obey is to state, that in certain areas, the person making the promise is no longer free to exercise her capacities and decide upon her own actions, and is no longer equal, but subordinate."* [**The Problem of Political Obligation**, p. 19] This results in those obeying no longer making their own decisions. Thus the

rational for voluntarism (i.e. that individuals are capable of thinking for themselves and must be allowed to express their individuality and make their own decisions) is violated in a hierarchical relationship as some are in charge and the many obey (see also section A.2.8). Thus any voluntarism which generates relationships of subordination is, by its very nature, incomplete and violates its own justification.

This can be seen from capitalist society, in which workers sell their freedom to a boss in order to live. In effect, under capitalism you are only free to the extent that you can choose whom you will obey! Freedom, however, must mean more than the right to change masters. Voluntary servitude is still servitude. For if, as Rousseau put it, sovereignty, *"for the same reason as makes it inalienable, cannot be represented"* neither can it be sold nor temporarily nullified by a hiring contract. Rousseau famously argued that the *"people of England regards itself as free; but it is grossly mistaken; it is free only during the election of members of parliament. As soon as they are elected, slavery overtakes it, and it is nothing."* [**The Social Contract and Discourses**, p. 266] Anarchists expand on this analysis. To paraphrase Rousseau:

> Under capitalism the worker regards herself as free; but she is grossly mistaken; she is free only when she signs her contract with her boss. As soon as it is signed, slavery overtakes her and she is nothing but an order taker.

To see why, to see the injustice, we need only quote Rousseau:

> *"That a rich and powerful man, having acquired immense possessions in land, should impose laws on those who want to establish themselves there, and that he should only allow them to do so on condition that they accept his supreme authority and obey all his wishes; that, I can still conceive ... Would not this tyrannical act contain a double usurpation: that on the ownership of the land and that on the liberty of the inhabitants?"* [**Op. Cit.**, p. 316]

Hence Proudhon's comment that *"Man may be made by property a slave or a despot by turns."* [**What is Property?**, p. 371] Little wonder we discover Bakunin rejecting *"any contract with another individual on any footing but the utmost equality and reciprocity"* as this would *"alienate his [or her] freedom"* and so would be a *"a relationship of voluntary servitude with another individual."* Anyone making such a contract in a free society (i.e. anarchist society) would be *"devoid of any sense of personal dignity."* [**Michael Bakunin: Selected Writings**, pp. 68–9] Only self-managed associations can create relationships of equality rather than of subordination between its members.

Therefore anarchists stress the need for direct democracy in voluntary associations in order to ensure that the concept of "freedom" is not a sham and a justification for domination, as it is under capitalism. Only self-managed associations can create relationships of equality rather than of subordination between its members.

It is for this reason that anarchists have opposed capitalism and urged *"workers to form themselves into democratic societies, with equal conditions for all members, on pain of a relapse into feudalism."* [Proudhon, **The General Idea of the Revolution**, p. 277] For similar reasons, anarchists (with the notable exception of Proudhon) opposed marriage as it turned women into *"a bonded slave, who takes her master's name, her master's bread, her master's commands, and serves*

her master's passions ... who can control no property, not even her own body, without his consent." [Voltairine de Cleyre, *"Sex Slavery"*, **The Voltairine de Cleyre Reader**, p. 94] While marriage, due to feminist agitation, in many countries has been reformed towards the anarchist ideal of a free union of equals, it still is based on the patriarchal principles anarchists like Goldman and de Cleyre identified and condemned (see section A.3.5 for more on feminism and anarchism).

Clearly, voluntary entry is a necessary but not a sufficient condition to defend an individual's liberty. This is to be expected as it ignores (or takes for granted) the social conditions in which agreements are made and, moreover, ignores the social relationships created by them (*"For the worker who **must sell** his labour, it is impossible to remain **free.**"* [Kropotkin, **Selected Writings on Anarchism and Revolution**, p. 305]). Any social relationships based on abstract individualism are likely to be based upon force, power, and authority, **not** liberty. This of course assumes a definition of liberty according to which individuals exercise their capacities and decide their own actions. Therefore, voluntarism is **not** enough to create a society that maximises liberty. This is why anarchists think that voluntary association **must** be complemented by self-management (direct democracy) **within** these associations. For anarchists, the assumptions of voluntarism imply self-management. Or, to use Proudhon's words, *"as individualism is the primordial fact of humanity, so association is its complementary term."* [**System of Economical Contradictions**, p. 430]

To answer the second objection first, in a society based on private property (and so statism), those with property have more power, which they can use to perpetuate their authority. *"Wealth is power, poverty is weakness,"* in the words of Albert Parsons. This means that under capitalism the much praised "freedom to choose" is extremely limited. It becomes, for the vast majority, the freedom to pick a master (under slavery, quipped Parsons, the master *"selected ... his own slaves. Under the wage slavery system the wage slave selects his master."*). Under capitalism, Parsons stressed, *"those disinherited of their natural rights must hire out and serve and obey the oppressing class or starve. There is no other alternative. Some things are priceless, chief among which are life and liberty. A freeman [or woman] is not for sale or hire."* [**Anarchism**, p. 99 and p. 98] And why should we excuse servitude or tolerate those who desire to restrict the liberty of others? The "liberty" to command is the liberty to enslave, and so is actually a denial of liberty.

Regarding the first objection, anarchists plead guilty. We **are** prejudiced against the reduction of human beings to the status of robots. We are prejudiced in favour of human dignity and freedom. We are prejudiced, in fact, in favour of humanity and individuality.

(Section A.2.11 discusses why direct democracy is the necessary social counterpart to voluntarism (i.e. free agreement). Section B.4 discusses why capitalism cannot be based on equal bargaining power between property owners and the propertyless).

A.2.15 What about "human nature"?

Anarchists, far from ignoring "human nature," have the only political theory that gives this concept deep thought and reflection. Too often, "human nature" is flung up as the last line of defence in an argument against anarchism, because it is thought to be beyond reply. This is not the case, however. First of all, human nature is a complex thing. If, by human nature, it is meant "what humans do," it is obvious that human nature is contradictory — love and hate, compassion and heartlessness, peace and violence, and so on, have all been expressed by people and so are all

products of "human nature." Of course, what is considered "human nature" can change with changing social circumstances. For example, slavery was considered part of "human nature" and "normal" for thousands of years. Homosexuality was considered perfectly normal by the ancient Greeks yet thousands of years later the Christian church denounced it as unnatural. War only become part of "human nature" once states developed. Hence Chomsky:

> "Individuals are certainly capable of evil ... But individuals are capable of all sorts of things. Human nature has lots of ways of realising itself, humans have lots of capacities and options. Which ones reveal themselves depends to a large extent on the institutional structures. If we had institutions which permitted pathological killers free rein, they'd be running the place. The only way to survive would be to let those elements of your nature manifest themselves.
>
> "If we have institutions which make greed the sole property of human beings and encourage pure greed at the expense of other human emotions and commitments, we're going to have a society based on greed, with all that follows. A different society might be organised in such a way that human feelings and emotions of other sorts, say, solidarity, support, sympathy become dominant. Then you'll have different aspects of human nature and personality revealing themselves." [**Chronicles of Dissent**, pp. 158]

Therefore, environment plays an important part in defining what "human nature" is, how it develops and what aspects of it are expressed. Indeed, one of the greatest myths about anarchism is the idea that we think human nature is inherently good (rather, we think it is inherently sociable). How it develops and expresses itself is dependent on the kind of society we live in and create. A hierarchical society will shape people in certain (negative) ways and produce a "human nature" radically different from a libertarian one. So *"when we hear men [and women] saying that Anarchists imagine men [and women] much better than they really are, we merely wonder how intelligent people can repeat that nonsense. Do we not say continually that the only means of rendering men [and women] less rapacious and egotistic, less ambitious and less slavish at the same time, is to eliminate those conditions which favour the growth of egotism and rapacity, of slavishness and ambition?"* [Peter Kropotkin, **Act for Yourselves**, p. 83]

As such, the use of "human nature" as an argument against anarchism is simply superficial and, ultimately, an evasion. It is an excuse not to think. *"Every fool,"* as Emma Goldman put it, *"from king to policemen, from the flatheaded parson to the visionless dabbler in science, presumes to speak authoritatively of human nature. The greater the mental charlatan, the more definite his insistence on the wickedness and weakness of human nature. Yet how can any one speak of it to-day, with every soul in prison, with every heart fettered, wounded, and maimed?"* Change society, create a better social environment and then we can judge what is a product of our natures and what is the product of an authoritarian system. For this reason, anarchism *"stands for the liberation of the human mind from the dominion of religion; the liberation of the human body from the dominion of property; liberation from the shackles and restraint of government."* For *"[f]reedom, expansion, opportunity, and above all, peace and repose, alone can teach us the real dominant factors of human nature and all its wonderful possibilities."* [**Red Emma Speaks**, p. 73]

This does not mean that human beings are infinitely plastic, with each individual born a **tabula rasa** (blank slate) waiting to be formed by "society" (which in practice means those who run it).

As Noam Chomsky argues, *"I don't think its possible to give a rational account of the concept of alienated labour on that assumption [that human nature is nothing but a historical product], nor is it possible to produce something like a moral justification for the commitment to some kind of social change, except on the basis of assumptions about human nature and how modifications in the structure of society will be better able to conform to some of the fundamental needs that are part of our essential nature."* [**Language and Politics**, p. 215] We do not wish to enter the debate about what human characteristics are and are not "innate." All we will say is that human beings have an innate ability to think and learn — that much is obvious, we feel — and that humans are sociable creatures, needing the company of others to feel complete and to prosper. Moreover, they have the ability to recognise and oppose injustice and oppression (Bakunin rightly considered *"**the power to think** and **the desire to rebel**"* as *"precious faculties."* [**God and the State**, p. 9]).

These three features, we think, suggest the viability of an anarchist society. The innate ability to think for oneself automatically makes all forms of hierarchy illegitimate, and our need for social relationships implies that we can organise without the state. The deep unhappiness and alienation afflicting modern society reveals that the centralisation and authoritarianism of capitalism and the state are denying some innate needs within us. In fact, as mentioned earlier, for the great majority of its existence the human race **has** lived in anarchic communities, with little or no hierarchy. That modern society calls such people "savages" or "primitive" is pure arrogance. So who can tell whether anarchism is against "human nature"? Anarchists have accumulated much evidence to suggest that it may not be.

As for the charge the anarchists demand too much of "human nature," it is often **non** anarchists who make the greatest claims on it. For *"while our opponents seem to admit there is a kind of salt of the earth – the rulers, the employers, the leaders — who, happily enough, prevent those bad men — the ruled, the exploited, the led — from becoming still worse than they are"* we anarchists *"maintain that **both** rulers and ruled are spoiled by authority"* and *"**both** exploiters and exploited are spoiled by exploitation."* So *"there is [a] difference, and a very important one. **We** admit the imperfections of human nature, but we make no exception for the rulers. **They** make it, although sometimes unconsciously, and because we make no such exception, they say that we are dreamers."* [Peter Kropotkin, **Op. Cit.**, p. 83] If human nature is so bad, then giving some people power over others and hoping this will lead to justice and freedom is hopelessly utopian.

Moreover, as noted, Anarchists argue that hierarchical organisations bring out the worse in human nature. Both the oppressor and the oppressed are negatively affected by the authoritarian relationships so produced. *"It is a characteristic of privilege and of every kind of privilege,"* argued Bakunin, *"to kill the mind and heart of man ... That is a social law which admits no exceptions ... It is the law of equality and humanity."* [**God and the State**, p. 31] And while the privileged become corrupted by power, the powerless (in general) become servile in heart and mind (luckily the human spirit is such that there will always be rebels no matter the oppression for where there is oppression, there is resistance and, consequently, hope). As such, it seems strange for anarchists to hear non-anarchists justify hierarchy in terms of the (distorted) "human nature" it produces.

Sadly, too many have done precisely this. It continues to this day. For example, with the rise of "sociobiology," some claim (with very little **real** evidence) that capitalism is a product of our "nature," which is determined by our genes. These claims are simply a new variation of the "human nature" argument and have, unsurprisingly, been leapt upon by the powers that be. Considering the dearth of evidence, their support for this "new" doctrine must be purely the result of its utility to those in power — i.e. the fact that it is useful to have an "objective" and

"scientific" basis to rationalise inequalities in wealth and power (for a discussion of this process see **Not in Our Genes: Biology, Ideology and Human Nature** by Steven Rose, R.C. Lewontin and Leon J. Kamin).

This is not to say that it does not hold a grain of truth. As scientist Stephen Jay Gould notes, *"the range of our potential behaviour is circumscribed by our biology"* and if this is what sociobiology means *"by genetic control, then we can scarcely disagree."* However, this is not what is meant. Rather, it is a form of *"biological determinism"* that sociobiology argues for. Saying that there are specific genes for specific human traits says little for while *"[v]iolence, sexism, and general nastiness **are** biological since they represent one subset of a possible range of behaviours"* so are *"peacefulness, equality, and kindness."* And so *"we may see their influence increase if we can create social structures that permit them to flourish."* That this may be the case can be seen from the works of sociobiologists themselves, who *"acknowledge diversity"* in human cultures while *"often dismiss[ing] the uncomfortable 'exceptions' as temporary and unimportant aberrations."* This is surprising, for if you believe that *"repeated, often genocidal warfare has shaped our genetic destiny, the existence of nonaggressive peoples is embarrassing."* [**Ever Since Darwin**, p. 252, p. 257 and p. 254]

Like the social Darwinism that preceded it, sociobiology proceeds by first projecting the dominant ideas of current society onto nature (often unconsciously, so that scientists mistakenly consider the ideas in question as both "normal" and "natural"). Bookchin refers to this as *"the subtle projection of historically conditioned human values"* onto nature rather than *"scientific objectivity."* Then the theories of nature produced in this manner are transferred **back** onto society and history, being used to "prove" that the principles of capitalism (hierarchy, authority, competition, etc.) are eternal **laws,** which are then appealed to as a justification for the status quo! *"What this procedure does accomplish,"* notes Bookchin, *"is reinforce human social hierarchies by justifying the command of men and women as innate features of the 'natural order.' Human domination is thereby transcribed into the genetic code as biologically immutable."* [**The Ecology of Freedom**, p. 95 and p. 92] Amazingly, there are many supposedly intelligent people who take this sleight-of-hand seriously.

This can be seen when "hierarchies" in nature are used to explain, and so justify, hierarchies in human societies. Such analogies are misleading for they forget the institutional nature of human life. As Murray Bookchin notes in his critique of sociobiology, a *"weak, enfeebled, unnerved, and sick ape is hardly likely to become an 'alpha' male, much less retain this highly ephemeral 'status.' By contrast, the most physically and mentally pathological human rulers have exercised authority with devastating effect in the course of history."* This *"expresses a power of hierarchical **institutions** over persons that is completely reversed in so-called 'animal hierarchies' where the absence of institutions is precisely the only intelligible way of talking about 'alpha males' or 'queen bees.'"* [*"Sociobiology or Social Ecology"*, **Which way for the Ecology Movement?**, p. 58] Thus what makes human society unique is conveniently ignored and the real sources of power in society are hidden under a genetic screen.

The sort of apologetics associated with appeals to "human nature" (or sociobiology at its worse) are natural, of course, because every ruling class needs to justify their right to rule. Hence they support doctrines that defined the latter in ways appearing to justify elite power — be it sociobiology, divine right, original sin, etc. Obviously, such doctrines have always been wrong … until now, of course, as it is obvious our current society truly conforms to "human nature" and it has been scientifically proven by our current scientific priesthood!

The arrogance of this claim is truly amazing. History hasn't stopped. One thousand years from now, society will be completely different from what it is presently or from what anyone has imagined. No government in place at the moment will still be around, and the current economic system will not exist. The only thing that may remain the same is that people will still be claiming that their new society is the "One True System" that completely conforms to human nature, even though all past systems did not.

Of course, it does not cross the minds of supporters of capitalism that people from different cultures may draw different conclusions from the same facts — conclusions that may be **more** valid. Nor does it occur to capitalist apologists that the theories of the "objective" scientists may be framed in the context of the dominant ideas of the society they live in. It comes as no surprise to anarchists, however, that scientists working in Tsarist Russia developed a theory of evolution based on **cooperation** within species, quite unlike their counterparts in capitalist Britain, who developed a theory based on **competitive struggle** within and between species. That the latter theory reflected the dominant political and economic theories of British society (notably competitive individualism) is pure coincidence, of course.

Kropotkin's classic work **Mutual Aid**, for example, was written in response to the obvious inaccuracies that British representatives of Darwinism had projected onto nature and human life. Building upon the mainstream Russian criticism of the British Darwinism of the time, Kropotkin showed (with substantial empirical evidence) that "mutual aid" within a group or species played as important a role as "mutual struggle" between individuals within those groups or species (see Stephan Jay Gould's essay *"Kropotkin was no Crackpot"* in his book **Bully for Brontosaurus** for details and an evaluation). It was, he stressed, a *"factor"* in evolution along with competition, a factor which, in most circumstances, was far more important to survival. Thus co-operation is just as "natural" as competition so proving that "human nature" was not a barrier to anarchism as co-operation between members of a species can be the best pathway to advantage individuals.

To conclude. Anarchists argue that anarchy is not against "human nature" for two main reasons. Firstly, what is considered as being "human nature" is shaped by the society we live in and the relationships we create. This means a hierarchical society will encourage certain personality traits to dominate while an anarchist one would encourage others. As such, anarchists *"do not so much rely on the fact that human nature will change as they do upon the theory that the same nature will act differently under different circumstances."* Secondly, change *"seems to be one of the fundamental laws of existence"* so *"who can say that man [sic!] has reached the limits of his possibilities."* [George Barrett, **Objections to Anarchism**, pp. 360–1 and p. 360]

For useful discussions on anarchist ideas on human nature, both of which refute the idea that anarchists think human beings are naturally good, see Peter Marshall's *"Human nature and anarchism"* [David Goodway (ed.), **For Anarchism: History, Theory and Practice**, pp. 127–149] and David Hartley's *"Communitarian Anarchism and Human Nature"*. [**Anarchist Studies**, vol. 3, no. 2, Autumn 1995, pp. 145–164]

A.2.16 Does anarchism require "perfect" people to work?

No. Anarchy is not a utopia, a "perfect" society. It will be a ***human*** society, with all the problems, hopes, and fears associated with human beings. Anarchists do not think that human beings need to be "perfect" for anarchy to work. They only need to be free. Thus Christie and Meltzer:

"[A] common fallacy [is] that revolutionary socialism [i.e. anarchism] is an 'idealisation' of the workers and [so] the mere recital of their present faults is a refutation of the class struggle ... it seems morally unreasonable that a free society ... could exist without moral or ethical perfection. But so far as the overthrow of [existing] society is concerned, we may ignore the fact of people's shortcomings and prejudices, so long as they do not become institutionalised. One may view without concern the fact ... that the workers might achieve control of their places of work long before they had acquired the social graces of the 'intellectual' or shed all the prejudices of the present society from family discipline to xenophobia. What does it matter, so long as they can run industry without masters? Prejudices wither in freedom and only flourish while the social climate is favourable to them ... What we say is ... that once life can continue without imposed authority from above, and imposed authority cannot survive the withdrawal of labour from its service, the prejudices of authoritarianism will disappear. There is no cure for them other than the free process of education." [**The Floodgates of Anarchy**, pp. 36–7]

Obviously, though, we think that a free society will produce people who are more in tune with both their own and others individuality and needs, thus reducing individual conflict. Remaining disputes would be solved by reasonable methods, for example, the use of juries, mutual third parties, or community and workplace assemblies (see section I.5.8 for a discussion of how could be done for anti-social activities as well as disputes).

Like the "anarchism-is-against-human-nature" argument (see section A.2.15), opponents of anarchism usually assume "perfect" people — people who are not corrupted by power when placed in positions of authority, people who are strangely unaffected by the distorting effects of hierarchy, privilege, and so forth. However, anarchists make no such claims about human perfection. We simply recognise that vesting power in the hands of one person or an elite is never a good idea, as people are not perfect.

It should be noted that the idea that anarchism requires a "new" (perfect) man or woman is often raised by the opponents of anarchism to discredit it (and, usually, to justify the retention of hierarchical authority, particularly capitalist relations of production). After all, people are not perfect and are unlikely ever to be. As such, they pounce on every example of a government falling and the resulting chaos to dismiss anarchism as unrealistic. The media loves to proclaim a country to be falling into "anarchy" whenever there is a disruption in "law and order" and looting takes place.

Anarchists are not impressed by this argument. A moment's reflection shows why, for the detractors make the basic mistake of assuming an anarchist society without anarchists! (A variation of such claims is raised by the right-wing "anarcho"-capitalists to discredit real anarchism. However, their "objection" discredits their own claim to be anarchists for they implicitly assume an anarchist society without anarchists!). Needless to say, an "anarchy" made up of people who still saw the need for authority, property and statism would soon become authoritarian (i.e. non-anarchist) again. This is because even if the government disappeared tomorrow, the same system would soon grow up again, because *"the strength of the government rests not with itself, but with the people. A great tyrant may be a fool, and not a superman. His strength lies not in himself, but in the superstition of the people who think that it is right to obey him. So long as that superstition exists it is useless for some liberator to cut off the head of tyranny; the people will create another, for they*

have grown accustomed to rely on something outside themselves." [George Barrett, **Objections to Anarchism**, p. 355]

Hence Alexander Berkman:

> *"Our social institutions are founded on certain ideas; as long as the latter are generally believed, the institutions built on them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present day conditions means the ultimate breakdown of government and capitalism.*" [**What is Anarchism?**, p. xii]

In other words, anarchy needs ***anarchists*** in order to be created and survive. But these anarchists need not be perfect, just people who have freed themselves, by their own efforts, of the superstition that command-and-obedience relations and capitalist property rights are necessary. The implicit assumption in the idea that anarchy needs "perfect" people is that freedom will be given, not taken; hence the obvious conclusion follows that an anarchy requiring "perfect" people will fail. But this argument ignores the need for self-activity and self-liberation in order to create a free society. For anarchists, *"history is nothing but a struggle between the rulers and the ruled, the oppressors and the oppressed."* [Peter Kropotkin, **Act for Yourselves**, p. 85] Ideas change through struggle and, consequently, in the struggle against oppression and exploitation, we not only change the world, we change ourselves at the same time. So it is the struggle for freedom which creates people capable of taking the responsibility for their own lives, communities and planet. People capable of living as equals in a free society, so making anarchy possible.

As such, the chaos which often results when a government disappears is not anarchy nor, in fact, a case against anarchism. It simple means that the necessary preconditions for creating an anarchist society do not exist. Anarchy would be the product of collective struggle at the heart of society, not the product of external shocks. Nor, we should note, do anarchists think that such a society will appear "overnight." Rather, we see the creation of an anarchist system as a process, not an event. The ins-and-outs of how it would function will evolve over time in the light of experience and objective circumstances, not appear in a perfect form immediately (see section H.2.5 for a discussion of Marxist claims otherwise).

Therefore, anarchists do not conclude that "perfect" people are necessary anarchism to work because the anarchist is *"no liberator with a divine mission to free humanity, but he is a part of that humanity struggling onwards towards liberty."* As such, *"[i]f, then, by some external means an Anarchist Revolution could be, so to speak, supplied ready-made and thrust upon the people, it is true that they would reject it and rebuild the old society. If, on the other hand, the people develop their ideas of freedom, and they themselves get rid of the last stronghold of tyranny — the government — then indeed the revolution will be permanently accomplished."* [George Barrett, **Op. Cit.**, p. 355]

This is not to suggest that an anarchist society must wait until ***everyone*** is an anarchist. Far from it. It is highly unlikely, for example, that the rich and powerful will suddenly see the errors of their ways and voluntarily renounce their privileges. Faced with a large and growing anarchist movement, the ruling elite has always used repression to defend its position in society. The use of fascism in Spain (see section A.5.6) and Italy (see section A.5.5) show the depths the capitalist class can sink to. Anarchism will be created in the face of opposition by the ruling minorities and, consequently, will need to defend itself against attempts to recreate authority (see section

H.2.1 for a refutation of Marxist claims anarchists reject the need to defend an anarchist society against counter-revolution).

Instead anarchists argue that we should focus our activity on convincing those subject to oppression and exploitation that they have the power to resist both and, ultimately, can end both by destroying the social institutions that cause them. As Malatesta argued, *"we need the support of the masses to build a force of sufficient strength to achieve our specific task of radical change in the social organism by the direct action of the masses, we must get closer to them, accept them as they are, and from within their ranks seek to 'push' them forward as much as possible."* [**Errico Malatesta: His Life and Ideas**, pp. 155–6] This would create the conditions that make possible a rapid evolution towards anarchism as what was initially accepted by a minority *"but increasingly finding popular expression, will make its way among the mass of the people"* and *"the minority will become the People, the great mass, and that mass rising up against property and the State, will march forward towards anarchist communism."* [Kropotkin, **Words of a Rebel**, p. 75] Hence the importance anarchists attach to spreading our ideas and arguing the case for anarchism. This creates conscious anarchists from those questioning the injustices of capitalism and the state.

This process is helped by the nature of hierarchical society and the resistance it naturally developed in those subject to it. Anarchist ideas develop spontaneously through struggle. As we discuss in section I.2.3, anarchistic organisations are often created as part of the resistance against oppression and exploitation which marks every hierarchical system and can., potentially, be the framework of a few society. As such, the creation of libertarian institutions is, therefore, always a possibility in any situation. A peoples' experiences may push them towards anarchist conclusions, namely the awareness that the state exists to protect the wealthy and powerful few and to disempower the many. That while it is needed to maintain class and hierarchical society, it is not needed to organise society nor can it do so in a just and fair way for all. This is possible. However, without a conscious anarchist presence any libertarian tendencies are likely to be used, abused and finally destroyed by parties or religious groups seeking political power over the masses (the Russian Revolution is the most famous example of this process). It is for that reason anarchists organise to influence the struggle and spread our ideas (see section J.3 for details). For it is the case that only when anarchist ideas *"acquire a predominating influence"* and are *"accepted by a sufficiently large section of the population"* will we *"have achieved anarchy, or taken a step towards anarchy."* For anarchy *"cannot be imposed against the wishes of the people."* [Malatesta, **Op. Cit.**, p. 159 and p. 163]

So, to conclude, the creation of an anarchist society is not dependent on people being perfect but it is dependent on a large majority being anarchists and wanting to reorganise society in a libertarian manner. This will not eliminate conflict between individuals nor create a fully formed anarchist humanity overnight but it will lay the ground for the gradual elimination of whatever prejudices and anti-social behaviour that remain after the struggle to change society has revolutionised those doing it.

A.2.17 Aren't most people too stupid for a free society to work?

We are sorry to have to include this question in an anarchist FAQ, but we know that many political ideologies explicitly assume that ordinary people are too stupid to be able to manage their own lives and run society. All aspects of the capitalist political agenda, from Left to Right, contain

people who make this claim. Be it Leninists, fascists, Fabians or Objectivists, it is assumed that only a select few are creative and intelligent and that these people should govern others. Usually, this elitism is masked by fine, flowing rhetoric about "freedom," "democracy" and other platitudes with which the ideologues attempt to dull people's critical thought by telling them want they want to hear.

It is, of course, also no surprise that those who believe in "natural" elites always class themselves at the top. We have yet to discover an "objectivist", for example, who considers themselves part of the great mass of "second-handers" (it is always amusing to hear people who simply parrot the ideas of Ayn Rand dismissing other people so!) or who will be a toilet cleaner in the unknown "ideal" of "real" capitalism. Everybody reading an elitist text will consider him or herself to be part of the "select few." It's "natural" in an elitist society to consider elites to be natural and yourself a potential member of one!

Examination of history shows that there is a basic elitist ideology which has been the essential rationalisation of all states and ruling classes since their emergence at the beginning of the Bronze Age (*"if the legacy of domination had had any broader purpose than the support of hierarchical and class interests, it has been the attemp to exorcise the belief in public competence from social discourse itself."* [Bookchin, **The Ecology of Freedom**, p. 206]). This ideology merely changes its outer garments, not its basic inner content over time.

During the Dark Ages, for example, it was coloured by Christianity, being adapted to the needs of the Church hierarchy. The most useful "divinely revealed" dogma to the priestly elite was "original sin": the notion that human beings are basically depraved and incompetent creatures who need "direction from above," with priests as the conveniently necessary mediators between ordinary humans and "God." The idea that average people are basically stupid and thus incapable of governing themselves is a carry over from this doctrine, a relic of the Dark Ages.

In reply to all those who claim that most people are "second-handers" or cannot develop anything more than "trade union consciousness," all we can say is that it is an absurdity that cannot withstand even a superficial look at history, particularly the labour movement. The creative powers of those struggling for freedom is often truly amazing, and if this intellectual power and inspiration is not seen in "normal" society, this is the clearest indictment possible of the deadening effects of hierarchy and the conformity produced by authority. (See also section B.1 for more on the effects of hierarchy). As Bob Black points outs:

> *"You are what you do. If you do boring, stupid, monotonous work, chances are you'll end up boring, stupid, and monotonous. Work is a much better explanation for the creeping cretinisation all around us than even such significant moronising mechanisms as television and education. People who are regimented all their lives, handed to work from school and bracketed by the family in the beginning and the nursing home in the end, are habituated to hierarchy and psychologically enslaved. Their aptitude for autonomy is so atrophied that their fear of freedom is among their few rationally grounded phobias. Their obedience training at work carries over into the families* ***they*** *start, thus reproducing the system in more ways than one, and into politics, culture and everything else. Once you drain the vitality from people at work, they'll likely submit to hierarchy and expertise in everything. They're used to it."* [**The Abolition of Work and other essays**, pp. 21–2]

When elitists try to conceive of liberation, they can only think of it being **given** to the oppressed by kind (for Leninists) or stupid (for Objectivists) elites. It is hardly surprising, then, that it fails. Only self-liberation can produce a free society. The crushing and distorting effects of authority can only be overcome by self-activity. The few examples of such self-liberation prove that most people, once considered incapable of freedom by others, are more than up for the task.

Those who proclaim their "superiority" often do so out of fear that their authority and power will be destroyed once people free themselves from the debilitating hands of authority and come to realise that, in the words of Max Stirner, *"the great are great only because we are on our knees. Let us rise"*

As Emma Goldman remarks about women's equality, *"[t]he extraordinary achievements of women in every walk of life have silenced forever the loose talk of women's inferiority. Those who still cling to this fetish do so because they hate nothing so much as to see their authority challenged. This is the characteristic of all authority, whether the master over his economic slaves or man over women. However, everywhere woman is escaping her cage, everywhere she is going ahead with free, large strides."* [**Vision on Fire**, p. 256] The same comments are applicable, for example, to the very successful experiments in workers' self-management during the Spanish Revolution.

Then, of course, the notion that people are too stupid for anarchism to work also backfires on those who argue it. Take, for example, those who use this argument to advocate democratic government rather than anarchy. Democracy, as Luigi Galleani noted, means *"acknowledging the right and the competence of the people to select their rulers."* However, *"whoever has the political competence to choose his [or her] own rulers is, by implication, also competent to do without them, especially when the causes of economic enmity are uprooted."* [**The End of Anarchism?**, p. 37] Thus the argument for democracy against anarchism undermines itself, for *"if you consider these worthy electors as unable to look after their own interests themselves, how is it that they know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing the election of a genius from the votes of a mass of fools?"* [Malatesta, **Anarchy**, pp. 53–4]

As for those who consider dictatorship as the solution to human stupidity, the question arises why are these dictators immune to this apparently universal human trait? And, as Malatesta noted, *"who are the best? And who will recognise these qualities in them?"* [**Op. Cit.**, p. 53] If they impose themselves on the "stupid" masses, why assume they will not exploit and oppress the many for their own benefit? Or, for that matter, that they are any more intelligent than the masses? The history of dictatorial and monarchical government suggests a clear answer to those questions. A similar argument applies for other non-democratic systems, such as those based on limited suffrage. For example, the Lockean (i.e. classical liberal or right-wing libertarian) ideal of a state based on the rule of property owners is doomed to be little more than a regime which oppresses the majority to maintain the power and privilege of the wealthy few. Equally, the idea of near universal stupidity bar an elite of capitalists (the "objectivist" vision) implies a system somewhat less ideal than the perfect system presented in the literature. This is because most people would tolerate oppressive bosses who treat them as means to an end rather than an end in themselves. For how can you expect people to recognise and pursue their own self-interest if you consider them fundamentally as the *"uncivilised hordes"*? You cannot have it both ways and the *"unknown ideal"* of pure capitalism would be as grubby, oppressive and alienating as "actually existing" capitalism.

As such, anarchists are firmly convinced that arguments against anarchy based on the lack of ability of the mass of people are inherently self-contradictory (when not blatantly self-servicing). If people are too stupid for anarchism then they are too stupid for any system you care to mention. Ultimately, anarchists argue that such a perspective simply reflects the servile mentality produced by a hierarchical society rather than a genuine analysis of humanity and our history as a species. To quote Rousseau:

> *"when I see multitudes of entirely naked savages scorn European voluptuousness and endure hunger, fire, the sword, and death to preserve only their independence, I feel that it does not behove slaves to reason about freedom."* [quoted by Noam Chomsky, **Marxism, Anarchism, and Alternative Futures**, p. 780]

A.2.18 Do anarchists support terrorism?

No. This is for three reasons.

Terrorism means either targeting or not worrying about killing innocent people. For anarchy to exist, it must be created by the mass of people. One does not convince people of one's ideas by blowing them up. Secondly, anarchism is about self-liberation. One cannot blow up a social relationship. Freedom cannot be created by the actions of an elite few destroying rulers **on behalf of** the majority. Simply put, a *"structure based on centuries of history cannot be destroyed with a few kilos of explosives."* [Kropotkin, quoted by Martin A. Millar, **Kropotkin**, p. 174] For so long as people feel the need for rulers, hierarchy will exist (see section A.2.16 for more on this). As we have stressed earlier, freedom cannot be given, only taken. Lastly, anarchism aims for freedom. Hence Bakunin's comment that *"when one is carrying out a revolution for the liberation of humanity, one should respect the life and liberty of men [and women]."* [quoted by K.J. Kenafick, **Michael Bakunin and Karl Marx**, p. 125] For anarchists, means determine the ends and terrorism by its very nature violates life and liberty of individuals and so cannot be used to create an anarchist society. The history of, say, the Russian Revolution, confirmed Kropotkin's insight that *"[v]ery sad would be the future revolution if it could only triumph by terror."* [quoted by Millar, **Op. Cit.**, p. 175]

Moreover anarchists are **not** against individuals but the institutions and social relationships that cause certain individuals to have power over others and abuse (i.e. use) that power. Therefore the anarchist revolution is about destroying structures, not people. As Bakunin pointed out, *"we wish not to kill persons, but to abolish status and its perquisites"* and anarchism *"does not mean the death of the individuals who make up the bourgeoisie, but the death of the bourgeoisie as a political and social entity economically distinct from the working class."* [**The Basic Bakunin**, p. 71 and p. 70] In other words, ***"You can't blow up a social relationship"*** (to quote the title of an anarchist pamphlet which presents the anarchist case against terrorism).

How is it, then, that anarchism is associated with violence? Partly this is because the state and media insist on referring to terrorists who are **not** anarchists as anarchists. For example, the German Baader-Meinhoff gang were often called "anarchists" despite their self-proclaimed Marxist-Leninism. Smears, unfortunately, work. Similarly, as Emma Goldman pointed out, *"it is a known fact known to almost everyone familiar with the Anarchist movement that a great number of [violent] acts, for which Anarchists had to suffer, either originated with the capitalist press or were instigated, if not directly perpetrated, by the police."* [**Red Emma Speaks**, p. 262]

An example of this process at work can be seen from the current anti-globalisation movement. In Seattle, for example, the media reported "violence" by protestors (particularly anarchist ones) yet this amounted to a few broken windows. The much greater **actual** violence of the police against protestors (which, incidentally, started **before** the breaking of a single window) was not considered worthy of comment. Subsequent media coverage of anti-globalisation demonstrations followed this pattern, firmly connecting anarchism with violence in spite of that the protesters have been the ones to suffer the greatest violence at the hands of the state. As anarchist activist Starhawk notes, *"if breaking windows and fighting back when the cops attack is 'violence,' then give me a new word, a word a thousand times stronger, to use when the cops are beating non-resisting people into comas."* [**Staying on the Streets**, p. 130]

Similarly, at the Genoa protests in 2001 the mainstream media presented the protestors as violent even though it was the state who killed one of them and hospitalised many thousands more. The presence of police agent provocateurs in creating the violence was unmentioned by the media. As Starhawk noted afterwards, in Genoa *"we encountered a carefully orchestrated political campaign of state terrorism. The campaign included disinformation, the use of infiltrators and provocateurs, collusion with avowed Fascist groups ... , the deliberate targeting of non-violent groups for tear gas and beating, endemic police brutality, the torture of prisoners, the political persecution of organisers ... They did all those openly, in a way that indicates they had no fear of repercussions and expected political protection from the highest sources."* [**Op. Cit.**, pp. 128–9] This was, unsurprisingly, not reported by the media.

Subsequent protests have seen the media indulge in yet more anti-anarchist hype, inventing stories to present anarchists are hate-filled individuals planning mass violence. For example, in Ireland in 2004 the media reported that anarchists were planning to use poison gas during EU related celebrations in Dublin. Of course, evidence of such a plan was not forthcoming and no such action happened. Neither did the riot the media said anarchists were organising. A similar process of misinformation accompanied the anti-capitalist May Day demonstrations in London and the protests against the Republican National Congress in New York. In spite of being constantly proved wrong after the event, the media always prints the scare stories of anarchist violence (even inventing events at, say Seattle, to justify their articles and to demonise anarchism further). Thus the myth that anarchism equals violence is perpetrated. Needless to say, the same papers that hyped the (non-existent) threat of anarchist violence remained silent on the actual violence of, and repression by, the police against demonstrators which occurred at these events. Neither did they run apologies after their (evidence-less) stories of doom were exposed as the nonsense they were by subsequent events.

This does not mean that Anarchists have not committed acts of violence. They have (as have members of other political and religious movements). The main reason for the association of terrorism with anarchism is because of the ***"propaganda by the deed"*** period in the anarchist movement.

This period — roughly from 1880 to 1900 — was marked by a small number of anarchists assassinating members of the ruling class (royalty, politicians and so forth). At its worse, this period saw theatres and shops frequented by members of the bourgeoisie targeted. These acts were termed *"propaganda by the deed."* Anarchist support for the tactic was galvanised by the assassination of Tsar Alexander II in 1881 by Russian Populists (this event prompted Johann Most's famous editorial in **Freiheit**, entitled *"At Last!"*, celebrating regicide and the assassination of tyrants). However, there were deeper reasons for anarchist support of this tactic: firstly, in

revenge for acts of repression directed towards working class people; and secondly, as a means to encourage people to revolt by showing that their oppressors could be defeated.

Considering these reasons it is no coincidence that propaganda by the deed began in France after the 20 000-plus deaths due to the French state's brutal suppression of the Paris Commune, in which many anarchists were killed. It is interesting to note that while the anarchist violence in revenge for the Commune is relatively well known, the state's mass murder of the Communards is relatively unknown. Similarly, it may be known that the Italian Anarchist Gaetano Bresci assassinated King Umberto of Italy in 1900 or that Alexander Berkman tried to kill Carnegie Steel Corporation manager Henry Clay Frick in 1892. What is often unknown is that Umberto's troops had fired upon and killed protesting peasants or that Frick's Pinkertons had also murdered locked-out workers at Homestead.

Such downplaying of statist and capitalist violence is hardly surprising. *"The State's behaviour is violence,"* points out Max Stirner, *"and it calls its violence 'law'; that of the individual, 'crime.'"* [**The Ego and Its Own**, p. 197] Little wonder, then, that anarchist violence is condemned but the repression (and often worse violence) that provoked it ignored and forgotten. Anarchists point to the hypocrisy of the accusation that anarchists are "violent" given that such claims come from either supporters of government or the actual governments themselves, governments *"which came into being through violence, which maintain themselves in power through violence, and which use violence constantly to keep down rebellion and to bully other nations."* [Howard Zinn, **The Zinn Reader**, p. 652]

We can get a feel of the hypocrisy surrounding condemnation of anarchist violence by non-anarchists by considering their response to state violence. For example, many capitalist papers and individuals in the 1920s and 1930s celebrated Fascism as well as Mussolini and Hitler. Anarchists, in contrast, fought Fascism to the death and tried to assassinate both Mussolini and Hitler. Obviously supporting murderous dictatorships is not "violence" and "terrorism" but resisting such regimes is! Similarly, non-anarchists can support repressive and authoritarian states, war and the suppression of strikes and unrest by violence ("restoring law and order") and not be considered "violent." Anarchists, in contrast, are condemned as "violent" and "terrorist" because a few of them tried to revenge such acts of oppression and state/capitalist violence! Similarly, it seems the height of hypocrisy for someone to denounce the anarchist "violence" which produces a few broken windows in, say, Seattle while supporting the actual violence of the police in imposing the state's rule or, even worse, supporting the American invasion of Iraq in 2003. If anyone should be considered violent it is the supporter of state and its actions yet people do not see the obvious and *"deplore the type of violence that the state deplores, and applaud the violence that the state practises."* [Christie and Meltzer, **The Floodgates of Anarchy**, p. 132]

It must be noted that the majority of anarchists did not support this tactic. Of those who committed "propaganda by the deed" (sometimes called *"attentats"*), as Murray Bookchin points out, only a *"few ... were members of Anarchist groups. The majority ... were soloists."* [**The Spanish Anarchists**, p. 102] Needless to say, the state and media painted all anarchists with the same brush. They still do, usually inaccurately (such as blaming Bakunin for such acts even though he had been dead years before the tactic was even discussed in anarchist circles or by labelling non-anarchist groups anarchists!).

All in all, the "propaganda by the deed" phase of anarchism was a failure, as the vast majority of anarchists soon came to see. Kropotkin can be considered typical. He *"never liked the slogan* ***propaganda by deed****, and did not use it to describe his own ideas of revolutionary action."* However,

in 1879 while still *"urg[ing] the importance of collective action"* he started *"expressing considerable sympathy and interest in **attentats**"* (these *"collective forms of action"* were seen as acting *"at the trade union and communal level"*). In 1880 he *"became less preoccupied with collective action and this enthusiasm for acts of revolt by individuals and small groups increased."* This did not last and Kropotkin soon attached *"progressively less importance to isolated acts of revolt"* particularly once *"he saw greater opportunities for developing collective action in the new militant trade unionism."* [Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism**, p. 92, p. 115, p. 129, pp. 129–30, p. 205] By the late 1880s and early 1890s he came to disapprove of such acts of violence. This was partly due to simple revulsion at the worse of the acts (such as the Barcelona Theatre bombing in response to the state murder of anarchists involved in the Jerez uprising of 1892 and Emile Henry's bombing of a cafe in response to state repression) and partly due to the awareness that it was hindering the anarchist cause.

Kropotkin recognised that the *"spate of terrorist acts"* of the 1880s had caused *"the authorities into taking repressive action against the movement"* and were *"not in his view consistent with the anarchist ideal and did little or nothing to promote popular revolt."* In addition, he was *"anxious about the isolation of the movement from the masses"* which *"had increased rather than diminished as a result of the preoccupation with"* propaganda by deed. He *"saw the best possibility for popular revolution in the ... development of the new militancy in the labour movement. From now on he focussed his attention increasingly on the importance of revolutionary minorities working among the masses to develop the spirit of revolt."* However, even during the early 1880s when his support for individual acts of revolt (if not for propaganda by the deed) was highest, he saw the need for collective class struggle and, therefore, *"Kropotkin always insisted on the importance of the labour movement in the struggles leading up to the revolution."* [**Op. Cit.**, pp. 205–6, p. 208 and p. 280]

Kropotkin was not alone. More and more anarchists came to see "propaganda by the deed" as giving the state an excuse to clamp down on both the anarchist and labour movements. Moreover, it gave the media (and opponents of anarchism) a chance to associate anarchism with mindless violence, thus alienating much of the population from the movement. This false association is renewed at every opportunity, regardless of the facts (for example, even though Individualist Anarchists rejected "propaganda by the deed" totally, they were also smeared by the press as "violent" and "terrorists").

In addition, as Kropotkin pointed out, the assumption behind propaganda by the deed, i.e. that everyone was waiting for a chance to rebel, was false. In fact, people are products of the system in which they live; hence they accepted most of the myths used to keep that system going. With the failure of propaganda by deed, anarchists turned back to what most of the movement had been doing anyway: encouraging the class struggle and the process of self-liberation. This turn back to the roots of anarchism can be seen from the rise in anarcho-syndicalist unions after 1890 (see section A.5.3). This position flows naturally from anarchist theory, unlike the idea of individual acts of violence:

> *"to bring about a revolution, and specially the Anarchist revolution[, it] is necessary that the people be conscious of their rights and their strength; it is necessary that they be ready to fight and ready to take the conduct of their affairs into their own hands. It must be the constant preoccupation of the revolutionists, the point towards which all their activity must aim, to bring about this state of mind among the masses ... Who expects the emancipation of mankind to come, not from the persistent and harmonious*

> *co-operation of all men [and women] of progress, but from the accidental or providential happening of some acts of heroism, is not better advised that one who expected it from the intervention of an ingenious legislator or of a victorious general ... our ideas oblige us to put all our hopes in the masses, because we do not believe in the possibility of imposing good by force and we do not want to be commanded ... Today, that which ... was the logical outcome of our ideas, the condition which our conception of the revolution and reorganisation of society imposes on us ... [is] to live among the people and to win them over to our ideas by actively taking part in their struggles and sufferings."* [Errico Malatesta, *"The Duties of the Present Hour"*, pp. 181–3, **Anarchism**, Robert Graham (ed.), pp. 180–1]

Despite most anarchists' tactical disagreement with propaganda by deed, few would consider it to be terrorism or rule out assassination under all circumstances. Bombing a village during a war because there **might** be an enemy in it is terrorism, whereas assassinating a murdering dictator or head of a repressive state is defence at best and revenge at worst. As anarchists have long pointed out, if by terrorism it is meant "killing innocent people" then the state is the greatest terrorist of them all (as well as having the biggest bombs and other weapons of destruction available on the planet). If the people committing "acts of terror" are really anarchists, they would do everything possible to avoid harming innocent people and never use the statist line that "collateral damage" is regrettable but inevitable. This is why the vast majority of "propaganda by the deed" acts were directed towards individuals of the ruling class, such as Presidents and Royalty, and were the result of previous acts of state and capitalist violence.

So "terrorist" acts have been committed by anarchists. This is a fact. However, it has nothing to do with anarchism as a socio-political theory. As Emma Goldman argued, it was *"not Anarchism, as such, but the brutal slaughter of the eleven steel workers [that] was the urge for Alexander Berkman's act."* [**Op. Cit.**, p. 268] Equally, members of **other** political and religious groups have also committed such acts. As the Freedom Group of London argued:

> *"There is a truism that the man [or woman] in the street seems always to forget, when he is abusing the Anarchists, or whatever party happens to be his **bete noire** for the moment, as the cause of some outrage just perpetrated. This indisputable fact is that homicidal outrages have, from time immemorial, been the reply of goaded and desperate classes, and goaded and desperate individuals, to wrongs from their fellowmen [and women], which they felt to be intolerable. Such acts are the violent recoil from violence, whether aggressive or repressive ... their cause lies not in any special conviction, but in the depths of .. . human nature itself. The whole course of history, political and social, is strewn with evidence of this."* [quoted by Emma Goldman, **Op. Cit.**, p. 259]

Terrorism has been used by many other political, social and religious groups and parties. For example, Christians, Marxists, Hindus, Nationalists, Republicans, Moslems, Sikhs, Fascists, Jews and Patriots have all committed acts of terrorism. Few of these movements or ideas have been labelled as "terrorist by nature" or continually associated with violence — which shows anarchism's threat to the status quo. There is nothing more likely to discredit and marginalise an idea than for malicious and/or ill-informed persons to portray those who believe and practice it as "mad bombers" with no opinions or ideals at all, just an insane urge to destroy.

Of course, the vast majority of Christians and so on have opposed terrorism as morally repugnant and counter-productive. As have the vast majority of anarchists, at all times and places. However, it seems that in our case it is necessary to state our opposition to terrorism time and time again.

So, to summarise — only a small minority of terrorists have ever been anarchists, and only a small minority of anarchists have ever been terrorists. The anarchist movement as a whole has always recognised that social relationships cannot be assassinated or bombed out of existence. Compared to the violence of the state and capitalism, anarchist violence is a drop in the ocean. Unfortunately most people remember the acts of the few anarchists who have committed violence rather than the acts of violence and repression by the state and capital that prompted those acts.

A.2.19 What ethical views do anarchists hold?

Anarchist viewpoints on ethics vary considerably, although all share a common belief in the need for an individual to develop within themselves their own sense of ethics. All anarchists agree with Max Stirner that an individual must free themselves from the confines of existing morality and question that morality — *"I decide whether it is the **right thing** for me; there is no right **outside** me."* [**The Ego and Its Own**, p. 189]

Few anarchists, however, would go so far as Stirner and reject **any** concept of social ethics at all (saying that, Stirner does value some universal concepts although they are egoistic ones). Such extreme moral relativism is almost as bad as moral absolutism for most anarchists (moral relativism is the view that there is no right or wrong beyond what suits an individual while moral absolutism is that view that what is right and wrong is independent of what individuals think).

It is often claimed that modern society is breaking up because of excessive "egoism" or moral relativism. This is false. As far as moral relativism goes, this is a step forward from the moral absolutism urged upon society by various Moralists and true-believers because it bases itself, however slimly, upon the idea of individual reason. However, as it denies the existence (or desirability) of ethics it is but the mirror image of what it is rebelling against. Neither option empowers the individual or is liberating.

Consequently, both of these attitudes hold enormous attraction to authoritarians, as a populace that is either unable to form an opinion about things (and will tolerate anything) or who blindly follow the commands of the ruling elite are of great value to those in power. Both are rejected by most anarchists in favour of an evolutionary approach to ethics based upon human reason to develop the ethical concepts and interpersonal empathy to generalise these concepts into ethical attitudes within society as well as within individuals. An anarchistic approach to ethics therefore shares the critical individual investigation implied in moral relativism but grounds itself into common feelings of right and wrong. As Proudhon argued:

> *"All progress begins by abolishing something; every reform rests upon denunciation of some abuse; each new idea is based upon the proved insufficiency of the old idea."*

Most anarchists take the viewpoint that ethical standards, like life itself, are in a constant process of evolution. This leads them to reject the various notions of *"God's Law," "Natural Law,"* and so on in favour of a theory of ethical development based upon the idea that individuals are entirely empowered to question and assess the world around them — in fact, they require it in

order to be truly free. You cannot be an anarchist and blindly accept **anything**! Michael Bakunin, one of the founding anarchist thinkers, expressed this radical scepticism as so:

> *"No theory, no ready-made system, no book that has ever been written will save the world. I cleave to no system. I am a true seeker."*

Any system of ethics which is not based on individual questioning can only be authoritarian. Erich Fromm explains why:

> *"Formally, authoritarian ethics denies man's capacity to know what is good or bad; the norm giver is always an authority transcending the individual. Such a system is based not on reason and knowledge but on awe of the authority and on the subject's feeling of weakness and dependence; the surrender of decision making to the authority results from the latter's magic power; its decisions can not and must not be questioned.* ***Materially****, or according to content, authoritarian ethics answers the question of what is good or bad primarily in terms of the interests of the authority, not the interests of the subject; it is exploitative, although the subject may derive considerable benefits, psychic or material, from it."* [**Man For Himself**, p. 10]

Therefore Anarchists take, essentially, a scientific approach to problems. Anarchists arrive at ethical judgements without relying on the mythology of spiritual aid, but on the merits of their own minds. This is done through logic and reason, and is a far better route to resolving moral questions than obsolete, authoritarian systems like orthodox religion and certainly better than the "there is no wrong or right" of moral relativism.

So, what are the source of ethical concepts? For Kropotkin, *"nature has thus to be recognised as the* ***first ethical teacher of man.*** *The social instinct, innate in men as well as in all the social animals, — this is the origin of all ethical conceptions and all subsequent development of morality."* [**Ethics**, p. 45]

Life, in other words, is the basis of anarchist ethics. This means that, essentially (according to anarchists), an individual's ethical viewpoints are derived from three basic sources:

1) from the society an individual lives in. As Kropotkin pointed out, *"Man's conceptions of morality are completely dependent upon the form that their social life assumed at a given time in a given locality ... this [social life] is reflected in the moral conceptions of men and in the moral teachings of the given epoch."* [**Op. Cit.**, p. 315] In other words, experience of life and of living.

2) A critical evaluation by individuals of their society's ethical norms, as indicated above. This is the core of Erich Fromm's argument that *"Man must accept the responsibility for himself and the fact that only using his own powers can he give meaning to his life ...****there is no meaning to life except the meaning man gives his life by the unfolding of his powers, by living productively.****"* [**Man for Himself**, p. 45] In other words, individual thought and development.

3) The feeling of empathy — *"the true origin of the moral sentiment .. . [is] simply in the feeling of sympathy."* [*"Anarchist Morality"*, **Anarchism**, p. 94] In other words, an individual's ability to feel and share experiences and concepts with others.

This last factor is very important for the development of a sense of ethics. As Kropotkin argued, *"[t]he more powerful your imagination, the better you can picture to yourself what any being feels when it is made to suffer, and the more intense and delicate will your moral sense be.. . And the more you are accustomed by circumstances, by those surrounding you, or by the intensity of your own thought and your imagination, to **act** as your own thought and imagination urge, the more will the moral sentiment grow in you, the more will it became habitual."* [**Op. Cit.**, p. 95]

So, anarchism is based (essentially) upon the ethical maxim *"treat others as you would like them to treat you under similar circumstances."* Anarchists are neither egoists nor altruists when it come to moral stands, they are simply **human.**

As Kropotkin noted, *"egoism"* and *"altruism"* both have their roots in the same motive — *"however great the difference between the two actions in their result of humanity, the motive is the same. It is the quest for pleasure."* [**Op. Cit.**, p. 85]

For anarchists, a person's sense of ethics must be developed by themselves and requires the full use of an individual's mental abilities as part of a social grouping, as part of a community. As capitalism and other forms of authority weaken the individual's imagination and reduce the number of outlets for them to exercise their reason under the dead weight of hierarchy as well as disrupting community, little wonder that life under capitalism is marked by a stark disregard for others and lack of ethical behaviour.

Combined with these factors is the role played by inequality within society. Without equality, there can be no real ethics for *"Justice implies Equality... only those who consider **others** as their **equals** can obey the rule: 'Do not do to others what you do not wish them to do to you.' A serf-owner and a slave merchant can evidently not recognise ... the 'categorial imperative' [of treating people as ends in themselves and not as means] as regards serfs [or slaves] because they do not look upon them as equals."* Hence the *"greatest obstacle to the maintenance of a certain moral level in our present societies lies in the absence of social equality. Without **real** equality, the sense of justice can never be universally developed, because **Justice implies the recognition of Equality.**"* [Peter Kropotkin, **Evolution and Environment**, p. 88 and p. 79]

Capitalism, like any society, gets the ethical behaviour it deserves..

In a society which moves between moral relativism and absolutism it is little wonder that egoism becomes confused with egotism. By disempowering individuals from developing their own ethical ideas and instead encouraging blind obedience to external authority (and so moral relativism once individuals think that they are without that authority's power), capitalist society ensures an impoverishment of individuality and ego. As Erich Fromm puts it:

> *"The failure of modern culture lies not in its principle of individualism, not in the idea that moral virtue is the same as the pursuit of self-interest, but in the deterioration of the meaning of self-interest; not in the fact that people are **too much concerned with their self-interest,** but that they are **not concerned enough with the interest of their real self; not in the fact that they are too selfish, but that they do not love themselves.**"* [**Man for Himself**, p. 139]

Therefore, strictly speaking, anarchism is based upon an egoistic frame of reference — ethical ideas must be an expression of what gives us pleasure as a whole individual (both rational and emotional, reason and empathy). This leads all anarchists to reject the false division between egoism and altruism and recognise that what many people (for example, capitalists) call "ego-

ism" results in individual self-negation and a reduction of individual self-interest. As Kropotkin argues:

> *"What was it that morality, evolving in animal and human societies, was striving for, if not for the opposition to the promptings of narrow egoism, and bringing up humanity in the spirit of the development of altruism? The very expressions 'egoism' and 'altruism' are incorrect, because there can be no pure altruism without an admixture of personal pleasure — and consequently, without egoism. It would therefore be more nearly correct to say that ethics aims at* ***the development of social habits and the weakening of the narrowly personal habits.*** *These last make the individual lose sight of society through his regard for his own person, and therefore they even fail to attain their object, i.e. the welfare of the individual, whereas the development of habits of work in common, and of mutual aid in general, leads to a series of beneficial consequences in the family as well as society."* [**Ethics**, pp. 307–8]

Therefore anarchism is based upon the rejection of moral absolutism (i.e. *"God's Law," "Natural Law," "Man's Nature," "A is A"*) and the narrow egotism which moral relativism so easily lends itself to. Instead, anarchists recognise that there exists concepts of right and wrong which exist outside of an individual's evaluation of their own acts.

This is because of the social nature of humanity. The interactions between individuals do develop into a social maxim which, according to Kropotkin, can be summarised as *"[i]s it useful to society? Then it is good. Is it hurtful? Then it is bad."* Which acts human beings think of as right or wrong is not, however, unchanging and the *"estimate of what is useful or harmful ... changes, but the foundation remains the same."* [*"Anarchist Morality"*, **Op. Cit.**, p. 91 and p. 92]

This sense of empathy, based upon a critical mind, is the fundamental basis of social ethics — the 'what-should-be' can be seen as an ethical criterion for the truth or validity of an objective 'what-is.' So, while recognising the root of ethics in nature, anarchists consider ethics as fundamentally a **human** idea — the product of life, thought and evolution created by individuals and generalised by social living and community.

So what, for anarchists, is unethical behaviour? Essentially anything that denies the most precious achievement of history: the liberty, uniqueness and dignity of the individual.

Individuals can see what actions are unethical because, due to empathy, they can place themselves into the position of those suffering the behaviour. Acts which restrict individuality can be considered unethical for two (interrelated) reasons.

Firstly, the protection and development of individuality in all enriches the life of every individual and it gives pleasure to individuals because of the diversity it produces. This egoist basis of ethics reinforces the second (social) reason, namely that individuality is good for society for it enriches the community and social life, strengthening it and allowing it to grow and evolve. As Bakunin constantly argued, progress is marked by a movement from *"the simple to the complex"* or, in the words of Herbert Read, it *"is measured by the degree of differentiation within a society. If the individual is a unit in a corporate mass, his [or her] life will be limited, dull, and mechanical. If the individual is a unit on his [or her] own, with space and potentiality for separate action ...he can develop — develop in the only real meaning of the word — develop in consciousness of strength, vitality, and joy."* [*"The Philosophy of Anarchism,"* **Anarchy and Order**, p. 37]

This defence of individuality is learned from nature. In an ecosystem, diversity is strength and so biodiversity becomes a source of basic ethical insight. In its most basic form, it provides a

guide to *"help us distinguish which of our actions serve the thrust of natural evolution and which of them impede them."* [Murray Bookchin, **The Ecology of Freedom**, p. 442]

So, the ethical concept *"lies in the feeling of sociality, inherent in the entire animal world and in the conceptions of equity, which constitutes one of the fundamental primary judgements of human reason."* Therefore anarchists embrace *"the permanent presence of a **double tendency** — towards greater development on the one side, of **sociality**, and, on the other side, of a consequent increase of the intensity of life which results in an increase of happiness for the **individuals**, and in progress — physical, intellectual, and moral."* [Kropotkin, **Ethics**, pp. 311–2 and pp. 19–20]

Anarchist attitudes to authority, the state, capitalism, private property and so on all come from our ethical belief that the liberty of individuals is of prime concern and that our ability to empathise with others, to see ourselves in others (our basic equality and common individuality, in other words).

Thus anarchism combines the subjective evaluation by individuals of a given set of circumstances and actions with the drawing of objective interpersonal conclusions of these evaluations based upon empathic bounds and discussion between equals. Anarchism is based on a humanistic approach to ethical ideas, one that evolves along with society and individual development. Hence an **ethical** society is one in which *"[d]ifference among people will be respected, indeed fostered, as elements that enrich the unity of experience and phenomenon ... [the different] will be conceived of as individual parts of a whole all the richer because of its complexity."* [Murray Bookchin, **Post Scarcity Anarchism**, p. 82]

A.2.20 Why are most anarchists atheists?

It is a fact that most anarchists are atheists. They reject the idea of god and oppose all forms of religion, particularly organised religion. Today, in secularised western European countries, religion has lost its once dominant place in society. This often makes the militant atheism of anarchism seem strange. However, once the negative role of religion is understood the importance of libertarian atheism becomes obvious. It is because of the role of religion and its institutions that anarchists have spent some time refuting the idea of religion as well as propagandising against it.

So why do so many anarchists embrace atheism? The simplest answer is that most anarchists are atheists because it is a logical extension of anarchist ideas. If anarchism is the rejection of illegitimate authorities, then it follows that it is the rejection of the so-called Ultimate Authority, God. Anarchism is grounded in reason, logic, and scientific thinking, not religious thinking. Anarchists tend to be sceptics, and not believers. Most anarchists consider the Church to be steeped in hypocrisy and the Bible a work of fiction, riddled with contradictions, absurdities and horrors. It is notorious in its debasement of women and its sexism is infamous. Yet men are treated little better. Nowhere in the bible is there an acknowledgement that human beings have inherent rights to life, liberty, happiness, dignity, fairness, or self-government. In the bible, humans are sinners, worms, and slaves (figuratively and literally, as it condones slavery). God has all the rights, humanity is nothing.

This is unsurprisingly, given the nature of religion. Bakunin put it best:

*"***The idea of God implies the abdication of human reason and justice; it is the most decisive negation of human liberty, and necessarily ends in the enslavement of mankind, both in theory and in practice.***

"Unless, then, we desire the enslavement and degradation of mankind .. . we may not, must not make the slightest concession either to the God of theology or to the God of metaphysics. He who, in this mystical alphabet, begins with A will inevitably end with Z; he who desires to worship God must harbour no childish illusions about the matter, but bravely renounce his liberty and humanity.

"If God is, man is a slave; now, man can and must be free; then, God does not exist." [**God and the State**, p. 25]

For most anarchists, then, atheism is required due to the nature of religion. *"To proclaim as divine all that is grand, just, noble, and beautiful in humanity,"* Bakunin argued, *"is to tacitly admit that humanity of itself would have been unable to produce it — that is, that, abandoned to itself, its own nature is miserable, iniquitous, base, and ugly. Thus we come back to the essence of all religion — in other words, to the disparagement of humanity for the greater glory of divinity."* As such, to do justice to our humanity and the potential it has, anarchists argue that we must do without the harmful myth of god and all it entails and so on behalf of *"human liberty, dignity, and prosperity, we believe it our duty to recover from heaven the goods which it has stolen and return them to earth."* [**Op. Cit.**, p. 37 and p. 36]

As well as the theoretical degrading of humanity and its liberty, religion has other, more practical, problems with it from an anarchist point of view. Firstly, religions have been a source of inequality and oppression. Christianity (like Islam), for example, has always been a force for repression whenever it holds any political or social sway (believing you have a direct line to god is a sure way of creating an authoritarian society). The Church has been a force of social repression, genocide, and the justification for every tyrant for nearly two millennia. When given the chance it has ruled as cruelly as any monarch or dictator. This is unsurprising:

"God being everything, the real world and man are nothing. God being truth, justice, goodness, beauty, power and life, man is falsehood, iniquity, evil, ugliness, impotence, and death. God being master, man is the slave. Incapable of finding justice, truth, and eternal life by his own effort, he can attain them only through a divine revelation. But whoever says revelation, says revealers, messiahs, prophets, priests, and legislators inspired by God himself; and these, as the holy instructors of humanity, chosen by God himself to direct it in the path of salvation, necessarily exercise absolute power. All men owe them passive and unlimited obedience; for against the divine reason there is no human reason, and against the justice of God no terrestrial justice holds." [Bakunin, **Op. Cit.**, p. 24]

Christianity has only turned tolerant and peace-loving when it is powerless and even then it has continued its role as apologist for the powerful. This is the second reason why anarchists oppose the church for when not being the source of oppression, the church has justified it and ensured its continuation. It has kept the working class in bondage for generations by sanctioning the rule of earthly authorities and teaching working people that it is wrong to fight against those same authorities. Earthly rulers received their legitimisation from the heavenly lord, whether

political (claiming that rulers are in power due to god's will) or economic (the rich having been rewarded by god). The bible praises obedience, raising it to a great virtue. More recent innovations like the Protestant work ethic also contribute to the subjugation of working people.

That religion is used to further the interests of the powerful can quickly be seen from most of history. It conditions the oppressed to humbly accept their place in life by urging the oppressed to be meek and await their reward in heaven. As Emma Goldman argued, Christianity (like religion in general) *"contains nothing dangerous to the regime of authority and wealth; it stands for self-denial and self-abnegation, for penance and regret, and is absolutely inert in the face of every [in]dignity, every outrage imposed upon mankind."* [**Red Emma Speaks**, p. 234]

Thirdly, religion has always been a conservative force in society. This is unsurprising, as it bases itself not on investigation and analysis of the real world but rather in repeating the truths handed down from above and contained in a few holy books. Theism is then *"the theory of speculation"* while atheism is *"the science of demonstration."* The *"one hangs in the metaphysical clouds of the Beyond, while the other has its roots firmly in the soil. It is the earth, not heaven, which man must rescue if he is truly to be saved."* Atheism, then, *"expresses the expansion and growth of the human mind"* while theism *"is static and fixed."* It is *"the absolutism of theism, its pernicious influence upon humanity, its paralysing effect upon thought and action, which Atheism is fighting with all its power."* [Emma Goldman, **Op. Cit.**, p. 243, p. 245 and pp. 246–7]

As the Bible says, *"By their fruits shall ye know them."* We anarchists agree but unlike the church we apply this truth to religion as well. That is why we are, in the main, atheists. We recognise the destructive role played by the Church, and the harmful effects of organised monotheism, particularly Christianity, on people. As Goldman summaries, religion *"is the conspiracy of ignorance against reason, of darkness against light, of submission and slavery against independence and freedom; of the denial of strength and beauty, against the affirmation of the joy and glory of life."* [**Op. Cit.**, p. 240]

So, given the fruits of the Church, anarchists argue that it is time to uproot it and plant new trees, the trees of reason and liberty.

That said, anarchists do not deny that religions contain important ethical ideas or truths. Moreover, religions can be the base for strong and loving communities and groups. They can offer a sanctuary from the alienation and oppression of everyday life and offer a guide to action in a world where everything is for sale. Many aspects of, say, Jesus' or Buddha's life and teachings are inspiring and worth following. If this were not the case, if religions were simply a tool of the powerful, they would have long ago been rejected. Rather, they have a dual-nature in that contain both ideas necessary to live a good life as well as apologetics for power. If they did not, the oppressed would not believe and the powerful would suppress them as dangerous heresies.

And, indeed, repression has been the fate of any group that has preached a radical message. In the middle ages numerous revolutionary Christian movements and sects were crushed by the earthly powers that be with the firm support of the mainstream church. During the Spanish Civil War the Catholic church supported Franco's fascists, denouncing the killing of pro-Franco priests by supporters of the republic while remaining silent about Franco's murder of Basque priests who had supported the democratically elected government (Pope John Paul II is seeking to turn the dead pro-Franco priests into saints while the pro-Republican priests remain unmentioned). The Archbishop of El Salvador, Oscar Arnulfo Romero, started out as a conservative but after seeing the way in which the political and economic powers were exploiting the people became their outspoken champion. He was assassinated by right-wing paramilitaries in 1980 because of this,

a fate which has befallen many other supporters of liberation theology, a radical interpretation of the Gospels which tries to reconcile socialist ideas and Christian social thinking.

Nor does the anarchist case against religion imply that religious people do not take part in social struggles to improve society. Far from it. Religious people, including members of the church hierarchy, played a key role in the US civil rights movement of the 1960s. The religious belief within Zapata's army of peasants during the Mexican revolution did not stop anarchists taking part in it (indeed, it had already been heavily influenced by the ideas of anarchist militant Ricardo Flores Magon). It is the dual-nature of religion which explains why many popular movements and revolts (particularly by peasants) have used the rhetoric of religion, seeking to keep the good aspects of their faith will fighting the earthly injustice its official representatives sanctify. For anarchists, it is the willingness to fight against injustice which counts, not whether someone believes in god or not. We just think that the social role of religion is to dampen down revolt, not encourage it. The tiny number of radical priests compared to those in the mainstream or on the right suggests the validity of our analysis.

It should be stressed that anarchists, while overwhelmingly hostile to the idea of the Church and an established religion, do not object to people practising religious belief on their own or in groups, so long as that practice doesn't impinge on the liberties of others. For example, a cult that required human sacrifice or slavery would be antithetical to anarchist ideas, and would be opposed. But peaceful systems of belief could exist in harmony within in anarchist society. The anarchist view is that religion is a personal matter, above all else — if people want to believe in something, that's their business, and nobody else's as long as they do not impose those ideas on others. All we can do is discuss their ideas and try and convince them of their errors.

To end, it should noted that we are not suggesting that atheism is somehow mandatory for an anarchist. Far from it. As we discuss in section A.3.7, there are anarchists who do believe in god or some form of religion. For example, Tolstoy combined libertarian ideas with a devote Christian belief. His ideas, along with Proudhon's, influences the Catholic Worker organisation, founded by anarchists Dorothy Day and Peter Maurin in 1933 and still active today. The anarchist activist Starhawk, active in the current anti-globalisation movement, has no problems also being a leading Pagan. However, for most anarchists, their ideas lead them logically to atheism for, as Emma Goldman put it, *"in its negation of gods is at the same time the strongest affirmation of man, and through man, the eternal yea to life, purpose, and beauty."* [**Red Emma Speaks**, p. 248]

A.3 What types of anarchism are there?

One thing that soon becomes clear to any one interested in anarchism is that there is not one single form of anarchism. Rather, there are different schools of anarchist thought, different types of anarchism which have many disagreements with each other on numerous issues. These types are usually distinguished by tactics and/or goals, with the latter (the vision of a free society) being the major division.

This means that anarchists, while all sharing a few key ideas, can be grouped into broad categories, depending on the economic arrangements that they consider to be most suitable to human freedom. However, all types of anarchists share a basic approach. To quote Rudolf Rocker:

> *"In common with the founders of Socialism, Anarchists demand the abolition of all economic monopolies and the common ownership of the soil and all other means of production, the use of which must be available to all without distinction; for personal and social freedom is conceivable only on the basis of equal economic advantages for everybody. Within the Socialist movement itself the Anarchists represent the viewpoint that the war against capitalism must be at the same time a war against all institutions of political power, for in history economic exploitation has always gone hand in hand with political and social oppression. The exploitation of man by man and the domination of man over man are inseparable, and each is the condition of the other."* [**Anarcho-Syndicalism**, pp. 62–3]

It is within this general context that anarchists disagree. The main differences are between ***"individualist"*** and ***"social"*** anarchists, although the economic arrangements each desire are not mutually exclusive. Of the two, social anarchists (communist-anarchists, anarcho-syndicalists and so on) have always been the vast majority, with individualist anarchism being restricted mostly to the United States. In this section we indicate the differences between these main trends within the anarchist movement. As will soon become clear, while social and individualist anarchists both oppose the state and capitalism, they disagree on the nature of a free society (and how to get there). In a nutshell, social anarchists prefer communal solutions to social problems and a communal vision of the good society (i.e. a society that protects and encourages individual freedom). Individualist anarchists, as their name suggests, prefer individual solutions and have a more individualistic vision of the good society. However, we must not let these difference cloud what both schools have in common, namely a desire to maximise individual freedom and end state and capitalist domination and exploitation.

In addition to this major disagreement, anarchists also disagree over such issues as syndicalism, pacifism, "lifestylism," animal rights and a whole host of other ideas, but these, while important, are only different aspects of anarchism. Beyond a few key ideas, the anarchist movement (like life itself) is in a constant state of change, discussion and thought — as would be expected in a movement that values freedom so highly.

The most obvious thing to note about the different types of anarchism is that *"[n]one are named after some Great Thinker; instead, they are invariably named either after some kind of practice, or, most often, organisational principle ... Anarchists like to distinguish themselves by what they do, and how they organise themselves to go about doing it."* [David Graeber, **Fragments of An Anarchist Anthropology**, p. 5] This does not mean that anarchism does not have individuals who have contributed significantly to anarchist theory. Far from it, as can be seen in section A.4 there are many such people. Anarchists simply recognise that to call your theory after an individual is a kind of idolatry. Anarchists know that even the greatest thinker is only human and, consequently, can make mistakes, fail to live up to their ideals or have a partial understanding of certain issues (see section H.2 for more discussion on this). Moreover, we see that the world changes and, obviously, what was a suitable practice or programme in, say, industrialising France of the 1840s may have its limitations in 21st century France!

Consequently, it is to be expected that a social theory like anarchism would have numerous schools of thought and practice associated with it. Anarchism, as we noted in section A.5, has its roots in the struggles of working class people against oppression. Anarchist ideas have developed in many different social situations and, consequently, have reflected those circumstances. Most obviously, individualist anarchism initially developed in pre-industrial America and as a result has a different perspective on many issues than social anarchism. As America changed, going from a predominantly pre-capitalist rural society to an industrialised capitalist one, American anarchism changed:

> *"Originally the American movement, the native creation which arose with Josiah Warren in 1829, was purely individualistic; the student of economy will easily understand the material and historical causes for such development. But within the last twenty years the communist idea has made great progress, owning primarily to that concentration in capitalist production which has driven the American workingman [and woman] to grasp at the idea of solidarity, and, secondly, to the expulsion of active communist propagandists from Europe."* [Voltairine de Cleyre, **The Voltairine de Cleyre Reader**, p. 110]

Thus rather than the numerous types of anarchism being an expression of some sort of "incoherence" within anarchism, it simply shows a movement which has its roots in real life rather than the books of long dead thinkers. It also shows a healthy recognition that people are different and that one person's dream may be another's nightmare and that different tactics and organisations may be required at different social periods and struggles. So while anarchists have their preferences on how they think a free society will, in general, be like and be created they are aware that other forms of anarchism and libertarian tactics may be more suitable for other people and social circumstances. However, just because someone calls themselves or their theory anarchism does not make it so. Any genuine type of anarchism must share the fundamental perspectives of the movement, in other words be anti-state and anti-capitalist.

Moreover, claims of anarchist "incoherence" by its critics are usually overblown. After all, being followers of Marx and/or Lenin has not stopped Marxists from splitting into numerous parties, groups and sects. Nor has it stopped sectarian conflict between them based on whose interpretation of the holy writings are the "correct" ones or who has used the "correct" quotes to bolster attempts to adjust their ideas and practice to a world significantly different from Europe in the 1850s or Russia in the 1900s. At least anarchists are honest about their differences!

Lastly, to put our cards on the table, the writers of this FAQ place themselves firmly in the "social" strand of anarchism. This does not mean that we ignore the many important ideas associated with individualist anarchism, only that we think social anarchism is more appropriate for modern society, that it creates a stronger base for individual freedom, and that it more closely reflects the sort of society we would like to live in.

A.3.1 What are the differences between individualist and social anarchists?

While there is a tendency for individuals in both camps to claim that the proposals of the other camp would lead to the creation of some kind of state, the differences between individualists and social anarchists are not very great. Both are anti-state, anti-authority and anti-capitalist. The major differences are twofold.

The first is in regard to the means of action in the here and now (and so the manner in which anarchy will come about). Individualists generally prefer education and the creation of alternative institutions, such as mutual banks, unions, communes, etc. They usually support strikes and other non-violent forms of social protest (such as rent strikes, the non-payment of taxes and so on). Such activity, they argue, will ensure that present society will gradually develop out of government into an anarchist one. They are primarily evolutionists, not revolutionists, and dislike social anarchists' use of direct action to create revolutionary situations. They consider revolution as being in contradiction to anarchist principles as it involves the expropriation of capitalist property and, therefore, authoritarian means. Rather they seek to return to society the wealth taken out of society by property by means of an new, alternative, system of economics (based around mutual banks and co-operatives). In this way a general "social liquidation" would be rendered easy, with anarchism coming about by reform and not by expropriation.

Most social anarchists recognise the need for education and to create alternatives (such as libertarian unions), but most disagree that this is enough in itself. They do not think capitalism can be reformed piece by piece into anarchy, although they do not ignore the importance of reforms by social struggle that increase libertarian tendencies within capitalism. Nor do they think revolution is in contradiction with anarchist principles as it is not authoritarian to destroy authority (be it state or capitalist). Thus the expropriation of the capitalist class and the destruction of the state by social revolution is a libertarian, not authoritarian, act by its very nature as it is directed against those who govern and exploit the vast majority. In short, social anarchists are usually evolutionists **and** revolutionists, trying to strengthen libertarian tendencies within capitalism while trying to abolish that system by social revolution. However, as some social anarchists are purely evolutionists too, this difference is not the most important one dividing social anarchists from individualists.

The second major difference concerns the form of anarchist economy proposed. Individualists prefer a market-based system of distribution to the social anarchists need-based system. Both agree that the current system of capitalist property rights must be abolished and that use rights must replace property rights in the means of life (i.e. the abolition of rent, interest and profits — *"usury,"* to use the individualist anarchists' preferred term for this unholy trinity). In effect, both schools follow Proudhon's classic work **What is Property?** and argue that possession must replace property in a free society (see section B.3 for a discussion of anarchist viewpoints

on property). Thus property *"will lose a certain attribute which sanctifies it now. The absolute ownership of it — 'the right to use or abuse' — will be abolished, and possession, use, will be the only title. It will be seen how impossible it would be for one person to 'own' a million acres of land, without a title deed, backed by a government ready to protect the title at all hazards."* [Lucy Parsons, **Freedom, Equality & Solidarity**, p. 33

However, within this use-rights framework, the two schools of anarchism propose different systems. The social anarchist generally argues for communal (or social) ownership and use. This would involve social ownership of the means of production and distribution, with personal possessions remaining for things you use, but not what was used to create them. Thus *"your watch is your own, but the watch factory belongs to the people." "Actual use,"* continues Berkman, *"will be considered the only title — not to ownership but to possession. The organisation of the coal miners, for example, will be in charge of the coal mines, not as owners but as the operating agency ... Collective possession, co-operatively managed in the interests of the community, will take the place of personal ownership privately conducted for profit."* [**What is Anarchism?**, p. 217]

This system would be based on workers' self-management of their work and (for most social anarchists) the free sharing of the product of that labour (i.e. an economic system without money). This is because *"in the present state of industry, when everything is interdependent, when each branch of production is knit up with all the rest, the attempt to claim an individualist origin for the products of industry is untenable."* Given this, it is impossible to *"estimate the share of each in the riches which **all** contribute to amass"* and, moreover, the *"common possession of the instruments of labour must necessarily bring with it the enjoyment in common of the fruits of common labour."* [Kropotkin, **The Conquest of Bread**, p. 45 and p. 46] By this social anarchists simply mean that the social product which is produced by all would be available to all and each individual who has contributed productively to society can take what they need (how quickly we can reach such an ideal is a moot point, as we discuss in section I.2.2). Some social anarchists, like mutualists for example, are against such a system of libertarian (or free) communism, but, in general, the vast majority of social anarchists look forward to the end of money and, therefore, of buying and selling. All agree, however, that anarchy will see *"Capitalistic and proprietary exploitation stopped everywhere"* and *"the wage system abolished"* whether by *"equal and just exchange"* (like Proudhon) or by the free sharing (like Kropotkin). [Proudhon, **The General Idea of the Revolution**, p. 281]

In contrast, the individualist anarchist (like the mutualist) denies that this system of use-rights should include the product of the workers labour. Instead of social ownership, individualist anarchists propose a more market based system in which workers would possess their own means of production and exchange the product of their labour freely with other workers. They argue that capitalism is not, in fact, a truly free market. Rather, by means of the state, capitalists have placed fetters on the market to create and protect their economic and social power (market discipline for the working class, state aid for the ruling class in other words). These state created monopolies (of money, land, tariffs and patents) and state enforcement of capitalist property rights are the source of economic inequality and exploitation. With the abolition of government, **real** free competition would result and ensure the end of capitalism and capitalist exploitation (see Benjamin Tucker's essay **State Socialism and Anarchism** for an excellent summary of this argument).

The Individualist anarchists argue that the means of production (bar land) are the product of individual labour and so they accept that people should be able to sell the means of production

they use, if they so desire. However, they reject capitalist property rights and instead favour an *"occupancy and use"* system. If the means of production, say land, is not in use, it reverts back to common ownership and is available to others for use. They think this system, called mutualism, will result in workers control of production and the end of capitalist exploitation and usury. This is because, logically and practically, a regime of "occupancy and use" cannot be squared with wage labour. If a workplace needs a group to operate it then it must be owned by the group who use it. If one individual claims to own it and it is, in fact, used by more than that person then, obviously, "occupancy and use" is violated. Equally, if an owner employs others to use the workplace then the boss can appropriate the product of the workers' labour, so violating the maxim that labour should receive its full product. Thus the principles of individualist anarchism point to anti-capitalist conclusions (see section G.3).

This second difference is the most important. The individualist fears being forced to join a community and thus losing his or her freedom (including the freedom to exchange freely with others). Max Stirner puts this position well when he argues that *"Communism, by the abolition of all personal property, only presses me back still more into dependence on another, to wit, on the generality or collectivity ... [which is] a condition hindering my free movement, a sovereign power over me. Communism rightly revolts against the pressure that I experience from individual proprietors; but still more horrible is the might that it puts in the hands of the collectivity."* [**The Ego and Its Own**, p. 257] Proudhon also argued against communism, stating that the community becomes the proprietor under communism and so capitalism and communism are based on property and so authority (see the section *"Characteristics of communism and of property"* in **What is Property?**). Thus the Individualist anarchist argues that social ownership places the individual's freedom in danger as any form of communism subjects the individual to society or the commune. They fear that as well as dictating individual morality, socialisation would effectively eliminate workers' control as "society" would tell workers what to produce and take the product of their labour. In effect, they argue that communism (or social ownership in general) would be similar to capitalism, with the exploitation and authority of the boss replaced with that of "society."

Needless to say, social anarchists disagree. They argue that Stirner's and Proudhon's comments are totally correct — but only about authoritarian communism. As Kropotkin argued, *"before and in 1848, the theory [of communism] was put forward in such a shape as to fully account for Proudhon's distrust as to its effect upon liberty. The old idea of Communism was the idea of monastic communities under the severe rule of elders or of men of science for directing priests. The last vestiges of liberty and of individual energy would be destroyed, if humanity ever had to go through such a communism."* [**Act for Yourselves**, p. 98] Kropotkin always argued that communist-anarchism was a **new** development and given that it dates from the 1870s, Proudhon's and Stirner's remarks cannot be considered as being directed against it as they could not be familiar with it.

Rather than subject the individual to the community, social anarchists argue that communal ownership would provide the necessary framework to protect individual liberty in all aspects of life by abolishing the power of the property owner, in whatever form it takes. In addition, rather than abolish **all** individual "property," communist anarchism acknowledges the importance of individual possessions and individual space. Thus we find Kropotkin arguing against forms of communism that *"desire to manage the community after the model of a family ... [to live] all in the same house and ... thus forced to continuously meet the same 'brethren and sisters' ... [it is] a fundamental error to impose on all the 'great family' instead of trying, on the contrary, to guarantee as much freedom and home life to each individual."* [**Small Communal Experiments and Why**

They Fail, pp. 8–9] The aim of anarchist-communism is, to again quote Kropotkin, to place *"the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home."* [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7] This ensures individual expression of tastes and desires and so individuality — both in consumption **and** in production, as social anarchists are firm supporters of workers' self-management.

Thus, for social anarchists, the Individualist Anarchist opposition to communism is only valid for state or authoritarian communism and ignores the fundamental nature of communist-anarchism. Communist anarchists do not replace individuality with community but rather use community to defend individuality. Rather than have "society" control the individual, as the Individualist Anarchist fears, social anarchism is based on importance of individuality and individual expression:

> *"Anarchist Communism maintains that most valuable of all conquests — individual liberty — and moreover extends it and gives it a solid basis – economic liberty — without which political liberty is delusive; it does not ask the individual who has rejected god, the universal tyrant, god the king, and god the parliament, to give unto himself a god more terrible than any of the proceeding — god the Community, or to abdicate upon its altar his [or her] independence, his [or her] will, his [or her] tastes, and to renew the vow of asceticism which he formally made before the crucified god. It says to him, on the contrary, 'No society is free so long as the individual is not so! ...'"* [**Op. Cit.**, pp. 14–15]

In addition, social anarchists have always recognised the need for voluntary collectivisation. If people desire to work by themselves, this is not seen as a problem (see Kropotkin's **The Conquest of Bread**, p. 61 and **Act for Yourselves**, pp. 104–5 as well as Malatesta's **Errico Malatesta: His Life and Ideas**, p. 99 and p. 103). This, social anarchists, stress does not in any way contradict their principles or the communist nature of their desired society as such exceptions are rooted in the "use rights" system both are based in (see section I.6.2 for a full discussion). In addition, for social anarchists an association exists solely for the benefit of the individuals that compose it; it is the means by which people co-operate to meet their common needs. Therefore, **all** anarchists emphasise the importance of free agreement as the basis of an anarchist society. Thus all anarchists agree with Bakunin:

> *"Collectivism could only imposed only on slaves, and this kind of collectivism would then be the negation of humanity. In a free community, collectivism can only come about through the pressure of circumstances, not by imposition from above but by a free spontaneous movement from below."* [**Bakunin on Anarchism**, p. 200]

If individualists desire to work for themselves and exchange goods with others, social anarchists have no objection. Hence our comments that the two forms of anarchism are not mutually exclusive. Social anarchists support the right of individuals **not** to join a commune while Individualist Anarchists support the rights of individuals to pool their possessions as they see fit, including communistic associations. However, if, in the name of freedom, an individual wished to claim property rights so as to exploit the labour of others, social anarchists would quickly

resist this attempt to recreate statism in the name of "liberty." Anarchists do not respect the "freedom" to be a ruler! In the words of Luigi Galleani:

> *"No less sophistical is the tendency of those who, under the comfortable cloak of anarchist individualism, would welcome the idea of domination ... But the heralds of domination presume to practice individualism in the name of their ego, over the obedient, resigned, or inert ego of others."* [**The End of Anarchism?**, p. 40]

Moreover, for social anarchists, the idea that the means of production can be sold implies that private property could be reintroduced in an anarchist society. In a free market, some succeed and others fail. As Proudhon argued, in competition victory goes to the strongest. When one's bargaining power is weaker than another then any "free exchange" will benefit the stronger party. Thus the market, even a non-capitalist one, will tend to magnify inequalities of wealth and power over time rather than equalising them. Under capitalism this is more obvious as those with only their labour power to sell are in a weaker position than those with capital but individualist anarchism would also be affected.

Thus, social anarchists argue, much against its will an individualist anarchist society would evolve away from fair exchanges back into capitalism. If, as seems likely, the "unsuccessful" competitors are forced into unemployment they may have to sell their labour to the "successful" in order to survive. This would create authoritarian social relationships and the domination of the few over the many via "free contracts." The enforcement of such contracts (and others like them), in all likelihood, *"opens ... the way for reconstituting under the heading of 'defence' all the functions of the State."* [Peter Kropotkin, **Anarchism**, p. 297]

Benjamin Tucker, the anarchist most influenced by liberalism and free market ideas, also faced the problems associated with all schools of abstract individualism — in particular, the acceptance of authoritarian social relations as an expression of "liberty." This is due to the similarity of property to the state. Tucker argued that the state was marked by two things, aggression and *"the assumption of authority over a given area and all within it, exercised generally for the double purpose of more complete oppression of its subjects and extension of its boundaries."* [**Instead of a Book**, p. 22] However, the boss and landlord also has authority over a given area (the property in question) and all within it (workers and tenants). The former control the actions of the latter just as the state rules the citizen or subject. In other words, individual ownership produces the same social relationships as that created by the state, as it comes from the same source (monopoly of power over a given area and those who use it).

Social anarchists argue that the Individualist Anarchists acceptance of individual ownership and their individualistic conception of individual freedom can lead to the denial of individual freedom by the creation of social relationships which are essentially authoritarian/statist in nature. *"The individualists,"* argued Malatesta, *"give the greatest importance to an abstract concept of freedom and fail to take into account, or dwell on the fact that real, concrete freedom is the outcome of solidarity and voluntary co-operation."* [**The Anarchist Revolution**, p. 16] Thus wage labour, for example, places the worker in the same relationship to the boss as citizenship places the citizen to the state, namely of one of domination and subjection. Similarly with the tenant and the landlord.

Such a social relationship cannot help but produce the other aspects of the state. As Albert Meltzer points out, this can have nothing but statist implications, because *"the school of Benjamin*

Tucker — by virtue of their individualism — accepted the need for police to break strikes so as to guarantee the employer's 'freedom.' All this school of so-called Individualists accept ... the necessity of the police force, hence for government, and the prime definition of anarchism is ***no government.***" [**Anarchism: Arguments For and Against**, p. 8] It is partly for this reason social anarchists support social ownership as the best means of protecting individual liberty.

Accepting individual ownership this problem can only be "got round" by accepting, along with Proudhon (the source of many of Tucker's economic ideas), the need for co-operatives to run workplaces that require more than one worker. This naturally complements their support for "occupancy and use" for land, which would effectively abolish landlords. Without co-operatives, workers will be exploited for *"it is well enough to talk of [the worker] buying hand tools, or small machinery which can be moved about; but what about the gigantic machinery necessary to the operation of a mine, or a mill? It requires many to work it. If one owns it, will he not make the others pay tribute for using it?"* This is because *"no man would employ another to work for him unless he could get more for his product than he had to pay for it, and that being the case, the inevitable course of exchange and re-exchange would be that the man* ***having received less than the full amount.***" [Voltairine de Cleyre, *"Why I am an Anarchist"*, **Exquisite Rebel**, p. 61 and p. 60] Only when the people who use a resource own it can individual ownership not result in hierarchical authority or exploitation (i.e. statism/capitalism). Only when an industry is co-operatively owned, can the workers ensure that they govern themselves during work and can get the full value of the goods they make once they are sold.

This solution is the one Individualist Anarchists ***do*** seem to accept and the only one consistent with all their declared principles (as well as anarchism). This can be seen when French individualist E. Armand argued that the key difference between his school of anarchism and communist-anarchism is that as well as seeing *"ownership of the consumer goods representing an extension of [the worker's] personality"* it also *"regards ownership of the means of production and free disposal of his produce as the quintessential guarantee of the autonomy of the individual. The understanding is that such ownership boils down to the chance to deploy (as individuals, couples, family groups, etc.) the requisite plot of soil or machinery of production to meet the requirements of the social unit, provided that the proprietor does not transfer it to someone else or reply upon the services of someone else in operating it."* Thus the individualist anarchist could *"defend himself against ... the exploitation of anyone by one of his neighbours who will set him to work in his employ and for his benefit"* and *"greed, which is to say the opportunity for an individual, couple or family group to own more than strictly required for their normal upkeep."* [*"Mini-Manual of the Anarchist Individualist"*, pp. 145–9, **Anarchism**, Robert Graham (ed.), p. 147 and pp. 147–8]

The ideas of the American individualist anarchists logically flow to the same conclusions. "Occupancy and Use" automatically excludes wage labour and so exploitation and oppression. As Wm. Gary Kline correctly points out, the US Individualist anarchists *"expected a society of largely self-employed workmen with no significant disparity of wealth between any of them."* [**The Individualist Anarchists**, p. 104] It is this vision of a self-employed society that logically flows from their principles which ensures that their ideas are truly anarchist. As it is, their belief that their system would ensure the elimination of profit, rent and interest place them squarely in the anti-capitalist camp alongside social anarchists.

Needless to say, social anarchists disagree with individualist anarchism, arguing that there are undesirable features of even non-capitalist markets which would undermine freedom and equality. Moreover, the development of industry has resulted in **natural** barriers of entry into markets

and this not only makes it almost impossible to abolish capitalism by competing against it, it also makes the possibility of recreating usury in new forms likely. Combine this with the difficulty in determining the exact contribution of each worker to a product in a modern economy and you see why social anarchists argue that the only real solution to capitalism is to ensure community ownership and management of the economy. It is this recognition of the developments within the capitalist economy which make social anarchists reject individualist anarchism in favour of communalising, and so decentralising, production by freely associated and co-operative labour on a large-scale rather than just in the workplace.

For more discussion on the ideas of the Individualist anarchists, and why social anarchists reject them, see section G — "Is individualist anarchism capitalistic?"

A.3.2 Are there different types of social anarchism?

Yes. Social anarchism has four major trends — mutualism, collectivism, communism and syndicalism. The differences are not great and simply involve differences in strategy. The one major difference that does exist is between mutualism and the other kinds of social anarchism. Mutualism is based around a form of market socialism — workers' co-operatives exchanging the product of their labour via a system of community banks. This mutual bank network would be *"formed by the whole community, not for the especial advantage of any individual or class, but for the benefit of all ... [with] no interest ... exacted on loans, except enough to cover risks and expenses."* Such a system would end capitalist exploitation and oppression for by *"introducing mutualism into exchange and credit we introduce it everywhere, and labour will assume a new aspect and become truly democratic."* [Charles A. Dana, **Proudhon and his *"Bank of the People"***, pp. 44–45 and p. 45]

The social anarchist version of mutualism differs from the individualist form by having the mutual banks owned by the local community (or commune) instead of being independent co-operatives. This would ensure that they provided investment funds to co-operatives rather than to capitalistic enterprises. Another difference is that some social anarchist mutualists support the creation of what Proudhon termed an ***"agro-industrial federation"*** to complement the federation of libertarian communities (called communes by Proudhon). This is a *"confederation ... intended to provide reciprocal security in commerce and industry"* and large scale developments such as roads, railways and so on. The purpose of *"specific federal arrangements is to protect the citizens of the federated states [sic!] from capitalist and financial feudalism, both within them and from the outside."* This is because *"political right requires to be buttressed by economic right."* Thus the agro-industrial federation would be required to ensure the anarchist nature of society from the destabilising effects of market exchanges (which can generate increasing inequalities in wealth and so power). Such a system would be a practical example of solidarity, as *"industries are sisters; they are parts of the same body; one cannot suffer without the others sharing in its suffering. They should therefore federate, not to be absorbed and confused together, but in order to guarantee mutually the conditions of common prosperity ... Making such an agreement will not detract from their liberty; it will simply give their liberty more security and force."* [**The Principle of Federation**, p. 70, p. 67 and p. 72]

The other forms of social anarchism do not share the mutualists support for markets, even non-capitalist ones. Instead they think that freedom is best served by communalising production

and sharing information and products freely between co-operatives. In other words, the other forms of social anarchism are based upon common (or social) ownership by federations of producers' associations and communes rather than mutualism's system of individual co-operatives. In Bakunin's words, the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal"* and *"the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, in other words by the agricultural and industrial associations."* [**Michael Bakunin: Selected Writings**, p. 206 and p. 174] Only by extending the principle of co-operation beyond individual workplaces can individual liberty be maximised and protected (see section I.1.3 for why most anarchists are opposed to markets). In this they share some ground with Proudhon, as can be seen. The industrial confederations would *"guarantee the mutual use of the tools of production which are the property of each of these groups and which will by a reciprocal contract become the collective property of the whole ... federation. In this way, the federation of groups will be able to ... regulate the rate of production to meet the fluctuating needs of society."* [James Guillaume, **Bakunin on Anarchism**, p. 376]

These anarchists share the mutualists support for workers' self-management of production within co-operatives but see confederations of these associations as being the focal point for expressing mutual aid, not a market. Workplace autonomy and self-management would be the basis of any federation, for *"the workers in the various factories have not the slightest intention of handing over their hard-won control of the tools of production to a superior power calling itself the 'corporation.'"* [Guillaume, **Op. Cit.**, p. 364] In addition to this industry-wide federation, there would also be cross-industry and community confederations to look after tasks which are not within the exclusive jurisdiction or capacity of any particular industrial federation or are of a social nature. Again, this has similarities to Proudhon's mutualist ideas.

Social anarchists share a firm commitment to common ownership of the means of production (excluding those used purely by individuals) and reject the individualist idea that these can be "sold off" by those who use them. The reason, as noted earlier, is because if this could be done, capitalism and statism could regain a foothold in the free society. In addition, other social anarchists do not agree with the mutualist idea that capitalism can be reformed into libertarian socialism by introducing mutual banking. For them capitalism can only be replaced by a free society by social revolution.

The major difference between collectivists and communists is over the question of "money" after a revolution. Anarcho-communists consider the abolition of money to be essential, while anarcho-collectivists consider the end of private ownership of the means of production to be the key. As Kropotkin noted, collectivist anarchism *"express[es] a state of things in which all necessaries for production are owned in common by the labour groups and the free communes, while the ways of retribution [i.e. distribution] of labour, communist or otherwise, would be settled by each group for itself."* [**Anarchism**, p. 295] Thus, while communism and collectivism both organise production in common via producers' associations, they differ in how the goods produced will be distributed. Communism is based on free consumption of all while collectivism is more likely to be based on the distribution of goods according to the labour contributed. However, most anarcho-collectivists think that, over time, as productivity increases and the sense of community becomes stronger, money will disappear. Both agree that, in the end, society would be run along the lines suggested by the communist maxim: ***"From each according to their abilities, to each***

according to their needs." They just disagree on how quickly this will come about (see section I.2.2).

For anarcho-communists, they think that *"communism — at least partial – has more chances of being established than collectivism"* after a revolution. [**Op. Cit.**, p. 298] They think that moves towards communism are essential as collectivism *"begins by abolishing private ownership of the means of production and immediately reverses itself by returning to the system of remuneration according to work performed which means the re-introduction of inequality."* [Alexander Berkman, **What is Anarchism?**, p. 230] The quicker the move to communism, the less chances of new inequalities developing. Needless to say, these positions are **not** that different and, in practice, the necessities of a social revolution and the level of political awareness of those introducing anarchism will determine which system will be applied in each area.

Syndicalism is the other major form of social anarchism. Anarcho-syndicalists, like other syndicalists, want to create an industrial union movement based on anarchist ideas. Therefore they advocate decentralised, federated unions that use direct action to get reforms under capitalism until they are strong enough to overthrow it. In many ways anarcho-syndicalism can be considered as a new version of collectivist-anarchism, which also stressed the importance of anarchists working within the labour movement and creating unions which prefigure the future free society.

Thus, even under capitalism, anarcho-syndicalists seek to create *"free associations of free producers."* They think that these associations would serve as *"a practical school of anarchism"* and they take very seriously Bakunin's remark that the workers' organisations must create *"not only the ideas but also the facts of the future itself"* in the pre-revolutionary period.

Anarcho-syndicalists, like all social anarchists, *"are convinced that a Socialist economic order cannot be created by the decrees and statutes of a government, but only by the solidaric collaboration of the workers with hand and brain in each special branch of production; that is, through the taking over of the management of all plants by the producers themselves under such form that the separate groups, plants, and branches of industry are independent members of the general economic organism and systematically carry on production and the distribution of the products in the interest of the community on the basis of free mutual agreements."* [Rudolf Rocker, **Anarcho-syndicalism**, p. 55]

Again, like all social anarchists, anarcho-syndicalists see the collective struggle and organisation implied in unions as the school for anarchism. As Eugene Varlin (an anarchist active in the First International who was murdered at the end of the Paris Commune) put it, unions have *"the enormous advantage of making people accustomed to group life and thus preparing them for a more extended social organisation. They accustom people not only to get along with one another and to understand one another, but also to organise themselves, to discuss, and to reason from a collective perspective."* Moreover, as well as mitigating capitalist exploitation and oppression in the here and now, the unions also *"form the natural elements of the social edifice of the future; it is they who can be easily transformed into producers associations; it is they who can make the social ingredients and the organisation of production work."* [quoted by Julian P. W. Archer, **The First International in France, 1864–1872**, p. 196]

The difference between syndicalists and other revolutionary social anarchists is slight and purely revolves around the question of anarcho-syndicalist unions. Collectivist anarchists agree that building libertarian unions is important and that work within the labour movement is essential in order to ensure *"the development and organisation ... of the social (and, by consequence, anti-political) power of the working masses."* [Bakunin, **Michael Bakunin: Selected Writings**,

p. 197] Communist anarchists usually also acknowledge the importance of working in the labour movement but they generally think that syndicalistic organisations will be created by workers in struggle, and so consider encouraging the ***"spirit of revolt"*** as more important than creating syndicalist unions and hoping workers will join them (of course, anarcho-syndicalists support such autonomous struggle and organisation, so the differences are not great). Communist-anarchists also do not place as great an emphasis on the workplace, considering struggles within it to be equal in importance to other struggles against hierarchy and domination outside the workplace (most anarcho-syndicalists would agree with this, however, and often it is just a question of emphasis). A few communist-anarchists reject the labour movement as hopelessly reformist in nature and so refuse to work within it, but these are a small minority.

Both communist and collectivist anarchists recognise the need for anarchists to unite together in purely anarchist organisations. They think it is essential that anarchists work together as anarchists to clarify and spread their ideas to others. Syndicalists often deny the importance of anarchist groups and federations, arguing that revolutionary industrial and community unions are enough in themselves. Syndicalists think that the anarchist and union movements can be fused into one, but most other anarchists disagree. Non-syndicalists point out the reformist nature of unionism and urge that to keep syndicalist unions revolutionary, anarchists must work within them as part of an anarchist group or federation. Most non-syndicalists consider the fusion of anarchism and unionism a source of potential **confusion** that would result in the two movements failing to do their respective work correctly. For more details on anarcho-syndicalism see section J.3.8 (and section J.3.9 on why many anarchists reject aspects of it). It should be stressed that non-syndicalist anarchists do **not** reject the need for collective struggle and organisation by workers (see section H.2.8 on that particular Marxist myth).

In practice, few anarcho-syndicalists totally reject the need for an anarchist federation, while few anarchists are totally anti-syndicalist. For example, Bakunin inspired both anarcho-communist and anarcho-syndicalist ideas, and anarcho-communists like Kropotkin, Malatesta, Berkman and Goldman were all sympathetic to anarcho-syndicalist movements and ideas.

For further reading on the various types of social anarchism, we would recommend the following: mutualism is usually associated with the works of Proudhon, collectivism with Bakunin's, communism with Kropotkin's, Malatesta's, Goldman's and Berkman's. Syndicalism is somewhat different, as it was far more the product of workers' in struggle than the work of a "famous" name (although this does not stop academics calling George Sorel the father of syndicalism, even though he wrote about a syndicalist movement that already existed. The idea that working class people can develop their own ideas, by themselves, is usually lost on them). However, Rudolf Rocker is often considered a leading anarcho-syndicalist theorist and the works of Fernand Pelloutier and Emile Pouget are essential reading to understand anarcho-syndicalism. For an overview of the development of social anarchism and key works by its leading lights, Daniel Guerin's excellent anthology **No Gods No Masters** cannot be bettered.

A.3.3 What kinds of green anarchism are there?

An emphasis on anarchist ideas as a solution to the ecological crisis is a common thread in most forms of anarchism today. The trend goes back to the late nineteenth century and the works of Peter Kropotkin and Elisee Reclus. The latter, for example, argued that a *"secret harmony exists*

between the earth and the people whom it nourishes, and when imprudent societies let themselves violate this harmony, they always end up regretting it." Similarly, no contemporary ecologist would disagree with his comments that the *"truly civilised man [and women] understands that his [or her] nature is bound up with the interest of all and with that of nature. He [or she] repairs the damage caused by his predecessors and works to improve his domain."* [quoted by George Woodcock, *"Introduction"*, Marie Fleming, **The Geography of Freedom**, p. 15]

With regards Kropotkin, he argued that an anarchist society would be based on a confederation of communities that would integrate manual and brain work as well as decentralising and integrating industry and agriculture (see his classic work **Fields, Factories, and Workshops**). This idea of an economy in which *"small is beautiful"* (to use the title of E.F. Schumacher's Green classic) was proposed nearly 70 years before it was taken up by what was to become the green movement. In addition, in **Mutual Aid** Kropotkin documented how co-operation within species and between them and their environment is usually of more benefit to them than competition. Kropotkin's work, combined with that of William Morris, the Reclus brothers (both of whom, like Kropotkin, were world-renowned geographers), and many others laid the foundations for the current anarchist interest in ecological issues.

However, while there are many themes of an ecological nature within classical anarchism, it is only relatively recently that the similarities between ecological thought and anarchism has come to the fore (essentially from the publication of Murray Bookchin's classic essay *"Ecology and Revolutionary Thought"* in 1965). Indeed, it would be no exaggeration to state that it is the ideas and work of Murray Bookchin that has placed ecology and ecological issues at the heart of anarchism and anarchist ideals and analysis into many aspects of the green movement.

Before discussing the types of green anarchism (also called eco-anarchism) it would be worthwhile to explain exactly **what** anarchism and ecology have in common. To quote Murray Bookchin, *"both the ecologist and the anarchist place a strong emphasis on spontaneity"* and *"to both the ecologist and the anarchist, an ever-increasing unity is achieved by growing differentiation. **An expanding whole is created by the diversification and enrichment of its parts.**"* Moreover, *"[j]ust as the ecologist seeks to expand the range of an eco-system and promote free interplay between species, so the anarchist seeks to expand the range of social experiments and remove all fetters to its development."* [**Post-Scarcity Anarchism**, p. 36]

Thus the anarchist concern with free development, decentralisation, diversity and spontaneity is reflected in ecological ideas and concerns. Hierarchy, centralisation, the state and concentrations of wealth reduce diversity and the free development of individuals and their communities by their very nature, and so weakens the social eco-system as well as the actual eco-systems human societies are part of. As Bookchin argues, *"the reconstructive message of ecology... [is that] we must conserve and promote variety"* but within modern capitalist society *"[a]ll that is spontaneous, creative and individuated is circumscribed by the standardised, the regulated and the massified."* [**Op. Cit.**, p. 35 and p. 26] So, in many ways, anarchism can be considered the application of ecological ideas to society, as anarchism aims to empower individuals and communities, decentralise political, social and economic power so ensuring that individuals and social life develops freely and so becomes increasingly diverse in nature. It is for this reason Brian Morris argues that *"the only political tradition that complements and, as it were, integrally connects with ecology — in a genuine and authentic way – is that of anarchism."* [**Ecology and Anarchism**, p. 132]

So what kinds of green anarchism are there? While almost all forms of modern anarchism consider themselves to have an ecological dimension, the specifically eco-anarchist thread within anarchism has two main focal points, ***Social Ecology*** and ***"primitivist"***. In addition, some anarchists are influenced by ***Deep Ecology***, although not many. Undoubtedly Social Ecology is the most influential and numerous current. Social Ecology is associated with the ideas and works of Murray Bookchin, who has been writing on ecological matters since the 1950's and, from the 1960s, has combined these issues with revolutionary social anarchism. His works include **Post-Scarcity Anarchism**, **Toward an Ecological Society**, **The Ecology of Freedom** and a host of others.

Social Ecology locates the roots of the ecological crisis firmly in relations of domination between people. The domination of nature is seen as a product of domination within society, but this domination only reaches crisis proportions under capitalism. In the words of Murray Bookchin:

> *"The notion that man must dominate nature emerges directly from the domination of man by man... But it was not until organic community relations... dissolved into market relationships that the planet itself was reduced to a resource for exploitation. This centuries-long tendency finds its most exacerbating development in modern capitalism. Owing to its inherently competitive nature, bourgeois society not only pits humans against each other, it also pits the mass of humanity against the natural world. Just as men are converted into commodities, so every aspect of nature is converted into a commodity, a resource to be manufactured and merchandised wantonly ... The plundering of the human spirit by the market place is paralleled by the plundering of the earth by capital."* [**Op. Cit.**, pp. 24–5]

"Only insofar," Bookchin stresses, *"as the ecology **consciously** cultivates an anti-hierarchical and a non-domineering sensibility, structure, and strategy for social change can it retain its very **identity** as the voice for a new balance between humanity and nature and its **goal** for a truly ecological society."* Social ecologists contrast this to what Bookchin labels *"environmentalism"* for while social ecology *"seeks to eliminate the concept of the domination of nature by humanity by eliminating domination of human by human, environmentalism reflects an 'instrumentalist' or technical sensibility in which nature is viewed merely as a passive habit, an agglomeration of external objects and forces, that must be made more 'serviceable' for human use, irrespective of what these uses may be. Environmentalism .. . does not bring into question the underlying notions of the present society, notably that man must dominate nature. On the contrary, it seeks to facilitate that domination by developing techniques for diminishing the hazards caused by domination."* [Murray Bookchin, **Towards an Ecological Society**, p. 77]

Social ecology offers the vision of a society in harmony with nature, one which *"involves a fundamental reversal of all the trends that mark the historic development of capitalist technology and bourgeois society – the minute specialisation of machines and labour, the concentration of resources and people in gigantic industrial enterprises and urban entities, the stratification and bureaucratisation of nature and human beings."* Such an ecotopia *"establish entirely new eco-communities that are artistically moulded to the eco-systems in which they are located."* Echoing Kropotkin, Bookchin argues that *"[s]uch an eco-community ... would heal the split between town and country, between mind and body by fusing intellectual with physical work, industry with agricultural in a*

rotation or diversification of vocational tasks." This society would be based on the use of appropriate and green technology, a *"new kind of technology — or eco-technology — one composed of flexible, versatile machinery whose productive applications would emphasise durability and quality, not built in obsolescence, and insensate quantitative output of shoddy goods, and a rapid circulation of expendable commodities ... Such an eco-technology would use the inexhaustible energy capacities of nature — the sun and wind, the tides and waterways, the temperature differentials of the earth and the abundance of hydrogen around us as fuels — to provide the eco-community with non-polluting materials or wastes that could be recycled."* [Bookchin, **Op. Cit.**, pp. 68–9]

However, this is not all. As Bookchin stresses an ecological society *"is more than a society that tries to check the mounting disequilibrium that exists between humanity and the natural world. Reduced to simple technical or political issues, this anaemic view of such a society's function degrades the issues raised by an ecological critique and leads them to purely technical and instrumental approaches to ecological problems. Social ecology is, first of all, a* ***sensibility*** *that includes not only a critique of hierarchy and domination but a reconstructive outlook ... guided by an ethics that emphasises variety without structuring differences into a hierarchical order ... the precepts for such an ethics ... [are] participation and differentiation."* [**The Modern Crisis**, pp. 24–5]

Therefore social ecologists consider it essential to attack hierarchy and capitalism, not civilisation as such as the root cause of ecological problems. This is one of the key areas in which they disagree with "Primitivist" Anarchist ideas, who tend to be far more critical of **all** aspects of modern life, with some going so far as calling for *"the end of civilisation"* including, apparently, all forms of technology and large scale organisation. We discuss these ideas in section A.3.9.

We must note here that other anarchists, while generally agreeing with its analysis and suggestions, are deeply critical of Social Ecology's support for running candidates in municipal elections. While Social Ecologists see this as a means of creating popular self-managing assemblies and creating a counter power to the state, few anarchists agree. Rather they see it as inherently reformist as well as being hopelessly naive about the possibilities of using elections to bring about social change (see section J.5.14 for a fuller discussion of this). Instead they propose direct action as the means to forward anarchist and ecological ideas, rejecting electioneering as a dead-end which ends up watering down radical ideas and corrupting the people involved (see section J.2 — What is Direct Action?).

Lastly, there is "deep ecology," which, because of its bio-centric nature, many anarchists reject as anti-human. There are few anarchists who think that **people,** as people, are the cause of the ecological crisis, which many deep ecologists seem to suggest. Murray Bookchin, for example, has been particularly outspoken in his criticism of deep ecology and the anti-human ideas that are often associated with it (see **Which Way for the Ecology Movement?**, for example). David Watson has also argued against Deep Ecology (see his **How Deep is Deep Ecology?** written under the name George Bradford). Most anarchists would argue that it is not people but the current system which is the problem, and that only people can change it. In the words of Murray Bookchin:

> *"[Deep Ecology's problems] stem from an authoritarian streak in a crude biologism that uses 'natural law' to conceal an ever-diminishing sense of humanity and papers over a profound ignorance of social reality by ignoring the fact it is* ***capitalism*** *we are talking about, not an abstraction called 'Humanity' and 'Society.'"* [**The Philosophy of Social Ecology**, p. 160]

Thus, as Morris stresses, *"by focusing entirely on the category of 'humanity' the Deep Ecologists ignore or completely obscure the social origins of ecological problems, or alternatively, biologise what are essentially social problems."* To submerge ecological critique and analysis into a simplistic protest against the human race ignores the real causes and dynamics of ecological destruction and, therefore, ensures an end to this destruction cannot be found. Simply put, it is hardly "people" who are to blame when the vast majority have no real say in the decisions that affect their lives, communities, industries and eco-systems. Rather, it is an economic and social system that places profits and power above people and planet. By focusing on "Humanity" (and so failing to distinguish between rich and poor, men and women, whites and people of colour, exploiters and exploited, oppressors and oppressed) the system we live under is effectively ignored, and so are the institutional causes of ecological problems. This can be *"both reactionary and authoritarian in its implications, and substitutes a naive understanding of 'nature' for a critical study of real social issues and concerns."* [Morris, **Op. Cit.**, p. 135]

Faced with a constant anarchist critique of certain of their spokes-persons ideas, many Deep Ecologists have turned away from the anti-human ideas associated with their movement. Deep ecology, particularly the organisation ***Earth First!*** (EF!), has changed considerably over time, and EF! now has a close working relationship with the ***Industrial Workers of the World*** (IWW), a syndicalist union. While deep ecology is not a thread of eco-anarchism, it shares many ideas and is becoming more accepted by anarchists as EF! rejects its few misanthropic ideas and starts to see that hierarchy, not the human race, is the problem (for a discussion between Murray Bookchin and leading Earth Firster! Dave Foreman see the book **Defending the Earth**).

A.3.4 Is anarchism pacifistic?

A pacifist strand has long existed in anarchism, with Leo Tolstoy being one of its major figures. This strand is usually called ***"anarcho-pacifism"*** (the term ***"non-violent anarchist"*** is sometimes used, but this term is unfortunate because it implies the rest of the movement are "violent," which is not the case!). The union of anarchism and pacifism is not surprising given the fundamental ideals and arguments of anarchism. After all, violence, or the threat of violence or harm, is a key means by which individual freedom is destroyed. As Peter Marshall points out, *"[g]iven the anarchist's respect for the sovereignty of the individual, in the long run it is non-violence and not violence which is implied by anarchist values."* [**Demanding the Impossible**, p.637] Malatesta is even more explicit when he wrote that the *"main plank of anarchism is the removal of violence from human relations"* and that anarchists *"are opposed to violence."* [**Errico Malatesta: His Life and Ideas**, p. 53]

However, although many anarchists reject violence and proclaim pacifism, the movement, in general, is not essentially pacifistic (in the sense of opposed all forms of violence at all times). Rather, it is anti-militarist, being against the organised violence of the state but recognising that there are important differences between the violence of the oppressor and the violence of the oppressed. This explains why the anarchist movement has always placed a lot of time and energy in opposing the military machine and capitalist wars while, at the same time, supporting and organising armed resistance against oppression (as in the case of the Makhnovist army during the Russian Revolution which resisted both Red and White armies and the militias the anarchists

organised to resist the fascists during the Spanish Revolution — see sections A.5.4 and A.5.6, respectively).

On the question of non-violence, as a rough rule of thumb, the movement divides along Individualist and Social lines. Most Individualist anarchists support purely non-violent tactics of social change, as do the Mutualists. However, Individualist anarchism is not pacifist as such, as many support the idea of violence in self-defence against aggression. Most social anarchists, on the other hand, do support the use of revolutionary violence, holding that physical force will be required to overthrow entrenched power and to resist state and capitalist aggression (although it was an anarcho-syndicalist, Bart de Ligt, who wrote the pacifist classic, **The Conquest of Violence**). As Malatesta put it, violence, while being *"in itself an evil,"* is *"justifiable only when it is necessary to defend oneself and others from violence"* and that a *"slave is always in a state of legitimate defence and consequently, his violence against the boss, against the oppressor, is always morally justifiable."* [**Op. Cit.**, p. 55 and pp. 53–54] Moreover, they stress that, to use the words of Bakunin, since social oppression *"stems far less from individuals than from the organisation of things and from social positions"* anarchists aim to *"ruthlessly destroy positions and things"* rather than people, since the aim of an anarchist revolution is to see the end of privileged classes *"not as individuals, but as classes."* [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin** p. 121, p. 124 and p. 122]

Indeed, the question of violence is relatively unimportant to most anarchists, as they do not glorify it and think that it should be kept to a minimum during any social struggle or revolution. All anarchists would agree with the Dutch pacifist anarcho-syndicalist Bart de Ligt when he argued that *"the violence and warfare which are characteristic conditions of the capitalist world do not go with the liberation of the individual, which is the historic mission of the exploited classes. The greater the violence, the weaker the revolution, even where violence has deliberately been put at the service of the revolution."* [**The Conquest of Violence**, p. 75]

Similarly, all anarchists would agree with de Ligt on, to use the name of one of his book's chapters, *"the absurdity of bourgeois pacifism."* For de Ligt, and all anarchists, violence is inherent in the capitalist system and any attempt to make capitalism pacifistic is doomed to failure. This is because, on the one hand, war is often just economic competition carried out by other means. Nations often go to war when they face an economic crisis, what they cannot gain in economic struggle they attempt to get by conflict. On the other hand, *"violence is indispensable in modern society... [because] without it the ruling class would be completely unable to maintain its privileged position with regard to the exploited masses in each country. The army is used first and foremost to hold down the workers... when they become discontented."* [Bart de Ligt, **Op. Cit.**, p. 62] As long as the state and capitalism exist, violence is inevitable and so, for anarcho-pacifists, the consistent pacifist must be an anarchist just as the consistent anarchist must be a pacifist.

For those anarchists who are non-pacifists, violence is seen as an unavoidable and unfortunate result of oppression and exploitation as well as the only means by which the privileged classes will renounce their power and wealth. Those in authority rarely give up their power and so must be forced. Hence the need for *"transitional"* violence *"to put an end to the far greater, and permanent, violence which keeps the majority of mankind in servitude."* [Malatesta, **Op. Cit.**, p. 55] To concentrate on the issue of violence versus non-violence is to ignore the real issue, namely how do we change society for the better. As Alexander Berkman pointed out, those anarchists who are pacifists confuse the issue, like those who think *"it's the same as if rolling up your sleeves for work should be considered the work itself."* To the contrary, *"[t]he fighting part of revolution is*

merely rolling up your sleeves. The real, actual task is ahead." [**What is Anarchism?**, p. 183] And, indeed, most social struggle and revolutions start relatively peaceful (via strikes, occupations and so on) and only degenerate into violence when those in power try to maintain their position (a classic example of this is in Italy, in 1920, when the occupation of factories by their workers was followed by fascist terror — see section A.5.5).

As noted above, all anarchists are anti-militarists and oppose both the military machine (and so the "defence" industry) as well as statist/capitalist wars (although a few anarchists, like Rudolf Rocker and Sam Dolgoff, supported the anti-fascist capitalist side during the second world war as the lesser evil). The anti-war machine message of anarchists and anarcho-syndicalists was propagated long before the start of the first world war, with syndicalists and anarchists in Britain and North America reprinting a French CGT leaflet urging soldiers not to follow orders and repress their striking fellow workers. Emma Goldman and Alexander Berkman were both arrested and deported from America for organising a ***"No-Conscription League"*** in 1917 while many anarchists in Europe were jailed for refusing to join the armed forces in the first and second world wars. The anarcho-syndicalist influenced IWW was crushed by a ruthless wave of government repression due to the threat its organising and anti-war message presented to the powerful elites who favoured war. More recently, anarchists, (including people like Noam Chomsky and Paul Goodman) have been active in the peace movement as well as contributing to the resistance to conscription where it still exists. Anarchists took an active part in opposing such wars as the Vietnam War, the Falklands war as well as the Gulf wars of 1991 and 2003 (including, in Italy and Spain, helping to organise strikes in protest against it). And it was during the 1991 Gulf War when many anarchists raised the slogan ***"No war but the class war"*** which nicely sums up the anarchist opposition to war — namely an evil consequence of any class system, in which the oppressed classes of different countries kill each other for the power and profits of their rulers. Rather than take part in this organised slaughter, anarchists urge working people to fight for their own interests, not those of their masters:

> *"More than ever we must avoid compromise; deepen the chasm between capitalists and wage slaves, between rulers and ruled; preach expropriation of private property and the destruction of states such as the only means of guaranteeing fraternity between peoples and Justice and Liberty for all; and we must prepare to accomplish these things."* [Malatesta, **Op. Cit.**, p. 251]

We must note here that Malatesta's words were written in part against Peter Kropotkin who, for reasons best known to himself, rejected everything he had argued for decades and supported the allies in the First World War as a lesser evil against German authoritarianism and Imperialism. Of course, as Malatesta pointed out, *"all Governments and all capitalist classes"* do *"misdeeds ... against the workers and rebels of their own countries."* [**Op. Cit.**, p. 246] He, along with Berkman, Goldman and a host of other anarchists, put their name to International Anarchist Manifesto against the First World War. It expressed the opinion of the bulk of the anarchist movement (at the time and consequently) on war and how to stop it. It is worth quoting from:

> "The truth is that the cause of wars ... rests solely in the existence of the State, which is the form of privilege ... Whatever the form it may assume, the State is nothing but organised oppression for the advantage of a privileged minority ...

> "The misfortune of the peoples, who were deeply attached to peace, is that, in order to avoid war, they placed their confidence in the State with its intriguing diplomatists, in democracy, and in political parties ... This confidence has been deliberately betrayed, and continues to be so, when governments, with the aid of the whole of the press, persuade their respective people that this war is a war of liberation.
>
> "We are resolutely against all wars between peoples, and ... have been, are, and ever will be most energetically opposed to war.
>
> "The role of the Anarchists ... is to continue to proclaim that there is only one war of liberation: that which in all countries is waged by the oppressed against the oppressors, by the exploited against the exploiters. Our part is to summon the slaves to revolt against their masters.
>
> "Anarchist action and propaganda should assiduously and perseveringly aim at weakening and dissolving the various States, at cultivating the spirit of revolt, and arousing discontent in peoples and armies...
>
> "We must take advantage of all the movements of revolt, of all the discontent, in order to foment insurrection, and to organise the revolution which we look to put end to all social wrongs... Social justice realised through the free organisation of producers: war and militarism done away with forever; and complete freedom won, by the abolition of the State and its organs of destruction." [*"International Anarchist Manifesto on the War,"* **Anarchy! An Anthology of Emma Goldman's Mother Earth**, pp. 386–8]

Thus, the attraction of pacifism to anarchists is clear. Violence **is** authoritarian and coercive, and so its use does contradict anarchist principles. That is why anarchists would agree with Malatesta when he argues that *"[w]e are on principle opposed to violence and for this reason wish that the social struggle should be conducted as humanely as possible."* [Malatesta, **Op. Cit.**, p. 57] Most, if not all, anarchists who are not strict pacifists agree with pacifist-anarchists when they argue that violence can often be counterproductive, alienating people and giving the state an excuse to repress both the anarchist movement and popular movements for social change. All anarchists support non-violent direct action and civil disobedience, which often provide better roads to radical change.

So, to sum up, anarchists who are pure pacifists are rare. Most accept the use of violence as a necessary evil and advocate minimising its use. All agree that a revolution which **institutionalises** violence will just recreate the state in a new form. They argue, however, that it is not authoritarian to destroy authority or to use violence to resist violence. Therefore, although most anarchists are not pacifists, most reject violence except in self-defence and even then kept to the minimum.

A.3.5 What is Anarcha-Feminism?

Although opposition to the state and all forms of authority had a strong voice among the early feminists of the 19th century, the more recent feminist movement which began in the 1960's was founded upon anarchist practice. This is where the term anarcha-feminism came from, referring

to women anarchists who act within the larger feminist and anarchist movements to remind them of their principles.

The modern anarcha-feminists built upon the feminist ideas of previous anarchists, both male and female. Indeed, anarchism and feminism have always been closely linked. Many outstanding feminists have also been anarchists, including the pioneering Mary Wollstonecraft (author of **A Vindication of the Rights of Woman**), the Communard Louise Michel, and the American anarchists (and tireless champions of women's freedom) Voltairine de Cleyre and Emma Goldman (for the former, see her essays *"Sex Slavery"*, *"Gates of Freedom"*, *"The Case of Woman vs. Orthodoxy"*, *"Those Who Marry Do Ill"*; for the latter see *"The Traffic in Women"*, *"Woman Suffrage"*, *"The Tragedy of Woman's Emancipation"*, *"Marriage and Love"* and *"Victims of Morality"*, for example). **Freedom**, the world's oldest anarchist newspaper, was founded by Charlotte Wilson in 1886. Anarchist women like Virgilia D'Andrea and Rose Pesota played important roles in both the libertarian and labour movements. The ***"Mujeres Libres"*** (*"Free Women"*) movement in Spain during the Spanish revolution is a classic example of women anarchists organising themselves to defend their basic freedoms and create a society based on women's freedom and equality (see **Free Women of Spain** by Martha Ackelsberg for more details on this important organisation). In addition, all the male major anarchist thinkers (bar Proudhon) were firm supporters of women's equality. For example, Bakunin opposed patriarchy and how the law *"subjects [women] to the absolute domination of the man."* He argued that *"[e]qual rights must belong to men and women"* so that women can *"become independent and be free to forge their own way of life."* He looked forward to the end of *"the authoritarian juridical family"* and *"the full sexual freedom of women."* [**Bakunin on Anarchism**, p. 396 and p. 397]

Thus anarchism has since the 1860s combined a radical critique of capitalism and the state with an equally powerful critique of patriarchy (rule by men). Anarchists, particularly female ones, recognised that modern society was dominated by men. As Ana Maria Mozzoni (an Italian anarchist immigrant in Buenos Aires) put it, women *"will find that the priest who damns you is a man; that the legislator who oppresses you is a man, that the husband who reduces you to an **object** is a man; that the libertine who harasses you is a man; that the capitalist who enriches himself with your ill-paid work and the speculator who calmly pockets the price of your body, are men."* Little has changed since then. Patriarchy still exists and, to quote the anarchist paper **La Questione Sociale**, it is still usually the case that women *"are slaves both in social and private life. If you are a proletarian, you have two tyrants: the man and the boss. If bourgeois, the only sovereignty left to you is that of frivolity and coquetry."* [quoted by Jose Moya, **Italians in Buenos Aires's Anarchist Movement**, pp. 197–8 and p. 200]

Anarchism, therefore, is based on an awareness that fighting patriarchy is as important as fighting against the state or capitalism. For *"[y]ou can have no free, or just, or equal society, nor anything approaching it, so long as womanhood is bought, sold, housed, clothed, fed, and **protected**, as a chattel."* [Voltairine de Cleyre, *"The Gates of Freedom"*, pp. 235–250, Eugenia C. Delamotte, **Gates of Freedom**, p. 242] To quote Louise Michel:

> *"The first thing that must change is the relationship between the sexes. Humanity has two parts, men and women, and we ought to be walking hand in hand; instead there is antagonism, and it will last as long as the 'stronger' half controls, or think its controls, the 'weaker' half."* [**The Red Virgin: Memoirs of Louise Michel**, p. 139]

Thus anarchism, like feminism, fights patriarchy and for women's equality. Both share much common history and a concern about individual freedom, equality and dignity for members of the female sex (although, as we will explain in more depth below, anarchists have always been very critical of mainstream/liberal feminism as not going far enough). Therefore, it is unsurprising that the new wave of feminism of the sixties expressed itself in an anarchistic manner and drew much inspiration from anarchist figures such as Emma Goldman. Cathy Levine points out that, during this time, *"independent groups of women began functioning without the structure, leaders, and other factotums of the male left, creating, independently and simultaneously, organisations similar to those of anarchists of many decades and regions. No accident, either."* [*"The Tyranny of Tyranny,"* **Quiet Rumours: An Anarcha-Feminist Reader**, p. 66] It is no accident because, as feminist scholars have noted, women were among the first victims of hierarchical society, which is thought to have begun with the rise of patriarchy and ideologies of domination during the late Neolithic era. Marilyn French argues (in **Beyond Power**) that the first major social stratification of the human race occurred when men began dominating women, with women becoming in effect a "lower" and "inferior" social class.

The links between anarchism and modern feminism exist in both ideas and action. Leading feminist thinker Carole Pateman notes that her *"discussion [on contract theory and its authoritarian and patriarchal basis] owes something to"* libertarian ideas, that is the *"anarchist wing of the socialist movement."* [**The Sexual Contract**, p. 14] Moreover, she noted in the 1980s how the *"major locus of criticism of authoritarian, hierarchical, undemocratic forms of organisation for the last twenty years has been the women's movement ... After Marx defeated Bakunin in the First International, the prevailing form of organisation in the labour movement, the nationalised industries and in the left sects has mimicked the hierarchy of the state ... The women's movement has rescued and put into practice the long-submerged idea [of anarchists like Bakunin] that movements for, and experiments in, social change must 'prefigure' the future form of social organisation."* [**The Disorder of Women**, p. 201]

Peggy Kornegger has drawn attention to these strong connections between feminism and anarchism, both in theory and practice. *"The radical feminist perspective is almost pure anarchism,"* she writes. *"The basic theory postulates the nuclear family as the basis of all authoritarian systems. The lesson the child learns, from father to teacher to boss to god, is to* ***obey*** *the great anonymous voice of Authority. To graduate from childhood to adulthood is to become a full-fledged automaton, incapable of questioning or even of thinking clearly."* [*"Anarchism: The Feminist Connection,"* **Quiet Rumours: An Anarcha-Feminist Reader**, p. 26] Similarly, the Zero Collective argues that Anarcha-feminism *"consists in recognising the anarchism of feminism and consciously developing it."* [*"Anarchism/Feminism,"* pp. 3–7, **The Raven**, no. 21, p. 6]

Anarcha-feminists point out that authoritarian traits and values, for example, domination, exploitation, aggressiveness, competitiveness, desensitisation etc., are highly valued in hierarchical civilisations and are traditionally referred to as "masculine." In contrast, non-authoritarian traits and values such as co-operation, sharing, compassion, sensitivity, warmth, etc., are traditionally regarded as "feminine" and are devalued. Feminist scholars have traced this phenomenon back to the growth of patriarchal societies during the early Bronze Age and their conquest of co-operatively based "organic" societies in which "feminine" traits and values were prevalent and respected. Following these conquests, however, such values came to be regarded as "inferior," especially for a man, since men were in charge of domination and exploitation under patriarchy. (See e.g. Riane Eisler, **The Chalice and the Blade**; Elise Boulding, **The Underside of History**).

Hence anarcha-feminists have referred to the creation of a non-authoritarian, anarchist society based on co-operation, sharing, mutual aid, etc. as the "feminisation of society."

Anarcha-feminists have noted that "feminising" society cannot be achieved without both self-management and decentralisation. This is because the patriarchal-authoritarian values and traditions they wish to overthrow are embodied and reproduced in hierarchies. Thus feminism implies decentralisation, which in turn implies self-management. Many feminists have recognised this, as reflected in their experiments with collective forms of feminist organisations that eliminate hierarchical structure and competitive forms of decision making. Some feminists have even argued that directly democratic organisations are specifically female political forms. [see e.g. Nancy Hartsock *"Feminist Theory and the Development of Revolutionary Strategy,"* in Zeila Eisenstein, ed., **Capitalist Patriarchy and the Case for Socialist Feminism**, pp. 56–77] Like all anarchists, anarcha-feminists recognise that self-liberation is the key to women's equality and thus, freedom. Thus Emma Goldman:

> *"Her development, her freedom, her independence, must come from and through herself. First, by asserting herself as a personality, and not as a sex commodity. Second, by refusing the right of anyone over her body; by refusing to bear children, unless she wants them, by refusing to be a servant to God, the State, society, the husband, the family, etc., by making her life simpler, but deeper and richer. That is, by trying to learn the meaning and substance of life in all its complexities; by freeing herself from the fear of public opinion and public condemnation."* [**Anarchism and Other Essays**, p. 211]

Anarcha-feminism tries to keep feminism from becoming influenced and dominated by authoritarian ideologies of either the right or left. It proposes direct action and self-help instead of the mass reformist campaigns favoured by the "official" feminist movement, with its creation of hierarchical and centralist organisations and its illusion that having more women bosses, politicians, and soldiers is a move towards "equality." Anarcha-feminists would point out that the so-called "management science" which women have to learn in order to become mangers in capitalist companies is essentially a set of techniques for controlling and exploiting wage workers in corporate hierarchies, whereas "feminising" society requires the elimination of capitalist wage-slavery and managerial domination altogether. Anarcha-feminists realise that learning how to become an effective exploiter or oppressor is not the path to equality (as one member of the Mujeres Libres put it, *"[w]e did not want to substitute a feminist hierarchy for a masculine one"* [quoted by Martha A. Ackelsberg, **Free Women of Spain**, pp. 22–3] — also see section B.1.4 for a further discussion on patriarchy and hierarchy).

Hence anarchism's traditional hostility to liberal (or mainstream) feminism, while supporting women's liberation and equality. Federica Montseny (a leading figure in the Spanish Anarchist movement) argued that such feminism advocated equality for women, but did not challenge existing institutions. She argued that (mainstream) feminism's only ambition is to give to women of a particular class the opportunity to participate more fully in the existing system of privilege and if these institutions *"are unjust when men take advantage of them, they will still be unjust if women take advantage of them."* [quoted by Martha A. Ackelsberg, **Op. Cit.**, p. 119] Thus, for anarchists, women's freedom did not mean an equal chance to become a boss or a wage slave, a voter or a politician, but rather to be a free and equal individual co-operating as equals in free

associations. *"Feminism,"* stressed Peggy Kornegger, *"doesn't mean female corporate power or a woman President; it means no corporate power and no Presidents. The Equal Rights Amendment will not transform society; it only gives women the 'right' to plug into a hierarchical economy. Challenging sexism means challenging all hierarchy — economic, political, and personal. And that means an anarcha-feminist revolution."* [**Op. Cit.**, p. 27]

Anarchism, as can be seen, included a class and economic analysis which is missing from mainstream feminism while, at the same time, showing an awareness to domestic and sex-based power relations which eluded the mainstream socialist movement. This flows from our hatred of hierarchy. As Mozzoni put it, *"Anarchy defends the cause of all the oppressed, and because of this, and in a special way, it defends your [women's] cause, oh! women, doubly oppressed by present society in both the social and private spheres."* [quoted by Moya, **Op. Cit.**, p. 203] This means that, to quote a Chinese anarchist, what anarchists *"mean by equality between the sexes is not just that the men will no longer oppress women. We also want men to no longer to be oppressed by other men, and women no longer to be oppressed by other women."* Thus women should *"completely overthrow rulership, force men to abandon all their special privileges and become equal to women, and make a world with neither the oppression of women nor the oppression of men."* [He Zhen, quoted by Peter Zarrow, **Anarchism and Chinese Political Culture**, p. 147]

So, in the historic anarchist movement, as Martha Ackelsberg notes, liberal/mainstream feminism was considered as being *"too narrowly focused as a strategy for women's emancipation; sexual struggle could not be separated from class struggle or from the anarchist project as a whole."* [**Op. Cit.**, p. 119] Anarcha-feminism continues this tradition by arguing that all forms of hierarchy are wrong, not just patriarchy, and that feminism is in conflict with its own ideals if it desires simply to allow women to have the same chance of being a boss as a man does. They simply state the obvious, namely that they *"do not believe that power in the hands of women could possibly lead to a non-coercive society"* nor do they *"believe that anything good can come out of a mass movement with a leadership elite."* The *"central issues are always power and social hierarchy"* and so people *"are free only when they have power over their own lives."* [Carole Ehrlich, *"Socialism, Anarchism and Feminism"*, **Quiet Rumours: An Anarcha-Feminist Reader**, p. 44] For if, as Louise Michel put it, *"a proletarian is a slave; the wife of a proletarian is even more a slave"* ensuring that the wife experiences an equal level of oppression as the husband misses the point. [**Op. Cit.**, p. 141]

Anarcha-feminists, therefore, like all anarchists oppose capitalism as a denial of liberty. Their critique of hierarchy in the society does not start and end with patriarchy. It is a case of wanting freedom everywhere, of wanting to *"[b]reak up ... every home that rests in slavery! Every marriage that represents the sale and transfer of the individuality of one of its parties to the other! Every institution, social or civil, that stands between man and his right; every tie that renders one a master, another a serf."* [Voltairine de Cleyre, *"The Economic Tendency of Freethought"*, **The Voltairine de Cleyre Reader**, p. 72] The ideal that an "equal opportunity" capitalism would free women ignores the fact that any such system would still see working class women oppressed by bosses (be they male or female). For anarcha-feminists, the struggle for women's liberation cannot be separated from the struggle against hierarchy **as such.** As L. Susan Brown puts it:

> *"Anarchist-feminism, as an expression of the anarchist sensibility applied to feminist concerns, takes the individual as its starting point and, in opposition to relations of domination and subordination, argues for non-instrumental economic forms that preserve*

individual existential freedom, for both men and women." [**The Politics of Individualism**, p. 144]

Anarcha-feminists have much to contribute to our understanding of the origins of the ecological crisis in the authoritarian values of hierarchical civilisation. For example, a number of feminist scholars have argued that the domination of nature has paralleled the domination of women, who have been identified with nature throughout history (See, for example, Caroline Merchant, **The Death of Nature**, 1980). Both women and nature are victims of the obsession with control that characterises the authoritarian personality. For this reason, a growing number of both radical ecologists and feminists are recognising that hierarchies must be dismantled in order to achieve their respective goals.

In addition, anarcha-feminism reminds us of the importance of treating women equally with men while, at the same time, respecting women's differences from men. In other words, that recognising and respecting diversity includes women as well as men. Too often many male anarchists assume that, because they are (in theory) opposed to sexism, they are not sexist in practice. Such an assumption is false. Anarcha-feminism brings the question of consistency between theory and practice to the front of social activism and reminds us all that we must fight not only external constraints but also internal ones.

This means that anarcha-feminism urges us to practice what we preach. As Voltairine de Cleyre argued, *"I never expect men to **give** us liberty. No, Women, we are not **worth** it, until we **take** it."* This involves *"insisting on a new code of ethics founded on the law of equal freedom: a code recognising the complete individuality of woman. By making rebels wherever we can. By ourselves **living our beliefs** . ... We are revolutionists. And we shall use propaganda by speech, deed, and most of all life — **being** what we teach."* Thus anarcha-feminists, like all anarchists, see the struggle against patriarchy as being a struggle of the oppressed for their own self-liberation, for *"**as a class** I have nothing to hope from men . .. No tyrant ever renounced his tyranny until he had to. If history ever teaches us anything it teaches this. Therefore my hope lies in creating rebellion in the breasts of women."* [*"The Gates of Freedom"*, pp. 235–250, Eugenia C. Delamotte, **Gates of Freedom**, p. 249 and p. 239] This was sadly as applicable within the anarchist movement as it was outside it in patriarchal society.

Faced with the sexism of male anarchists who spoke of sexual equality, women anarchists in Spain organised themselves into the **Mujeres Libres** organisation to combat it. They did not believe in leaving their liberation to some day after the revolution. Their liberation was a integral part of that revolution and had to be started today. In this they repeated the conclusions of anarchist women in Illinois Coal towns who grew tried of hearing their male comrades *"shout in favour"* of sexual equality *"in the future society"* while doing nothing about it in the here and now. They used a particularly insulting analogy, comparing their male comrades to priests who *"make false promises to the starving masses ... [that] there will be rewards in paradise."* The argued that mothers should make their daughters *"understand that the difference in sex does not imply inequality in rights"* and that as well as being *"rebels against the social system of today,"* they *"should fight especially against the oppression of men who would like to retain women as their moral and material inferior."* [Ersilia Grandi, quoted by Caroline Waldron Merithew, **Anarchist Motherhood**, p. 227] They formed the ***"Luisa Michel"*** group to fight against capitalism and patriarchy in the upper Illinois valley coal towns over three decades before their Spanish comrades organised themselves.

For anarcha-feminists, combating sexism is a key aspect of the struggle for freedom. It is not, as many Marxist socialists argued before the rise of feminism, a diversion from the "real" struggle against capitalism which would somehow be automatically solved after the revolution. It is an essential part of the struggle:

> *"We do not need any of your titles ... We want none of them. What we do want is knowledge and education and liberty. We know what our rights are and we demand them. Are we not standing next to you fighting the supreme fight? Are you not strong enough, men, to make part of that supreme fight a struggle for the rights of women? And then men and women together will gain the rights of all humanity."* [Louise Michel, **Op. Cit.**, p. 142]

A key part of this revolutionising modern society is the transformation of the current relationship between the sexes. Marriage is a particular evil for *"the old form of marriage, based on the Bible, 'till death doth part,' ... [is] an institution that stands for the sovereignty of the man over the women, of her complete submission to his whims and commands."* Women are reduced *"to the function of man's servant and bearer of his children."* [Goldman, **Op. Cit.**, pp. 220–1] Instead of this, anarchists proposed ***"free love,"*** that is couples and families based on free agreement between equals than one partner being in authority and the other simply obeying. Such unions would be without sanction of church or state for *"two beings who love each other do not need permission from a third to go to bed."* [Mozzoni, quoted by Moya, **Op. Cit.**, p. 200]

Equality and freedom apply to more than just relationships. For *"if social progress consists in a constant tendency towards the equalisation of the liberties of social units, then the demands of progress are not satisfied so long as half society, Women, is in subjection... . Woman ... is beginning to feel her servitude; that there is a requisite acknowledgement to be won from her master before he is put down and she exalted to — Equality. This acknowledgement is,* ***the freedom to control her own person****. "* [Voltairine de Cleyre, *"The Gates of Freedom"*, **Op. Cit.**, p. 242] Neither men nor state nor church should say what a woman does with her body. A logical extension of this is that women must have control over their own reproductive organs. Thus anarcha-feminists, like anarchists in general, are pro-choice and pro-reproductive rights (i.e. the right of a woman to control her own reproductive decisions). This is a long standing position. Emma Goldman was persecuted and incarcerated because of her public advocacy of birth control methods and the extremist notion that women should decide when they become pregnant (as feminist writer Margaret Anderson put it, *"In 1916, Emma Goldman was sent to prison for advocating that 'women need not always keep their mouth shut and their wombs open.'"*).

Anarcha-feminism does not stop there. Like anarchism in general, it aims at changing **all** aspects of society not just what happens in the home. For, as Goldman asked, *"how much independence is gained if the narrowness and lack of freedom of the home is exchanged for the narrowness and lack of freedom of the factory, sweat-shop, department store, or office?"* Thus women's equality and freedom had to be fought everywhere and defended against all forms of hierarchy. Nor can they be achieved by voting. Real liberation, argue anarcha-feminists, is only possible by direct action and anarcha-feminism is based on women's self-activity and self-liberation for while the *"right to vote, or equal civil rights, may be good demands ... true emancipation begins neither at the polls nor in the courts. It begins in woman's soul ... her freedom will reach as far as her power to achieve freedom reaches."* [Goldman, **Op. Cit.**, p. 216 and p. 224]

The history of the women's movement proves this. Every gain has come from below, by the action of women themselves. As Louise Michel put it, *"[w]e women are not bad revolutionaries. Without begging anyone, we are taking our place in the struggles; otherwise, we could go ahead and pass motions until the world ends and gain nothing."* [**Op. Cit.**, p. 139] If women waited for others to act for them their social position would never have changed. This includes getting the vote in the first place. Faced with the militant suffrage movement for women's votes, British anarchist Rose Witcop recognised that it was *"true that this movement shows us that women who so far have been so submissive to their masters, the men, are beginning to wake up at last to the fact they are not inferior to those masters."* Yet she argued that women would not be freed by votes but *"by their own strength."* [quoted by Sheila Rowbotham, **Hidden from History**, pp. 100–1 and p. 101] The women's movement of the 1960s and 1970s showed the truth of that analysis. In spite of equal voting rights, women's social place had remained unchanged since the 1920s.

Ultimately, as Anarchist Lily Gair Wilkinson stressed, the *"call for 'votes' can never be a call to freedom. For what is it to vote? To vote is to register assent to being ruled by one legislator or another?"* [quoted by Sheila Rowbotham, **Op. Cit.**, p. 102] It does not get to the heart of the problem, namely hierarchy and the authoritarian social relationships it creates of which patriarchy is only a subset of. Only by getting rid of all bosses, political, economic, social and sexual can **genuine** freedom for women be achieved and *"make it possible for women to be human in the truest sense. Everything within her that craves assertion and activity should reach its fullest expression; all artificial barriers should be broken, and the road towards greater freedom cleared of every trace of centuries of submission and slavery."* [Emma Goldman, **Op. Cit.**, p. 214]

A.3.6 What is Cultural Anarchism?

For our purposes, we will define cultural anarchism as the promotion of anti-authoritarian values through those aspects of society traditionally regarded as belonging to the sphere of "culture" rather than "economics" or "politics" — for example, through art, music, drama, literature, education, child-rearing practices, sexual morality, technology, and so forth.

Cultural expressions are anarchistic to the extent that they deliberately attack, weaken, or subvert the tendency of most traditional cultural forms to promote authoritarian values and attitudes, particularly domination and exploitation. Thus a novel that portrays the evils of militarism can be considered as cultural anarchism if it goes beyond the simple "war-is-hell" model and allows the reader to see how militarism is connected with authoritarian institutions (e.g. capitalism and statism) or methods of authoritarian conditioning (e.g. upbringing in the traditional patriarchal family). Or, as John Clark expresses it, cultural anarchism implies *"the development of arts, media, and other symbolic forms that expose various aspects of the system of domination and contrast them with a system of values based on freedom and community."* This *"**cultural** struggle"* would be part of a general struggle *"to combat the material and ideological power of all dominating classes, whether economic, political, racial, religious, or sexual, with a multi-dimensional practice of liberation."* In other words, an *"expanded conception of class analysis"* and *"an amplified practice of class struggle"* which includes, but is not limited to, *"**economic** actions like strikes, boycotts, job actions, occupation, organisations of direct action groups and federations of libertarian workers' groups and development of workers' assemblies, collectives and co-operatives"* and *"**political** activity"* like the *"active interference with implementation of repressive governmental policies,"* the *"non-compliance*

and resistance against regimentation and bureaucratisation of society" and *"participation in movements for increasing direct participation in decision-making and local control."* [**The Anarchist Moment**, p. 31]

Cultural anarchism is important — indeed essential — because authoritarian values are embedded in a total system of domination with many aspects besides the political and economic. Hence those values cannot be eradicated even by a combined economic and political revolution if there it is not also accompanied by profound psychological changes in the majority of the population. For mass acquiescence in the current system is rooted in the psychic structure of human beings (their *"character structure,"* to use Wilhelm Reich's expression), which is produced by many forms of conditioning and socialisation that have developed with patriarchal-authoritarian civilisation during the past five or six thousand years.

In other words, even if capitalism and the state were overthrown tomorrow, people would soon create new forms of authority in their place. For authority — a strong leader, a chain of command, someone to give orders and relieve one of the responsibility of thinking for oneself — are what the submissive/authoritarian personality feels most comfortable with. Unfortunately, the majority of human beings fear real freedom, and indeed, do not know what to do with it — as is shown by a long string of failed revolutions and freedom movements in which the revolutionary ideals of freedom, democracy, and equality were betrayed and a new hierarchy and ruling class were quickly created. These failures are generally attributed to the machinations of reactionary politicians and capitalists, and to the perfidy of revolutionary leaders; but reactionary politicians only attract followers because they find a favourable soil for the growth of their authoritarian ideals in the character structure of ordinary people.

Hence the prerequisite of an anarchist revolution is a period of consciousness-raising in which people gradually become aware of submissive/authoritarian traits within themselves, see how those traits are reproduced by conditioning, and understand how they can be mitigated or eliminated through new forms of culture, particularly new child-rearing and educational methods. We will explore this issue more fully in section B.1.5 (What is the mass-psychological basis for authoritarian civilisation?), J.6 (What methods of child rearing do anarchists advocate?), and J.5.13 (What are Modern Schools?)

Cultural anarchist ideas are shared by almost all schools of anarchist thought and consciousness-raising is considered an essential part of any anarchist movement. For anarchists, its important to *"build the new world in the shell of the old"* in all aspects of our lives and creating an anarchist culture is part of that activity. Few anarchists, however, consider consciousness-raising as enough in itself and so combine cultural anarchist activities with organising, using direct action and building libertarian alternatives in capitalist society. The anarchist movement is one that combines practical self-activity with cultural work, with both activities feeding into and supporting the other.

A.3.7 Are there religious anarchists?

Yes, there are. While most anarchists have opposed religion and the idea of God as deeply anti-human and a justification for earthly authority and slavery, a few believers in religion have taken their ideas to anarchist conclusions. Like all anarchists, these religious anarchists have combined an opposition to the state with a critical position with regards to private property and inequality.

In other words, anarchism is not necessarily atheistic. Indeed, according to Jacques Ellul, *"biblical thought leads directly to anarchism, and that this is the only 'political anti-political' position in accord with Christian thinkers."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 75]

There are many different types of anarchism inspired by religious ideas. As Peter Marshall notes, the *"first clear expression of an anarchist sensibility may be traced back to the Taoists in ancient China from about the sixth century BC"* and *"Buddhism, particularly in its Zen form, ... has ... a strong libertarian spirit."* [**Op. Cit.**, p. 53 and p. 65] Some, like the anti-globalisation activist Starhawk, combine their anarchist ideas with Pagan and Spiritualist influences. However, religious anarchism usually takes the form of Christian Anarchism, which we will concentrate on here.

Christian Anarchists take seriously Jesus' words to his followers that *"kings and governors have domination over men; let there be none like that among you."* Similarly, Paul's dictum that there *"is no authority except God"* is taken to its obvious conclusion with the denial of state authority within society. Thus, for a true Christian, the state is usurping God's authority and it is up to each individual to govern themselves and discover that (to use the title of Tolstoy's famous book) **The Kingdom of God is within you**.

Similarly, the voluntary poverty of Jesus, his comments on the corrupting effects of wealth and the Biblical claim that the world was created for humanity to be enjoyed in common have all been taken as the basis of a socialistic critique of private property and capitalism. Indeed, the early Christian church (which could be considered as a liberation movement of slaves, although one that was later co-opted into a state religion) was based upon communistic sharing of material goods, a theme which has continually appeared within radical Christian movements inspired, no doubt, by such comments as *"all that believed were together, and had all things in common, and they sold their possessions and goods, and parted them all, according as every man has need"* and *"the multitude of them that believed were of one heart and of one soul, not one of them said that all of the things which he possessed was his own; but they had all things in common."* (Acts, 2:44,45; 4:32)

Unsurprisingly, the Bible would have been used to express radical libertarian aspirations of the oppressed, which, in later times, would have taken the form of anarchist or Marxist terminology). As Bookchin notes in his discussion of Christianity's contributions to *"the legacy of freedom," "[b]y spawning nonconformity, heretical conventicles, and issues of authority over person and belief, Christianity created not merely a centralised authoritarian Papacy, but also its very antithesis: a quasi-religious anarchism."* Thus *"Christianity's mixed message can be grouped into two broad and highly conflicting systems of belief. On one side there was a radical, activistic, communistic, and libertarian vision of the Christian life"* and *"on the other side there was a conservative, quietistic, materially unwordly, and hierarchical vision."* [**The Ecology of Freedom**, p. 266 and pp. 274–5]

Thus clergyman's John Ball's egalitarian comments (as quoted by Peter Marshall [**Op. Cit.**, p. 89]) during the Peasant Revolt in 1381 in England:

"When Adam delved and Eve span,
Who was then a gentleman?" The history of Christian anarchism includes the ***Heresy of the Free Spirit*** in the Middle Ages, numerous Peasant revolts and the ***Anabaptists*** in the 16th century. The libertarian tradition within Christianity surfaced again in the 18th century in the writings of William Blake and the American Adam Ballou reached anarchist conclusions in his **Practical Christian Socialism** in 1854. However, Christian anarchism became a clearly defined thread of the anarchist movement with the work of the famous Russian author Leo Tolstoy.

Tolstoy took the message of the Bible seriously and came to consider that a true Christian must oppose the state. From his reading of the Bible, Tolstoy drew anarchist conclusions:

> *"ruling means using force, and using force means doing to him whom force is used, what he does not like and what he who uses force would certainly not like done to himself. Consequently ruling means doing to others what we would not they should do unto us, that is, doing wrong."* [**The Kingdom of God is Within You**, p. 242]

Thus a true Christian must refrain from governing others. From this anti-statist position he naturally argued in favour of a society self-organised from below:

> *"Why think that non-official people could not arrange their life for themselves, as well as Government people can arrange it nor for themselves but for others?"* [**The Slavery of Our Times**, p. 46]

This meant that *"people can only be freed from slavery by the abolition of Governments."* [**Op. Cit.**, p. 49] Tolstoy urged non-violent action against oppression, seeing a spiritual transformation of individuals as the key to creating an anarchist society. As Max Nettlau argues, the *"great truth stressed by Tolstoy is that the recognition of the power of the good, of goodness, of solidarity — and of all that is called love — lies within **ourselves**, and that it can and must be awakened, developed and exercised **in our own behaviour.**"* [**A Short History of Anarchism**, pp. 251–2] Unsurprisngly, Tolstoy thought the *"anarchists are right in everything ... They are mistaken only in thinking that anarchy can be instituted by a revolution."* [quoted by Peter Marshall, **Op. Cit.**, p. 375]

Like all anarchists, Tolstoy was critical of private property and capitalism. He greatly admired and was heavily influenced by Proudhon, considering the latter's *"property is theft"* as *"an absolute truth"* which would *"survive as long as humanity."* [quoted by Jack Hayward, **After the French Revolution**, p. 213] Like Henry George (whose ideas, like those of Proudhon, had a strong impact on him) he opposed private property in land, arguing that *"were it not for the defence of landed property, and its consequent rise in price, people would not be crowded into such narrow spaces, but would scatter over the free land of which there is still so much in the world."* Moreover, *"in this struggle [for landed property] it is not those who work in the land, but always those who take part in government violence, who have the advantage."* Thus Tolstoy recognised that property rights in anything beyond use require state violence to protect them as possession is *"always protected by custom, public opinion, by feelings of justice and reciprocity, and they do not need to be protected by violence."* [**The Slavery of Our Times**, p. 47] Indeed, he argues that:

> *"Tens of thousands of acres of forest lands belonging to one proprietor – while thousands of people close by have no fuel — need protection by violence. So, too, do factories and works where several generations of workmen have been defrauded and are still being defrauded. Yet more do the hundreds of thousands of bushels of grain, belonging to one owner, who has held them back to sell at triple price in time of famine."* [**Op. Cit.**, pp. 47–8]

As with other anarchists, Tolstoy recognised that under capitalism, economic conditions *"compel [the worker] to go into temporary or perpetual slavery to a capitalist"* and so is *"obliged to sell his liberty."* This applied to both rural and urban workers, for the *"slaves of our times are not*

only all those factory and workshop hands, who must sell themselves completely into the power of the factory and foundry owners in order to exist; but nearly all the agricultural labourers are slaves, working as they do unceasingly to grow another's corn on another's field." Such a system could only be maintained by violence, for *"first, the fruit of their toil is unjustly and violently taken form the workers, and then the law steps in, and these very articles which have been taken from the workmen — unjustly and by violence — are declared to be the absolute property of those who have stolen them."* [**Op. Cit.**, p. 34, p. 31 and p. 38]

Tolstoy argued that capitalism morally and physically ruined individuals and that capitalists were *"slave-drivers."* He considered it impossible for a true Christian to be a capitalist, for a *"manufacturer is a man whose income consists of value squeezed out of the workers, and whose whole occupation is based on forced, unnatural labour"* and therefore, *"he must first give up ruining human lives for his own profit."* [**The Kingdom Of God is Within You**, p. 338 and p. 339] Unsurprisingly, Tolstoy argued that co-operatives were the *"only social activity which a moral, self-respecting person who doesn't want to be a party of violence can take part in."* [quoted by Peter Marshall, **Op. Cit.**, p. 378]

So, for Tolstoy, *"taxes, or land-owning or property in articles of use or in the means of production"* produces *"the slavery of our times."* However, he rejected the state socialist solution to the social problem as political power would create a new form of slavery on the ruins of the old. This was because *"the fundamental cause of slavery is legislation: the fact that there are people who have the power to make laws."* This requires *"organised violence used by people who have power, in order to compel others to obey the laws they (the powerful) have made — in other words, to do their will."* Handing over economic life to the state would simply mean *"there will be people to whom power will be given to regulate all these matters. Some people will decide these questions, and others will obey them."* [Tolstoy, **Op. Cit.**, p. 40, p. 41, p. 43 and p. 25] He correctly prophetised that *"the only thing that will happen"* with the victory of Marxism would be *"that despotism will be passed on. Now the capitalists are ruling, but then the directors of the working class will rule."* [quoted by Marshall, **Op. Cit.**, p. 379]

From his opposition to violence, Tolstoy rejects both state and private property and urged pacifist tactics to end violence within society and create a just society. For Tolstoy, government could only be destroyed by a mass refusal to obey, by non-participation in govermmental violence and by exposing fraud of statism to the world. He rejected the idea that force should be used to resist or end the force of the state. In Nettlau's words, he *"asserted ... **resistance to evil**; and to one of the ways of resistance — by active force — he added another way: **resistance through disobedience, the passive force.**"* [**Op. Cit.**, p. 251] In his ideas of a free society, Tolstoy was clearly influenced by rural Russian life and aimed for a society based on peasant farming of communal land, artisans and small-scale co-operatives. He rejected industrialisation as the product of state violence, arguing that *"such division of labour as now exists will ... be impossible in a free society."* [Tolstoy, **Op. Cit.**, p. 26]

Tolstoy's ideas had a strong influence on Gandhi, who inspired his fellow country people to use non-violent resistance to kick Britain out of India. Moreover, Gandhi's vision of a free India as a federation of peasant communes is similar to Tolstoy's anarchist vision of a free society (although we must stress that Gandhi was not an anarchist). The **Catholic Worker Group** in the United States was also heavily influenced by Tolstoy (and Proudhon), as was Dorothy Day a staunch Christian pacifist and anarchist who founded it in 1933. The influence of Tolstoy and religious anarchism in general can also be found in **Liberation Theology** movements in Latin

and South America who combine Christian ideas with social activism amongst the working class and peasantry (although we should note that Liberation Theology is more generally inspired by state socialist ideas rather than anarchist ones).

So there is a minority tradition within anarchism which draws anarchist conclusions from religion. However, as we noted in section A.2.20, most anarchists disagree, arguing that anarchism implies atheism and it is no coincidence that the biblical thought has, historically, been associated with hierarchy and defence of earthly rulers. Thus the vast majority of anarchists have been and are atheists, for *"to worship or revere any being, natural or supernatural, will always be a form of self-subjugation and servitude that will give rise to social domination. As [Bookchin] writes: 'The moment that human beings fall on their knees before anything that is 'higher' than themselves, hierarchy will have made its first triumph over freedom.'"* [Brian Morris, **Ecology and Anarchism**, p. 137] This means that most anarchists agree with Bakunin that if God existed it would be necessary, for human freedom and dignity, to abolish it. Given what the Bible says, few anarchists think it can be used to justify libertarian ideas rather than support authoritarian ones and are not surprised that the hierarchical side of Christianity has predominated in its long (and generally oppressive) history.

Atheist anarchists point to the fact that the Bible is notorious for advocating all kinds of abuses. How does the Christian anarchist reconcile this? Are they a Christian first, or an anarchist? Equality, or adherence to the Scripture? For a believer, it seems no choice at all. If the Bible is the word of God, how can an anarchist support the more extreme positions it takes while claiming to believe in God, his authority and his laws?

For example, no capitalist nation would implement the no working on the Sabbath law which the Bible expounds. Most Christian bosses have been happy to force their fellow believers to work on the seventh day in spite of the Biblical penalty of being stoned to death (*"Six days shall work be done, but on the seventh day there shall be to you an holy day, a sabbath of rest to the Lord: whosoever doeth work therein shall be put to death."* Exodus 35:2). Would a Christian anarchist advocate such a punishment for breaking God's law? Equally, a nation which allowed a woman to be stoned to death for not being a virgin on her wedding night would, rightly, be considered utterly evil. Yet this is the fate specified in the "good book" (Deuteronomy 22:13–21). Would premarital sex by women be considered a capital crime by a Christian anarchist? Or, for that matter, should *"a stubborn and rebellious son, which will not obey the voice of his father, or the voice of his mother"* also suffer the fate of having *"all the men of his city ... stone him with stones, that he die"*? (Deuteronomy 21:18–21) Or what of the Bible's treatment of women: *"Wives, submit yourselves unto your own husbands."* (Colossians 3:18) They are also ordered to *"keep silence in the churches."* (I Corinthians 14:34–35). Male rule is explicitly stated: *"I would have you know that the head of every man is Christ; and the head of the woman is the man; and the head of Christ is God."* (I Corinthians 11:3)

Clearly, a Christian anarchist would have to be as highly selective as non-anarchist believers when it comes to applying the teachings of the Bible. The rich rarely proclaim the need for poverty (at least for themselves) and seem happy to forgot (like the churches) the difficulty a rich man apparently has entering heaven, for example. They seem happy to ignore Jesus' admonition that *"If thou wilt be perfect, go and sell that thou hast, and give to the poor, and thou shalt have treasure in heaven: and come and follow me."* (Matthew 19:21). The followers of the Christian right do not apply this to their political leaders, or, for that matter, their spiritual ones. Few apply the maxim to *"Give to every man that asketh of thee; and of him that taketh away thy goods*

ask them not again." (Luke 6:30, repeated in Matthew 5:42) Nor do they hold *"all things common"* as practised by the first Christian believers. (Acts 4:32) So if non-anarchist believers are to be considered as ignoring the teachings of the Bible by anarchist ones, the same can be said of them by those they attack.

Moreover idea that Christianity is basically anarchism is hard to reconcile with its history. The Bible has been used to defend injustice far more than it has been to combat it. In countries where Churches hold **de facto** political power, such as in Ireland, in parts of South America, in nineteenth and early twentieth century Spain and so forth, typically anarchists are strongly anti-religious because the Church has the power to suppress dissent and class struggle. Thus the actual role of the Church belies the claim that the Bible is an anarchist text.

In addition, most social anarchists consider Tolstoyian pacifism as dogmatic and extreme, seeing the need (sometimes) for violence to resist greater evils. However, most anarchists would agree with Tolstoyians on the need for individual transformation of values as a key aspect of creating an anarchist society and on the importance of non-violence as a general tactic (although, we must stress, that few anarchists totally reject the use of violence in self-defence, when no other option is available).

A.3.8 What is *"anarchism without adjectives"*?

In the words of historian George Richard Esenwein, *"anarchism without adjectives"* in its broadest sense *"referred to an unhyphenated form of anarchism, that is, a doctrine without any qualifying labels such as communist, collectivist, mutualist, or individualist. For others, ... [it] was simply understood as an attitude that tolerated the coexistence of different anarchist schools."* [**Anarchist Ideology and the Working Class Movement in Spain, 1868–1898**, p. 135]

The originator of the expression was Cuban born Fernando Tarrida del Marmol who used it in November, 1889, in Barcelona. He directed his comments towards the communist and collectivist anarchists in Spain who at the time were having an intense debate over the merits of their two theories. "Anarchism without adjectives" was an attempt to show greater tolerance between anarchist tendencies and to be clear that anarchists should not impose a preconceived economic plan on anyone — even in theory. Thus the economic preferences of anarchists should be of *"secondary importance"* to abolishing capitalism and the state, with free experimentation the one rule of a free society.

Thus the theoretical perspective known as *"anarquismo sin adjetives"* ("anarchism without adjectives") was one of the by-products of a intense debate within the movement itself. The roots of the argument can be found in the development of Communist Anarchism after Bakunin's death in 1876. While not entirely dissimilar to Collectivist Anarchism (as can be seen from James Guillaume's famous work *"On Building the New Social Order"* within **Bakunin on Anarchism**, the collectivists did see their economic system evolving into free communism), Communist Anarchists developed, deepened and enriched Bakunin's work just as Bakunin had developed, deepened and enriched Proudhon's. Communist Anarchism was associated with such anarchists as Elisee Reclus, Carlo Cafiero, Errico Malatesta and (most famously) Peter Kropotkin.

Quickly Communist-Anarchist ideas replaced Collectivist Anarchism as the main anarchist tendency in Europe, except in Spain. Here the major issue was not the question of communism (although for Ricardo Mella this played a part) but a question of the modification of strategy and

tactics implied by Communist Anarchism. At this time (the 1880s), the Communist Anarchists stressed local (pure) cells of anarchist militants, generally opposed trade unionism (although Kropotkin was not one of these as he saw the importance of militant workers organisations) as well as being somewhat anti-organisation as well. Unsurprisingly, such a change in strategy and tactics came in for a lot of discussion from the Spanish Collectivists who strongly supported working class organisation and struggle.

This conflict soon spread outside of Spain and the discussion found its way into the pages of **La Revolte** in Paris. This provoked many anarchists to agree with Malatesta's argument that *"[i]t is not right for us, to say the least, to fall into strife over mere hypotheses."* [quoted by Max Nettlau, **A Short History of Anarchism**, pp. 198–9] Over time, most anarchists agreed (to use Nettlau's words) that *"we cannot foresee the economic development of the future"* [**Op. Cit.**, p. 201] and so started to stress what they had in common (opposition to capitalism and the state) rather than the different visions of how a free society would operate. As time progressed, most Communist-Anarchists saw that ignoring the labour movement ensured that their ideas did not reach the working class while most Collectivist-Anarchists stressed their commitment to communist ideals and their arrival sooner, rather than later, after a revolution. Thus both groups of anarchists could work together as there was *"no reason for splitting up into small schools, in our eagerness to overemphasise certain features, subject to variation in time and place, of the society of the future, which is too remote from us to permit us to envision all its adjustments and possible combinations."* Moreover, in a free society *"the methods and the individual forms of association and agreements, or the organisation of labour and of social life, will not be uniform and we cannot, at this moment, make and forecasts or determinations concerning them."* [Malatesta, quoted by Nettlau, **Op. Cit.**, p. 173]

Thus, Malatesta continued, *"[e]ven the question as between anarchist-collectivism and anarchist-communism is a matter of qualification, of method and agreement"* as the key is that, no matter the system, *"a new moral conscience will come into being, which will make the wage system repugnant to men [and women] just as legal slavery and compulsion are now repugnant to them."* If this happens then, *"whatever the specific forms of society may turn out to be, the basis of social organisation will be communist."* As long as we *"hold to fundamental principles and ... do our utmost to instil them in the masses"* we need not *"quarrel over mere words or trifles but give post-revolutionary society a direction towards justice, equality and liberty."* [quoted by Nettlau, **Op. Cit.**, p. 173 and p. 174]

Similarly, in the United States there was also an intense debate at the same time between Individualist and Communist anarchists. There Benjamin Tucker was arguing that Communist-Anarchists were not anarchists while John Most was saying similar things about Tucker's ideas. Just as people like Mella and Tarrida put forward the idea of tolerance between anarchist groups, so anarchists like Voltairine de Cleyre *"came to label herself simply 'Anarchist,' and called like Malatesta for an 'Anarchism without Adjectives,' since in the absence of government many different experiments would probably be tried in various localities in order to determine the most appropriate form."* [Peter Marshall, **Demanding the Impossible**, p. 393] In her own words, a whole range of economic systems would be *"advantageously tried in different localities. I would see the instincts and habits of the people express themselves in a free choice in every community; and I am sure that distinct environments would call out distinct adaptations."* [*"Anarchism"*, **Exquisite Rebel**, p. 79] Consequently, individualist and communist anarchist *"forms of society, as well as many intermediations, would, in the absence of government, be tried in various localities, according to the instincts and material condition of the people ... Liberty and experiment alone can determine the*

best forms of society. Therefore I no longer label myself otherwise than 'Anarchist' simply." [*"The Making of An Anarchist"*, **The Voltairine de Cleyre Reader**, pp. 107–8]

These debates had a lasting impact on the anarchist movement, with such noted anarchists as de Cleyre, Malatesta, Nettlau and Reclus adopting the tolerant perspective embodied in the expression "anarchism without adjectives" (see Nettlau's **A Short History of Anarchism**, pages 195 to 201 for an excellent summary of this). It is also, we add, the dominant position within the anarchist movement today with most anarchists recognising the right of other tendencies to the name "anarchist" while, obviously, having their own preferences for specific types of anarchist theory and their own arguments why other types are flawed. However, we must stress that the different forms of anarchism (communism, syndicalism, religious etc) are not mutually exclusive and you do not have to support one and hate the others. This tolerance is reflected in the expression "anarchism without adjectives."

One last point, some "anarcho"-capitalists have attempted to use the tolerance associated with "anarchism without adjectives" to argue that their ideology should be accepted as part of the anarchist movement. After all, they argue, anarchism is just about getting rid of the state, economics is of secondary importance. However, such a use of *"anarchism without adjectives"* is bogus as it was commonly agreed at the time that the types of economics that were being discussed were **anti-capitalist** (i.e. socialistic). For Malatesta, for example, there were *"anarchists who foresee and propose other solution, other future forms of social organisation"* than communist anarchism, but they *"desire, just as we do, to destroy political power and private property." "Let us do away,"* he argued, *"with all exclusivism of schools of thinking"* and let us *"come to an understanding on ways and means, and go forwards."* [quoted by Nettlau, **Op. Cit.**, p. 175] In other words, it was agreed that capitalism had to be abolished along with the state and once this was the case free experimentation would develop. Thus the struggle against the state was just one part of a wider struggle to end oppression and exploitation and could not be isolated from these wider aims. As "anarcho"-capitalists do not seek the abolition of capitalism along with the state they are not anarchists and so "anarchism without adjectives" does not apply to the so-called "anarchist" capitalists (see section F on why "anarcho"-capitalism is not anarchist).

This is not to say that after a revolution "anarcho"-capitalist communities would not exist. Far from it. If a group of people wanted to form such a system then they could, just as we would expect a community which supported state socialism or theocracy to live under that regime. Such enclaves of hierarchy would exist simply because it is unlikely that everyone on the planet, or even in a given geographical area, will become anarchists all at the same time. The key thing to remember is that no such system would be anarchist and, consequently, is not *"anarchism without adjectives."*

A.3.9 What is anarcho-primitivism?

As discussed in section A.3.3, most anarchists would agree with Situationist Ken Knabb in arguing that *"in a liberated world computers and other modern technologies could be used to eliminate dangerous or boring tasks, freeing everyone to concentrate on more interesting activities."* Obviously *"[c]ertain technologies — nuclear power is the most obvious example — are indeed so insanely dangerous that they will no doubt be brought to a prompt halt. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of*

their commercial rationales. But many technologies ..., however they may presently be misused, have few if any ***inherent*** *drawbacks. It's simply a matter of using them more sensibly, bringing them under popular control, introducing a few ecological improvements, and redesigning them for human rather than capitalistic ends."* [**Public Secrets**, p. 79 and p. 80] Thus most eco-anarchists see the use of appropriate technology as the means of creating a society which lives in balance with nature.

However, a small but vocal minority of self-proclaimed Green anarchists disagree. Writers such as John Zerzan, John Moore and David Watson have expounded a vision of anarchism which, they claim, aims to critique every form of power and oppression. This is often called *"anarcho-primitivism,"* which according to Moore, is simply *"a shorthand term for a radical current that critiques the totality of civilisation from an anarchist perspective, and seeks to initiate a comprehensive transformation of human life."* [**Primitivist Primer**]

How this current expresses itself is diverse, with the most extreme elements seeking the end of all forms of technology, division of labour, domestication, "Progress", industrialism, what they call *"mass society"* and, for some, even symbolic culture (i.e. numbers, language, time and art). They tend to call any system which includes these features *"civilisation"* and, consequently, aim for *"the destruction of civilisation"*. How far back they wish to go is a moot point. Some see the technological level that existed before the Industrial Revolution as acceptable, many go further and reject agriculture and all forms of technology beyond the most basic. For them, a return to the wild, to a hunter-gatherer mode of life, is the only way for anarchy is exist and dismiss out of hand the idea that appropriate technology can be used to create an anarchist society based on industrial production which minimises its impact on ecosystems.

Thus we find the primitivist magazine **"Green Anarchy"** arguing that those, like themselves, *"who prioritise the values of personal autonomy or wild existence have reason to oppose and reject all large-scale organisations and societies on the grounds that they necessitate imperialism, slavery and hierarchy, regardless of the purposes they may be designed for."* They oppose capitalism as it is *"civilisation's current dominant manifestation."* However, they stress that it is *"Civilisation, not capitalism per se, was the genesis of systemic authoritarianism, compulsory servitude and social isolation. Hence, an attack upon capitalism that fails to target civilisation can never abolish the institutionalised coercion that fuels society. To attempt to collectivise industry for the purpose of democratising it is to fail to recognise that all large-scale organisations adopt a direction and form that is independent of its members' intentions."* Thus, they argue, genuine anarchists must oppose industry and technology for *"[h]ierarchical institutions, territorial expansion, and the mechanisation of life are all required for the administration and process of mass production to occur."* For primitivists, *"[o]nly small communities of self-sufficient individuals can coexist with other beings, human or not, without imposing their authority upon them."* Such communities would share essential features with tribal societies, *"[f]or over 99% of human history, humans lived within small and egalitarian extended family arrangements, while drawing their subsistence directly from the land."* [**Against Mass Society**]

While such tribal communities, which lived in harmony with nature and had little or no hierarchies, are seen as inspirational, primitivists look (to use the title of a John Zerzan book) forward to seeing the *"Future Primitive."* As John Moore puts it, *"the future envisioned by anarcho-primitivism ... is without precedent. Although primitive cultures provide intimations of the future, and that future may well incorporate elements derived from those cultures, an anarcho-primitivist world would likely be quite different from previous forms of anarchy."* [**Op. Cit.**]

For the primitivist, other forms of anarchism are simply self-managed alienation within essentially the same basic system we now endure. Hence Moore's comment that *"classical anarchism"* wants *"to take over civilisation, rework its structures to some degree, and remove its worst abuses and oppressions. However, 99% of life in civilisation remains unchanged in their future scenarios, precisely because the aspects of civilisation they question are minimal ... overall life patterns wouldn't change too much."* Thus *"[f]rom the perspective of anarcho-primitivism, all other forms of radicalism appear as reformist, whether or not they regard themselves as revolutionary."* [**Op. Cit.**]

In reply, "classical anarchists" point out three things. Firstly, to claim that the *"worst abuses and oppressions"* account for 1% of capitalist society is simply nonsense and, moreover, something an apologist of that system would happily agree with. Secondly, it is obvious from reading any "classical" anarchist text that Moore's assertions are nonsense. "Classical" anarchism aims to transform society radically from top to bottom, not tinker with minor aspects of it. Do primitivists really think that people who went to the effort to abolish capitalism would simply continue doing 99% of the same things they did before hand? Of course not. In other words, it is not enough to get rid of the boss, although this is a necessary first step! Thirdly, and most importantly, Moore's argument ensures that his new society would be impossible to reach.

So, as can be seen, primitivism has little or no bearing to the traditional anarchist movement and its ideas. The visions of both are simply incompatible, with the ideas of the latter dismissed as authoritarian by the former and anarchists questioning whether primitivism is practical in the short term or even desirable in the long. While supporters of primitivism like to portray it as the most advanced and radical form of anarchism, others are less convinced. They consider it as a confused ideology which draws its followers into absurd positions and, moreover, is utterly impractical. They would agree with Ken Knabb that primitivism is rooted in *"fantasies [which] contain so many obvious self-contradictions that it is hardly necessary to criticise them in any detail. They have questionable relevance to actual past societies and virtually no relevance to present possibilities. Even supposing that life was better in one or another previous era,* ***we have to begin from where we are now.*** *Modern technology is so interwoven with all aspects of our life that it could not be abruptly discontinued without causing a global chaos that would wipe out billions of people."* [**Op. Cit.**, p. 79]

The reason for this is simply that we live in a highly industrialised and interconnected system in which most people do not have the skills required to live in a hunter-gatherer or even agricultural society. Moreover, it is extremely doubtful that six billion people **could** survive as hunter-gatherers even if they had the necessary skills. As Brian Morris notes, *"[t]he future we are told is 'primitive.' How this is to be achieved in a world that presently sustains almost six billion people (for evidence suggests that the hunter-gatherer lifestyle is only able to support 1 or 2 people per sq. mile)"* primitivists like Zerzan do not tell us. [*"Anthropology and Anarchism,"* pp. 35–41, **Anarchy: A Journal of Desire Armed**, no. 45, p. 38] Most anarchists, therefore, agree with Chomsky's summation that *"I do not think that they are realising that what they are calling for is the mass genocide of millions of people because of the way society is now structured and organised ... If you eliminate these structures everybody dies ... And, unless one thinks through these things, it's not really serious."* [**Chomsky on Anarchism**, p. 226]

Somewhat ironically, many proponents of primitivsm agree with its critics that the earth would be unable to support six billion living as a hunter-gatherers. This, critics argue, gives primitivism a key problem in that population levels will take time to fall and so any "primitivist" rebellion faces two options. Either it comes about via some kind of collapse of "civilisation" or it involves

a lengthy transition period during which "civilisation" and its industrial legacies are decommissioned safely, population levels drop naturally to an appropriate level and people gain the necessary skills required for their new existence.

The problems with the first option should be obvious but, sadly, it is implied by many primitivist writers. Moore, for example, talks about *"when civilisation collapses"* (*"through its own volition, through our efforts, or a combination of the two"*). This implies an extremely speedy process which is confirmed when he talks about the need for *"positive alternatives"* to be built now as *"the social disruption caused by collapse could easily create the psychological insecurity and social vacuum in which fascism and other totalitarian dictatorships could flourish."* [**Op. Cit.**] Social change based on *"collapse," "insecurity"* and *"social disruption"* does not sound like a recipe for a successful revolution.

Then there are the anti-organisation dogmas expounded by primitivism. Moore is typical, asserting that *"[o]rganisations, for anarcho-primitivists, are just rackets, gangs for putting a particular ideology in power"* and reiterates the point by saying primitivists stand for *"the abolition of all power relations, including the State . .. and any kind of party or organisation."* [**Op. Cit.**] Yet without organisation, no modern society could function. There would be a total and instant collapse which would see not only mass starvation but also ecological destruction as nuclear power stations meltdown, industrial waste seeps into the surrounding environment, cities and towns decay and hordes of starving people fighting over what vegetables, fruits and animals they could find in the countryside. Clearly an anti-organisation dogma can only be reconciled with the idea of a near overnight *"collapse"* of civilisation, not with a steady progress towards a long term goal. Equally, how many *"positive alternatives"* could exist without organisation?

Moore dismissed any critique that points out that a collapse would cause mass destruction as *"just smear tactics," "weird fantasies spread by some commentators hostile to anarcho-primitivism who suggest that the population levels envisaged by anarcho-primitivists would have to be achieved by mass die-offs or nazi-style death camps."* The *"commitment of anarcho-primitivists to the abolition of all power relations ... means that such orchestrated slaughter remains an impossibility as well as just plain horrendous."* [**Op. Cit.**] Yet no critic is suggesting that primitivists desire such a die-off or seek to organise it. They simply point out that the collapse of civilisation would result in a mass die-off due to the fact that most people do not have the skills necessary to survive it nor could the Earth provide enough food for six billion people trying to live in a primitivist manner. Other primitivists have asserted that it can, stating *"[i]t is not possible for all six billion of the planet's current inhabitants to survive as hunter-gatherers, but it is possible for those who can't to grow their own food in significantly smaller spaces ... as has been demonstrated by permaculture, organic gardening, and indigenous horticulture techniques."* [**Against Mass Society**] Unfortunately no evidence was provided to show the truth of this assertion nor that people could develop the necessary skills in time even if it were. It seems a slim hope to place the fate of billions on, so that humanity can be "wild" and free from such tyrannies as hospitals, books and electricity.

Faced with the horrors that such a *"collapse"* would entail, those primitivists who have thought the issue through end up accepting the need for a transition period. John Zerzan, for example, argues that it *"seems evident that industrialisation and the factories could not be gotten rid of instantly, but equally clear that their liquidation must be pursued with all the vigour behind the rush of break-out."* Even the existence of cities is accepted, for *"[c]ultivation within the cities is another aspect of practical transition."* [**On the Transition: Postscript to Future Primitive**]

However, to accept the necessity of a transition period does little more than expose the contradictions within primitivism. Zerzan notes that *"the means of reproducing the prevailing Death Ship (e.g. its technology) cannot be used to fashion a liberated world."* He ponders: *"What would we keep? 'Labour-saving devices?' Unless they involve no division of labour (e.g. a lever or incline), this concept is a fiction; behind the 'saving' is hidden the congealed drudgery of many and the despoliation of the natural world."* How this is compatible with maintaining *"industrialisation and the factories"* for a (non-specified) period is unclear. Similarly, he argues that *"[i]nstead of the coercion of work — and how much of the present could continue without precisely that coercion? — an existence without constraints is an immediate, central objective."* [**Op. Cit.**] How that is compatible with the arguing that industry would be maintained for a time is left unasked, never mind unanswered. And if "work" continues, how is this compatible with the typical primitivist dismissal of "traditional" anarchism, namely that self-management is managing your own alienation and that no one will want to work in a factory or in a mine and, therefore, coercion will have to be used to make them do so? Does working in a self-managed workplace somehow become less alienating and authoritarian during a primitivist transition?

It is an obvious fact that the human population size cannot be reduced significantly by voluntary means in a short period of time. For primitivism to be viable, world population levels need to drop by something like 90%. This implies a drastic reduction of population will take decades, if not centuries, to achieve voluntarily. Given that it is unlikely that (almost) everyone on the planet will decide not to have children, this time scale will almost certainly be centuries and so agriculture and most industries will have to continue (and an exodus from the cities would be impossible immediately). Likewise, reliable contraceptives are a product of modern technology and, consequently, the means of producing them would have to maintained over that time — unless primitivists argue that along with refusing to have children, people will also refuse to have sex.

Then there is the legacy of industrial society, which simply cannot be left to decay on its own. To take just one obvious example, leaving nuclear power plants to melt down would hardly be eco-friendly. Moreover, it is doubtful that the ruling elite will just surrender its power without resistance and, consequently, any social revolution would need to defend itself against attempts to reintroduce hierarchy. Needless to say, a revolution which shunned all organisation and industry as inherently authoritarian would not be able to do this (it would have been impossible to produce the necessary military supplies to fight Franco's fascist forces during the Spanish Revolution if the workers had not converted and used their workplaces to do so, to note another obvious example).

Then there is another, key, contradiction. For if you accept that there is a need for a transition from 'here' to 'there' then primitivism automatically excludes itself from the anarchist tradition. The reason is simple. Moore asserts that *"mass society"* involves *"people working, living in artificial, technologised environments, and [being] subject to forms of coercion and control."* [**Op. Cit.**] So if what primitivists argue about technology, industry and mass society are all true, then any primitivist transition would, by definition, not be libertarian. This is because *"mass society"* will have to remain for some time (at the very least decades, more likely centuries) after a successful revolution and, consequently from a primitivist perspective, be based on *"forms of coercion and control."* There is an ideology which proclaims the need for a transitional system which will be based on coercion, control and hierarchy which will, in time, disappear into a stateless society. It also, like primitivism, stresses that industry and large scale organisation is impossible without

hierarchy and authority. That ideology is Marxism. Thus it seems ironic to "classical" anarchists to hear self-proclaimed anarchists repeating Engels arguments against Bakunin as arguments for "anarchy" (see section H.4 for a discussion of Engels claims that industry excludes autonomy).

So if, as seems likely, any transition will take centuries to achieve then the primivitist critique of "traditional" anarchism becomes little more than a joke — and a hindrance to meaningful anarchist practice and social change. It shows the contradiction at the heart of primitivism. While its advocates attack other anarchists for supporting technology, organisation, self-management of work, industrialisation and so on, they are themselves are dependent on the things they oppose as part of any humane transition to a primitivist society. And given the passion with which they attack other anarchists on these matters, unsurprisingly the whole notion of a primitivist transition period seems impossible to other anarchists. To denounce technology and industrialism as inherently authoritarian and then turn round and advocate their use after a revolution simply does not make sense from a logical or libertarian perspective.

Thus the key problem with primitivism can be seen. It offers no practical means of achieving its goals in a libertarian manner. As Knabb summarises, *"[w]hat begins as a valid questioning of excessive faith in science and technology ends up as a desperate and even less justified faith in the return of a primeval paradise, accompanied by a failure to engage the present system in any but an abstract, apocalyptical way."* To avoid this, it is necessary to take into account where we are now and, consequently, we will have to *"seriously consider how we will deal with all the practical problems that will be posed in the interim."* [**Op. Cit.**, p. 80 and p. 79] Sadly, primitivist ideology excludes this possibility by dismissing the starting point any real revolution would begin from as being inherently authoritarian. Moreover, they are blocking genuine social change by ensuring that no mass movement would ever be revolutionary enough to satisfy their criteria:

> *"Those who proudly proclaim their 'total opposition' to all compromise, all authority, all organisation, all theory, all technology, etc., usually turn out to have no* ***revolutionary*** *perspective whatsoever — no practical conception of how the present system might be overthrown or how a post-revolutionary society might work. Some even attempt to justify this lack by declaring that a mere revolution could never be radical enough to satisfy their eternal ontological rebelliousness. Such all-or-nothing bombast may temporarily impress a few spectators, but its ultimate effect is simply to make people blas*
> [Knabb, **Op. Cit.**, pp. 31–32]

Then there is the question of the means suggested for achieving primitivism. Moore argues that the *"kind of world envisaged by anarcho-primitivism is one unprecedented in human experience in terms of the degree and types of freedom anticipated ... so there can't be any limits on the forms of resistance and insurgency that might develop."* [**Op. Cit.**] Non-primitivists reply by saying that this implies primitivists don't know what they want nor how to get there. Equally, they stress that there **must be** limits on what are considered acceptable forms of resistance. This is because means shape the ends created and so authoritarian means will result in authoritarian ends. Tactics are not neutral and support for certain tactics betray an authoritarian perspective.

This can be seen from the UK magazine **"Green Anarchist,"** part of the extreme end of "Primitivism." Due to its inherent unattractiveness for most people, it could never come about by libertarian means (i.e. by the free choice of individuals who create it by their own acts) and so cannot be anarchist as very few people would actually voluntarily embrace such a situation. This led to

"Green Anarchist" developing a form of eco-vanguardism in order, to use Rousseau's expression, to "force people to be free." This was expressed when the magazine supported the actions and ideas of the (non-anarchist) Unabomber and published an article (*"The Irrationalists"*) by one its editors stating that *"the Oklahoma bombers had the right idea. The pity was that they did not blast any more government offices ... The Tokyo sarin cult had the right idea. The pity was that in testing the gas a year prior to the attack they gave themselves away."* [**Green Anarchist**, no. 51, p. 11] A defence of these remarks was published in the next issue and a subsequent exchange of letters in the US-based **Anarchy: A Journal of Desire Armed** magazine (numbers 48 to 52) saw the other editor justify this sick, authoritarian nonsense as simply examples of *"unmediated resistance"* conducted *"under conditions of extreme repression."* Whatever happened to the anarchist principle that means shape the ends? This means there **are** *"limits"* on tactics, as some tactics are not and can never be libertarian.

However, few primitivists take such an extreme position. Most "primitivist" anarchists rather than being anti-technology and anti-civilisation as such instead (to use David Watson's expression) believe it is a case of the *"affirmation of aboriginal lifeways"* and of taking a far more critical approach to issues such as technology, rationality and progress than that associated with Social Ecology. These eco-anarchists reject *"a dogmatic primitivism which claims we can return in some linear way to our primordial roots"* just as much as the idea of "progress," *"**superseding** both Enlightenment and Counter-Enlightenment"* ideas and traditions. For them, Primitivism *"reflects not only a glimpse at life before the rise of the state, but also a legitimate response to real conditions of life under civilisation"* and so we should respect and learn from *"palaeolithic and neolithic wisdom traditions"* (such as those associated with Native American tribes and other aboriginal peoples). While we *"cannot, and would not want to abandon secular modes of thinking and experiencing the world... we cannot reduce the experience of life, and the fundamental, inescapable questions **why** we live, and **how** we live, to secular terms... Moreover, the boundary between the spiritual and the secular is not so clear. A dialectical understanding that we are our history would affirm an inspirited reason that honours not only atheistic Spanish revolutionaries who died for **el ideal,** but also religious pacifist prisoners of conscience, Lakota ghost dancers, taoist hermits and executed sufi mystics."* [David Watson, **Beyond Bookchin: Preface for a future social ecology**, p. 240, p. 103, p. 240 and pp. 66–67]

Such "primitivist" anarchism is associated with a range of magazines, mostly US-based, like **Fifth Estate**. For example, on the question of technology, they argue that *"[w]hile market capitalism was a spark that set the fire, and remains at the centre of the complex, it is only part of something larger: the forced adaptation of organic human societies to an economic-instrumental civilisation and its mass technics, which are not only hierarchical and external but increasingly 'cellular' and internal. It makes no sense to layer the various elements of this process in a mechanistic hierarchy of first cause and secondary effects."* [Watson, **Op. Cit.**, pp. 127–8] For this reason primitivists are more critical of all aspects of technology, including calls by social ecologists for the use of **appropriate** technology essential in order to liberate humanity and the planet:

> *"To speak of technological society is in fact to refer to **the technics generated within capitalism,** which in turn generate new forms of capital. The notion of a distinct realm of social relations that determine this technology is not only ahistorical and undialectical, it reflects a kind of simplistic base/superstructure schema."* [Watson, **Op. Cit.**, p. 124]

Thus it is not a case of who **uses** technology which determines its effects, rather the effects of technology are determined to a large degree by the society that creates it. In other words, technology is selected which tends to re-enforce hierarchical power as it is those in power who generally select which technology is introduced within society (saying that, oppressed people have this excellent habit of turning technology against the powerful and technological change and social struggle are inter-related — see section D.10). Thus even the use of appropriate technology involves more than selecting from the range of available technology at hand, as these technologies have certain effects regardless of who uses them. Rather it is a question of critically evaluating all aspects of technology and modifying and rejecting it as required to maximise individual freedom, empowerment and happiness. Few Social Ecologists would disagree with this approach, though, and differences are usually a question of emphasis rather than a deep political point.

However, few anarchists are convinced by an ideology which, as Brian Morris notes, dismisses the *"last eight thousand years or so of human history"* as little more than a source *"of tyranny, hierarchical control, mechanised routine devoid of any spontaneity. All those products of the human creative imagination — farming, art, philosophy, technology, science, urban living, symbolic culture — are viewed negatively by Zerzan — in a monolithic sense."* While there is no reason to worship progress, there is just as little need to dismiss all change and development out of hand as oppressive. Nor are they convinced by Zerzan's *"selective culling of the anthropological literature."* [**Op. Cit.**, p. 38] Most anarchists would concurr with Murray Bookchin:

> *"The ecology movement will never gain any real influence or have any significant impact on society if it advances a message of despair rather than hope, of a regressive and impossible return to primordial human cultures, rather than a commitment to human progress and to a unique* ***human*** *empathy for life as a whole ... We must recover the utopian impulses, the hopefulness, the appreciation of what is good, what is worth rescuing in yumn civilisation, as well as what must be rejected, if the ecology movement is to play a transformative and creative role in human affairs. For without changing society, we will not change the diastrous ecological direction in which capitalism is moving."* [**The Ecology of Freedom**, p. 63]

In addition, a position of "turning back the clock" is deeply flawed, for while some aboriginal societies are very anarchistic, not all are. As anarchist anthropologist David Graeber points out, *"we know almost nothing about like in Palaeolithic, other than the sort of thing that can be gleaned from studying very old skulls ... But what we see in the more recent ethnographic records is endless variety. There were hunter-gatherer societies with nobles and slaves, there are agrarian societies that are fiercely egalitarian. Even in ... Amazonia, one finds some groups who can justly be described as anarchists, like the Piaroa, living alongside others (say, the warlike Sherentre, who are clearly anything but."* [**Fragments of an Anarchist Anthropology**, pp. 53–4] Even if we speculate, like Zerzan, that if we go back far enough we would find all of humanity in anarchistic tribes, the fact remains that certain of these societies did develop into statist, propertarian ones implying that a future anarchist society that is predominantly inspired by and seek to reproduce key elements of prehistoric forms of anarchy is not the answer as "civilisation" may develop again due to the same social or environmental factors.

Primitivism confuses two radically different positions, namely support for a literal return to primitive lifeways and the use of examples from primitive life as a tool for social critique. Few

anarchists would disagree with the second position as they recognise that current does not equal better and, consequently, past cultures and societies can have positive (as well as negative) aspects to them which can shed light on what a genuinely human society can be like. Similarly if "primitivism" simply involved questioning technology along with authority, few would disagree. However, this sensible position is, in the main, subsumed within the first one, the idea that an anarchist society would be a literal return to hunter-gatherer society. That this is the case can be seen from primitivist writings (some primitivists say that they are not suggesting the Stone Age as a model for their desired society nor a return to gathering and hunting, yet they seem to exclude any other options by their critique).

So to suggest that primitivism is simply a critique or some sort of *"anarchist speculation"* (to use John Moore's term) seems incredulous. If you demonise technology, organisation, "mass society" and "civilisation" as inherently authoritarian, you cannot turn round and advocate their use in a transition period or even in a free society. As such, the critique points to a mode of action and a vision of a free society and to suggest otherwise is simply incredulous. Equally, if you praise foraging bands and shifting horticultural communities of past and present as examples of anarchy then critics are entitled to conclude that primitivists desire a similar system for the future. This is reinforced by the critiques of industry, technology, "mass society" and agriculture.

Until such time as "primitivists" clearly state which of the two forms of primitivism they subscribe to, other anarchists will not take their ideas that seriously. Given that they fail to answer such basic questions of how they plan to deactivate industry safely and avoid mass starvation without the workers' control, international links and federal organisation they habitually dismiss out of hand as new forms of "governance," other anarchists do not hold much hope that it will happen soon. Ultimately, we are faced with the fact that a revolution will start in society as it is. Anarchism recognises this and suggests a means of transforming it. Primitivism shies away from such minor problems and, consequently, has little to recommend it in most anarchists' eyes.

This is not to suggest, of course, that non-primitivist anarchists think that everyone in a free society must have the same level of technology. Far from it. An anarchist society would be based on free experimentation. Different individuals and groups will pick the way of life that best suits them. Those who seek less technological ways of living will be free to do so as will those who want to apply the benefits of (appropriate) technologies. Similarly, all anarchists support the struggles of those in the developing world against the onslaught of (capitalist) civilisation and the demands of (capitalist) progress.

For more on "primitivist" anarchism see John Zerzan's **Future Primitive** as well as David Watson's **Beyond Bookchin** and **Against the Mega-Machine**. Ken Knabb's essay **The Poverty of Primitivism** is an excellent critique of primitivism as is Brian Oliver Sheppard's **Anarchism vs. Primitivism**.

A.4 Who are the major anarchist thinkers?

Although Gerard Winstanley (**The New Law of Righteousness**, 1649) and William Godwin (**Enquiry Concerning Political Justice**, 1793) had begun to unfold the philosophy of anarchism in the 17th and 18th centuries, it was not until the second half of the 19th century that anarchism emerged as a coherent theory with a systematic, developed programme. This work was mainly started by four people — a German, ***Max Stirner*** (1806–1856), a Frenchman, ***Pierre-Joseph Proudhon*** (1809–1865), and two Russians, ***Michael Bakunin*** (1814–1876) and ***Peter Kropotkin*** (1842–1921). They took the ideas in common circulation within sections of the working population and expressed them in written form.

Born in the atmosphere of German romantic philosophy, Stirner's anarchism (set forth in **The Ego and Its Own**) was an extreme form of individualism, or **egoism**, which placed the unique individual above all else — state, property, law or duty. His ideas remain a cornerstone of anarchism. Stirner attacked both capitalism and state socialism, laying the foundations of both social and individualist anarchism by his egoist critique of capitalism and the state that supports it. In place of the state and capitalism, Max Stirner urges the *"union of egoists,"* free associations of unique individuals who co-operate as equals in order to maximise their freedom and satisfy their desires (including emotional ones for solidarity, or "intercourse" as Stirner called it). Such a union would be non-hierarchical, for, as Stirner wonders, *"is an association, wherein most members allow themselves to be lulled as regards their most natural and most obvious interests, actually an Egoist's association? Can they really be 'Egoists' who have banded together when one is a slave or a serf of the other?"* [**No Gods, No Masters**, vol. 1, p. 24]

Individualism by definition includes no concrete programme for changing social conditions. This was attempted by Pierre-Joseph Proudhon, the first to describe himself openly as an anarchist. His theories of **mutualism**, **federalism** and workers' **self-management** and **association** had a profound effect on the growth of anarchism as a mass movement and spelled out clearly how an anarchist world could function and be co-ordinated. It would be no exaggeration to state that Proudhon's work defined the fundamental nature of anarchism as both an anti-state and anti-capitalist movement and set of ideas. Bakunin, Kropotkin and Tucker all claimed inspiration from his ideas and they are the immediate source for both social and individualist anarchism, with each thread emphasising different aspects of mutualism (for example, social anarchists stress the associational aspect of them while individualist anarchists the non-capitalist market side). Proudhon's major works include **What is Property**, **System of Economical Contradictions**, **The Principle of Federation** and, and **The Political Capacity of the Working Classes**. His most detailed discussion of what mutualism would look like can be found in his **The General Idea of the Revolution**. His ideas heavily influenced both the French Labour movement and the Paris Commune of 1871.

Proudhon's ideas were built upon by Michael Bakunin, who humbly suggested that his own ideas were simply Proudhon's *"widely developed and pushed right to ... [their] final consequences."* [**Michael Bakunin: Selected Writings**, p. 198] However, he is doing a disservice to his own

role in developing anarchism. For Bakunin is the central figure in the development of modern anarchist activism and ideas. He emphasised the importance of **collectivism,** mass insurrection, **revolution** and involvement in the militant **labour movement** as the means of creating a free, classless society. Moreover, he repudiated Proudhon's sexism and added patriarchy to the list of social evils anarchism opposes. Bakunin also emphasised the social nature of humanity and individuality, rejecting the abstract individualism of liberalism as a denial of freedom. His ideas become dominant in the 20th century among large sections of the radical labour movement. Indeed, many of his ideas are almost identical to what would later be called syndicalism or anarcho-syndicalism. Bakunin influenced many union movements — especially in Spain, where a major anarchist social revolution took place in 1936. His works include **Anarchy and Statism** (his only book), **God and the State**, **The Paris Commune and the Idea of the State**, and many others. **Bakunin on Anarchism**, edited by Sam Dolgoff is an excellent collection of his major writings. Brian Morris' **Bakunin: The Philosophy of Freedom** is an excellent introduction to Bakunin's life and ideas.

Peter Kropotkin, a scientist by training, fashioned a sophisticated and detailed anarchist analysis of modern conditions linked to a thorough-going prescription for a future society — **communist-anarchism** — which continues to be the most widely-held theory among anarchists. He identified **mutual aid** as the best means by which individuals can develop and grow, pointing out that competition **within** humanity (and other species) was often not in the best interests of those involved. Like Bakunin, he stressed the importance of direct, economic, class struggle and anarchist participation in any popular movement, particularly in labour unions. Taking Proudhon's and Bakunin's idea of the **commune,** he generalised their insights into a vision of how the social, economic and personal life of a free society would function. He aimed to base anarchism *"on a scientific basis by the study of the tendencies that are apparent now in society and may indicate its further evolution"* towards anarchy while, at the same time, urging anarchists to *"promote their ideas directly amongst the labour organisations and to induce those union to a direct struggle against capital, without placing their faith in parliamentary legislation."* [**Anarchism**, p. 298 and p. 287] Like Bakunin, he was a revolutionary and, like Bakunin, his ideas inspired those struggle for freedom across the globe. His major works included **Mutual Aid**, **The Conquest of Bread**, **Field, Factories, and Workshops**, **Modern Science and Anarchism**, **Act for Yourselves**, **The State: Its Historic Role**, **Words of a Rebel**, and many others. A collection of his revolutionary pamphlets is available under the title **Anarchism** and is essential reading for anyone interested in his ideas. In Addition, Graham Purchase's **Evolution and Revolution** and **Kropotkin: The Politics of Community** by Brain Morris are both excellent evaluations of his ideas and how they are still relevant today.

The various theories proposed by these "founding anarchists" are not, however, mutually exclusive: they are interconnected in many ways, and to some extent refer to different levels of social life. Individualism relates closely to the conduct of our private lives: only by recognising the uniqueness and freedom of others and forming unions with them can we protect and maximise our own uniqueness and liberty; mutualism relates to our general relations with others: by mutually working together and co-operating we ensure that we do not work for others. Production under anarchism would be collectivist, with people working together for their own, and the common, good, and in the wider political and social world decisions would be reached communally.

It should also be stressed that anarchist schools of thought are **not** named after individual anarchists. Thus anarchists are **not** *"Bakuninists"*, *"Proudhonists"* or *"Kropotkinists"* (to name three possibilities). Anarchists, to quote Malatesta, *"follow ideas and not men, and rebel against this habit of embodying a principle in a man."* This did not stop him calling Bakunin *"our great master and inspiration."* [**Errico Malatesta: Life and Ideas**, p. 199 and p. 209] Equally, not everything written by a famous anarchist thinker is automatically libertarian. Bakunin, for example, only became an anarchist in the last ten years of his life (this does not stop Marxists using his pre-anarchist days to attack anarchism!). Proudhon turned away from anarchism in the 1850s before returning to a more anarchistic (if not strictly anarchist) position just before his death in 1865. Similarly, Kropotkin's or Tucker's arguments in favour of supporting the Allies during the First World War had nothing to do with anarchism. Thus to say, for example, that anarchism is flawed because Proudhon was a sexist pig simply does not convince anarchists. No one would dismiss democracy, for example, because Rousseau opinions on women were just as sexist as Proudhon's. As with anything, modern anarchists analyse the writings of previous anarchists to draw inspiration, but a dogma. Consequently, we reject the non-libertarian ideas of "famous" anarchists while keeping their positive contributions to the development of anarchist theory. We are sorry to belabour the point, but much of Marxist "criticism" of anarchism basically involves pointing out the negative aspects of dead anarchist thinkers and it is best simply to state clearly the obvious stupidity of such an approach.

Anarchist ideas of course did not stop developing when Kropotkin died. Neither are they the products of just four men. Anarchism is by its very nature an evolving theory, with many different thinkers and activists. When Bakunin and Kropotkin were alive, for example, they drew aspects of their ideas from other libertarian activists. Bakunin, for example, built upon the practical activity of the followers of Proudhon in the French labour movement in the 1860s. Kropotkin, while the most associated with developing the theory communist-anarchism, was simply the most famous expounder of the ideas that had developed after Bakunin's death in the libertarian wing of the First International and before he became an anarchist. Thus anarchism is the product of tens of thousands of thinkers and activists across the globe, each shaping and developing anarchist theory to meet their needs as part of the general movement for social change. Of the many other anarchists who could be mentioned here, we can mention but a few.

Stirner is not the only famous anarchist to come from Germany. It also produced a number of original anarchist thinkers. Gustav Landauer was expelled from the Marxist Social-Democratic Party for his radical views and soon after identified himself as an anarchist. For him, anarchy was *"the expression of the liberation of man from the idols of state, the church and capital"* and he fought *"**State** socialism, levelling from above, bureaucracy"* in favour of *"free association and union, the absence of authority."* His ideas were a combination of Proudhon's and Kropotkin's and he saw the development of self-managed communities and co-operatives as the means of changing society. He is most famous for his insight that the *"state is a condition, a certain relationship among human beings, a mode of behaviour between them; we destroy it by contracting other relationships, by behaving differently towards one another."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 410 and p. 411] He took a leading part in the Munich revolution of 1919 and was murdered during its crushing by the German state. His book **For Socialism** is an excellent summary of his main ideas.

Other notable German anarchists include Johann Most, originally a Marxist and an elected member of the Reichstag, he saw the futility of voting and became an anarchist after being exiled

for writing against the Kaiser and clergy. He played an important role in the American anarchist movement, working for a time with Emma Goldman. More a propagandist than a great thinker, his revolutionary message inspired numerous people to become anarchists. Then there is Rudolf Rocker, a bookbinder by trade who played an important role in the Jewish labour movement in the East End of London (see his autobiography, **The London Years**, for details). He also produced the definite introduction to **Anarcho-syndicalism** as well as analysing the Russian Revolution in articles like **Anarchism and Sovietism** and defending the Spanish revolution in pamphlets like **The Tragedy of Spain**. His **Nationalism and Culture** is a searching analysis of human culture through the ages, with an analysis of both political thinkers and power politics. He dissects nationalism and explains how the nation is not the cause but the result of the state as well as repudiating race science for the nonsense it is.

In the United States Emma Goldman and Alexander Berkman were two of the leading anarchist thinkers and activists. Goldman united Stirner's egoism with Kropotkin's communism into a passionate and powerful theory which combined the best of both. She also placed anarchism at the centre of feminist theory and activism as well as being an advocate of syndicalism (see her book **Anarchism and Other Essays** and the collection of essays, articles and talks entitled **Red Emma Speaks**). Alexander Berkman, Emma's lifelong companion, produced a classic introduction to anarchist ideas called **What is Anarchism?** (also known as **What is Communist Anarchism?** and the **ABC of Anarchism**). Like Goldman, he supported anarchist involvement in the labour movement was a prolific writer and speaker (the book **Life of An Anarchist** gives an excellent selection of his best articles, books and pamphlets). Both were involved in editing anarchist journals, with Goldman most associated with **Mother Earth** (see **Anarchy! An Anthology of Emma Goldman's Mother Earth** edited by Peter Glassgold) and Berkman **The Blast** (reprinted in full in 2005). Both journals were closed down when the two anarchists were arrested in 1917 for their anti-war activism.

In December 1919, both he and Goldman were expelled by the US government to Russia after the 1917 revolution had radicalised significant parts of the American population. There as they were considered too dangerous to be allowed to remain in the land of the free. Exactly two years later, their passports arrived to allow them to leave Russia. The Bolshevik slaughter of the Kronstadt revolt in March 1921 after the civil war ended had finally convinced them that the Bolshevik dictatorship meant the death of the revolution there. The Bolshevik rulers were more than happy to see the back of two genuine revolutionaries who stayed true to their principles. Once outside Russia, Berkman wrote numerous articles on the fate of the revolution (including **The Russian Tragedy** and **The Kronstadt Rebellion**) as well as publishing his diary in book from as **The Bolshevik Myth**. Goldman produced her classic work **My Disillusionment in Russia** as well as publishing her famous autobiography **Living My Life**. She also found time to refute Trotsky's lies about the Kronstadt rebellion in **Trotsky Protests Too Much**.

As well as Berkman and Goldman, the United States also produced other notable activists and thinkers. Voltairine de Cleyre played an important role in the US anarchist movement, enriching both US and international anarchist theory with her articles, poems and speeches. Her work includes such classics as **Anarchism and American Traditions**, **Direct Action**, **Sex Slavery** and **The Dominant Idea**. These are included, along with other articles and some of her famous poems, in **The Voltairine de Cleyre Reader**. These and other important essays are included in **Exquisite Rebel**, another anthology of her writings, while Eugenia C. Delamotte's **Gates of Freedom** provides an excellent overview of her life and ideas as well as selections from her works.

In addition, the book **Anarchy! An Anthology of Emma Goldman's Mother Earth** contains a good selection of her writings as well as other anarchists active at the time. Also of interest is the collection of the speeches she made to mark the state murder of the Chicago Martyrs in 1886 (see **the First Mayday: The Haymarket Speeches 1895–1910**). Every November the 11th, except when illness made it impossible, she spoke in their memory. For those interested in the ideas of that previous generation of anarchists which the Chicago Martyrs represented, Albert Parsons' **Anarchism: Its Philosophy and Scientific Basis** is essential reading. His wife, Lucy Parsons, was also an outstanding anarchist activist from the 1870s until her death in 1942 and selections of her writings and speeches can be found in the book **Freedom, Equality & Solidarity** (edited by Gale Ahrens).

Elsewhere in the Americas, Ricardo Flores Magon helped lay the ground for the Mexican revolution of 1910 by founding the (strangely named) **Mexican Liberal Party** in 1905 which organised two unsuccessful uprising against the Diaz dictatorship in 1906 and 1908. Through his paper **Tierra y Libertad** (*"Land and Liberty"*) he influenced the developing labour movement as well as Zapata's peasant army. He continually stressed the need to turn the revolution into a **social** revolution which will *"give the lands to the people"* as well as *"possession of the factories, mines, etc."* Only this would ensure that the people *"will not be deceived."* Talking of the Agrarians (the Zapatista army), Ricardo's brother Enrique he notes that they *"are more or less inclined towards anarchism"* and they can work together because both are *"direct actionists"* and *"they act perfectly revolutionary. They go after the rich, the authorities and the priestcraft"* and have *"burnt to ashes private property deeds as well as all official records"* as well as having *"thrown down the fences that marked private properties."* Thus the anarchists *"propagate our principles"* while the Zapatista's *"put them into practice."* [quoted by David Poole, **Land and Liberty**, p. 17 and p. 25] Ricardo died as a political prisoner in an American jail and is, ironically, considered a hero of the revolution by the Mexican state. A substantial collection of his writings are available in the book **Dreams of Freedom** (which includes an impressive biographical essay which discusses his influence as well as placing his work in historical context).

Italy, with its strong and dynamic anarchist movement, has produced some of the best anarchist writers. Errico Malatesta spent over 50 years fighting for anarchism across the world and his writings are amongst the best in anarchist theory. For those interested in his practical and inspiring ideas then his short pamphlet **Anarchy** cannot be beaten. Collections of his articles can be found in **The Anarchist Revolution** and **Errico Malatesta: His Life and Ideas**, both edited by Vernon Richards. A favourite writing technique was the use of dialogues, such as **At the Cafe: Conversations on Anarchism**. These, using the conversations he had with non-anarchists as their basis, explained anarchist ideas in a clear and down to Earth manner. Another dialogue, **Fra Contadini: A Dialogue on Anarchy**, was translated into many languages, with 100,000 copies printed in Italy in 1920 when the revolution Malatesta had fought for all his life looked likely. At this time Malatesta edited **Umanita Nova** (the first Italian daily anarchist paper, it soon gained a circulation of 50 000) as well as writing the programme for the **Unione Anarchica Italiana**, a national anarchist organisation of some 20 000. For his activities during the factory occupations he was arrested at the age of 67 along with 80 other anarchists activists. Other Italian anarchists of note include Malatesta's friend Luigi Fabbri (sadly little of his work has been translated into English bar **Bourgeois Influences on Anarchism** and **Anarchy and 'Scientific' Communism**) Luigi Galleani produced a very powerful anti-organisational anarchist-communism which proclaimed (in **The End of Anarchism?**) that *"Communism is simply the economic foundation by*

which the individual has the opportunity to regulate himself and carry out his functions." Camillo Berneri, before being murdered by the Communists during the Spanish Revolution, continued the fine tradition of critical, practical anarchism associated with Italian anarchism. His study of Kropotkin's federalist ideas is a classic (**Peter Kropotkin: His Federalist Ideas**). His daughter Marie-Louise Berneri, before her tragic early death, contributed to the British anarchist press (see her **Neither East Nor West: Selected Writings 1939–48** and **Journey Through Utopia**).

In Japan, Hatta Shuzo developed Kropotkin's communist-anarchism in new directions between the world wars. Called "true anarchism," he created an anarchism which was a concrete alternative to the mainly peasant country he and thousands of his comrades were active in. While rejecting certain aspects of syndicalism, they organised workers into unions as well as working with the peasantry for the *"foundation stones on which to build the new society that we long for are none other than the awakening of the tenant farmers"* who *"account for a majority of the population."* Their new society was based on decentralised communes which combined industry and agriculture for, as one of Hatta's comrade's put it, *"the village will cease to be a mere communist agricultural village and become a co-operative society which is a fusion of agriculture and industry."* Hatta rejected the idea that they sought to go back to an ideal past, stating that the anarchists were *"completely opposite to the medievalists. We seek to use machines as means of production and, indeed, hope for the invention of yet more ingenious machines."* [quoted by John Crump, **Hatta Shuzo and Pure Anarchism in Interwar Japan**, p. 122–3, and p. 144]

As far as individualist anarchism goes, the undoubted "pope" was Benjamin Tucker. Tucker, in his **Instead of Book**, used his intellect and wit to attack all who he considered enemies of freedom (mostly capitalists, but also a few social anarchists as well! For example, Tucker excommunicated Kropotkin and the other communist-anarchists from anarchism. Kropotkin did not return the favour). Tucker built on the such notable thinkers as Josiah Warren, Lysander Spooner, Stephen Pearl Andrews and William B. Greene, adapting Proudhon's mutualism to the conditions of pre-capitalist America (see Rudolf Rocker's **Pioneers of American Freedom** for details). Defending the worker, artisan and small-scale farmer from a state intent on building capitalism by means of state intervention, Tucker argued that capitalist exploitation would be abolished by creating a totally free non-capitalist market in which the four state monopolies used to create capitalism would be struck down by means of mutual banking and *"occupancy and use"* land and resource rights. Placing himself firmly in the socialist camp, he recognised (like Proudhon) that all non-labour income was theft and so opposed profit, rent and interest. he translated Proudhon's **What is Property** and **System of Economical Contradictions** as well as Bakunin's **God and the State**. Tucker's compatriot, Joseph Labadie was an active trade unionist as well as contributor to Tucker's paper **Liberty**. His son, Lawrence Labadie carried the individualist-anarchist torch after Tucker's death, believing that *"that freedom in every walk of life is the greatest possible means of elevating the human race to happier conditions."*

Undoubtedly the Russian Leo Tolstoy is the most famous writer associated with religious anarchism and has had the greatest impact in spreading the spiritual and pacifistic ideas associated with that tendency. Influencing such notable people as Gandhi and the ***Catholic Worker Group*** around Dorothy Day, Tolstoy presented a radical interpretation of Christianity which stressed individual responsibility and freedom above the mindless authoritarianism and hierarchy which marks so much of mainstream Christianity. Tolstoy's works, like those of that other radical libertarian Christian William Blake, have inspired many Christians towards a libertarian vision of Jesus' message which has been hidden by the mainstream churches. Thus Christian Anarchism

maintains, along with Tolstoy, that *"Christianity in its true sense puts an end to government"* (see, for example, Tolstoy's **The Kingdom of God is within you** and Peter Marshall's **William Blake: Visionary Anarchist**).

More recently, Noam Chomsky (in such works as **Deterring Democracy**, **Necessary Illusions**, **World Orders, Old and New**, **Rogue States**, **Hegemony or Survival** and many others) and Murray Bookchin (**Post-Scarcity Anarchism**, **The Ecology of Freedom**, **Towards an Ecological Society**, and **Remaking Society**, among others) have kept the social anarchist movement at the front of political theory and analysis. Bookchin's work has placed anarchism at the centre of green thought and has been a constant threat to those wishing to mystify or corrupt the movement to create an ecological society. **The Murray Bookchin Reader** contains a representative selection of his writings. Sadly, a few years before his death Bookchin distanced himself from the anarchism he spent nearly four decades advocating (although he remained a libertarian socialist to the end). Chomsky's well documented critiques of U.S. imperialism and how the media operates are his most famous works, but he has also written extensively about the anarchist tradition and its ideas, most famously in his essays *"Notes on Anarchism"* (in **For Reasons of State**) and his defence of the anarchist social revolution against bourgeois historians in *"Objectivity and Liberal Scholarship"* (in **American Power and the New Mandarins**). These and others of his more explicitly anarchist essays and interviews can be found in the collection **Chomsky on Anarchism**. Other good sources for his anarchist ideas are **Radical Priorities**, **Language and Politics** and the pamphlet **Government in the Future**. Both **Understanding Power** and **The Chomsky Reader** are excellent introductions to his thought.

Britain has also seen an important series of anarchist thinkers. Hebert Read (probably the only anarchist to ever accept a knighthood!) wrote several works on anarchist philosophy and theory (see his **Anarchy and Order** compilation of essays). His anarchism flowered directly from his aesthetic concerns and he was a committed pacifist. As well as giving fresh insight and expression to the tradition themes of anarchism, he contributed regularly to the anarchist press (see the collection of articles **A One-Man Manifesto and other writings from Freedom Press**). Another pacifist anarchist was Alex Comfort. As well as writing the **Joy of Sex**, Comfort was an active pacifist and anarchist. He wrote particularly on pacifism, psychiatry and sexual politics from a libertarian perspective. His most famous anarchist book was **Authority and Delinquency** and a collection of his anarchist pamphlets and articles was published under the title **Writings against Power and Death**.

However, the most famous and influential British anarchist must be Colin Ward. He became an anarchist when stationed in Glasgow during the Second World War and came across the local anarchist group there. Once an anarchist, he has contributed to the anarchist press extensively. As well as being an editor of **Freedom**, he also edited the influential monthly magazine **Anarchy** during the 1960s (a selection of articles picked by Ward can be found in the book **A Decade of Anarchy**). However, his most famous single book is **Anarchy in Action** where he has updated Kropotkin's **Mutual Aid** by uncovering and documenting the anarchistic nature of everyday life even within capitalism. His extensive writing on housing has emphasised the importance of collective self-help and social management of housing against the twin evils of privatisation and nationalisation (see, for example, his books **Talking Houses** and **Housing: An Anarchist Approach**). He has cast an anarchist eye on numerous other issues, including water use (Reflected in Water: A Crisis of Social Responsibility), transport (**Freedom to go: after the motor age**) and the welfare state (**Social Policy: an anarchist response**). His **Anarchism: A Very**

Short Introduction is a good starting point for discovering anarchism and his particular perspective on it while **Talking Anarchy** provides an excellent overview of both his ideas and life. Lastly we must mention both Albert Meltzer and Nicolas Walter, both of whom contributed extensively to the anarchist press as well as writing two well known short introductions to anarchism (**Anarchism: Arguments for and against** and **About Anarchism**, respectively).

We could go on; there are many more writers we could mention. But besides these, there are the thousands of "ordinary" anarchist militants who have never written books but whose common sense and activism have encouraged the spirit of revolt within society and helped build the new world in the shell of the old. As Kropotkin put it, *"anarchism was born **among the people**; and it will continue to be full of life and creative power only as long as it remains a thing of the people."* [**Anarchism**, p. 146]

So we hope that this concentration on anarchist thinkers should not be taken to mean that there is some sort of division between activists and intellectuals in the movement. Far from it. Few anarchists are purely thinkers or activists. They are usually both. Kropotkin, for example, was jailed for his activism, as was Malatesta and Goldman. Makhno, most famous as an active participate in the Russian Revolution, also contributed theoretical articles to the anarchist press during and after it. The same can be said of Louise Michel, whose militant activities during the Paris Commune and in building the anarchist movement in France after it did not preclude her writing articles for the libertarian press. We are simply indicating key anarchists thinkers so that those interested can read about their ideas directly.

A.4.1 Are there any thinkers close to anarchism?

Yes. There are numerous thinkers who are close to anarchism. They come from both the liberal and socialist traditions. While this may be considered surprising, it is not. Anarchism has links with both ideologies. Obviously the individualist anarchists are closest to the liberal tradition while social anarchists are closest to the socialist.

Indeed, as Nicholas Walter put it, *"Anarchism can be seen as a development from either liberalism or socialism, or from both liberalism and socialism. Like liberals, anarchists want freedom; like socialists, anarchists want equality."* However, *"anarchism is not just a mixture of liberalism and socialism ... we differ fundamentally from them."* [**About Anarchism**, p. 29 and p. 31] In this he echoes Rocker's comments in **Anarcho-Syndicalism**. And this can be a useful tool for seeing the links between anarchism and other theories however it must be stressed that anarchism offers an ***anarchist*** critique of both liberalism and socialism and we should not submerge the uniqueness of anarchism into other philosophies.

Section A.4.2 discusses liberal thinkers who are close to anarchism, while section A.4.3 highlights those socialists who are close to anarchism. There are even Marxists who inject libertarian ideas into their politics and these are discussed in section A.4.4. And, of course, there are thinkers who cannot be so easily categorised and will be discussed here.

Economist David Ellerman has produced an impressive body of work arguing for workplace democracy. Explicitly linking his ideas the early British Ricardian socialists and Proudhon, in such works as **The Democratic Worker-Owned Firm** and **Property and Contract in Economics** he has presented both a rights based and labour-property based defence of self-management against capitalism. He argues that *"[t]oday's economic democrats are the*

new abolitionists *trying to abolish the whole institution of renting people in favour of democratic self-management in the workplace"* for his *"critique is not new; it was developed in the Enlightenment doctrine of inalienable rights. It was applied by abolitionists against the voluntary self-enslavement contract and by political democrats against the voluntary contraction defence of non-democratic government."* [**The Democratic Worker-Owned Firm**, p. 210] Anyone, like anarchists, interested in producer co-operatives as alternatives to wage slavery will find his work of immense interest.

Ellerman is not the only person to stress the benefits of co-operation. Alfie Kohn's important work on the benefits of co-operation builds upon Kropotkin's studies of mutual aid and is, consequently, of interest to social anarchists. In **No Contest: the case against competition** and **Punished by Rewards**, Kohn discusses (with extensive empirical evidence) the failings and negative impact of competition on those subject to it. He addresses both economic and social issues in his works and shows that competition is not what it is cracked up to be.

Within feminist theory, Carole Pateman is the most obvious libertarian influenced thinker. Independently of Ellerman, Pateman has produced a powerful argument for self-managed association in both the workplace and society as a whole. Building upon a libertarian analysis of Rousseau's arguments, her analysis of contract theory is ground breaking. If a theme has to be ascribed to Pateman's work it could be freedom and what it means to be free. For her, freedom can only be viewed as self-determination and, consequently, the absence of subordination. Consequently, she has advocated a participatory form of democracy from her first major work, **Participation and Democratic Theory** onwards. In that book, a pioneering study of in participatory democracy, she exposed the limitations of liberal democratic theory, analysed the works of Rousseau, Mill and Cole and presented empirical evidence on the benefits of participation on the individuals involved.

In the **Problem of Political Obligation**, Pateman discusses the "liberal" arguments on freedom and finds them wanting. For the liberal, a person must consent to be ruled by another but this opens up the "problem" that they might not consent and, indeed, may never have consented. Thus the liberal state would lack a justification. She deepens her analysis to question why freedom should be equated to consenting to be ruled and proposed a participatory democratic theory in which people collectively make their own decisions (a self-assumed obligation to your fellow citizens rather to a state). In discussing Kropotkin, she showed her awareness of the social anarchist tradition to which her own theory is obviously related.

Pateman builds on this analysis in her **The Sexual Contract**, where she dissects the sexism of classical liberal and democratic theory. She analyses the weakness of what calls 'contractarian' theory (classical liberalism and right-wing "libertarianism") and shows how it leads not to free associations of self-governing individuals but rather social relationships based on authority, hierarchy and power in which a few rule the many. Her analysis of the state, marriage and wage labour are profoundly libertarian, showing that freedom must mean more than consenting to be ruled. This is the paradox of capitalist liberal, for a person is assumed to be free in order to consent to a contract but once within it they face the reality subordination to another's decisions (see section A.4.2 for further discussion).

Her ideas challenge some of Western culture's core beliefs about individual freedom and her critiques of the major Enlightenment political philosophers are powerful and convincing. Implicit is a critique not just of the conservative and liberal tradition, but of the patriarchy and

hierarchy contained within the Left as well. As well as these works, a collection of her essays is available called **The Disorder of Women**.

Within the so-called "anti-globalisation" movement Naomi Klein shows an awareness of libertarian ideas and her own work has a libertarian thrust to it (we call it "so-called" as its members are internationalists, seeking a globalisation from below not one imposed from above by and for a few). She first came to attention as the author of **No Logo**, which charts the growth of consumer capitalism, exposing the dark reality behind the glossy brands of capitalism and, more importantly, highlighting the resistance to it. No distant academic, she is an active participant in the movement she reports on in **Fences and Windows**, a collection of essays on globalisation, its consequences and the wave of protests against it.

Klein's articles are well written and engaging, covering the reality of modern capitalism, the gap, as she puts it, *"between rich and power but also between rhetoric and reality, between what is said and what is done. Between the promise of globalisation and its real effects."* She shows how we live in a world where the market (i.e. capital) is made "freer" while people suffer increased state power and repression. How an unelected Argentine President labels that country's popular assemblies *"antidemocratic."* How rhetoric about liberty is used as a tool to defend and increase private power (as she reminds us, *"always missing from [the globalisation] discussion is the issue of power. So many of the debates that we have about globalisation theory are actually about power: who holds it, who is exercising it and who is disguising it, pretending it no longer matters"*). [**Fences and Windows**, pp 83–4 and p. 83]

And how people across the world are resisting. As she puts it, *"many [in the movement] are tired of being spoken for and about. They are demanding a more direct form of political participation."* She reports on a movement which she is part of, one which aims for a globalisation from below, one *"founded on principles of transparency, accountability and self-determination, one that frees people instead of liberating capital."* This means being against a *"corporate-driven globalisation . .. that is centralising power and wealth into fewer and fewer hands"* while presenting an alternative which is about *"decentralising power and building community-based decision-making potential — whether through unions, neighbourhoods, farms, villages, anarchist collectives or aboriginal self-government."* All strong anarchist principles and, like anarchists, she wants people to manage their own affairs and chronicles attempts around the world to do just that (many of which, as Klein notes, are anarchists or influenced by anarchist ideas, sometimes knowing, sometimes not). [**Op. Cit.**, p. 77, p. 79 and p. 16]

While not an anarchist, she is aware that real change comes from below, by the self-activity of working class people fighting for a better world. Decentralisation of power is a key idea in the book. As she puts it, the *"goal"* of the social movements she describes is *"not to take power for themselves but to challenge power centralisation on principle"* and so creating *"a new culture of vibrant direct democracy ... one that is fuelled and strengthened by direct participation."* She does not urge the movement to invest itself with new leaders and neither does she (like the Left) think that electing a few leaders to make decisions for us equals "democracy" (*"the goal is not better faraway rules and rulers but close-up democracy on the ground"*). Klein, therefore, gets to the heart of the matter. Real social change is based on empowering the grassroots, *"the desire for self-determination, economic sustainability and participatory democracy."* Given this, Klein has presented libertarian ideas to a wide audience. [**Op. Cit.**, p. xxvi, p. xxvi-xxvii, p. 245 and p. 233]

Other notable libertarian thinkers include Henry D. Thoreau, Albert Camus, Aldous Huxley, Lewis Mumford, Lewis Mumford and Oscar Wilde. Thus there are numerous thinkers who approach anarchist conclusions and who discuss subjects of interest to libertarians. As Kropotkin noted a hundred years ago, these kinds of writers *"are full of ideas which show how closely anarchism is interwoven with the work that is going on in modern thought in the same direction of enfranchisement of man from the bonds of the state as well as from those of capitalism."* [**Anarchism**, p. 300] The only change since then is that more names can be added to the list.

Peter Marshall discusses the ideas of most, but not all, of the non-anarchist libertarians we mention in this and subsequent sections in his book history of anarchism, **Demanding the Impossible**. Clifford Harper's **Anarchy: A Graphic Guide** is also a useful guide for finding out more.

A.4.2 Are there any liberal thinkers close to anarchism?

As noted in the last section, there are thinkers in both the liberal and socialist traditions who approach anarchist theory and ideals. This understandable as anarchism shares certain ideas and ideals with both.

However, as will become clear in sections A.4.3 and A.4.4, anarchism shares most common ground with the socialist tradition it is a part of. This is because classical liberalism is a profoundly elitist tradition. The works of Locke and the tradition he inspired aimed to justify hierarchy, state and private property. As Carole Pateman notes, *"Locke's state of nature, with its father-rulers and capitalist economy, would certainly not find favour with anarchists"* any more than his vision of the social contract and the liberal state it creates. A state, which as Pateman recounts, in which *"only males who own substantial amounts of material property are [the] politically relevant members of society"* and exists *"precisely to preserve the property relationships of the developing capitalist market economy, not to disturb them."* For the majority, the non-propertied, they expressed *"tacit consent"* to be ruled by the few by *"choosing to remain within the one's country of birth when reaching adulthood."* [**The Problem of Political Obligation**, p. 141, p. 71, p. 78 and p. 73]

Thus anarchism is at odds with what can be called the pro-capitalist liberal tradition which, flowing from Locke, builds upon his rationales for hierarchy. As David Ellerman notes, *"there is a whole liberal tradition of apologising for non-democratic government based on consent – on a voluntary social contract alienating governing rights to a sovereign."* In economics, this is reflected in their support for wage labour and the capitalist autocracy it creates for the *"employment contract is the modern limited workplace version"* of such contracts. [**The Democratic Worker-Owned Firm**, p. 210] This pro-capitalist liberalism essentially boils down to the liberty to pick a master or, if you are among the lucky few, to become a master yourself. The idea that freedom means self-determination for all at all times is alien to it. Rather it is based on the idea of "self-ownership," that you "own" yourself and your rights. Consequently, you can sell (alienate) your rights and liberty on the market. As we discuss in section B.4, in practice this means that most people are subject to autocratic rule for most of their waking hours (whether in work or in marriage).

The modern equivalent of classical liberalism is the right-wing "libertarian" tradition associated with Milton Friedman, Robert Nozick, von Hayek and so forth. As they aim to reduce the state to simply the defender to private property and enforcer of the hierarchies that social institution creates, they can by no stretch of the imagination be considered near anarchism. What is

called "liberalism" in, say, the United States is a more democratic liberal tradition and has, like anarchism, little in common with the shrill pro-capitalist defenders of the minimum state. While they may (sometimes) be happy to denounce the state's attacks on individual liberty, they are more than happy to defend the "freedom" of the property owner to impose exactly the same restrictions on those who use their land or capital.

Given that feudalism combined ownership and rulership, that the governance of people living on land was an attribute of the ownership of that land, it would be no exaggeration to say that the right-wing "libertarian" tradition is simply its modern (voluntary) form. It is no more libertarian than the feudal lords who combated the powers of the King in order to protect their power over their own land and serfs. As Chomsky notes, *"the 'libertarian' doctrines that are fashionable in the US and UK particularly ... seem to me to reduce to advocacy of one or another form of illegitimate authority, quite often real tyranny."* [**Marxism, Anarchism, and Alternative Futures**, p. 777] Moreover, as Benjamin Tucker noted with regards their predecessors, while they are happy to attack any state regulation which benefits the many or limits their power, they are silent on the laws (and regulations and "rights") which benefit the few.

However there is another liberal tradition, one which is essentially pre-capitalist which has more in common with the aspirations of anarchism. As Chomsky put it:

> *"These ideas [of anarchism] grow out the Enlightenment; their roots are in Rousseau's* ***Discourse on Inequality****, Humbolt's* ***The Limits of State Action****, Kant's insistence, in his defence of the French Revolution, that freedom is the precondition for acquiring the maturity for freedom, not a gift to be granted when such maturity is achieved .. . With the development of industrial capitalism, a new and unanticipated system of injustice, it is libertarian socialism that has preserved and extended the radical humanist message of the Enlightenment and the classical liberal ideals that were perverted into an ideology to sustain the emerging social order. In fact, on the very same assumptions that led classical liberalism to oppose the intervention of the state in social life, capitalist social relations are also intolerable. This is clear, for example, from the classic work of [Wilhelm von] Humboldt,* ***The Limits of State Action****, which anticipated and perhaps inspired [John Stuart] Mill ... This classic of liberal thought, completed in 1792, is in its essence profoundly, though prematurely, anticapitalist. Its ideas must be attenuated beyond recognition to be transmuted into an ideology of industrial capitalism."* [*"Notes on Anarchism"*, **For Reasons of State**, p. 156]

Chomsky discusses this in more detail in his essay *"Language and Freedom"* (contained in both **Reason of State** and **The Chomsky Reader**). As well as Humbolt and Mill, such "pre-capitalist" liberals would include such radicals as Thomas Paine, who envisioned a society based on artisan and small farmers (i.e. a pre-capitalist economy) with a rough level of social equality and, of course, a minimal government. His ideas inspired working class radicals across the world and, as E.P. Thompson reminds us, Paine's **Rights of Man** was *"a foundation-text of the English [and Scottish] working-class movement."* While his ideas on government are *"close to a theory of anarchism,"* his reform proposals *"set a source towards the social legislation of the twentieth century."* [**The Making of the English Working Class**, p. 99, p. 101 and p. 102] His combination of concern for liberty and social justice places him close to anarchism.

Then there is Adam Smith. While the right (particularly elements of the "libertarian" right) claim him as a classic liberal, his ideas are more complex than that. For example, as Noam

Chomsky points out, Smith advocated the free market because *"it would lead to perfect equality, equality of condition, not just equality of opportunity."* [**Class Warfare**, p. 124] As Smith himself put it, *"in a society where things were left to follow their natural course, where there is perfect liberty"* it would mean that *"advantages would soon return to the level of other employments"* and so *"the different employments of labour and stock must ... be either perfectly equal or continually tending to equality."* Nor did he oppose state intervention or state aid for the working classes. For example, he advocated public education to counter the negative effects of the division of labour. Moreover, he was against state intervention because whenever *"a legislature attempts to regulate differences between masters and their workmen, its counsellors are always the masters. When regulation, therefore, is in favour of the workmen, it is always just and equitable; but it is otherwise when in favour of the masters."* He notes how *"the law"* would *"punish"* workers' combinations *"very severely"* while ignoring the masters' combinations (*"if it dealt impartially, it would treat the masters in the same manner"*). [**The Wealth of Nations**, p. 88 and p. 129] Thus state intervention was to be opposed in general because the state was run by the few for the few, which would make state intervention benefit the few, not the many. It is doubtful Smith would have left his ideas on laissez-faire unchanged if he had lived to see the development of corporate capitalism. It is this critical edge of Smith's work are conveniently ignored by those claiming him for the classical liberal tradition.

Smith, argues Chomsky, was *"a pre-capitalist and anti-capitalist person with roots in the Enlightenment."* Yes, he argues, *"the classical liberals, the [Thomas] Jeffersons and the Smiths, were opposing the concentrations of power that they saw around them ... They didn't see other forms of concentration of power which only developed later. When they did see them, they didn't like them. Jefferson was a good example. He was strongly opposed to the concentrations of power that he saw developing, and warned that the banking institutions and the industrial corporations which were barely coming into existence in his day would destroy the achievements of the Revolution."* [**Op. Cit.**, p. 125]

As Murray Bookchin notes, Jefferson *"is most clearly identified in the early history of the United States with the political demands and interests of the independent farmer-proprietor."* [**The Third Revolution**, vol. 1, pp. 188–9] In other words, with pre-capitalist economic forms. We also find Jefferson contrasting the *"aristocrats"* and the *"democrats."* The former are *"those who fear and distrust the people, and wish to draw all powers from them into the hands of the higher classes."* The democrats *"identify with the people, have confidence in them, cherish and consider them as the honest & safe ... depository of the public interest,"* if not always *"the most wise."* [quoted by Chomsky, **Powers and Prospects**, p. 88] As Chomsky notes, the *"aristocrats"* were *"the advocates of the rising capitalist state, which Jefferson regarded with dismay, recognising the obvious contradiction between democracy and the capitalism."* [**Op. Cit.**, p. 88] Claudio J. Katz's essay on *"Thomas Jefferson's Liberal Anticapitalism"* usefully explores these issues. [**American Journal of Political Science**, vol. 47, No. 1 (Jan, 2003), pp. 1–17]

Jefferson even went so far as to argue that *"a little rebellion now and then is a good thing ... It is a medicine necessary for the sound health of government ... The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants."* [quoted by Howard Zinn, **A People's History of the United States**, p. 94] However, his libertarian credentials are damaged by him being both a President of the United States and a slave owner but compared to the other "founding fathers" of the American state, his liberalism is of a democratic form. As Chomsky reminds us, *"all the Founding Fathers hated democracy — Thomas Jefferson was a partial exception, but only partial."*

The American state, as a classical liberal state, was designed (to quote James Madison) *"to protect the minority of the opulent from the majority."* Or, to repeat John Jay's principle, the *"people who own the country ought to govern it."* [**Understanding Power**, p. 315] If American is a (formally) democracy rather than an oligarchy, it is in spite of rather than because of classical liberalism.

Then there is John Stuart Mill who recognised the fundamental contradiction in classical liberalism. How can an ideology which proclaims itself for individual liberty support institutions which systematically nullify that liberty in practice? For this reason Mill attacked patriarchal marriage, arguing that marriage must be a voluntary association between equals, with *"sympathy in equality ... living together in love, without power on one side or obedience on the other."* Rejecting the idea that there had to be *"an absolute master"* in any association, he pointed out that in *"partnership in business ... it is not found or thought necessary to enact that in every partnership, one partner shall have entire control over the concern, and the others shall be bound to obey his rule."* [*"The Subjection of Women,"* quoted by Susan L. Brown, **The Politics of Individualism**, pp. 45–6]

Yet his own example showed the flaw in liberal support for capitalism, for the employee ***is*** subject to a relationship in which power accrues to one party and obedience to another. Unsurprisingly, therefore, he argued that the *"form of association ... which is mankind continue to improve, must be expected in the end to predominate, is not that which can exist between a capitalist as chief, and workpeople without a voice in management, but the association of the labourers themselves on terms of equality, collectively owning the capital ... and working under managers elected and removable by themselves."* [**The Principles of Political Economy**, p. 147] Autocratic management during working hours is hardly compatible with Mill's maxim that *"[o]ver himself, over his own body and mind, the individual is sovereign."* Mill's opposition to centralised government and wage slavery brought his ideas closer to anarchism than most liberals, as did his comment that the *"social principle of the future"* was *"how to unite the greatest individual liberty of action with a common ownership in the raw materials of the globe, and equal participation of all in the benefits of combined labour."* [quoted by Peter Marshall, **Demanding the Impossible**, p. 164] His defence of individuality, **On Liberty**, is a classic, if flawed, work and his analysis of socialist tendencies (*"Chapters on Socialism"*) is worth reading for its evaluation of their pros and cons from a (democratic) liberal perspective.

Like Proudhon, Mill was a forerunner of modern-day market socialism and a firm supporter of decentralisation and social participation. This, argues Chomsky, is unsurprising for pre-capitalist classical liberal thought *"is opposed to state intervention in social life, as a consequence of deeper assumptions about the human need for liberty, diversity, and free association. On the same assumptions, capitalist relations of production, wage labour, competitiveness, the ideology of 'possessive individualism' — all must be regarded as fundamentally antihuman. Libertarian socialism is properly to be regarded as the inheritor of the liberal ideals of the Enlightenment."* [*"Notes on Anarchism"*, **Op. Cit.**, p. 157]

Thus anarchism shares commonality with pre-capitalist and democratic liberal forms. The hopes of these liberals were shattered with the development of capitalism. To quote Rudolf Rocker's analysis:

> *"Liberalism and Democracy were pre-eminently political concepts, and since the great majority of the original adherents of both maintained the right of ownership in the old sense, these had to renounce them both when economic development took a course which*

could not be practically reconciled with the original principles of Democracy, and still less with those of Liberalism. Democracy, with its motto of 'all citizens equal before the law,' and Liberalism with its 'right of man over his own person,' both shipwrecked on the realities of the capitalist economic form. So long as millions of human beings in every country had to sell their labour-power to a small minority of owners, and to sink into the most wretched misery if they could find no buyers, the so-called 'equality before the law' remains merely a pious fraud, since the laws are made by those who find themselves in possession of the social wealth. But in the same way there can also be no talk of a 'right over one's own person,' for that right ends when one is compelled to submit to the economic dictation of another if he does not want to starve." [**Anarcho-Syndicalism**, p. 10]

A.4.3 Are there any socialist thinkers close to anarchism?

Anarchism developed in response to the development of capitalism and it is in the non-anarchist socialist tradition which anarchism finds most fellow travellers.

The earliest British socialists (the so-called Ricardian Socialists) following in the wake of Robert Owen held ideas which were similar to those of anarchists. For example, Thomas Hodgskin expounded ideas similar to Proudhon's mutualism while William Thompson developed a non-state, communal form of socialism based on *"communities of mutual co-operative"* which had similarities to anarcho-communism (Thompson had been a mutualist before becoming a communist in light of the problems even a non-capitalist market would have). John Francis Bray is also of interest, as is the radical agrarianist Thomas Spence who developed a communal form of land-based socialism which expounded many ideas usually associated with anarchism (see *"The Agrarian Socialism of Thomas Spence"* by Brian Morris in his book **Ecology and Anarchism**). Moreover, the early British trade union movement *"developed, stage by stage, a theory of syndicalism"* 40 years before Bakunin and the libertarian wing of the First International did. [E.P. Thompson, **The Making of the English Working Class**, p. 912] Noel Thompson's **The Real Rights of Man** is a good summary of all these thinkers and movements, as is E.P. Thompson's classic social history of working class life (and politics) of this period, **The Making of the English Working Class**.

Libertarian ideas did not die out in Britain in the 1840s. There was also the quasi-syndicalists of the Guild Socialists of the 1910s and 1920s who advocated a decentralised communal system with workers' control of industry. G.D.H. Cole's **Guild Socialism Restated** is the most famous work of this school, which also included author's S.G. Hobson and A.R. Orage (Geoffrey Osteregaard's **The Tradition of Workers' Control** provides an good summary of the ideas of Guild Socialism). Bertrand Russell, another supporter of Guild Socialism, was attracted to anarchist ideas and wrote an extremely informed and thoughtful discussion of anarchism, syndicalism and Marxism in his classic book **Roads to Freedom**.

While Russell was pessimistic about the possibility of anarchism in the near future, he felt it was *"the ultimate idea to which society should approximate."* As a Guild Socialist, he took it for granted that there could *"be no real freedom or democracy until the men who do the work in a business also control its management."* His vision of a good society is one any anarchist would support: *"a world in which the creative spirit is alive, in which life is an adventure full of joy and*

hope, based upon the impulse to construct than upon the desire to retain what we possess or to seize what is possessed by others. It must be a world in which affection has free play, in which love is purged of the instinct for domination, in which cruelty and envy have been dispelled by happiness and the unfettered development of all the instincts that build up life and fill it with mental delights." [quoted by Noam Chomsky, **Problems of Knowledge and Freedom**, pp. 59–60, p. 61 and p. x] An informed and interesting writer on many subjects, his thought and social activism has influenced many other thinkers, including Noam Chomsky (whose **Problems of Knowledge and Freedom** is a wide ranging discussion on some of the topics Russell addressed).

Another important British libertarian socialist thinker and activist was William Morris. Morris, a friend of Kropotkin, was active in the **Socialist League** and led its anti-parliamentarian wing. While stressing he was not an anarchist, there is little real difference between the ideas of Morris and most anarcho-communists (Morris said he was a communist and saw no need to append "anarchist" to it as, for him, communism was democratic and liberatory). A prominent member of the "Arts and Crafts" movement, Morris argued for humanising work and it was, to quoted the title of one of his most famous essays, as case of **Useful Work vrs Useless Toil**. His utopia novel **News from Nowhere** paints a compelling vision of a libertarian communist society where industrialisation has been replaced with a communal craft-based economy. It is a utopia which has long appealed to most social anarchists. For a discussion of Morris' ideas, placed in the context of his famous utopia, see **William Morris and News from Nowhere: A Vision for Our Time** (Stephen Coleman and Paddy O'Sullivan (eds.))

Also of note is the Greek thinker Cornelius Castoriadis. Originally a Trotskyist, Castoriadis evaluation of Trotsky's deeply flawed analysis of Stalinist Russia as a degenerated workers' state lead him to reject first Leninism and then Marxism itself. This led him to libertarian conclusions, seeing the key issue not who owns the means of production but rather hierarchy. Thus the class struggle was between those with power and those subject to it. This led him to reject Marxist economics as its value analysis abstracted from (i.e. ignored!) the class struggle at the heart of production (Autonomist Marxism rejects this interpretation of Marx, but they are the only Marxists who do). Castoriadis, like social anarchists, saw the future society as one based on radical autonomy, generalised self-management and workers' councils organised from the bottom up. His three volume collected works (**Political and Social Writings**) are essential reading for anyone interested in libertarian socialist politics and a radical critique of Marxism.

Special mention should also be made of Maurice Brinton, who, as well as translating many works by Castoriadis, was a significant libertarian socialist thinker and activist as well. An ex-Trotskyist like Castoriadis, Brinton carved out a political space for a revolutionary libertarian socialism, opposed to the bureaucratic reformism of Labour as well as the police-state "socialism" of Stalinism and the authoritarianism of the Leninism which produced it. He produced numerous key pamphlets which shaped the thinking of a generation of anarchists and other libertarian socialists. These included **Paris: May 1968**, his brilliant eyewitness account of the near-revolution in France, the essential **The Bolsheviks and Workers' Control** in which he exposed Lenin's hostility to workers' self-management, and **The Irrational in Politics**, a re-statement and development of the early work of Wilhelm Reich. These and many more articles have been collected in the book **For Workers' Power: The Selected Writings of Maurice Brinton**, edited by David Goodway.

The American radical historian Howard Zinn has sometimes called himself an anarchist and is well informed about the anarchist tradition (he wrote an excellent introductory essay on *"An-*

archism" for a US edition of a Herbert Read book) . As well as his classic **A People's History of the United States**, his writings of civil disobedience and non-violent direct action are essential. An excellent collection of essays by this libertarian socialist scholar has been produced under the title **The Zinn Reader**. Another notable libertarian socialists close to anarchism are Edward Carpenter (see, for example, Sheila Rowbotham's **Edward Carpenter: Prophet of the New Life**) and Simone Weil (**Oppression and Liberty**)

It would also be worthwhile to mention those market socialists who, like anarchists, base their socialism on workers' self-management. Rejecting central planning, they have turned back to the ideas of industrial democracy and market socialism advocated by the likes of Proudhon (although, coming from a Marxist background, they generally fail to mention the link which their central-planning foes stress). Allan Engler (in **Apostles of Greed**) and David Schweickart (in **Against Capitalism** and **After Capitalism**) have provided useful critiques of capitalism and presented a vision of socialism rooted in co-operatively organised workplaces. While retaining an element of government and state in their political ideas, these socialists have placed economic self-management at the heart of their economic vision and, consequently, are closer to anarchism than most socialists.

A.4.4 Are there any Marxist thinkers close to anarchism?

None of the libertarian socialists we highlighted in the last section were Marxists. This is unsurprising as most forms of Marxism are authoritarian. However, this is not the case for all schools of Marxism. There are important sub-branches of Marxism which shares the anarchist vision of a self-managed society. These include Council Communism, Situationism and Autonomism. Perhaps significantly, these few Marxist tendencies which are closest to anarchism are, like the branches of anarchism itself, not named after individuals. We will discuss each in turn.

Council Communism was born in the German Revolution of 1919 when Marxists inspired by the example of the Russian soviets and disgusted by the centralism, opportunism and betrayal of the mainstream Marxist social-democrats, drew similar anti-parliamentarian, direct actionist and decentralised conclusions to those held by anarchists since Bakunin. Like Marx's libertarian opponent in the First International, they argued that a federation of workers' councils would form the basis of a socialist society and, consequently, saw the need to build militant workplace organisations to promote their formation. Lenin attacked these movements and their advocates in his diatribe **Left-wing Communism: An Infantile Disorder**, which council communist Herman Gorter demolished in his **An Open Letter to Comrade Lenin**. By 1921, the council communists broke with the Bolshevism that had already effectively expelled them from both the national Communist Parties and the Communist International.

Like the anarchists, they argued that Russia was a state-capitalist party dictatorship and had nothing to be with socialism. And, again like anarchists, the council communists argue that the process of building a new society, like the revolution itself, is either the work of the people themselves or doomed from the start. As with the anarchists, they too saw the Bolshevik take-over of the soviets (like that of the trade unions) as subverting the revolution and beginning the restoration of oppression and exploitation.

To discover more about council communism, the works of Paul Mattick are essential reading. While best known as a writer on Marxist economic theory in such works as **Marx and**

Keynes, **Economic Crisis and Crisis Theory** and **Economics, Politics and the Age of Inflation**, Mattick had been a council communist since the German revolution of 1919/1920. His books **Anti-Bolshevik Communism** and **Marxism: The Last Refuge of the Bourgeoisie?** are excellent introductions to his political ideas. Also essential reading is Anton Pannekeok's works. His classic **Workers' Councils** explains council communism from first principles while his **Lenin as Philosopher** dissects Lenin's claims to being a Marxist (Serge Bricianer, **Pannekoek and the Workers' Councils** is the best study of the development of Panekoek's ideas). In the UK, the militant suffragette Sylvia Pankhurst became a council communist under the impact of the Russian Revolution and, along with anarchists like Guy Aldred, led the opposition to the importation of Leninism into the communist movement there (see Mark Shipway's **Anti-Parliamentary Communism: The Movement for Workers Councils in Britain, 1917–45** for more details of libertarian communism in the UK). Otto Ruhle and Karl Korsch are also important thinkers in this tradition.

Building upon the ideas of council communism, the Situationists developed their ideas in important new directions. Working in the late 1950s and 1960s, they combined council communist ideas with surrealism and other forms of radical art to produce an impressive critique of post-war capitalism. Unlike Castoriadis, whose ideas influenced them, the Situationists continued to view themselves as Marxists, developing Marx's critique of capitalist economy into a critique of capitalist society as alienation had shifted from being located in capitalist production into everyday life. They coined the expression ***"The Spectacle"*** to describe a social system in which people become alienated from their own lives and played the role of an audience, of spectators. Thus capitalism had turned being into having and now, with the spectacle, it turned having into appearing. They argued that we could not wait for a distant revolution, but rather should liberate ourselves in the here and now, creating events (*"situations"*) which would disrupt the ordinary and normal to jolt people out of their allotted roles within society. A social revolution based on sovereign rank and file assemblies and self-managed councils would be the ultimate "situation" and the aim of all Situationists.

While critical of anarchism, the differences between the two theories are relatively minor and the impact of the Situationists on anarchism cannot be underestimated. Many anarchists embraced their critique of modern capitalist society, their subversion of modern art and culture for revolutionary purposes and call for revolutionising everyday life. Ironically, while Situationism viewed itself as an attempt to transcend tradition forms of Marxism and anarchism, it essentially became subsumed by anarchism. The classic works of situationism are Guy Debord's **Society of the Spectacle** and Raoul Veneigem's **The Revolution of Everyday Life**. The **Situationist International Anthology** (edited by Ken Knabb) is essential reading for any budding Situationists, as is Knabb's own **Public Secrets**.

Lastly there is Autonomist Marxism. Drawing on the works of the council communism, Castoriadis, situationism and others, it places the class struggle at the heart of its analysis of capitalism. It initially developed in Italy during the 1960s and has many currents, some closer to anarchism than others. While the most famous thinker in the Autonomist tradition is probably Antonio Negri (who coined the wonderful phrase *"money has only one face, that of the boss"* in **Marx Beyond Marx**) his ideas are more within traditional Marxist. For an Autonomist whose ideas are closer to anarchism, we need to turn to the US thinker and activist who has written the one of the best summaries of Kropotkin's ideas in which he usefully indicates the similarities between anarcho-communism and Autonomist Marxism (*"Kropotkin, Self-valorisation and the Crisis of Marxism,"*

Anarchist Studies, vol. 2, no. 3). His book **Reading Capital Politically** is an essential text for understanding Autonomism and its history.

For Cleaver, *"autonomist Marxism"* as generic name for a variety of movements, politics and thinkers who have emphasised the autonomous power of workers — autonomous from capital, obviously, but also from their official organisations (e.g. the trade unions, the political parties) and, moreover, the power of particular groups of working class people to act autonomously from other groups (e.g. women from men). By *"autonomy"* it is meant the ability of working class people to define their own interests and to struggle for them and, critically, to go beyond mere reaction to exploitation and to take the offensive in ways that shape the class struggle and define the future. Thus they place working class power at the centre of their thinking about capitalism, how it develops and its dynamics as well as in the class conflicts within it. This is not limited to just the workplace and just as workers resist the imposition of work inside the factory or office, via slowdowns, strikes and sabotage, so too do the non-waged resist the reduction of their lives to work. For Autonomists, the creation of communism is not something that comes later but is something which is repeatedly created by current developments of new forms of working class self-activity.

The similarities with social anarchism are obvious. Which probably explains why Autonomists spend so much time analysing and quoting Marx to justify their ideas for otherwise other Marxists will follow Lenin's lead on the council communists and label them anarchists and ignore them! For anarchists, all this Marx quoting seems amusing. Ultimately, if Marx really was an Autonomist Marxist then why do Autonomists have to spend so much time re-constructing what Marx "really" meant? Why did he not just say it clearly to begin with? Similarly, why root out (sometimes obscure) quotes and (sometimes passing) comments from Marx to justify your insights? Does something stop being true if Marx did not mention it first? Whatever the insights of Autonomism its Marxism will drag it backwards by rooting its politics in the texts of two long dead Germans. Like the surreal debate between Trotsky and Stalin in the 1920s over *"Socialism in One Country"* conducted by means of Lenin quotes, all that will be proved is not whether a given idea is right but simply that the mutually agreed authority figure (Lenin or Marx) may have held it. Thus anarchists suggest that Autonomists practice some autonomy when it comes to Marx and Engels.

Other libertarian Marxists close to anarchism include Erich Fromm and Wilhelm Reich. Both tried to combine Marx with Freud to produce a radical analysis of capitalism and the personality disorders it causes. Erich Fromm, in such books as **The Fear of Freedom**, **Man for Himself**, **The Sane Society** and **To Have or To Be?** developed a powerful and insightful analysis of capitalism which discussed how it shaped the individual and built psychological barriers to freedom and authentic living. His works discuss many important topics, including ethics, the authoritarian personality (what causes it and how to change it), alienation, freedom, individualism and what a good society would be like.

Fromm's analysis of capitalism and the *"having"* mode of life are incredibly insightful, especially in context with today's consumerism. For Fromm, the way we live, work and organise together influence how we develop, our health (mental and physical), our happiness more than we suspect. He questions the sanity of a society which covets property over humanity and adheres to theories of submission and domination rather than self-determination and self-actualisation. His scathing indictment of modern capitalism shows that it is the main source of the isolation and alienation prevalent in today. Alienation, for Fromm, is at the heart of the system (whether

private or state capitalism). We are happy to the extent that we realise ourselves and for this to occur our society must value the human over the inanimate (property).

Fromm rooted his ideas in a humanistic interpretation of Marx, rejecting Leninism and Stalinism as an authoritarian corruption of his ideas (*"the destruction of socialism ... began with Lenin."*). Moreover, he stressed the need for a decentralised and libertarian form of socialism, arguing that the anarchists had been right to question Marx's preferences for states and centralisation. As he put it, the *"errors of Marx and Engels ... [and] their centralistic orientation, were due to the fact they were much more rooted in the middle-class tradition of the eighteenth and nineteenth centuries, both psychologically and intellectually, than men like Fourier, Owen, Proudhon and Kropotkin."* As the *"contradiction"* in Marx between *"the principles of centralisation and decentralisation,"* for Fromm *"Marx and Engels were much more 'bourgeois' thinkers than were men like Proudhon, Bakunin, Kropotkin and Landauer. Paradoxical as it sounds, the Leninist development of Socialism represented a regression to the bourgeois concepts of the state and of political power, rather than the new socialist concept as it was expressed so much clearer by Owen, Proudhon and others."* [**The Sane Society**, p. 265, p. 267 and p. 259] Fromm's Marxism, therefore, was fundamentally of a libertarian and humanist type and his insights of profound importance for anyone interested in changing society for the better.

Wilheim Reich, like Fromm, set out to elaborate a social psychology based on both Marxism and psychoanalysis. For Reich, sexual repression led to people amenable to authoritarianism and happy to subject themselves to authoritarian regimes. While he famously analysed Nazism in this way (in **The Mass Psychology of Fascism**, his insights also apply to other societies and movements (it is no co-incidence, for example, that the religious right in America oppose pre-martial sex and use scare tactics to get teenagers to associate it with disease, dirt and guilt).

His argument is that due to sexual repression we develop what he called *"character armour"* which internalises our oppressions and ensures that we can function in a hierarchical society. This social conditioning is produced by the patriarchal family and its net results is a powerful reinforcement and perpetuation of the dominant ideology and the mass production of individuals with obedience built into them, individuals ready to accept the authority of teacher, priest, employer and politician as well as to endorse the prevailing social structure. This explains how individuals and groups can support movements and institutions which exploit or oppress them. In other words, act think, feel and act against themselves and, moreover, can internalise their own oppression to such a degree that they may even seek to defend their subordinate position.

Thus, for Reich, sexual repression produces an individual who is adjusted to the authoritarian order and who will submit to it in spite of all misery and degradation it causes them. The net result is fear of freedom, and a conservative, reactionary mentality. Sexual repression aids political power, not only through the process which makes the mass individual passive and unpolitical, but also by creating in their character structure an interest in actively supporting the authoritarian order.

While his uni-dimensional focus on sex is misplaced, his analysis of how we internalise our oppression in order to survive under hierarchy is important for understanding why so many of the most oppressed people seem to love their social position and those who rule over them. By understanding this collective character structure and how it forms also provides humanity with new means of transcending such obstacles to social change. Only an awareness of how people's character structure prevents them from becoming aware of their real interests can it be combated and social self-emancipation assured.

Maurice Brinton's **The Irrational in Politics** is an excellent short introduction to Reich's ideas which links their insights to libertarian socialism.

A.5 What are some examples of "Anarchy in Action"?

Anarchism, more than anything else, is about the efforts of millions of revolutionaries changing the world in the last two centuries. Here we will discuss some of the high points of this movement, all of them of a profoundly anti-capitalist nature.

Anarchism **is** about radically changing the world, not just making the present system less inhuman by encouraging the anarchistic tendencies within it to grow and develop. While no purely anarchist revolution has taken place yet, there have been numerous ones with a highly anarchist character and level of participation. And while these have **all** been destroyed, in each case it has been at the hands of outside force brought against them (backed either by Communists or Capitalists), not because of any internal problems in anarchism itself. These revolutions, despite their failure to survive in the face of overwhelming force, have been both an inspiration for anarchists and proof that anarchism is a viable social theory and can be practised on a large scale.

What these revolutions share is the fact they are, to use Proudhon's term, a ***"revolution from below"*** — they were examples of *"collective activity, of popular spontaneity."* It is only a transformation of society from the bottom up by the action of the oppressed themselves that can create a free society. As Proudhon asked, *"[w]hat serious and lasting Revolution was not made **from below,** by the people?"* For this reason an anarchist is a *"revolutionary **from below.**"* Thus the social revolutions and mass movements we discuss in this section are examples of popular self-activity and self-liberation (as Proudhon put it in 1848, *"the proletariat must emancipate itself"*). [quoted by George Woodcock, **Pierre-Joseph Proudhon: A Biography**, p. 143 and p. 125] All anarchists echo Proudhon's idea of revolutionary change from below, the creation of a new society by the actions of the oppressed themselves. Bakunin, for example, argued that anarchists are *"foes ... of all State organisations as such, and believe that the people can only be happy and free, when, organised from below by means of its own autonomous and completely free associations, without the supervision of any guardians, it will create its own life."* [**Marxism, Freedom and the State**, p. 63] In section J.7 we discuss what anarchists think a social revolution is and what it involves.

Many of these revolutions and revolutionary movements are relatively unknown to non-anarchists. Most people will have heard of the Russian revolution but few will know of the popular movements which were its life-blood before the Bolsheviks seized power or the role that the anarchists played in it. Few will have heard of the Paris Commune, the Italian factory occupations or the Spanish collectives. This is unsurprising for, as Hebert Read notes, history *"is of two kinds — a record of events that take place publicly, that make the headlines in the newspapers and get embodied in official records — we might call this overground history"* but *"taking place at the same time, preparing for these public events, anticipating them, is another kind of history, that is not embodied in official records, an invisible underground history."* [quoted by William R.

McKercher, **Freedom and Authority**, p. 155] Almost by definition, popular movements and revolts are part of *"underground history"*, the social history which gets ignored in favour of elite history, the accounts of the kings, queens, politicians and wealthy whose fame is the product of the crushing of the many.

This means our examples of "anarchy in action" are part of what the Russian anarchist Voline called *"The Unknown Revolution."* Voline used that expression as the title of his classic account of the Russian revolution he was an active participant of. He used it to refer to the rarely acknowledged independent, creative actions of the people themselves. As Voline put it, *"it is not known how to study a revolution"* and most historians *"mistrust and ignore those developments which occur silently in the depths of the revolution ... at best, they accord them a few words in passing ... [Yet] it is precisely these hidden facts which are important, and which throw a true light on the events under consideration and on the period."* [**The Unknown Revolution**, p. 19] Anarchism, based as it is on revolution from below, has contributed considerably to both the ***"underground history"*** and the ***"unknown revolution"*** of the past few centuries and this section of the FAQ will shed some light on its achievements.

It is important to point out that these examples are of wide-scale social experiments and do not imply that we ignore the undercurrent of anarchist practice which exists in everyday life, even under capitalism. Both Peter Kropotkin (in **Mutual Aid**) and Colin Ward (in **Anarchy in Action**) have documented the many ways in which ordinary people, usually unaware of anarchism, have worked together as equals to meet their common interests. As Colin Ward argues, *"an anarchist society, a society which organises itself without authority, is always in existence, like a seed beneath the snow, buried under the weight of the state and its bureaucracy, capitalism and its waste, privilege and its injustices, nationalism and its suicidal loyalties, religious differences and their superstitious separatism."* [**Anarchy in Action**, p. 14]

Anarchism is not only about a future society, it is also about the social struggle happening today. It is not a condition but a process, which we create by our self-activity and self-liberation.

By the 1960's, however, many commentators were writing off the anarchist movement as a thing of the past. Not only had fascism finished off European anarchist movements in the years before and during the war, but in the post-war period these movements were prevented from recovering by the capitalist West on one hand and the Leninist East on the other. Over the same period of time, anarchism had been repressed in the US, Latin America, China, Korea (where a social revolution with anarchist content was put down before the Korean War), and Japan. Even in the one or two countries that escaped the worst of the repression, the combination of the Cold War and international isolation saw libertarian unions like the Swedish SAC become reformist.

But the 60's were a decade of new struggle, and all over the world the 'New Left' looked to anarchism as well as elsewhere for its ideas. Many of the prominent figures of the massive explosion of May 1968 in France considered themselves anarchists. Although these movements themselves degenerated, those coming out of them kept the idea alive and began to construct new movements. The death of Franco in 1975 saw a massive rebirth of anarchism in Spain, with up to 500,000 people attending the CNT's first post-Franco rally. The return to a limited democracy in some South American countries in the late 70's and 80's saw a growth in anarchism there. Finally, in the late 80's it was anarchists who struck the first blows against the Leninist USSR, with the first protest march since 1928 being held in Moscow by anarchists in 1987.

Today the anarchist movement, although still weak, organises tens of thousands of revolutionaries in many countries. Spain, Sweden and Italy all have libertarian union movements or-

ganising some 250,000 between them. Most other European countries have several thousand active anarchists. Anarchist groups have appeared for the first time in other countries, including Nigeria and Turkey. In South America the movement has recovered massively. A contact sheet circulated by the Venezuelan anarchist group **Corrio A** lists over 100 organisations in just about every country.

Perhaps the recovery is slowest in North America, but there, too, all the libertarian organisations seem to be undergoing significant growth. As this growth accelerates, many more examples of anarchy in action will be created and more and more people will take part in anarchist organisations and activities, making this part of the FAQ less and less important.

However, it is essential to highlight mass examples of anarchism working on a large scale in order to avoid the specious accusation of "utopianism." As history is written by the winners, these examples of anarchy in action are often hidden from view in obscure books. Rarely are they mentioned in the schools and universities (or if mentioned, they are distorted). Needless to say, the few examples we give are just that, a few.

Anarchism has a long history in many countries, and we cannot attempt to document every example, just those we consider to be important. We are also sorry if the examples seem Eurocentric. We have, due to space and time considerations, had to ignore the syndicalist revolt (1910 to 1914) and the shop steward movement (1917–21) in Britain, Germany (1919–21), Portugal (1974), the Mexican revolution, anarchists in the Cuban revolution, the struggle in Korea against Japanese (then US and Russian) imperialism during and after the Second World War, Hungary (1956), the "the refusal of work" revolt in the late 1960's (particularly in "the hot Autumn" in Italy, 1969), the UK miner's strike (1984–85), the struggle against the Poll Tax in Britain (1988–92), the strikes in France in 1986 and 1995, the Italian COBAS movement in the 80's and 90's, the popular assemblies and self-managed occupied workplaces during the Argentine revolt at the start of the 21st century and numerous other major struggles that have involved anarchist ideas of self-management (ideas that usually develop from the movement themselves, without anarchists necessarily playing a major, or "leading", role).

For anarchists, revolutions and mass struggles are ***"festivals of the oppressed,"*** when ordinary people start to act for themselves and change both themselves and the world.

A.5.1 The Paris Commune

The Paris Commune of 1871 played an important role in the development of both anarchist ideas and the movement. As Bakunin commented at the time,

> *"revolutionary socialism [i.e. anarchism] has just attempted its first striking and practical demonstration in the Paris Commune ... [It] show[ed] to all enslaved peoples (and are there any masses that are not slaves?) the only road to emancipation and health; Paris inflict[ed] a mortal blow upon the political traditions of bourgeois radicalism and [gave] a real basis to revolutionary socialism."* [**Bakunin on Anarchism**, pp. 263–4]

The Paris Commune was created after France was defeated by Prussia in the Franco-Prussian war. The French government tried to send in troops to regain the Parisian National Guard's cannon to prevent it from falling into the hands of the population. *"Learning that the Versailles soldiers were trying to seize the cannon,"* recounted participant Louise Michel, *"men and women*

of Montmartre swarmed up the Butte in surprise manoeuvre. Those people who were climbing up the Butte believed they would die, but they were prepared to pay the price." The soldiers refused to fire on the jeering crowd and turned their weapons on their officers. This was March 18th; the Commune had begun and *"the people wakened ... The eighteenth of March could have belonged to the allies of kings, or to foreigners, or to the people. It was the people's."* [**Red Virgin: Memoirs of Louise Michel**, p. 64]

In the free elections called by the Parisian National Guard, the citizens of Paris elected a council made up of a majority of Jacobins and Republicans and a minority of socialists (mostly Blanquists — authoritarian socialists — and followers of the anarchist Proudhon). This council proclaimed Paris autonomous and desired to recreate France as a confederation of communes (i.e. communities). Within the Commune, the elected council people were recallable and paid an average wage. In addition, they had to report back to the people who had elected them and were subject to recall by electors if they did not carry out their mandates.

Why this development caught the imagination of anarchists is clear — it has strong similarities with anarchist ideas. In fact, the example of the Paris Commune was in many ways similar to how Bakunin had predicted that a revolution would have to occur — a major city declaring itself autonomous, organising itself, leading by example, and urging the rest of the planet to follow it. (See *"Letter to Albert Richards"* in **Bakunin on Anarchism**). The Paris Commune began the process of creating a new society, one organised from the bottom up. It was *"a blow for the decentralisation of political power."* [Voltairine de Cleyre, *"The Paris Commune,"* **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 67]

Many anarchists played a role within the Commune — for example Louise Michel, the Reclus brothers, and Eugene Varlin (the latter murdered in the repression afterwards). As for the reforms initiated by the Commune, such as the re-opening of workplaces as co-operatives, anarchists can see their ideas of associated labour beginning to be realised. By May, 43 workplaces were co-operatively run and the Louvre Museum was a munitions factory run by a workers' council. Echoing Proudhon, a meeting of the Mechanics Union and the Association of Metal Workers argued that *"our economic emancipation ... can only be obtained through the formation of workers' associations, which alone can transform our position from that of wage earners to that of associates."* They instructed their delegates to the Commune's Commission on Labour Organisation to support the following objectives:

> *"The abolition of the exploitation of man by man, the last vestige of slavery;*
>
> *"The organisation of labour in mutual associations and inalienable capital."*

In this way, they hoped to ensure that *"equality must not be an empty word"* in the Commune. [**The Paris Commune of 1871: The View from the Left**, Eugene Schulkind (ed.), p. 164] The Engineers Union voted at a meeting on 23rd of April that since the aim of the Commune should be *"economic emancipation"* it should *"organise labour through associations in which there would be joint responsibility"* in order *"to suppress the exploitation of man by man."* [quoted by Stewart Edwards, **The Paris Commune 1871**, pp. 263–4]

As well as self-managed workers' associations, the Communards practised direct democracy in a network popular clubs, popular organisations similar to the directly democratic neighbourhood assemblies (*"sections"*) of the French Revolution. *"People, govern yourselves through your public meetings, through your press"* proclaimed the newspaper of one Club. The commune was

seen as an expression of the assembled people, for (to quote another Club) *"Communal power resides in each arrondissement [neighbourhood] wherever men are assembled who have a horror of the yoke and of servitude."* Little wonder that Gustave Courbet, artist friend and follower of Proudhon, proclaimed Paris as *"a true paradise ... all social groups have established themselves as federations and are masters of their own fate."* [quoted by Martin Phillip Johnson, **The Paradise of Association**, p. 5 and p. 6]

In addition the Commune's *"Declaration to the French People"* which echoed many key anarchist ideas. It saw the *"political unity"* of society as being based on *"the voluntary association of all local initiatives, the free and spontaneous concourse of all individual energies for the common aim, the well-being, the liberty and the security of all."* [quoted by Edwards, **Op. Cit.**, p. 218] The new society envisioned by the communards was one based on the *"absolute autonomy of the Commune ... assuring to each its integral rights and to each Frenchman the full exercise of his aptitudes, as a man, a citizen and a labourer. The autonomy of the Commune will have for its limits only the equal autonomy of all other communes adhering to the contract; their association must ensure the liberty of France."* [*"Declaration to the French People"*, quoted by George Woodcock, **Pierre-Joseph Proudhon: A Biography**, pp. 276–7] With its vision of a confederation of communes, Bakunin was correct to assert that the Paris Commune was *"a bold, clearly formulated negation of the State."* [**Bakunin on Anarchism**, p. 264]

Moreover, the Commune's ideas on federation obviously reflected the influence of Proudhon on French radical ideas. Indeed, the Commune's vision of a communal France based on a federation of delegates bound by imperative mandates issued by their electors and subject to recall at any moment echoes Proudhon's ideas (Proudhon had argued in favour of the *"implementation of the binding mandate"* in 1848 [**No Gods, No Masters**, p. 63] and for federation of communes in his work **The Principle of Federation**).

Thus both economically and politically the Paris Commune was heavily influenced by anarchist ideas. Economically, the theory of associated production expounded by Proudhon and Bakunin became consciously revolutionary practice. Politically, in the Commune's call for federalism and autonomy, anarchists see their *"future social organisation... [being] carried out from the bottom up, by the free association or federation of workers, starting with associations, then going into the communes, the regions, the nations, and, finally, culminating in a great international and universal federation."* [Bakunin, **Op. Cit.**, p. 270]

However, for anarchists the Commune did not go far enough. It did not abolish the state within the Commune, as it had abolished it beyond it. The Communards organised themselves *"in a Jacobin manner"* (to use Bakunin's cutting term). As Peter Kropotkin pointed out, while *"proclaiming the free Commune, the people of Paris proclaimed an essential anarchist principle ... they stopped mid-course"* and gave *"themselves a Communal Council copied from the old municipal councils."* Thus the Paris Commune did not *"break with the tradition of the State, of representative government, and it did not attempt to achieve within the Commune that organisation from the simple to the complex it inaugurated by proclaiming the independence and free federation of the Communes."* This lead to disaster as the Commune council became *"immobilised ... by red tape"* and lost *"the sensitivity that comes from continued contact with the masses ... Paralysed by their distancing from the revolutionary centre — the people — they themselves paralysed the popular initiative."* [**Words of a Rebel**, p. 97, p. 93 and p. 97]

In addition, its attempts at economic reform did not go far enough, making no attempt to turn all workplaces into co-operatives (i.e. to expropriate capital) and forming associations of these co-

operatives to co-ordinate and support each other's economic activities. Paris, stressed Voltairine de Cleyre, *"failed to strike at economic tyranny, and so came of what it could have achieved"* which was a *"free community whose economic affairs shall be arranged by the groups of actual producers and distributors, eliminating the useless and harmful element now in possession of the world's capital."* [**Op. Cit.**, p. 67] As the city was under constant siege by the French army, it is understandable that the Communards had other things on their minds. However, for Kropotkin such a position was a disaster:

> *"They treated the economic question as a secondary one, which would be attended to later on, **after** the triumph of the Commune ... But the crushing defeat which soon followed, and the blood-thirsty revenge taken by the middle class, proved once more that the triumph of a popular Commune was materially impossible without a parallel triumph of the people in the economic field."* [**Op. Cit.**, p. 74]

Anarchists drew the obvious conclusions, arguing that *"if no central government was needed to rule the independent Communes, if the national Government is thrown overboard and national unity is obtained by free federation, then a central **municipal** Government becomes equally useless and noxious. The same federative principle would do within the Commune."* [Kropotkin, **Evolution and Environment**, p. 75] Instead of abolishing the state within the commune by organising federations of directly democratic mass assemblies, like the Parisian "sections" of the revolution of 1789–93 (see Kropotkin's **Great French Revolution** for more on these), the Paris Commune kept representative government and suffered for it. *"Instead of acting for themselves ... the people, confiding in their governors, entrusted them the charge of taking the initiative. This was the first consequence of the inevitable result of elections."* The council soon became *"the greatest obstacle to the revolution"* thus proving the *"political axiom that a government cannot be revolutionary."* [**Anarchism**, p. 240, p. 241 and p. 249]

The council become more and more isolated from the people who elected it, and thus more and more irrelevant. And as its irrelevance grew, so did its authoritarian tendencies, with the Jacobin majority creating a *"Committee of Public Safety"* to *"defend"* (by terror) the "revolution." The Committee was opposed by the libertarian socialist minority and was, fortunately, ignored in practice by the people of Paris as they defended their freedom against the French army, which was attacking them in the name of capitalist civilisation and "liberty." On May 21st, government troops entered the city, followed by seven days of bitter street fighting. Squads of soldiers and armed members of the bourgeoisie roamed the streets, killing and maiming at will. Over 25,000 people were killed in the street fighting, many murdered after they had surrendered, and their bodies dumped in mass graves. As a final insult, **Sacré Coeur** was built by the bourgeoisie on the birth place of the Commune, the Butte of Montmartre, to atone for the radical and atheist revolt which had so terrified them.

For anarchists, the lessons of the Paris Commune were threefold. Firstly, a decentralised confederation of communities is the necessary political form of a free society (*"**This was the form that the social revolution must take** — the independent commune."* [Kropotkin, **Op. Cit.**, p. 163]). Secondly, *"there is no more reason for a government inside a Commune than for government above the Commune."* This means that an anarchist community will be based on a confederation of neighbourhood and workplace assemblies freely co-operating together. Thirdly, it is critically important to unify political and economic revolutions into a **social** revolution. *"They*

tried to consolidate the Commune first and put off the social revolution until later, whereas the only way to proceed was ***to consolidate the Commune by means of the social revolution!****"* [Peter Kropotkin, **Words of a Rebel** , p. 97]

For more anarchist perspectives on the Paris Commune see Kropotkin's essay *"The Paris Commune"* in **Words of a Rebel** (and **The Anarchist Reader**) and Bakunin's *"The Paris Commune and the Idea of the State"* in **Bakunin on Anarchism**.

A.5.2 The Haymarket Martyrs

May 1st is a day of special significance for the labour movement. While it has been hijacked in the past by the Stalinist bureaucracy in the Soviet Union and elsewhere, the labour movement festival of May Day is a day of world-wide solidarity. A time to remember past struggles and demonstrate our hope for a better future. A day to remember that an injury to one is an injury to all.

The history of Mayday is closely linked with the anarchist movement and the struggles of working people for a better world. Indeed, it originated with the execution of four anarchists in Chicago in 1886 for organising workers in the fight for the eight-hour day. Thus May Day is a product of ***"anarchy in action"*** — of the struggle of working people using direct action in labour unions to change the world.

It began in the 1880s in the USA. In 1884, the **Federation of Organised Trades and Labor Unions of the United States and Canada** (created in 1881, it changed its name in 1886 to the **American Federation of Labor**) passed a resolution which asserted that *"eight hours shall constitute a legal day's work from and after May 1, 1886, and that we recommend to labour organisations throughout this district that they so direct their laws as to conform to this resolution."* A call for strikes on May 1st, 1886 was made in support of this demand.

In Chicago the anarchists were the main force in the union movement, and partially as a result of their presence, the unions translated this call into strikes on May 1st. The anarchists thought that the eight hour day could only be won through direct action and solidarity. They considered that struggles for reforms, like the eight hour day, were not enough in themselves. They viewed them as only one battle in an ongoing class war that would only end by social revolution and the creation of a free society. It was with these ideas that they organised and fought.

In Chicago alone, 400 000 workers went out and the threat of strike action ensured that more than 45 000 were granted a shorter working day without striking. On May 3, 1886, police fired into a crowd of pickets at the McCormick Harvester Machine Company, killing at least one striker, seriously wounding five or six others, and injuring an undetermined number. Anarchists called for a mass meeting the next day in Haymarket Square to protest the brutality. According to the Mayor, *"nothing had occurred yet, or looked likely to occur to require interference."* However, as the meeting was breaking up a column of 180 police arrived and ordered the meeting to end. At this moment a bomb was thrown into the police ranks, who opened fire on the crowd. How many civilians were wounded or killed by the police was never exactly ascertained, but 7 policemen eventually died (ironically, only one was the victim of the bomb, the rest were a result of the bullets fired by the police [Paul Avrich, **The Haymarket Tragedy**, p. 208]).

A *"reign of terror"* swept over Chicago, and the *"organised banditti and conscienceless brigands of capital suspended the only papers which would give the side of those whom they crammed into*

prison cells. They have invaded the homes of everyone who has ever known to have raised a voice or sympathised with those who have aught to say against the present system of robbery and oppression … they have invaded their homes and subjected them and their families to indignities that must be seen to be believed." [Lucy Parsons, **Liberty, Equality & Solidarity**, p. 53] Meeting halls, union offices, printing shops and private homes were raided (usually without warrants). Such raids into working-class areas allowed the police to round up all known anarchists and other socialists. Many suspects were beaten up and some bribed. *"Make the raids first and look up the law afterwards"* was the public statement of J. Grinnell, the States Attorney, when a question was raised about search warrants. [*"Editor's Introduction"*, **The Autobiographies of the Haymarket Martyrs**, p. 7]

Eight anarchists were put on trial for accessory to murder. No pretence was made that any of the accused had carried out or even planned the bomb. The judge ruled that it was not necessary for the state to identify the actual perpetrator or prove that he had acted under the influence of the accused. The state did not try to establish that the defendants had in any way approved or abetted the act. In fact, only three were present at the meeting when the bomb exploded and one of those, Albert Parsons, was accompanied by his wife and fellow anarchist Lucy and their two small children to the event.

The reason why these eight were picked was because of their anarchism and union organising, as made clear by that State's Attorney when he told the jury that *"Law is on trial. Anarchy is on trial. These men have been selected, picked out by the Grand Jury, and indicted because they were leaders. They are no more guilty than the thousands who follow them. Gentlemen of the jury; convict these men, make examples of them, hang them and you save our institutions, our society."* The jury was selected by a special bailiff, nominated by the State's Attorney and was explicitly chosen to compose of businessmen and a relative of one of the cops killed. The defence was not allowed to present evidence that the special bailiff had publicly claimed *"I am managing this case and I know what I am about. These fellows are going to be hanged as certain as death."* [**Op. Cit.**, p. 8] Not surprisingly, the accused were convicted. Seven were sentenced to death, one to 15 years' imprisonment.

An international campaign resulted in two of the death sentences being commuted to life, but the world wide protest did not stop the US state. Of the remaining five, one (Louis Lingg) cheated the executioner and killed himself on the eve of the execution. The remaining four (Albert Parsons, August Spies, George Engel and Adolph Fischer) were hanged on November 11th 1887. They are known in Labour history as the Haymarket Martyrs. Between 150,000 and 500,000 lined the route taken by the funeral cortege and between 10,000 to 25,000 were estimated to have watched the burial.

In 1889, the American delegation attending the International Socialist congress in Paris proposed that May 1st be adopted as a workers' holiday. This was to commemorate working class struggle and the *"Martyrdom of the Chicago Eight"*. Since then Mayday has became a day for international solidarity. In 1893, the new Governor of Illinois made official what the working class in Chicago and across the world knew all along and pardoned the Martyrs because of their obvious innocence and because *"the trial was not fair."* To this day, no one knows who threw the bomb — the only definite fact is that it was not any of those who were tried for the act: *"Our comrades were not murdered by the state because they had any connection with the bomb-throwing, but because they had been active in organising the wage-slaves of America."* [Lucy Parsons, **Op. Cit.**, p. 142]

The authorities had believed at the time of the trial that such persecution would break the back of the labour movement. As Lucy Parsons, a participant of the events, noted 20 years later, the Haymarket trial *"was a class trial — relentless, vindictive, savage and bloody. By that prosecution the capitalists sought to break the great strike for the eight-hour day which as being successfully inaugurated in Chicago, this city being the stormcentre of that great movement; and they also intended, by the savage manner in which they conducted the trial of these men, to frighten the working class back to their long hours of toil and low wages from which they were attempting to emerge. The capitalistic class imagined they could carry out their hellish plot by putting to an ignominious death the most progressive leaders among the working class of that day. In executing their bloody deed of judicial murder they succeeded, but in arresting the mighty onward movement of the class struggle they utterly failed."* [Lucy Parsons, **Op. Cit.**, p. 128] In the words of August Spies when he addressed the court after he had been sentenced to die:

> *"If you think that by hanging us you can stamp out the labour movement ... the movement from which the downtrodden millions, the millions who toil in misery and want, expect salvation — if this is your opinion, then hang us! Here you will tread on a spark, but there and there, behind you — and in front of you, and everywhere, flames blaze up. It is a subterranean fire. You cannot put it out."* [quoted by Paul Avrich, **Op. Cit.**, p. 287]

At the time and in the years to come, this defiance of the state and capitalism was to win thousands to anarchism, particularly in the US itself. Since the Haymarket event, anarchists have celebrated May Day (on the 1st of May — the reformist unions and labour parties moved its marches to the first Sunday of the month). We do so to show our solidarity with other working class people across the world, to celebrate past and present struggles, to show our power and remind the ruling class of their vulnerability. As Nestor Makhno put it:

> *"That day those American workers attempted, by organising themselves, to give expression to their protest against the iniquitous order of the State and Capital of the propertied ...*
>
> "The workers of Chicago ... had gathered to resolve, in common, the problems of their lives and their struggles...
>
> "Today too ... the toilers ... regard the first of May as the occasion of a get-together when they will concern themselves with their own affairs and consider the matter of their emancipation." [**The Struggle Against the State and Other Essays**, pp. 59–60]

Anarchists stay true to the origins of May Day and celebrate its birth in the direct action of the oppressed. It is a classic example of anarchist principles of direct action and solidarity, *"an historic event of great importance, inasmuch as it was, in the first place, the first time that workers themselves had attempted to get a shorter work day by united, simultaneous action ... this strike was the first in the nature of Direct Action on a large scale, the first in America."* [Lucy Parsons, **Op. Cit.**, pp. 139–40] Oppression and exploitation breed resistance and, for anarchists, May Day is an international symbol of that resistance and power — a power expressed in the last words of August Spies, chiselled in stone on the monument to the Haymarket martyrs in Waldheim Cemetery in Chicago:

"The day will come when our silence will be more powerful than the voices you are throttling today."

To understand why the state and business class were so determined to hang the Chicago Anarchists, it is necessary to realise they were considered the leaders of a massive radical union movement. In 1884, the Chicago Anarchists produced the world's first daily anarchist newspaper, the **Chicagoer Arbeiter-Zeiting**. This was written, read, owned and published by the German immigrant working class movement. The combined circulation of this daily plus a weekly (**Vorbote**) and a Sunday edition (**Fackel**) more than doubled, from 13,000 per issues in 1880 to 26,980 in 1886. Anarchist weekly papers existed for other ethnic groups as well (one English, one Bohemian and one Scandinavian).

Anarchists were very active in the Central Labour Union (which included the eleven largest unions in the city) and aimed to make it, in the words of Albert Parsons (one of the Martyrs), *"the embryonic group of the future 'free society.'"* The anarchists were also part of the **International Working People's Association** (also called the ***"Black International"***) which had representatives from 26 cities at its founding convention. The I.W.P.A. soon *"made headway among trade unions, especially in the mid-west"* and its ideas of *"direct action of the rank and file"* and of trade unions *"serv[ing] as the instrument of the working class for the complete destruction of capitalism and the nucleus for the formation of a new society"* became known as the ***"Chicago Idea"*** (an idea which later inspired the **Industrial Workers of the World** which was founded in Chicago in 1905). [*"Editor's Introduction,"* **The Autobiographies of the Haymarket Martyrs**, p. 4]

This idea was expressed in the manifesto issued at the I.W.P.A.'s Pittsburgh Congress of 1883:

"First — Destruction of the existing class rule, by all means, i.e. by energetic, relentless, revolutionary and international action.

"Second — Establishment of a free society based upon co-operative organisation of production.

"Third — Free exchange of equivalent products by and between the productive organisations without commerce and profit-mongery.

"Fourth — Organisation of education on a secular, scientific and equal basis for both sexes.

"Fifth — Equal rights for all without distinction to sex or race.

"Sixth — Regulation of all public affairs by free contracts between autonomous (independent) communes and associations, resting on a federalistic basis." [**Op. Cit.**, p. 42]

In addition to their union organising, the Chicago anarchist movement also organised social societies, picnics, lectures, dances, libraries and a host of other activities. These all helped to forge a distinctly working-class revolutionary culture in the heart of the *"American Dream."* The threat to the ruling class and their system was too great to allow it to continue (particularly with memories of the vast uprising of labour in 1877 still fresh. As in 1886, that revolt was also meet by state violence — see **Strike!** by J. Brecher for details of this strike movement as well as the Haymarket events). Hence the repression, kangaroo court, and the state murder of those the state and capitalist class considered "leaders" of the movement.

For more on the Haymarket Martyrs, their lives and their ideas, **The Autobiographies of the Haymarket Martyrs** is essential reading. Albert Parsons, the only American born Martyr, produced a book which explained what they stood for called **Anarchism: Its Philosophy and Scientific Basis**. Historian Paul Avrich's **The Haymarket Tragedy** is a useful in depth account of the events.

A.5.3 Building the Syndicalist Unions

Just before the turn of the century in Europe, the anarchist movement began to create one of the most successful attempts to apply anarchist organisational ideas in everyday life. This was the building of mass revolutionary unions (also known as syndicalism or anarcho-syndicalism). The syndicalist movement, in the words of a leading French syndicalist militant, was *"a practical schooling in anarchism"* for it was *"a laboratory of economic struggles"* and organised *"along anarchic lines."* By organising workers into *"libertarian organisations,"* the syndicalist unions were creating the *"free associations of free producers"* within capitalism to combat it and, ultimately, replace it. [Fernand Pelloutier, **No Gods, No Masters**, vol. 2, p. 57, p. 55 and p. 56]

While the details of syndicalist organisation varied from country to country, the main lines were the same. Workers should form themselves into unions (or ***syndicates***, the French for union). While organisation by industry was generally the preferred form, craft and trade organisations were also used. These unions were directly controlled by their members and would federate together on an industrial and geographical basis. Thus a given union would be federated with all the local unions in a given town, region and country as well as with all the unions within its industry into a national union (of, say, miners or metal workers). Each union was autonomous and all officials were part-time (and paid their normal wages if they missed work on union business). The tactics of syndicalism were direct action and solidarity and its aim was to replace capitalism by the unions providing the basic framework of the new, free, society.

Thus, for anarcho-syndicalism, *"the trade union is by no means a mere transitory phenomenon bound up with the duration of capitalist society, it is the germ of the Socialist economy of the future, the elementary school of Socialism in general."* The *"economic fighting organisation of the workers"* gives their members *"every opportunity for direct action in their struggles for daily bread, it also provides them with the necessary preliminaries for carrying through the reorganisation of social life on a [libertarian] Socialist plan by them own strength."* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 59 and p. 62] Anarcho-syndicalism, to use the expression of the I.W.W., aims to build the new world in the shell of the old.

In the period from the 1890's to the outbreak of World War I, anarchists built revolutionary unions in most European countries (particularly in Spain, Italy and France). In addition, anarchists in South and North America were also successful in organising syndicalist unions (particularly Cuba, Argentina, Mexico and Brazil). Almost all industrialised countries had some syndicalist movement, although Europe and South America had the biggest and strongest ones. These unions were organised in a confederal manner, from the bottom up, along anarchist lines. They fought with capitalists on a day-to-day basis around the issue of better wages and working conditions and the state for social reforms, but they also sought to overthrow capitalism through the revolutionary general strike.

Thus hundreds of thousands of workers around the world were applying anarchist ideas in everyday life, proving that anarchy was no utopian dream but a practical method of organising on a wide scale. That anarchist organisational techniques encouraged member participation, empowerment and militancy, and that they also successfully fought for reforms and promoted class consciousness, can be seen in the growth of anarcho-syndicalist unions and their impact on the labour movement. The Industrial Workers of the World, for example, still inspires union activists and has, throughout its long history, provided many union songs and slogans.

However, as a mass movement, syndicalism effectively ended by the 1930s. This was due to two factors. Firstly, most of the syndicalist unions were severely repressed just after World War I. In the immediate post-war years they reached their height. This wave of militancy was known as the "red years" in Italy, where it attained its high point with factory occupations (see section A.5.5). But these years also saw the destruction of these unions in country after county. In the USA, for example, the I.W.W. was crushed by a wave of repression backed whole-heartedly by the media, the state, and the capitalist class. Europe saw capitalism go on the offensive with a new weapon — fascism. Fascism arose (first in Italy and, most infamously, in Germany) as an attempt by capitalism to physically smash the organisations the working class had built. This was due to radicalism that had spread across Europe in the wake of the war ending, inspired by the example of Russia. Numerous near revolutions had terrified the bourgeoisie, who turned to fascism to save their system.

In country after country, anarchists were forced to flee into exile, vanish from sight, or became victims of assassins or concentration camps after their (often heroic) attempts at fighting fascism failed. In Portugal, for example, the 100,000 strong anarcho-syndicalist CGT union launched numerous revolts in the late 1920s and early 1930s against fascism. In January 1934, the CGT called for a revolutionary general strike which developed into a five day insurrection. A state of siege was declared by the state, which used extensive force to crush the rebellion. The CGT, whose militants had played a prominent and courageous role in the insurrection, was completely smashed and Portugal remained a fascist state for the next 40 years. [Phil Mailer, **Portugal: The Impossible Revolution**, pp. 72–3] In Spain, the CNT (the most famous anarcho-syndicalist union) fought a similar battle. By 1936, it claimed one and a half million members. As in Italy and Portugal, the capitalist class embraced fascism to save their power from the dispossessed, who were becoming confident of their power and their right to manage their own lives (see section A.5.6).

As well as fascism, syndicalism also faced the negative influence of Leninism. The apparent success of the Russian revolution led many activists to turn to authoritarian politics, particularly in English speaking countries and, to a lesser extent, France. Such notable syndicalist activists as Tom Mann in England, William Gallacher in Scotland and William Foster in the USA became Communists (the last two, it should be noted, became Stalinist). Moreover, Communist parties deliberately undermined the libertarian unions, encouraging fights and splits (as, for example, in the I.W.W.). After the end of the Second World War, the Stalinists finished off what fascism had started in Eastern Europe and destroyed the anarchist and syndicalist movements in such places as Bulgaria and Poland. In Cuba, Castro also followed Lenin's example and did what the Batista and Machado dictatorship's could not, namely smash the influential anarchist and syndicalist movements (see Frank Fernandez's **Cuban Anarchism** for a history of this movement from its origins in the 1860s to the 21st century).

So by the start of the second world war, the large and powerful anarchist movements of Italy, Spain, Poland, Bulgaria and Portugal had been crushed by fascism (but not, we must stress, without a fight). When necessary, the capitalists supported authoritarian states in order to crush the labour movement and make their countries safe for capitalism. Only Sweden escaped this trend, where the syndicalist union the SAC is still organising workers. It is, in fact, like many other syndicalist unions active today, growing as workers turn away from bureaucratic unions whose leaders seem more interested in protecting their privileges and cutting deals with management than defending their members. In France, Spain and Italy and elsewhere, syndicalist unions are again on the rise, showing that anarchist ideas are applicable in everyday life.

Finally, it must be stressed that syndicalism has its roots in the ideas of the earliest anarchists and, consequently, was not invented in the 1890s. It is true that development of syndicalism came about, in part, as a reaction to the disastrous "propaganda by deed" period, in which individual anarchists assassinated government leaders in attempts to provoke a popular uprising and in revenge for the mass murders of the Communards and other rebels (see section A.2.18 for details). But in response to this failed and counterproductive campaign, anarchists went back to their roots and to the ideas of Bakunin. Thus, as recognised by the likes of Kropotkin and Malatesta, syndicalism was simply a return to the ideas current in the libertarian wing of the First International.

Thus we find Bakunin arguing that *"it is necessary to organise the power of the proletariat. But this organisation must be the work of the proletariat itself ... Organise, constantly organise the international militant solidarity of the workers, in every trade and country, and remember that however weak you are as isolated individuals or districts, you will constitute a tremendous, invincible power by means of universal co-operation."* As one American activist commented, this is *"the same militant spirit that breathes now in the best expressions of the Syndicalist and I.W.W. movements"* both of which express *"a strong world wide revival of the ideas for which Bakunin laboured throughout his life."* [Max Baginski, **Anarchy! An Anthology of Emma Goldman's Mother Earth**, p. 71] As with the syndicalists, Bakunin stressed the *"organisation of trade sections, their federation ... bear in themselves the living germs of* ***the new social order,*** *which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself."* [quoted by Rudolf Rocker, **Op. Cit.**, p. 50]

Such ideas were repeated by other libertarians. Eugene Varlin, whose role in the Paris Commune ensured his death, advocated a socialism of associations, arguing in 1870 that syndicates were the *"natural elements"* for the rebuilding of society: *"it is they that can easily be transformed into producer associations; it is they that can put into practice the retooling of society and the organisation of production."* [quoted by Martin Phillip Johnson, **The Paradise of Association**, p. 139] As we discussed in section A.5.2, the Chicago Anarchists held similar views, seeing the labour movement as both the means of achieving anarchy and the framework of the free society. As Lucy Parsons (the wife of Albert) put it *"we hold that the granges, trade-unions, Knights of Labour assemblies, etc., are the embryonic groups of the ideal anarchistic society ..."* [contained in Albert R. Parsons, **Anarchism: Its Philosophy and Scientific Basis**, p. 110] These ideas fed into the revolutionary unionism of the I.W.W. As one historian notes, the *"proceedings of the I.W.W.'s inaugural convention indicate that the participants were not only aware of the 'Chicago Idea' but were conscious of a continuity between their efforts and the struggles of the Chicago anarchists to initiate industrial unionism."* The Chicago idea represented *"the earliest American expression of syndicalism."* [Salvatore Salerno, **Red November, Black November**, p. 71]

Thus, syndicalism and anarchism are not differing theories but, rather, different interpretations of the same ideas (see for a fuller discussion section H.2.8). While not all syndicalists are anarchists (some Marxists have proclaimed support for syndicalism) and not all anarchists are syndicalists (see section J.3.9 for a discussion why), all social anarchists see the need for taking part in the labour and other popular movements and encouraging libertarian forms of organisation and struggle within them. By doing this, inside and outside of syndicalist unions, anarchists are showing the validity of our ideas. For, as Kropotkin stressed, the *"next revolution must from its inception bring about the seizure of the entire social wealth by the workers in order to transform it into common property. This revolution can succeed only through the workers, only if the urban and rural workers everywhere carry out this objective themselves. To that end, they must initiate their own action in the period* ***before the revolution****; this can happen only if there is a strong* ***workers' organisation.****"* [**Selected Writings on Anarchism and Revolution**, p. 20] Such popular self-managed organisations cannot be anything but ***"anarchy in action."***

A.5.4 Anarchists in the Russian Revolution

The Russian revolution of 1917 saw a huge growth in anarchism in that country and many experiments in anarchist ideas. However, in popular culture the Russian Revolution is seen not as a mass movement by ordinary people struggling towards freedom but as the means by which Lenin imposed his dictatorship on Russia. The truth is radically different. The Russian Revolution was a mass movement from below in which many different currents of ideas existed and in which millions of working people (workers in the cities and towns as well as peasants) tried to transform their world into a better place. Sadly, those hopes and dreams were crushed under the dictatorship of the Bolshevik party — first under Lenin, later under Stalin.

The Russian Revolution, like most history, is a good example of the maxim "history is written by those who win." Most capitalist histories of the period between 1917 and 1921 ignore what the anarchist Voline called ***"the unknown revolution"*** — the revolution called forth from below by the actions of ordinary people. Leninist accounts, at best, praise this autonomous activity of workers so long as it coincides with their own party line but radically condemn it (and attribute it with the basest motives) as soon as it strays from that line. Thus Leninist accounts will praise the workers when they move ahead of the Bolsheviks (as in the spring and summer of 1917) but will condemn them when they oppose Bolshevik policy once the Bolsheviks are in power. At worse, Leninist accounts portray the movement and struggles of the masses as little more than a backdrop to the activities of the vanguard party.

For anarchists, however, the Russian Revolution is seen as a classic example of a social revolution in which the self-activity of working people played a key role. In their soviets, factory committees and other class organisations, the Russian masses were trying to transform society from a class-ridden, hierarchical statist regime into one based on liberty, equality and solidarity. As such, the initial months of the Revolution seemed to confirm Bakunin's prediction that the *"future social organisation must be made solely from the bottom upwards, by the free associations or federations of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal."* [**Michael Bakunin: Selected Writings**, p. 206] The soviets and factory committees expressed concretely Bakunin's ideas and Anarchists played an important role in the struggle.

The initial overthrow of the Tsar came from the direct action of the masses. In February 1917, the women of Petrograd erupted in bread riots. On February 18th, the workers of the Putilov Works in Petrograd went on strike. By February 22nd, the strike had spread to other factories. Two days later, 200 000 workers were on strike and by February 25th the strike was virtually general. The same day also saw the first bloody clashes between protestors and the army. The turning point came on the 27th, when some troops went over to the revolutionary masses, sweeping along other units. This left the government without its means of coercion, the Tsar abdicated and a provisional government was formed.

So spontaneous was this movement that all the political parties were left behind. This included the Bolsheviks, with the *"Petrograd organisation of the Bolsheviks oppos[ing] the calling of strikes precisely on the eve of the revolution destined to overthrow the Tsar. Fortunately, the workers ignored the Bolshevik 'directives' and went on strike anyway ... Had the workers followed its guidance, it is doubtful that the revolution would have occurred when it did."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 123]

The revolution carried on in this vein of direct action from below until the new, "socialist" state was powerful enough to stop it.

For the Left, the end of Tsarism was the culmination of years of effort by socialists and anarchists everywhere. It represented the progressive wing of human thought overcoming traditional oppression, and as such was duly praised by leftists around the world. However, **in** Russia things were progressing. In the workplaces and streets and on the land, more and more people became convinced that abolishing feudalism politically was **not** enough. The overthrow of the Tsar made little real difference if feudal exploitation still existed in the economy, so workers started to seize their workplaces and peasants, the land. All across Russia, ordinary people started to build their own organisations, unions, co-operatives, factory committees and councils (or "soviets" in Russian). These organisations were initially organised in anarchist fashion, with recallable delegates and being federated with each other.

Needless to say, all the political parties and organisations played a role in this process. The two wings of the Marxist social-democrats were active (the Mensheviks and the Bolsheviks), as were the Social Revolutionaries (a populist peasant based party) and the anarchists. The anarchists participated in this movement, encouraging all tendencies to self-management and urging the overthrow of the provisional government. They argued that it was necessary to transform the revolution from a purely political one into an economic/social one. Until the return of Lenin from exile, they were the only political tendency who thought along those lines.

Lenin convinced his party to adopt the slogan *"All Power to the Soviets"* and push the revolution forward. This meant a sharp break with previous Marxist positions, leading one ex-Bolshevik turned Menshevik to comment that Lenin had *"made himself a candidate for one European throne that has been vacant for thirty years — the throne of Bakunin!"* [quoted by Alexander Rabinowitch, **Prelude to Revolution**, p. 40] The Bolsheviks now turned to winning mass support, championing direct action and supporting the radical actions of the masses, policies in the past associated with anarchism (*"the Bolsheviks launched ... slogans which until then had been particularly and insistently been voiced by the Anarchists."* [Voline, **The Unknown Revolution**, p. 210]). Soon they were winning more and more votes in the soviet and factory committee elections. As Alexander Berkman argues, the *"Anarchist mottoes proclaimed by the Bolsheviks did not fail to bring results. The masses relied to their flag."* [**What is Anarchism?**, p. 120]

The anarchists were also influential at this time. Anarchists were particularly active in the movement for workers self-management of production which existed around the factory committees (see M. Brinton, **The Bolsheviks and Workers Control** for details). They were arguing for workers and peasants to expropriate the owning class, abolish all forms of government and re-organise society from the bottom up using their own class organisations — the soviets, the factory committees, co-operatives and so on. They could also influence the direction of struggle. As Alexander Rabinowitch (in his study of the July uprising of 1917) notes:

> *"At the rank-and-file level, particularly within the [Petrograd] garrison and at the Kronstadt naval base, there was in fact very little to distinguish Bolshevik from Anarchist... The Anarchist-Communists and the Bolsheviks competed for the support of the same uneducated, depressed, and dissatisfied elements of the population, and the fact is that in the summer of 1917, the Anarchist-Communists, with the support they enjoyed in a few important factories and regiments, possessed an undeniable capacity to influence the course of events. Indeed, the Anarchist appeal was great enough in some factories and military units to influence the actions of the Bolsheviks themselves."* [**Op. Cit.**, p. 64]

Indeed, one leading Bolshevik stated in June, 1917 (in response to a rise in anarchist influence), *"[b]y fencing ourselves off from the Anarchists, we may fence ourselves off from the masses."* [quoted by Alexander Rabinowitch, **Op. Cit.**, p. 102]

The anarchists operated with the Bolsheviks during the October Revolution which overthrew the provisional government. But things changed once the authoritarian socialists of the Bolshevik party had seized power. While both anarchists and Bolsheviks used many of the same slogans, there were important differences between the two. As Voline argued, *"[f]rom the lips and pens of the Anarchists, those slogans were sincere and concrete, for they corresponded to their principles and called for action entirely in conformity with such principles. But with the Bolsheviks, the same slogans meant practical solutions totally different from those of the libertarians and did not tally with the ideas which the slogans appeared to express."* [**The Unknown Revolution**, p. 210]

Take, for example, the slogan *"All power to the Soviets."* For anarchists it meant exactly that — organs for the working class to run society directly, based on mandated, recallable delegates. For the Bolsheviks, that slogan was simply the means for a Bolshevik government to be formed over and above the soviets. The difference is important, *"for the Anarchists declared, if 'power' really should belong to the soviets, it could not belong to the Bolshevik party, and if it should belong to that Party, as the Bolsheviks envisaged, it could not belong to the soviets."* [Voline, **Op. Cit.**, p. 213] Reducing the soviets to simply executing the decrees of the central (Bolshevik) government and having their All-Russian Congress be able to recall the government (i.e. those with **real** power) does not equal "all power," quite the reverse.

Similarly with the term *"workers' control of production."* Before the October Revolution Lenin saw *"workers' control"* purely in terms of the *"universal, all-embracing workers' control over the capitalists."* [**Will the Bolsheviks Maintain Power?**, p. 52] He did not see it in terms of workers' management of production itself (i.e. the abolition of wage labour) via federations of factory committees. Anarchists and the workers' factory committees did. As S.A. Smith correctly notes, Lenin used *"the term ['workers' control'] in a very different sense from that of the factory committees."* In fact Lenin's *"proposals ... [were] thoroughly statist and centralist in character, whereas*

the practice of the factory committees was essentially local and autonomous." [**Red Petrograd**, p. 154] For anarchists, *"if the workers' organisations were capable of exercising effective control [over their bosses], then they also were capable of guaranteeing all production. In such an event, private industry could be eliminated quickly but progressively, and replaced by collective industry. Consequently, the Anarchists rejected the vague nebulous slogan of 'control of production.' They advocated* ***expropriation — progressive, but immediate — of private industry by the organisations of collective production.****"* [Voline, **Op. Cit.**, p. 221]

Once in power, the Bolsheviks systematically undermined the popular meaning of workers' control and replaced it with their own, statist conception. *"On three occasions,"* one historian notes, *"in the first months of Soviet power, the [factory] committee leaders sought to bring their model into being. At each point the party leadership overruled them. The result was to vest both managerial* ***and*** *control powers in organs of the state which were subordinate to the central authorities, and formed by them."* [Thomas F. Remington, **Building Socialism in Bolshevik Russia**, p. 38] This process ultimately resulted in Lenin arguing for, and introducing, *"one-man management"* armed with *"dictatorial"* power (with the manager appointed from above by the state) in April 1918. This process is documented in Maurice Brinton's **The Bolsheviks and Workers' Control**, which also indicates the clear links between Bolshevik practice and Bolshevik ideology as well as how both differed from popular activity and ideas.

Hence the comments by Russian Anarchist Peter Arshinov:

> *"Another no less important peculiarity is that [the] October [revolution of 1917] has two meanings — that which the working' masses who participated in the social revolution gave it, and with them the Anarchist-Communists, and that which was given it by the political party [the Marxist-Communists] that captured power from this aspiration to social revolution, and which betrayed and stifled all further development. An enormous gulf exists between these two interpretations of October. The October of the workers and peasants is the suppression of the power of the parasite classes in the name of equality and self-management. The Bolshevik October is the conquest of power by the party of the revolutionary intelligentsia, the installation of its 'State Socialism' and of its 'socialist' methods of governing the masses."* [**The Two Octobers**]

Initially, anarchists had supported the Bolsheviks, since the Bolshevik leaders had hidden their state-building ideology behind support for the soviets (as socialist historian Samuel Farber notes, the anarchists *"had actually been an unnamed coalition partner of the Bolsheviks in the October Revolution."* [**Before Stalinism**, p. 126]). However, this support quickly "withered away" as the Bolsheviks showed that they were, in fact, not seeking true socialism but were instead securing power for themselves and pushing not for collective ownership of land and productive resources but for government ownership. The Bolsheviks, as noted, systematically undermined the workers' control/self-management movement in favour of capitalist-like forms of workplace management based around *"one-man management"* armed with *"dictatorial powers."*

As regards the soviets, the Bolsheviks systematically undermining what limited independence and democracy they had. In response to the *"great Bolshevik losses in the soviet elections"* during the spring and summer of 1918 *"Bolshevik armed force usually overthrew the results of these provincial elections."* Also, the *"government continually postponed the new general elections to the Petrograd Soviet, the term of which had ended in March 1918. Apparently, the government feared*

that the opposition parties would show gains." [Samuel Farber, **Op. Cit.**, p. 24 and p. 22] In the Petrograd elections, the Bolsheviks *"lost the absolute majority in the soviet they had previously enjoyed"* but remained the largest party. However, the results of the Petrograd soviet elections were irrelevant as a *"Bolshevik victory was assured by the numerically quite significant representation now given to trade unions, district soviets, factory-shop committees, district workers conferences, and Red Army and naval units, in which the Bolsheviks had overwhelming strength."* [Alexander Rabinowitch, *"The Evolution of Local Soviets in Petrograd"*, pp. 20–37, **Slavic Review**, Vol. 36, No. 1, p. 36f] In other words, the Bolsheviks had undermined the democratic nature of the soviet by swamping it by their own delegates. Faced with rejection in the soviets, the Bolsheviks showed that for them "soviet power" equalled party power. To stay in power, the Bolsheviks had to destroy the soviets, which they did. The soviet system remained "soviet" in name only. Indeed, from 1919 onwards Lenin, Trotsky and other leading Bolsheviks were admitting that they had created a party dictatorship and, moreover, that such a dictatorship was essential for any revolution (Trotsky supported party dictatorship even after the rise of Stalinism).

The Red Army, moreover, no longer was a democratic organisation. In March of 1918 Trotsky had abolished the election of officers and soldier committees:

> *"the principle of election is politically purposeless and technically inexpedient, and it has been, in practice, abolished by decree."* [**Work, Discipline, Order**]

As Maurice Brinton correctly summarises:

> *"Trotsky, appointed Commissar of Military Affairs after Brest-Litovsk, had rapidly been reorganising the Red Army. The death penalty for disobedience under fire had been restored. So, more gradually, had saluting, special forms of address, separate living quarters and other privileges for officers. Democratic forms of organisation, including the election of officers, had been quickly dispensed with."* [*"The Bolsheviks and Workers' Control"*, **For Workers' Power**, pp. 336–7]

Unsurprisingly, Samuel Farber notes that *"there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [**Before Stalinism**, p. 44]

Thus after the October Revolution, anarchists started to denounce the Bolshevik regime and call for a ***"Third Revolution"*** which would finally free the masses from all bosses (capitalist or socialist). They exposed the fundamental difference between the rhetoric of Bolshevism (as expressed, for example, in Lenin's **State and Revolution**) with its reality. Bolshevism in power had proved Bakunin's prediction that the *"dictatorship of the proletariat"* would become the *"dictatorship **over** the proletariat"* by the leaders of the Communist Party.

The influence of the anarchists started to grow. As Jacques Sadoul (a French officer) noted in early 1918:

> *"The anarchist party is the most active, the most militant of the opposition groups and probably the most popular ... The Bolsheviks are anxious."* [quoted by Daniel Guerin, **Anarchism**, pp. 95–6]

By April 1918, the Bolsheviks began the physical suppression of their anarchist rivals. On April 12th, 1918, the Cheka (the secret police formed by Lenin in December, 1917) attacked anarchist centres in Moscow. Those in other cities were attacked soon after. As well as repressing their most vocal opponents on the left, the Bolsheviks were restricting the freedom of the masses they claimed to be protecting. Democratic soviets, free speech, opposition political parties and groups, self-management in the workplace and on the land — all were destroyed in the name of "socialism." All this happened, we must stress, **before** the start of the Civil War in late May, 1918, which most supporters of Leninism blame for the Bolsheviks' authoritarianism. During the civil war, this process accelerated, with the Bolsheviks' systematically repressing opposition from all quarters — including the strikes and protests of the very class who they claimed was exercising its "dictatorship" while they were in power!

It is important to stress that this process had started well **before** the start of the civil war, confirming anarchist theory that a "workers' state" is a contraction in terms. For anarchists, the Bolshevik substitution of party power for workers power (and the conflict between the two) did not come as a surprise. The state is the delegation of **power** — as such, it means that the idea of a "workers' state" expressing "workers' power" is a logical impossibility. If workers **are** running society then power rests in their hands. If a state exists then power rests in the hands of the handful of people at the top, **not** in the hands of all. The state was designed for minority rule. No state can be an organ of working class (i.e. majority) self-management due to its basic nature, structure and design. For this reason anarchists have argued for a bottom-up federation of workers' councils as the agent of revolution and the means of managing society after capitalism and the state have been abolished.

As we discuss in section H, the degeneration of the Bolsheviks from a popular working class party into dictators over the working class did not occur by accident. A combination of political ideas and the realities of state power (and the social relationships it generates) could not help but result in such a degeneration. The political ideas of Bolshevism, with its vanguardism, fear of spontaneity and identification of party power with working class power inevitably meant that the party would clash with those whom it claimed to represent. After all, if the party is the vanguard then, automatically, everyone else is a "backward" element. This meant that if the working class resisted Bolshevik policies or rejected them in soviet elections, then the working class was "wavering" and being influenced by "petty-bourgeois" and "backward" elements. Vanguardism breeds elitism and, when combined with state power, dictatorship.

State power, as anarchists have always stressed, means the delegation of power into the hands of a few. This automatically produces a class division in society — those with power and those without. As such, once in power the Bolsheviks were isolated from the working class. The Russian Revolution confirmed Malatesta's argument that a *"government, that is a group of people entrusted with making laws and empowered to use the collective power to oblige each individual to obey them, is already a privileged class and cut off from the people. As any constituted body would do, it will instinctively seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to its special interests. Having been put in a privileged position, the government is already at odds with the people whose strength it disposes of."* [**Anarchy**, p. 34] A highly centralised state such as the Bolsheviks built would reduce accountability to a minimum while at the same time accelerating the isolation of the rulers from the ruled. The masses were no longer a source of inspiration and power, but rather an alien group whose lack of "discipline" (i.e. ability to follow orders) placed the revolution in danger. As one Russian Anarchist argued:

> *"The proletariat is being gradually enserfed by the state. The people are being transformed into servants over whom there has arisen a new class of administrators — a new class born mainly form the womb of the so-called intelligentsia ... We do not mean to say ... that the Bolshevik party set out to create a new class system. But we do say that even the best intentions and aspirations must inevitably be smashed against the evils inherent in any system of centralised power. The separation of management from labour, the division between administrators and workers flows logically from centralisation. It cannot be otherwise."* [**The Anarchists in the Russian Revolution**, pp. 123–4]

For this reason anarchists, while agreeing that there is an uneven development of political ideas within the working class, reject the idea that "revolutionaries" should take power on behalf of working people. Only when working people actually run society themselves will a revolution be successful. For anarchists, this meant that *"[e]ffective emancipation can be achieved only by the **direct, widespread, and independent action ... of the workers themselves,** grouped ... in their own class organisations ... on the basis of concrete action and self-government, **helped but not governed,** by revolutionaries working in the very midst of, and not above the mass and the professional, technical, defence and other branches."* [Voline, **Op. Cit.**, p. 197] By substituting party power for workers power, the Russian Revolution had made its first fatal step. Little wonder that the following prediction (from November 1917) made by anarchists in Russia came true:

> *"Once their power is consolidated and 'legalised', the Bolsheviks who are ... men of centralist and authoritarian action will begin to rearrange the life of the country and of the people by governmental and dictatorial methods, imposed by the centre. The[y] ... will dictate the will of the party to all Russia, and command the whole nation. **Your Soviets and your other local organisations will become little by little, simply executive organs of the will of the central government.** In the place of healthy, constructive work by the labouring masses, in place of free unification from the bottom, we will see the installation of an authoritarian and statist apparatus which would act from above and set about wiping out everything that stood in its way with an iron hand."* [quoted by Voline, **Op. Cit.**, p. 235]

The so-called "workers' state" could not be participatory or empowering for working class people (as the Marxists claimed) simply because state structures are not designed for that. Created as instruments of minority rule, they cannot be transformed into (nor "new" ones created which are) a means of liberation for the working classes. As Kropotkin put it, Anarchists *"maintain that the State organisation, having been the force to which minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges."* [**Anarchism**, p. 170] In the words of an anarchist pamphlet written in 1918:

> *"Bolshevism, day by day and step by step, proves that state power possesses inalienable characteristics; it can change its label, its 'theory', and its servitors, but in essence it merely remains power and despotism in new forms."* [quoted by Paul Avrich, *"The Anarchists in the Russian Revolution,"* pp. 341–350, **Russian Review**, vol. 26, issue no. 4, p. 347]

For insiders, the Revolution had died a few months after the Bolsheviks took over. To the outside world, the Bolsheviks and the USSR came to represent "socialism" even as they systematically

destroyed the basis of real socialism. By transforming the soviets into state bodies, substituting party power for soviet power, undermining the factory committees, eliminating democracy in the armed forces and workplaces, repressing the political opposition and workers' protests, the Bolsheviks effectively marginalised the working class from its own revolution. Bolshevik ideology and practice were themselves important and sometimes decisive factors in the degeneration of the revolution and the ultimate rise of Stalinism.

As anarchists had predicted for decades previously, in the space of a few months, and before the start of the Civil War, the Bolshevik's "workers' state" had become, like any state, an alien power **over** the working class and an instrument of minority rule (in this case, the rule of the party). The Civil War accelerated this process and soon party dictatorship was introduced (indeed, leading Bolsheviks began arguing that it was essential in any revolution). The Bolsheviks put down the libertarian socialist elements within their country, with the crushing of the uprising at Kronstadt and the Makhnovist movement in the Ukraine being the final nails in the coffin of socialism and the subjugation of the soviets.

The Kronstadt uprising of February, 1921, was, for anarchists, of immense importance (see the appendix "What was the Kronstadt Rebellion?" for a full discussion of this uprising). The uprising started when the sailors of Kronstadt supported the striking workers of Petrograd in February, 1921. They raised a 15 point resolution, the first point of which was a call for soviet democracy. The Bolsheviks slandered the Kronstadt rebels as counter-revolutionaries and crushed the revolt. For anarchists, this was significant as the repression could not be justified in terms of the Civil War (which had ended months before) and because it was a major uprising of ordinary people for ***real*** socialism. As Voline puts it:

> *"Kronstadt was the first entirely independent attempt of the people to liberate themselves of all yokes and carry out the Social Revolution: this attempt was made directly ... by the working masses themselves, without political shepherds, without leaders or tutors. It was the first step towards the third and social revolution."* [Voline, **Op. Cit.**, pp. 537–8]

In the Ukraine, anarchist ideas were most successfully applied. In areas under the protection of the Makhnovist movement, working class people organised their own lives directly, based on their own ideas and needs – true social self-determination. Under the leadership of Nestor Makhno, a self-educated peasant, the movement not only fought against both Red and White dictatorships but also resisted the Ukrainian nationalists. In opposition to the call for "national self-determination," i.e. a new Ukrainian state, Makhno called instead for working class self-determination in the Ukraine and across the world. Makhno inspired his fellow peasants and workers to fight for real freedom:

> *"Conquer or die — such is the dilemma that faces the Ukrainian peasants and workers at this historic moment ... But we will not conquer in order to repeat the errors of the past years, the error of putting our fate into the hands of new masters; we will conquer in order to take our destinies into our own hands, to conduct our lives according to our own will and our own conception of the truth."* [quoted by Peter Arshinov, **History of the Makhnovist Movement**, p. 58]

To ensure this end, the Makhnovists refused to set up governments in the towns and cities they liberated, instead urging the creation of free soviets so that the working people could govern

themselves. Taking the example of Aleksandrovsk, once they had liberated the city the Makhnovists *"immediately invited the working population to participate in a general conference ... it was proposed that the workers organise the life of the city and the functioning of the factories with their own forces and their own organisations ... The first conference was followed by a second. The problems of organising life according to principles of self-management by workers were examined and discussed with animation by the masses of workers, who all welcomed this ideas with the greatest enthusiasm ... Railroad workers took the first step ... They formed a committee charged with organising the railway network of the region ... From this point, the proletariat of Aleksandrovsk began to turn systematically to the problem of creating organs of self-management."* [**Op. Cit.**, p. 149]

The Makhnovists argued that the *"freedom of the workers and peasants is their own, and not subject to any restriction. It is up to the workers and peasants themselves to act, to organise themselves, to agree among themselves in all aspects of their lives, as they see fit and desire .. . The Makhnovists can do no more than give aid and counsel ... In no circumstances can they, nor do they wish to, govern."* [Peter Arshinov, quoted by Guerin, **Op. Cit.**, p. 99] In Alexandrovsk, the Bolsheviks proposed to the Makhnovists spheres of action — their Revkom (Revolutionary Committee) would handle political affairs and the Makhnovists military ones. Makhno advised them *"to go and take up some honest trade instead of seeking to impose their will on the workers."* [Peter Arshinov in **The Anarchist Reader**, p. 141]

They also organised free agricultural communes which *"[a]dmittedly .. . were not numerous, and included only a minority of the population .. . But what was most precious was that these communes were formed by the poor peasants themselves. The Makhnovists never exerted any pressure on the peasants, confining themselves to propagating the idea of free communes."* [Arshinov, **History of the Makhnovist Movement**, p. 87] Makhno played an important role in abolishing the holdings of the landed gentry. The local soviet and their district and regional congresses equalised the use of the land between all sections of the peasant community. [**Op. Cit.**, pp. 53–4]

Moreover, the Makhnovists took the time and energy to involve the whole population in discussing the development of the revolution, the activities of the army and social policy. They organised numerous conferences of workers', soldiers' and peasants' delegates to discuss political and social issues as well as free soviets, unions and communes. They organised a regional congress of peasants and workers when they had liberated Aleksandrovsk. When the Makhnovists tried to convene the third regional congress of peasants, workers and insurgents in April 1919 and an extraordinary congress of several regions in June 1919 the Bolsheviks viewed them as counter-revolutionary, tried to ban them and declared their organisers and delegates outside the law.

The Makhnovists replied by holding the conferences anyway and asking *"[c]an there exist laws made by a few people who call themselves revolutionaries, which permit them to outlaw a whole people who are more revolutionary than they are themselves?"* and *"[w]hose interests should the revolution defend: those of the Party or those of the people who set the revolution in motion with their blood?"* Makhno himself stated that he *"consider[ed] it an inviolable right of the workers and peasants, a right won by the revolution, to call conferences on their own account, to discuss their affairs."* [**Op. Cit.**, p. 103 and p. 129]

In addition, the Makhnovists *"fully applied the revolutionary principles of freedom of speech, of thought, of the press, and of political association. In all cities and towns occupied by the Makhnovists, they began by lifting all the prohibitions and repealing all the restrictions imposed on the press and on political organisations by one or another power."* Indeed, the *"only restriction that the Makhnovists*

considered necessary to impose on the Bolsheviks, the left Socialist-Revolutionaries and other statists was a prohibition on the formation of those 'revolutionary committees' which sought to impose a dictatorship over the people." [**Op. Cit.**, p. 153 and p. 154]

The Makhnovists rejected the Bolshevik corruption of the soviets and instead proposed *"the free and completely independent soviet system of working people without authorities and their arbitrary laws."* Their proclamations stated that the *"working people themselves must freely choose their own soviets, which carry out the will and desires of the working people themselves, that is to say. ADMINISTRATIVE, not ruling soviets."* Economically, capitalism would be abolished along with the state — the land and workshops *"must belong to the working people themselves, to those who work in them, that is to say, they must be socialised."* [**Op. Cit.**, p. 271 and p. 273]

The army itself, in stark contrast to the Red Army, was fundamentally democratic (although, of course, the horrific nature of the civil war did result in a few deviations from the ideal — however, compared to the regime imposed on the Red Army by Trotsky, the Makhnovists were much more democratic movement).

The anarchist experiment of self-management in the Ukraine came to a bloody end when the Bolsheviks turned on the Makhnovists (their former allies against the "Whites," or pro-Tsarists) when they were no longer needed. This important movement is fully discussed in the appendix "Why does the Makhnovist movement show there is an alternative to Bolshevism?" of our FAQ. However, we must stress here the one obvious lesson of the Makhnovist movement, namely that the dictatorial policies pursued by the Bolsheviks were not imposed on them by objective circumstances. Rather, the political ideas of Bolshevism had a clear influence in the decisions they made. After all, the Makhnovists were active in the same Civil War and yet did not pursue the same policies of party power as the Bolsheviks did. Rather, they successfully encouraged working class freedom, democracy and power in extremely difficult circumstances (and in the face of strong Bolshevik opposition to those policies). The received wisdom on the left is that there was no alternative open to the Bolsheviks. The experience of the Makhnovists disproves this. What the masses of people, as well as those in power, do and think politically is as much part of the process determining the outcome of history as are the objective obstacles that limit the choices available. Clearly, ideas do matter and, as such, the Makhnovists show that there was (and is) a practical alternative to Bolshevism — anarchism.

The last anarchist march in Moscow until 1987 took place at the funeral of Kropotkin in 1921, when over 10,000 marched behind his coffin. They carried black banners declaring *"Where there is authority, there is no freedom"* and *"The Liberation of the working class is the task of the workers themselves."* As the procession passed the Butyrki prison, the inmates sang anarchist songs and shook the bars of their cells.

Anarchist opposition within Russia to the Bolshevik regime started in 1918. They were the first left-wing group to be repressed by the new "revolutionary" regime. Outside of Russia, anarchists continued to support the Bolsheviks until news came from anarchist sources about the repressive nature of the Bolshevik regime (until then, many had discounted negative reports as being from pro-capitalist sources). Once these reliable reports came in, anarchists across the globe rejected Bolshevism and its system of party power and repression. The experience of Bolshevism confirmed Bakunin's prediction that Marxism meant *"the highly despotic government of the masses by a new and very small aristocracy of real or pretended scholars. The people are not learned, so they will be liberated from the cares of government and included in entirety in the governed herd."* [**Statism and Anarchy**, pp. 178–9]

From about 1921 on, anarchists outside of Russia started describing the USSR as *"state-capitalist"* to indicate that although individual bosses might have been eliminated, the Soviet state bureaucracy played the same role as individual bosses do in the West (anarchists **within** Russia had been calling it that since 1918). For anarchists, *"the Russian revolution ... is trying to reach ... economic equality ... this effort has been made in Russia under a strongly centralised party dictatorship ... this effort to build a communist republic on the basis of a strongly centralised state communism under the iron law of a party dictatorship is bound to end in failure. We are learning to know in Russia how **not** to introduce communism."* [**Anarchism**, p. 254]

This meant exposing that Berkman called **"The Bolshevik Myth,"** the idea that the Russian Revolution was a success and should be copied by revolutionaries in other countries: *"It is imperative to unmask the great delusion, which otherwise might lead the Western workers to the same abyss as their brothers [and sisters] in Russia. It is incumbent upon those who have seen through the myth to expose its true nature."* [*"The Anti-Climax'"*, **The Bolshevik Myth**, p. 342] Moreover, anarchists felt that it was their revolutionary duty not only present and learn from the facts of the revolution but also show solidarity with those subject to Bolshevik dictatorship. As Emma Goldman argued, she had not *"come to Russia expecting to find Anarchism realised."* Such idealism was alien to her (although that has not stopped Leninists saying the opposite). Rather, she expected to see *"the beginnings of the social changes for which the Revolution had been fought."* She was aware that revolutions were difficult, involving *"destruction"* and *"violence."* That Russia was not perfect was not the source of her vocal opposition to Bolshevism. Rather, it was the fact that *"the Russian people have been **locked out**"* of their own revolution by the Bolshevik state which used *"the sword and the gun to keep the people out."* As a revolutionary she refused *"to side with the master class, which in Russia is called the Communist Party."* [**My Disillusionment in Russia**, p. xlvii and p. xliv]

For more information on the Russian Revolution and the role played by anarchists, see the appendix on "The Russian Revolution" of the FAQ. As well as covering the Kronstadt uprising and the Makhnovists, it discusses why the revolution failed, the role of Bolshevik ideology played in that failure and whether there were any alternatives to Bolshevism.

The following books are also recommended: **The Unknown Revolution** by Voline; **The Guillotine at Work** by G.P. Maximov; **The Bolshevik Myth** and **The Russian Tragedy**, both by Alexander Berkman; **The Bolsheviks and Workers Control** by M. Brinton; **The Kronstadt Uprising** by Ida Mett; **The History of the Makhnovist Movement** by Peter Arshinov; **My Disillusionment in Russia** and **Living My Life** by Emma Goldman; **Nestor Makhno Anarchy's Cossack: The struggle for free soviets in the Ukraine 1917–1921** by Alexandre Skirda.

Many of these books were written by anarchists active during the revolution, many imprisoned by the Bolsheviks and deported to the West due to international pressure exerted by anarcho-syndicalist delegates to Moscow who the Bolsheviks were trying to win over to Leninism. The majority of such delegates stayed true to their libertarian politics and convinced their unions to reject Bolshevism and break with Moscow. By the early 1920's all the anarcho-syndicalist union confederations had joined with the anarchists in rejecting the "socialism" in Russia as state capitalism and party dictatorship.

A.5.5 Anarchists in the Italian Factory Occupations

After the end of the First World War there was a massive radicalisation across Europe and the world. Union membership exploded, with strikes, demonstrations and agitation reaching massive levels. This was partly due to the war, partly to the apparent success of the Russian Revolution. This enthusiasm for the Russian Revolution even reached Individualist Anarchists like Joseph Labadie, who like many other anti-capitalists, saw *"the red in the east [giving] hope of a brighter day"* and the Bolsheviks as making *"laudable efforts to at least try some way out of the hell of industrial slavery."* [quoted by Carlotta R. Anderson, **All-American Anarchist** p. 225 and p. 241]

Across Europe, anarchist ideas became more popular and anarcho-syndicalist unions grew in size. For example, in Britain, the ferment produced the shop stewards' movement and the strikes on Clydeside; Germany saw the rise of IWW inspired industrial unionism and a libertarian form of Marxism called "Council Communism"; Spain saw a massive growth in the anarcho-syndicalist CNT. In addition, it also, unfortunately, saw the rise and growth of both social democratic and communist parties. Italy was no exception.

In Turin, a new rank-and-file movement was developing. This movement was based around the *"internal commissions"* (elected ad hoc grievance committees). These new organisations were based directly on the group of people who worked together in a particular work shop, with a mandated and recallable shop steward elected for each group of 15 to 20 or so workers. The assembly of all the shop stewards in a given plant then elected the "internal commission" for that facility, which was directly and constantly responsible to the body of shop stewards, which was called the *"factory council."*

Between November 1918 and March 1919, the internal commissions had become a national issue within the trade union movement. On February 20, 1919, the Italian Federation of Metal Workers (FIOM) won a contract providing for the election of "internal commissions" in the factories. The workers subsequently tried to transform these organs of workers' representation into factory councils with a managerial function. By May Day 1919, the internal commissions *"were becoming the dominant force within the metalworking industry and the unions were in danger of becoming marginal administrative units. Behind these alarming developments, in the eyes of reformists, lay the libertarians."* [Carl Levy, **Gramsci and the Anarchists**, p. 135] By November 1919 the internal commissions of Turin were transformed into factory councils.

The movement in Turin is usually associated with the weekly **L'Ordine Nuovo** (The New Order), which first appeared on May 1, 1919. As Daniel Guerin summarises, it was *"edited by a left socialist, Antonio Gramsci, assisted by a professor of philosophy at Turin University with anarchist ideas, writing under the pseudonym of Carlo Petri, and also of a whole nucleus of Turin libertarians. In the factories, the Ordine Nuovo group was supported by a number of people, especially the anarcho-syndicalist militants of the metal trades, Pietro Ferrero and Maurizio Garino. The manifesto of* ***Ordine Nuovo*** *was signed by socialists and libertarians together, agreeing to regard the factory councils as 'organs suited to future communist management of both the individual factory and the whole society.'"* [**Anarchism**, p. 109]

The developments in Turin should not be taken in isolation. All across Italy, workers and peasants were taking action. In late February 1920, a rash of factory occupations broke out in Liguria, Piedmont and Naples. In Liguria, the workers occupied the metal and shipbuilding plants

in Sestri Ponente, Cornigliano and Campi after a breakdown of pay talks. For up to four days, under syndicalist leadership, they ran the plants through factory councils.

During this period the Italian Syndicalist Union (USI) grew in size to around 800 000 members and the influence of the Italian Anarchist Union (UAI) with its 20 000 members and daily paper (**Umanita Nova**) grew correspondingly. As the Welsh Marxist historian Gwyn A. Williams points out *"Anarchists and revolutionary syndicalists were the most consistently and totally revolutionary group on the left ... the most obvious feature of the history of syndicalism and anarchism in 1919–20: rapid and virtually continuous growth ... The syndicalists above all captured militant working-class opinion which the socialist movement was utterly failing to capture."* [**Proletarian Order**, pp. 194–195] In Turin, libertarians *"worked within FIOM"* and had been *"heavily involved in the **Ordine Nuovo** campaign from the beginning."* [**Op. Cit.**, p. 195] Unsurprisingly, **Ordone Nuovo** was denounced as "syndicalist" by other socialists.

It was the anarchists and syndicalists who first raised the idea of occupying workplaces. Malatesta was discussing this idea in **Umanita Nova** in March, 1920. In his words, *"General strikes of protest no longer upset anyone ... One must seek something else. We put forward an idea: take-over of factories... the method certainly has a future, because it corresponds to the ultimate ends of the workers' movement and constitutes an exercise preparing one for the ultimate act of expropriation."* [**Errico Malatesta: His Life and Ideas**, p. 134] In the same month, during *"a strong syndicalist campaign to establish councils in Mila, Armando Borghi [anarchist secretary of the USI] called for mass factory occupations. In Turin, the re-election of workshop commissars was just ending in a two-week orgy of passionate discussion and workers caught the fever. [Factory Council] Commissars began to call for occupations."* Indeed, *"the council movement outside Turin was essentially anarcho-syndicalist."* Unsurprisingly, the secretary of the syndicalist metal-workers *"urged support for the Turin councils because they represented anti-bureaucratic direct action, aimed at control of the factory and could be the first cells of syndicalist industrial unions ... The syndicalist congress voted to support the councils... . Malatesta ... supported them as a form of direct action guaranteed to generate rebelliousness ... **Umanita Nova** and **Guerra di Classe** [paper of the USI] became almost as committed to the councils as **L'Ordine Nuovo** and the Turin edition of **Avanti.**"* [Williams, **Op. Cit.**, p. 200, p. 193 and p. 196]

The upsurge in militancy soon provoked an employer counter-offensive. The bosses organisation denounced the factory councils and called for a mobilisation against them. Workers were rebelling and refusing to follow the bosses orders — "indiscipline" was rising in the factories. They won state support for the enforcement of the existing industrial regulations. The national contract won by the FIOM in 1919 had provided that the internal commissions were banned from the shop floor and restricted to non-working hours. This meant that the activities of the shop stewards' movement in Turin — such as stopping work to hold shop steward elections — were in violation of the contract. The movement was essentially being maintained through mass insubordination. The bosses used this infringement of the agreed contract as the means combating the factory councils in Turin.

The showdown with the employers arrived in April, when a general assembly of shop stewards at Fiat called for sit-in strikes to protest the dismissal of several shop stewards. In response the employers declared a general lockout. The government supported the lockout with a mass show of force and troops occupied the factories and mounted machine guns posts at them. When the shop stewards movement decided to surrender on the immediate issues in dispute after two weeks on strike, the employers responded with demands that the shop stewards councils be limited to

non-working hours, in accordance with the FIOM national contract, and that managerial control be re-imposed.

These demands were aimed at the heart of the factory council system and Turin labour movement responded with a massive general strike in defence of it. In Turin, the strike was total and it soon spread throughout the region of Piedmont and involved 500 000 workers at its height. The Turin strikers called for the strike to be extended nationally and, being mostly led by socialists, they turned to the CGL trade union and Socialist Party leaders, who rejected their call.

The only support for the Turin general strike came from unions that were mainly under anarcho-syndicalist influence, such as the independent railway and the maritime workers unions (*"The syndicalists were the only ones to move."*). The railway workers in Pisa and Florence refused to transport troops who were being sent to Turin. There were strikes all around Genoa, among dock workers and in workplaces where the USI was a major influence. So in spite of being *"betrayed and abandoned by the whole socialist movement,"* the April movement *"still found popular support"* with *"actions ... either directly led or indirectly inspired by anarcho-syndicalists."* In Turin itself, the anarchists and syndicalists were *"threatening to cut the council movement out from under"* Gramsci and the **Ordine Nuovo** group. [Williams, **Op. Cit.**, p. 207, p. 193 and p. 194]

Eventually the CGL leadership settled the strike on terms that accepted the employers' main demand for limiting the shop stewards' councils to non-working hours. Though the councils were now much reduced in activity and shop floor presence, they would yet see a resurgence of their position during the September factory occupations.

The anarchists *"accused the socialists of betrayal. They criticised what they believed was a false sense of discipline that had bound socialists to their own cowardly leadership. They contrasted the discipline that placed every movement under the 'calculations, fears, mistakes and possible betrayals of the leaders' to the other discipline of the workers of Sestri Ponente who struck in solidarity with Turin, the discipline of the railway workers who refused to transport security forces to Turin and the anarchists and members of the Unione Sindacale who forgot considerations of party and sect to put themselves at the disposition of the Torinesi."* [Carl Levy, **Op. Cit.**, p. 161] Sadly, this top-down "discipline" of the socialists and their unions would be repeated during the factory occupations, with terrible results.

In September, 1920, there were large-scale stay-in strikes in Italy in response to an owner wage cut and lockout. *"Central to the climate of the crisis was the rise of the syndicalists."* In mid-August, the USI metal-workers *"called for both unions to occupy the factories"* and called for *"a preventive occupation"* against lock-outs. The USI saw this as the *"expropriation of the factories by the metal-workers"* (which must *"be defended by all necessary measures"*) and saw the need *"to call the workers of other industries into battle."* [Williams, **Op. Cit.**, p. 236, pp. 238–9] Indeed, *"[i]f the FIOM had not embraced the syndicalist idea of an occupation of factories to counter an employer's lockout, the USI may well have won significant support from the politically active working class of Turin."* [Carl Levy, **Op. Cit.**, p. 129] These strikes began in the engineering factories and soon spread to railways, road transport, and other industries, with peasants seizing land. The strikers, however, did more than just occupy their workplaces, they placed them under workers' self-management. Soon over 500 000 "strikers" were at work, producing for themselves. Errico Malatesta, who took part in these events, writes:

> *"The metal workers started the movement over wage rates. It was a strike of a new kind. Instead of abandoning the factories, the idea was to remain inside without working ...*

> *Throughout Italy there was a revolutionary fervour among the workers and soon the demands changed their characters. Workers thought that the moment was ripe to take possession once [and] for all the means of production. They armed for defence ... and began to organise production on their own ... It was the right of property abolished in fact ...; it was a new regime, a new form of social life that was being ushered in. And the government stood by because it felt impotent to offer opposition.*" [**Errico Malatesta: His Life and Ideas**, p. 134]

Daniel Guerin provides a good summary of the extent of the movement:

> *"The management of the factories ... [was] conducted by technical and administrative workers' committees. Self-management went quite a long way: in the early period assistance was obtained from the banks, but when it was withdrawn the self-management system issued its own money to pay the workers' wages. Very strict self-discipline was required, the use of alcoholic beverages forbidden, and armed patrols were organised for self-defence. Very close solidarity was established between the factories under self-management. Ores and coal were put into a common pool, and shared out equitably."* [**Anarchism**, p. 109]

Italy was *"paralysed, with half a million workers occupying their factories and raising red and black flags over them."* The movement spread throughout Italy, not only in the industrial heartland around Milan, Turin and Genoa, but also in Rome, Florence, Naples and Palermo. The *"militants of the USI were certainly in the forefront of the movement,"* while **Umanita Nova** argued that *"the movement is very serious and we must do everything we can to channel it towards a massive extension."* The persistent call of the USI was for *"an extension of the movement to the whole of industry to institute their 'expropriating general strike.'"* [Williams, **Op. Cit.**, p. 236 and pp. 243–4] Railway workers, influenced by the libertarians, refused to transport troops, workers went on strike against the orders of the reformist unions and peasants occupied the land. The anarchists whole-heartedly supported the movement, unsurprisingly as the *"occupation of the factories and the land suited perfectly our programme of action."* [Malatesta, **Op. Cit.**, p. 135] Luigi Fabbri described the occupations as having *"revealed a power in the proletariat of which it had been unaware hitherto."* [quoted by Paolo Sprinao, **The Occupation of the Factories**, p. 134]

However, after four weeks of occupation, the workers decided to leave the factories. This was because of the actions of the socialist party and the reformist trade unions. They opposed the movement and negotiated with the state for a return to "normality" in exchange for a promise to extend workers' control legally, in association with the bosses. The question of revolution was decided by a vote of the CGL national council in Milan on April 10-11th, without consulting the syndicalist unions, after the Socialist Party leadership refused to decide one way or the other.

Needless to say, this promise of "workers' control" was not kept. The lack of independent inter-factory organisation made workers dependent on trade union bureaucrats for information on what was going on in other cities, and they used that power to isolate factories, cities, and factories from each other. This lead to a return to work, *"in spite of the opposition of individual anarchists dispersed among the factories."* [Malatesta, **Op. Cit.**, p. 136] The local syndicalist union confederations could not provide the necessary framework for a fully co-ordinated occupation

movement as the reformist unions refused to work with them; and although the anarchists were a large minority, they were still a minority:

> *"At the 'interproletarian' convention held on 12 September (in which the Unione Anarchia, the railwaymen's and maritime workers union participated) the syndicalist union decided that 'we cannot do it ourselves' without the socialist party and the CGL, protested against the 'counter-revolutionary vote' of Milan, declared it minoritarian, arbitrary and null, and ended by launching new, vague, but ardent calls to action."* [Paolo Spriano, **Op. Cit.**, p. 94]

Malatesta addressed the workers of one of the factories at Milan. He argued that *"[t]hose who celebrate the agreement signed at Rome [between the Confederazione and the capitalists] as a great victory of yours are deceiving you. The victory in reality belongs to Giolitti, to the government and the bourgeoisie who are saved from the precipice over which they were hanging."* During the occupation the *"bourgeoisie trembled, the government was powerless to face the situation."* Therefore:

> *"To speak of victory when the Roman agreement throws you back under bourgeois exploitation which you could have got rid of is a lie. If you give up the factories, do this with the conviction [of] hav[ing] lost a great battle and with the firm intention to resume the struggle on the first occasion and to carry it on in a thorough way... Nothing is lost if you have no illusion [about] the deceiving character of the victory. The famous decree on the control of factories is a mockery ... because it tends to harmonise your interests and those of the bourgeois which is like harmonising the interests of the wolf and the sheep. Don't believe those of your leaders who make fools of you by adjourning the revolution from day to day. You yourselves must make the revolution when an occasion will offer itself, without waiting for orders which never come, or which come only to enjoin you to abandon action. Have confidence in yourselves, have faith in your future and you will win."* [quoted by Max Nettlau, **Errico Malatesta: The Biography of an Anarchist**]

Malatesta was proven correct. With the end of the occupations, the only victors were the bourgeoisie and the government. Soon the workers would face Fascism, but first, in October 1920, *"after the factories were evacuated,"* the government (obviously knowing who the real threat was) *"arrested the entire leadership of the USI and UAI. The socialists did not respond"* and *"more-or-less ignored the persecution of the libertarians until the spring of 1921 when the aged Malatesta and other imprisoned anarchists mounted a hunger strike from their cells in Milan."* [Carl Levy, **Op. Cit.**, pp. 221–2] They were acquitted after a four day trial.

The events of 1920 show four things. Firstly, that workers can manage their own workplaces successfully by themselves, without bosses. Secondly, on the need for anarchists to be involved in the labour movement. Without the support of the USI, the Turin movement would have been even more isolated than it was. Thirdly, anarchists need to be organised to influence the class struggle. The growth of the UAI and USI in terms of both influence and size indicates the importance of this. Without the anarchists and syndicalists raising the idea of factory occupations and supporting the movement, it is doubtful that it would have been as successful and widespread as it was. Lastly, that socialist organisations, structured in a hierarchical fashion, do not produce a

revolutionary membership. By continually looking to leaders, the movement was crippled and could not develop to its full potential.

This period of Italian history explains the growth of Fascism in Italy. As Tobias Abse points out, *"the rise of fascism in Italy cannot be detached from the events of the **biennio rosso**, the two red years of 1919 and 1920, that preceded it. Fascism was a preventive counter-revolution ... launched as a result of the failed revolution"* ["*The Rise of Fascism in an Industrial City*", pp. 52–81, **Rethinking Italian Fascism**, David Forgacs (ed.), p. 54] The term *"preventive counter-revolution"* was originally coined by the leading anarchist Luigi Fabbri, who correctly described fascism as *"the organisation and agent of the violent armed defence of the ruling class against the proletariat, which, to their mind, has become unduly demanding, united and intrusive."* ["*Fascism: The Preventive Counter-Revolution*", pp. 408–416, **Anarchism**, Robert Graham (ed.), p. 410 and p. 409]

The rise of fascism confirmed Malatesta's warning at the time of the factory occupations: *"If we do not carry on to the end, we will pay with tears of blood for the fear we now instil in the bourgeoisie."* [quoted by Tobias Abse, **Op. Cit.**, p. 66] The capitalists and rich landowners backed the fascists in order to teach the working class their place, aided by the state. They ensured *"that it was given every assistance in terms of funding and arms, turning a blind eye to its breaches of the law and, where necessary, covering its back through intervention by armed forces which, on the pretext of restoring order, would rush to the aid of the fascists wherever the latter were beginning to take a beating instead of doling one out."* [Fabbri, **Op. Cit.**, p. 411] To quote Tobias Abse:

> *"The aims of the Fascists and their backers amongst the industrialists and agrarians in 1921–22 were simple: to break the power of the organised workers and peasants as completely as possible, to wipe out, with the bullet and the club, not only the gains of the **biennio rosso**, but everything that the lower classes had gained ... between the turn of the century and the outbreak of the First World War."* [**Op. Cit.**, p. 54]

The fascist squads attacked and destroyed anarchist and socialist meeting places, social centres, radical presses and Camera del Lavoro (local trade union councils). However, even in the dark days of fascist terror, the anarchists resisted the forces of totalitarianism. *"It is no coincidence that the strongest working-class resistance to Fascism was in ... towns or cities in which there was quite a strong anarchist, syndicalist or anarcho-syndicalist tradition."* [Tobias Abse, **Op. Cit.**, p. 56]

The anarchists participated in, and often organised sections of, the **Arditi del Popolo**, a working-class organisation devoted to the self-defence of workers' interests. The Arditi del Popolo organised and encouraged working-class resistance to fascist squads, often defeating larger fascist forces (for example, *"the total humiliation of thousands of Italo Balbo's squadristi by a couple of hundred Arditi del Popolo backed by the inhabitants of the working class districts"* in the anarchist stronghold of Parma in August 1922 [Tobias Abse, **Op. Cit.**, p. 56]).

The Arditi del Popolo was the closest Italy got to the idea of a united, revolutionary working-class front against fascism, as had been suggested by Malatesta and the UAI. This movement *"developed along anti-bourgeois and anti-fascist lines, and was marked by the independence of its local sections."* [**Red Years, Black Years: Anarchist Resistance to Fascism in Italy**, p. 2] Rather than being just an "anti-fascist" organisation, the Arditi *"were not a movement in defence of 'democracy' in the abstract, but an essentially working-class organisation devoted to the defence of the interests of industrial workers, the dockers and large numbers of artisans and craftsmen."* [Tobias Abse, **Op. Cit.**, p. 75] Unsurprisingly, the **Arditi del Popolo** *"appear to have been strongest*

and most successful in areas where traditional working-class political culture was less exclusively socialist and had strong anarchist or syndicalist traditions, for example, Bari, Livorno, Parma and Rome." [Antonio Sonnessa, *"Working Class Defence Organisation, Anti-Fascist Resistance and the* ***Arditi del Popolo*** *in Turin, 1919–22,"* pp. 183–218, **European History Quarterly**, vol. 33, no. 2, p. 184]

However, both the socialist and communist parties withdrew from the organisation. The socialists signed a "Pact of Pacification" with the Fascists in August 1921. The communists *"preferred to withdraw their members from the Arditi del Popolo rather than let them work with the anarchists."* [**Red Years, Black Years**, p. 17] Indeed, *"[o]n the same day as the Pact was signed,* ***Ordine Nuovo*** *published a PCd'I [Communist Party of Italy] communication warning communists against involvement"* in the Arditi del Popolo. Four days later, the Communist leadership *"officially abandoned the movement. Severe disciplinary measures were threatened against those communists who continued to participate in, or liase with,"* the organisation. Thus by *"the end of the first week of August 1921 the PSI, CGL and the PCd'I had officially denounced"* the organisation. *"Only the anarchist leaders, if not always sympathetic to the programme of the [Arditi del Popolo], did not abandon the movement."* Indeed, **Umanita Nova** *"strongly supported"* it *"on the grounds it represented a popular expression of anti-fascist resistance and in defence of freedom to organise."* [Antonio Sonnessa, **Op. Cit.**, p. 195 and p. 194]

However, in spite of the decisions by their leaders, many rank and file socialists and communists took part in the movement. The latter took part in open *"defiance of the PCd'I leadership's growing abandonment"* of it. In Turin, for example, communists who took part in the **Arditi del Polopo** did so *"less as communists and more as part of a wider, working-class self-identification ... This dynamic was re-enforced by an important socialist and anarchist presence"* there. The failure of the Communist leadership to support the movement shows the bankruptcy of Bolshevik organisational forms which were unresponsive to the needs of the popular movement. Indeed, these events show the *"libertarian custom of autonomy from, and resistance to, authority was also operated against the leaders of the workers' movement, particularly when they were held to have misunderstood the situation at grass roots level."* [Sonnessa, **Op. Cit.**, p. 200, p. 198 and p. 193]

Thus the Communist Party failed to support the popular resistance to fascism. The Communist leader Antonio Gramsci explained why, arguing that *"the party leadership's attitude on the question of the Arditi del Popolo ... corresponded to a need to prevent the party members from being controlled by a leadership that was not the party's leadership."* Gramsci added that this policy *"served to disqualify a mass movement which had started from below and which could instead have been exploited by us politically."* [**Selections from Political Writings (1921–1926)**, p. 333] While being less sectarian towards the Arditi del Popolo than other Communist leaders, *"[i]n common with all communist leaders, Gramsci awaited the formation of the PCd'I-led military squads."* [Sonnessa, **Op. Cit.**, p. 196] In other words, the struggle against fascism was seen by the Communist leadership as a means of gaining more members and, when the opposite was a possibility, they preferred defeat and fascism rather than risk their followers becoming influenced by anarchism.

As Abse notes, *"it was the withdrawal of support by the Socialist and Communist parties at the national level that crippled"* the Arditi. [**Op. Cit.**, p. 74] Thus *"social reformist defeatism and communist sectarianism made impossible an armed opposition that was widespread and therefore effective; and the isolated instances of popular resistance were unable to unite in a successful strategy."* And fascism could have been defeated: *"Insurrections at Sarzanna, in July 1921, and at Parma, in August 1922, are examples of the correctness of the policies which the anarchists urged in action*

and propaganda." [**Red Years, Black Years**, p. 3 and p. 2] Historian Tobias Abse confirms this analysis, arguing that *"[w]hat happened in Parma in August 1922 ... could have happened elsewhere, if only the leadership of the Socialist and Communist parties thrown their weight behind the call of the anarchist Malatesta for a united revolutionary front against Fascism.*" [**Op. Cit.**, p. 56]

In the end, fascist violence was successful and capitalist power maintained:

> *"The anarchists' will and courage were not enough to counter the fascist gangs, powerfully aided with material and arms, backed by the repressive organs of the state. Anarchists and anarcho-syndicalists were decisive in some areas and in some industries, but only a similar choice of direct action on the parts of the Socialist Party and the General Confederation of Labour [the reformist trade union] could have halted fascism.*" [**Red Years, Black Years**, pp. 1–2]

After helping to defeat the revolution, the Marxists helped ensure the victory of fascism.

Even after the fascist state was created, anarchists resisted both inside and outside Italy. In America, for example, Italian anarchists played a major role in fighting fascist influence in their communities, none more so that Carlo Tresca, most famous for his role in the 1912 IWW Lawrence strike, who *"in the 1920s had no peer among anti-Fascist leaders, a distinction recognised by Mussolini's political police in Rome."* [Nunzio Pernicone, **Carlo Tresca: Portrait of a Rebel**, p. 4] Many Italians, both anarchist and non-anarchist, travelled to Spain to resist Franco in 1936 (see Umberto Marzochhi's **Remembering Spain: Italian Anarchist Volunteers in the Spanish Civil War** for details). During the Second World War, anarchists played a major part in the Italian Partisan movement. It was the fact that the anti-fascist movement was dominated by anti-capitalist elements that led the USA and the UK to place known fascists in governmental positions in the places they "liberated" (often where the town had already been taken by the Partisans, resulting in the Allied troops "liberating" the town from its own inhabitants!).

Given this history of resisting fascism in Italy, it is surprising that some claim Italian fascism was a product or form of syndicalism. This is even claimed by some anarchists. According to Bob Black the *"Italian syndicalists mostly went over to Fascism"* and references David D. Roberts 1979 study **The Syndicalist Tradition and Italian Fascism** to support his claim. [**Anarchy after Leftism**, p. 64] Peter Sabatini in a review in **Social Anarchism** makes a similar statement, saying that syndicalism's *"ultimate failure"* was *"its transformation into a vehicle of fascism."* [**Social Anarchism**, no. 23, p. 99] What is the truth behind these claims?

Looking at Black's reference we discover that, in fact, most of the Italian syndicalists did not go over to fascism, if by syndicalists we mean members of the USI (the Italian Syndicalist Union). Roberts states that:

> *"The vast majority of the organised workers failed to respond to the syndicalists' appeals and continued to oppose [Italian] intervention [in the First World War], shunning what seemed to be a futile capitalist war. The syndicalists failed to convince even a majority within the USI ... the majority opted for the neutralism of Armando Borghi, leader of the anarchists within the USI. Schism followed as De Ambris led the interventionist minority out of the confederation.*" [**The Syndicalist Tradition and Italian Fascism**, p. 113]

However, if we take "syndicalist" to mean some of the intellectuals and "leaders" of the pre-war movement, it was a case that the *"leading syndicalists came out for intervention quickly and*

almost unanimously" [Roberts, **Op. Cit.**, p. 106] after the First World War started. Many of these pro-war "leading syndicalists" did become fascists. However, to concentrate on a handful of "leaders" (which the majority did not even follow!) and state that this shows that the *"Italian syndicalists mostly went over to Fascism"* staggers belief. What is even worse, as seen above, the Italian anarchists and syndicalists were the most dedicated and successful fighters against fascism. In effect, Black and Sabatini have slandered a whole movement.

What is also interesting is that these "leading syndicalists" were not anarchists and so not anarcho-syndicalists. As Roberts notes *"[i]n Italy, the syndicalist doctrine was more clearly the product of a group of intellectuals, operating within the Socialist party and seeking an alternative to reformism."* They *"explicitly denounced anarchism"* and *"insisted on a variety of Marxist orthodoxy."* The *"syndicalists genuinely desired — and tried — to work within the Marxist tradition."* [**Op. Cit.**, p. 66, p. 72, p. 57 and p. 79] According to Carl Levy, in his account of Italian anarchism, *"[u]nlike other syndicalist movements, the Italian variation coalesced inside a Second International party. Supporter were partially drawn from socialist intransigents ... the southern syndicalist intellectuals pronounced republicanism ... Another component ... was the remnant of the Partito Operaio."* [*"Italian Anarchism: 1870–1926"* in **For Anarchism: History, Theory, and Practice**, David Goodway (Ed.), p. 51]

In other words, the Italian syndicalists who turned to fascism were, firstly, a small minority of intellectuals who could not convince the majority within the syndicalist union to follow them, and, secondly, Marxists and republicans rather than anarchists, anarcho-syndicalists or even revolutionary syndicalists.

According to Carl Levy, Roberts' book *"concentrates on the syndicalist intelligentsia"* and that *"some syndicalist intellectuals ... helped generate, or sympathetically endorsed, the new Nationalist movement .. . which bore similarities to the populist and republican rhetoric of the southern syndicalist intellectuals."* He argues that there *"has been far too much emphasis on syndicalist intellectuals and national organisers"* and that syndicalism *"relied little on its national leadership for its long-term vitality."* [**Op. Cit.**, p. 77, p. 53 and p. 51] If we do look at the membership of the USI, rather than finding a group which *"mostly went over to fascism,"* we discover a group of people who fought fascism tooth and nail and were subject to extensive fascist violence.

To summarise, Italian Fascism had nothing to do with syndicalism and, as seen above, the USI fought the Fascists and was destroyed by them along with the UAI, Socialist Party and other radicals. That a handful of pre-war Marxist-syndicalists later became Fascists and called for a "National-Syndicalism" does not mean that syndicalism and fascism are related (any more than some anarchists later becoming Marxists makes anarchism "a vehicle" for Marxism!).

It is hardly surprising that anarchists were the most consistent and successful opponents of Fascism. The two movements could not be further apart, one standing for total statism in the service of capitalism while the other for a free, non-capitalist society. Neither is it surprising that when their privileges and power were in danger, the capitalists and the landowners turned to fascism to save them. This process is a common feature in history (to list just four examples, Italy, Germany, Spain and Chile).

A.5.6 Anarchism and the Spanish Revolution

As Noam Chomsky notes, *"a good example of a really large-scale anarchist revolution — in fact the best example to my knowledge — is the Spanish revolution in 1936, in which over most of Republican Spain there was a quite inspiring anarchist revolution that involved both industry and agriculture over substantial areas ... And that again was, by both human measures and indeed anyone's economic measures, quite successful. That is, production continued effectively; workers in farms and factories proved quite capable of managing their affairs without coercion from above, contrary to what lots of socialists, communists, liberals and other wanted to believe."* The revolution of 1936 was *"based on three generations of experiment and thought and work which extended anarchist ideas to very large parts of the population."* [**Radical Priorities**, p. 212]

Due to this anarchist organising and agitation, Spain in the 1930's had the largest anarchist movement in the world. At the start of the Spanish "Civil" war, over one and one half million workers and peasants were members of the CNT (the ***National Confederation of Labour***), an anarcho-syndicalist union federation, and 30,000 were members of the FAI (the ***Anarchist Federation of Iberia***). The total population of Spain at this time was 24 million.

The social revolution which met the Fascist coup on July 18th, 1936, is the greatest experiment in libertarian socialism to date. Here the last mass syndicalist union, the CNT, not only held off the fascist rising but encouraged the widespread take-over of land and factories. Over seven million people, including about two million CNT members, put self-management into practise in the most difficult of circumstances and actually improved both working conditions and output.

In the heady days after the 19th of July, the initiative and power truly rested in the hands of the rank-and-file members of the CNT and FAI. It was ordinary people, undoubtedly under the influence of Faistas (members of the FAI) and CNT militants, who, after defeating the fascist uprising, got production, distribution and consumption started again (under more egalitarian arrangements, of course), as well as organising and volunteering (in their tens of thousands) to join the militias, which were to be sent to free those parts of Spain that were under Franco. In every possible way the working class of Spain were creating by their own actions a new world based on their own ideas of social justice and freedom — ideas inspired, of course, by anarchism and anarchosyndicalism.

George Orwell's eye-witness account of revolutionary Barcelona in late December, 1936, gives a vivid picture of the social transformation that had begun:

> *"The Anarchists were still in virtual control of Catalonia and the revolution was still in full swing. To anyone who had been there since the beginning it probably seemed even in December or January that the revolutionary period was ending; but when one came straight from England the aspect of Barcelona was something startling and overwhelming. It was the first time that I had ever been in a town where the working class was in the saddle. Practically every building of any size had been seized by the workers and was draped with red flags or with the red and black flag of the Anarchists; every wall was scrawled with the hammer and sickle and with the initials of the revolutionary parties; almost every church had been gutted and its images burnt. Churches here and there were being systematically demolished by gangs of workman. Every shop and cafe had an inscription saying that it had been collectivised; even the bootblacks had been collectivised and their boxes painted red and black. Waiters and shop-walkers looked you in*

> *the face and treated you as an equal. Servile and even ceremonial forms of speech had temporarily disappeared. Nobody said 'Señor' or 'Don' or even 'Usted'; everyone called everyone else 'Comrade' or 'Thou', and said 'Salud!' instead of 'Buenos dias'... Above all, there was a belief in the revolution and the future, a feeling of having suddenly emerged into an era of equality and freedom. Human beings were trying to behave as human beings and not as cogs in the capitalist machine."* [**Homage to Catalonia**, pp. 2–3]

The full extent of this historic revolution cannot be covered here. It will be discussed in more detail in Section I.8 of the FAQ. All that can be done is to highlight a few points of special interest in the hope that these will give some indication of the importance of these events and encourage people to find out more about it.

All industry in Catalonia was placed either under workers' self-management **or** workers' control (that is, either totally taking over **all** aspects of management, in the first case, or, in the second, controlling the old management). In some cases, whole town and regional economies were transformed into federations of collectives. The example of the Railway Federation (which was set up to manage the railway lines in Catalonia, Aragon and Valencia) can be given as a typical example. The base of the federation was the local assemblies:

> *"All the workers of each locality would meet twice a week to examine all that pertained to the work to be done... The local general assembly named a committee to manage the general activity in each station and its annexes. At [these] meetings, the decisions (direccion) of this committee, whose members continued to work [at their previous jobs], would be subjected to the approval or disapproval of the workers, after giving reports and answering questions."*

The delegates on the committee could be removed by an assembly at any time and the highest co-ordinating body of the Railway Federation was the ***"Revolutionary Committee,"*** whose members were elected by union assemblies in the various divisions. The control over the rail lines, according to Gaston Leval, *"did not operate from above downwards, as in a statist and centralised system. The Revolutionary Committee had no such powers... The members of the... committee being content to supervise the general activity and to co-ordinate that of the different routes that made up the network."* [Gaston Leval, **Collectives in the Spanish Revolution**, p. 255]

On the land, tens of thousands of peasants and rural day workers created voluntary, self-managed collectives. The quality of life improved as co-operation allowed the introduction of health care, education, machinery and investment in the social infrastructure. As well as increasing production, the collectives increased freedom. As one member puts it, *"it was marvellous ... to live in a collective, a free society where one could say what one thought, where if the village committee seemed unsatisfactory one could say. The committee took no big decisions without calling the whole village together in a general assembly. All this was wonderful."* [Ronald Fraser, **Blood of Spain**, p. 360]

We discuss the revolution in more detail in section I.8. For example, sections I.8.3 and I.8.4 discuss in more depth how the industrial collectives. The rural collectives are discussed in sections I.8.5 and I.8.6. We must stress that these sections are summaries of a vast social movement, and more information can be gathered from such works as Gaston Leval's **Collectives in the**

Spanish Revolution, Sam Dolfgoff's **The Anarchist Collectives**, Jose Peirats' **The CNT in the Spanish Revolution** and a host of other anarchist accounts of the revolution.

On the social front, anarchist organisations created rational schools, a libertarian health service, social centres, and so on. The ***Mujeres Libres*** (free women) combated the traditional role of women in Spanish society, empowering thousands both inside and outside the anarchist movement (see **The Free Women of Spain** by Martha A. Ackelsberg for more information on this very important organisation). This activity on the social front only built on the work started long before the outbreak of the war; for example, the unions often funded rational schools, workers centres, and so on.

The voluntary militias that went to free the rest of Spain from Franco were organised on anarchist principles and included both men and women. There was no rank, no saluting and no officer class. Everybody was equal. George Orwell, a member of the POUM militia (the POUM was a dissident Marxist party, influenced by Leninism but not, as the Communists asserted, Trotskyist) makes this clear:

> *"The essential point of the [militia] system was the social equality between officers and men. Everyone from general to private drew the same pay, ate the same food, wore the same clothes, and mingled on terms of complete equality. If you wanted to slap the general commanding the division on the back and ask him for a cigarette, you could do so, and no one thought it curious. In theory at any rate each militia was a democracy and not a hierarchy. It was understood that orders had to be obeyed, but it was also understood that when you gave an order you gave it as comrade to comrade and not as superior to inferior. There were officers and N.C.O.s, but there was no military rank in the ordinary sense; no titles, no badges, no heel-clicking and saluting. They had attempted to produce within the militias a sort of temporary working model of the classless society. Of course there was not perfect equality, but there was a nearer approach to it than I had ever seen or that I would have though conceivable in time of war... "* [**Op. Cit.**, p. 26]

In Spain, however, as elsewhere, the anarchist movement was smashed between Stalinism (the Communist Party) on the one hand and Capitalism (Franco) on the other. Unfortunately, the anarchists placed anti-fascist unity before the revolution, thus helping their enemies to defeat both them and the revolution. Whether they were forced by circumstances into this position or could have avoided it is still being debated (see section I.8.10 for a discussion of why the CNT-FAI collaborated and section I.8.11 on why this decision was **not** a product of anarchist theory).

Orwell's account of his experiences in the militia's indicates why the Spanish Revolution is so important to anarchists:

> *"I had dropped more or less by chance into the only community of any size in Western Europe where political consciousness and disbelief in capitalism were more normal than their opposites. Up here in Aragon one was among tens of thousands of people, mainly though not entirely of working-class origin, all living at the same level and mingling on terms of equality. In theory it was perfect equality, and even in practice it was not far from it. There is a sense in which it would be true to say that one was experiencing a foretaste of Socialism, by which I mean that the prevailing mental atmosphere was*

that of Socialism. Many of the normal motives of civilised life — snobbishness, money-grubbing, fear of the boss, etc. — had simply ceased to exist. The ordinary class- division of society had disappeared to an extent that is almost unthinkable in the money-tainted air of England; there was no one there except the peasants and ourselves, and no one owned anyone else as his master... One had been in a community where hope was more normal than apathy or cynicism, where the word 'comrade' stood for comradeship and not, as in most countries, for humbug. One had breathed the air of equality. I am well aware that it is now the fashion to deny that Socialism has anything to do with equality. In every country in the world a huge tribe of party-hacks and sleek little professors are busy 'proving' that Socialism means no more than a planned state-capitalism with the grab-motive left intact. But fortunately there also exists a vision of Socialism quite different from this. The thing that attracts ordinary men to Socialism and makes them willing to risk their skins for it, the 'mystique' of Socialism, is the idea of equality; to the vast majority of people Socialism means a classless society, or it means nothing at all ... In that community where no one was on the make, where there was a shortage of everything but no boot-licking, one got, perhaps, a crude forecast of what the opening stages of Socialism might be like. And, after all, instead of disillusioning me it deeply attracted me..." [**Op. Cit.**, pp. 83–84]

For more information on the Spanish Revolution, the following books are recommended: **Lessons of the Spanish Revolution** by Vernon Richards; **Anarchists in the Spanish Revolution** and **The CNT in the Spanish Revolution** by Jose Peirats; **Free Women of Spain** by Martha A. Ackelsberg; **The Anarchist Collectives** edited by Sam Dolgoff; *"Objectivity and Liberal Scholarship"* by Noam Chomsky (in **The Chomsky Reader**); **The Anarchists of Casas Viejas** by Jerome R. Mintz; and **Homage to Catalonia** by George Orwell.

A.5.7 The May-June Revolt in France, 1968

The May-June events in France placed anarchism back on the radical landscape after a period in which many people had written the movement off as dead. This revolt of ten million people grew from humble beginnings. Expelled by the university authorities of Nanterre in Paris for anti-Vietnam War activity, a group of anarchists (including Daniel Cohn-Bendit) promptly called a protest demonstration. The arrival of 80 police enraged many students, who quit their studies to join the battle and drive the police from the university.

Inspired by this support, the anarchists seized the administration building and held a mass debate. The occupation spread, Nanterre was surrounded by police, and the authorities closed the university down. The next day, the Nanterre students gathered at the Sorbonne University in the centre of Paris. Continual police pressure and the arrest of over 500 people caused anger to erupt into five hours of street fighting. The police even attacked passers-by with clubs and tear gas.

A total ban on demonstrations and the closure of the Sorbonne brought thousands of students out onto the streets. Increasing police violence provoked the building of the first barricades. Jean Jacques Lebel, a reporter, wrote that by 1 a.m., *"[l]iterally thousands helped build barricades... women, workers, bystanders, people in pyjamas, human chains to carry rocks, wood, iron."* An entire night of fighting left 350 police injured. On May 7th, a 50,000-strong protest march against the

police was transformed into a day-long battle through the narrow streets of the Latin Quarter. Police tear gas was answered by molotov cocktails and the chant *"Long Live the Paris Commune!"*

By May 10th, continuing massive demonstrations forced the Education Minister to start negotiations. But in the streets, 60 barricades had appeared and young workers were joining the students. The trade unions condemned the police violence. Huge demonstrations throughout France culminated on May 13th with one million people on the streets of Paris.

Faced with this massive protest, the police left the Latin Quarter. Students seized the Sorbonne and created a mass assembly to spread the struggle. Occupations soon spread to every French University. From the Sorbonne came a flood of propaganda, leaflets, proclamations, telegrams, and posters. Slogans such as "***Everything is Possible," "Be Realistic, Demand the Impossible," "Life without Dead Times,"*** and ***"It is Forbidden to Forbid"*** plastered the walls. ***"All Power to the Imagination"*** was on everyone's lips. As Murray Bookchin pointed out, *"the motive forces of revolution today... are not simply scarcity and material need, but also* ***quality of everyday life ... the attempt to gain control of one's own destiny****."* [**Post-Scarcity Anarchism**, p. 166]

Many of the most famous slogans of those days originated from the Situationists. The **Situationist International** had been formed in 1957 by a small group of dissident radicals and artists. They had developed a highly sophisticated (if jargon riddled) and coherent analysis of modern capitalist society and how to supersede it with a new, freer one. Modern life, they argued, was mere survival rather than living, dominated by the economy of consumption in which everyone, everything, every emotion and relationship becomes a commodity. People were no longer simply alienated producers, they were also alienated consumers. They defined this kind of society as the ***"Spectacle."*** Life itself had been stolen and so revolution meant recreating life. The area of revolutionary change was no longer just the workplace, but in everyday existence:

> *"People who talk about revolution and class struggle without referring explicitly to everyday life, without understanding what is subversive about love and what is positive in the refusal of constraints, such people have a corpse in their mouth."* [quoted by Clifford Harper, **Anarchy: A Graphic Guide**, p. 153]

Like many other groups whose politics influenced the Paris events, the situationists argued that *"the workers' councils are the only answer. Every other form of revolutionary struggle has ended up with the very opposite of what it was originally looking for."* [quoted by Clifford Harper, **Op. Cit.**, p. 149] These councils would be self-managed and not be the means by which a "revolutionary" party would take power. Like the anarchists of **Noire et Rouge** and the libertarian socialists of **Socialisme ou Barbarie**, their support for a self-managed revolution from below had a massive influence in the May events and the ideas that inspired it.

On May 14th, the Sud-Aviation workers locked the management in its offices and occupied their factory. They were followed by the Cleon-Renault, Lockhead-Beauvais and Mucel-Orleans factories the next day. That night the National Theatre in Paris was seized to become a permanent assembly for mass debate. Next, France's largest factory, Renault-Billancourt, was occupied. Often the decision to go on indefinite strike was taken by the workers without consulting union officials. By May 17th, a hundred Paris Factories were in the hands of their workers. The weekend of the 19th of May saw 122 factories occupied. By May 20th, the strike and occupations were general and involved six million people. Print workers said they did not wish to leave a monopoly of media coverage to TV and radio, and agreed to print newspapers as long as the press *"carries out*

with objectivity the role of providing information which is its duty." In some cases print-workers insisted on changes in headlines or articles before they would print the paper. This happened mostly with the right-wing papers such as ***'Le Figaro'*** or ***'La Nation'***.

With the Renault occupation, the Sorbonne occupiers immediately prepared to join the Renault strikers, and led by anarchist black and red banners, 4,000 students headed for the occupied factory. The state, bosses, unions and Communist Party were now faced with their greatest nightmare — a worker-student alliance. Ten thousand police reservists were called up and frantic union officials locked the factory gates. The Communist Party urged their members to crush the revolt. They united with the government and bosses to craft a series of reforms, but once they turned to the factories they were jeered out of them by the workers.

The struggle itself and the activity to spread it was organised by self-governing mass assemblies and co-ordinated by action committees. The strikes were often run by assemblies as well. As Murray Bookchin argues, the *"hope [of the revolt] lay in the extension of self-management in all its forms — the general assemblies and their administrative forms, the action committees, the factory strike committees — to all areas of the economy, indeed to all areas of life itself."* Within the assemblies, *"a fever of life gripped millions, a rewaking of senses that people never thought they possessed."* [**Op. Cit.**, p. 168 and p. 167] It was not a workers' strike or a student strike. It was a **peoples'** strike that cut across almost all class lines.

On May 24th, anarchists organised a demonstration. Thirty thousand marched towards the Palace de la Bastille. The police had the Ministries protected, using the usual devices of tear gas and batons, but the Bourse (Stock Exchange) was left unprotected and a number of demonstrators set fire to it.

It was at this stage that some left-wing groups lost their nerve. The Trotskyist JCR turned people back into the Latin Quarter. Other groups such as UNEF and Parti Socialiste Unife (United Socialist Party) blocked the taking of the Ministries of Finance and Justice. Cohn-Bendit said of this incident *"As for us, we failed to realise how easy it would have been to sweep all these nobodies away... .It is now clear that if, on 25 May, Paris had woken to find the most important Ministries occupied, Gaullism would have caved in at once... . "* Cohn-Bendit was forced into exile later that very night.

As the street demonstrations grew and occupations continued, the state prepared to use overwhelming means to stop the revolt. Secretly, top generals readied 20,000 loyal troops for use on Paris. Police occupied communications centres like TV stations and Post Offices. By Monday, May 27th, the Government had guaranteed an increase of 35% in the industrial minimum wage and an all round-wage increase of 10%. The leaders of the CGT organised a march of 500,000 workers through the streets of Paris two days later. Paris was covered in posters calling for a *"Government of the People."* Unfortunately the majority still thought in terms of changing their rulers rather than taking control for themselves.

By June 5th most of the strikes were over and an air of what passes for normality within capitalism had rolled back over France. Any strikes which continued after this date were crushed in a military-style operation using armoured vehicles and guns. On June 7th, they made an assault on the Flins steelworks which started a four-day running battle which left one worker dead. Three days later, Renault strikers were gunned down by police, killing two. In isolation, those pockets of militancy stood no chance. On June 12th, demonstrations were banned, radical groups outlawed, and their members arrested. Under attack from all sides, with escalating state violence and trade union sell-outs, the General Strike and occupations crumbled.

So why did this revolt fail? Certainly not because "vanguard" Bolshevik parties were missing. It was infested with them. Fortunately, the traditional authoritarian left sects were isolated and outraged. Those involved in the revolt did not require a vanguard to tell them what to do, and the "workers' vanguards" frantically ran after the movement trying to catch up with it and control it.

No, it was the lack of independent, self-managed confederal organisations to co-ordinate struggle which resulted in occupations being isolated from each other. So divided, they fell. In addition, Murray Bookchin argues that *"an awareness among the workers that the factories had to be **worked**, not merely occupied or struck,"* was missing. [**Op. Cit.**, p. 182]

This awareness would have been encouraged by the existence of a strong anarchist movement before the revolt. The anti-authoritarian left, though very active, was too weak among striking workers, and so the idea of self-managed organisations and workers self-management was not widespread. However, the May-June revolt shows that events can change very rapidly. *"Under the influence of the students,"* noted libertarian socialist Maurice Brinton, *"thousands began to query the whole principle of hierarchy ... Within a matter of days the tremendous creative potentialities of the people suddenly erupted. The boldest and realistic ideas — and they are usually the same — were advocated, argued, applied. Language, rendered stale by decades of bureaucratic mumbo-jumbo, eviscerated by those who manipulate it for advertising purposes, reappeared as something new and fresh. People re-appropriated it in all its fullness. Magnificently apposite and poetic slogans emerged from the anonymous crowd."* [*"Paris: May 1968"*, **For Workers' Power**, p. 253] The working class, fused by the energy and bravado of the students, raised demands that could not be catered for within the confines of the existing system. The General Strike displays with beautiful clarity the potential power that lies in the hands of the working class. The mass assemblies and occupations give an excellent, if short-lived, example of anarchy in action and how anarchist ideas can quickly spread and be applied in practice.

For more details of these events, see participants Daniel and Gabriel Cohn-Bendit's **Obsolete Communism: The Left-Wing Alternative** or Maurice Brinton's eye-witness account *"Paris: may 1968"* (in his **For Workers' Power**). **Beneath the Paving Stones** by edited Dark Star is a good anthology of situationist works relating to Paris 68 (it also contains Brinton's essay).

Section B — Why do anarchists oppose the current system?

This section of the FAQ presents an analysis of the basic social relationships of modern society and the structures which create them, particularly those aspects of society that anarchists want to change.

Anarchism is, essentially, a revolt against capitalism. As a political theory it was born at the same time as capitalism and in opposition to it. As a social movement it grew in strength and influence as capitalism colonised more and more parts of society. Rather than simply express opposition to the state, as some so-called experts assert, anarchism has always been opposed to other forms of authority and the oppression they create, in particular capitalism and its particular form of private property. It is no coincidence that Proudhon, the first person to declare themselves an anarchist, did so in a book entitled **What is Property?** (and gave the answer ***"It is theft!"***). From Proudhon onwards, anarchism has opposed both the state and capitalism (indeed, it is the one thing such diverse thinkers as Benjamin Tucker and Peter Kropotkin both agreed on). Needless to say, since Proudhon anarchism has extended its critique of authority beyond these two social evils. Other forms of social hierarchy, such as sexism, racism and homophobia, have been rejected as limitations of freedom and equality. So this section of the FAQ summarises the key ideas behind anarchism's rejection of the current system we live under.

This, of course, does not mean that anarchistic ideas have not existed within society before the dawn of capitalism. Far from it. Thinkers whose ideas can be classified as anarchist go back thousands of years and are found many diverse cultures and places. Indeed, it would be no exaggeration to say that anarchism was born the moment the state and private property were created. However, as Kropotkin noted, while *"from all times there have been Anarchists and Statists"* in our times *"Anarchy was brought forth by the same critical and revolutionary protest that gave rise to Socialism in general."* However, unlike other socialists, anarchists have not stopped at the *"negation of Capitalism and of society based on the subjection of labour to capital"* and went further to *"declare themselves against what constitutes the real strength of Capitalism: the State and its principle supports — centralisation of authority, law, always made by a minority for its own profit, and a form of justice whose chief aim is to protect Authority and Capitalism."* So anarchism was *"not only against Capitalism, but also against these pillars of Capitalism: Law, Authority, and the State."* [**Evolution and Environment**, p. 16 and p. 19]

In other words, anarchism as it exists today, as a social movement with a long history of struggle and with a political theory and set of ideas, is the product of the transformation of society which accompanied the creation of the modern (nation-) state and capital and (far more importantly) the reaction, resistance and opposition of those subject to these new social relationships and institutions. As such, the analysis and critique presented in this section of the FAQ will concentrate on modern, capitalist, society.

Anarchists realise that the power of governments and other forms of hierarchy depends upon the agreement of the governed. Fear is not the whole answer, it is far more *"because they [the oppressed] subscribe to the same values as their governors. Rulers and ruled alike believe in the principle of authority, of hierarchy, of power."* [Colin Ward, **Anarchy in Action**, p. 15] With this in mind, we present in this section of the FAQ our arguments to challenge this "consensus," to present the case why we should become anarchists, why authoritarian social relationships and organisations are not in our interests.

Needless to say, this task is not easy. No ruling class could survive unless the institutions which empower it are generally accepted by those subject to them. This is achieved by various means — by propaganda, the so-called education system, by tradition, by the media, by the general cultural

assumptions of a society. In this way the dominant ideas in society are those of the dominant elite. This means that any social movement needs to combat these ideas before trying to end them:

> *"People often do not even recognise the existence of systems of oppression and domination. They have to try to struggle to gain their rights within the systems in which they live before they even perceive that there is repression. Take a look at the women's movement. One of the first steps in the development of the women's movement was so-called 'consciousness raising efforts.' Try to get women to perceive that it is not the natural state of the world for them to be dominated and controlled. My grandmother couldn't join the women's movement, since she didn't feel any oppression, in some sense. That's just the way life was, like the sun rises in the morning. Until people can realise that it is not like the sun rising, that it can be changed, that you don't have to follow orders, that you don't have to be beaten, until people can perceive that there is something wrong with that, until that is overcome, you can't go on. And one of the ways to do that is to try to press reforms within the existing systems of repression, and sooner or later you find that you will have to change them."* [Noam Chomsky, **Anarchism Interview**]

This means, as Malatesta stressed, that anarchists *"first task therefore must be to persuade people."* This means that we *"must make people aware of the misfortunes they suffer and of their chances to destroy them ... To those who are cold and hungry we will demonstrate how possible and easy it would be to assure everybody their material needs. To those who are oppressed and despised we shall show how it is possible to live happily in a world of people who are free and equal .. . And when we will have succeeded in arousing the sentiment of rebellion in the minds of men [and women] against the avoidable and unjust evils from which we suffer in society today, and in getting them to understand how they are caused and how it depends on human will to rid ourselves of them"* then we will be able to unite and change them for the better. [**Errico Malatesta: His Life and Ideas**, pp. 185–6]

So we must explain **why** we want to change the system. From this discussion, it will become apparent why anarchists are dissatisfied with the very limited amount of freedom in modern society and why they want to create a truly free society. In the words of Noam Chomsky, the anarchist critique of modern society means:

> *"to seek out and identify structures of authority, hierarchy, and domination in every aspect of life, and to challenge them; unless a justification for them can be given, they are illegitimate, and should be dismantled, to increase the scope of human freedom. That includes political power, ownership and management, relations among men and women, parents and children, our control over the fate of future generations (the basic moral imperative behind the environmental movement...), and much else. Naturally this means a challenge to the huge institutions of coercion and control: the state, the unaccountable private tyrannies that control most of the domestic and international economy [i.e. capitalist corporations and companies], and so on. But not only these."* [**Marxism, Anarchism, and Alternative Futures**, p. 775]

This task is made easier by the fact that the *"dominating class"* has **not** *"succeeded in reducing all its subjects to passive and unconscious instruments of its interests."* This means that where there

is oppression and exploitation there is also resistance — and hope. Even when those oppressed by hierarchical social relations generally accept it, those institutions cannot put out the spark of freedom totally. Indeed, they help produce the spirit of revolt by their very operation as people finally say enough is enough and stand up for their rights. Thus hierarchical societies *"contain organic contradictions and [these] are like the germs of death"* from which *"the possibility of progress"* springs. [Malatesta, **Op. Cit.**, pp. 186–7]

Anarchists, therefore, combine their critique of existing society with active participation in the on-going struggles which exist in any hierarchical struggle. As we discuss in section J, we urge people to take ***direct action*** to fight oppression. Such struggles change those who take part in them, breaking the social conditioning which keeps hierarchical society going and making people aware of other possibilities, aware that other worlds are possible and that we do not have to live like this. Thus struggle is the practical school of anarchism, the means by which the preconditions of an anarchist society are created. Anarchists seek to learn from such struggles while, at the same time, propagating our ideas within them and encouraging them to develop into a general struggle for social liberation and change.

Thus the natural resistance of the oppressed to their oppression encourages this process of justification Chomsky (and anarchism) calls for, this critical evaluation of authority and domination, this undermining of what previously was considered "natural" or "common-sense" **until we started to question it.** As noted above, an essential part of this process is to encourage direct action by the oppressed against their oppressors as well as encouraging the anarchistic tendencies and awareness that exist (to a greater or lesser degree) in any hierarchical society. The task of anarchists is to encourage such struggles and the questioning their produce of society and the way it works. We aim to encourage people to look at the root causes of the social problems they are fighting, to seek to change the underlying social institutions and relationships which produce them. We seek to create an awareness that oppression can not only be fought, but ended, and that the struggle against an unjust system creates the seeds of the society that will replace it. In other words, we seek to encourage hope and a positive vision of a better world.

However, this section of the FAQ is concerned directly with the critical or "negative" aspect of anarchism, the exposing of the evil inherent in all authority, be it from state, property or whatever and why, consequently, anarchists seek *"the destruction of power, property, hierarchy and exploitation."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 11] Later sections will indicate how, after analysing the world, anarchists plan to change it constructively, but some of the constructive core of anarchism will be seen even in this section. After this broad critique of the current system, we move onto more specific areas. Section C explains the anarchist critique of the economics of capitalism. Section D discusses how the social relationships and institutions described in this section impact on society as a whole. Section E discusses the causes (and some suggested solutions) to the ecological problems we face.

B.1 Why are anarchists against authority and hierarchy?

First, it is necessary to indicate what kind of authority anarchism challenges. While it is customary for some opponents of anarchism to assert that anarchists oppose all kinds of authority, the reality of the situation is more complex. While anarchists have, on occasion, stated their opposition to "all authority" a closer reading quickly shows that anarchists reject only one specific form of authority, what we tend to call hierarchy (see section H.4 for more details). This can be seen when Bakunin stated that *"the principle of **authority**"* was the *"eminently theological, metaphysical and political idea that the masses, **always** incapable of governing themselves, must submit at all times to the benevolent yoke of a wisdom and a justice, which in one way or another, is imposed from above."* [**Marxism, Freedom and the State**, p. 33]

Other forms of authority are more acceptable to anarchists, it depends whether the authority in question becomes a source of **power** over others or not. That is the key to understanding the anarchist position on authority — if it is ***hierarchical*** authority, then anarchists are against it.. The reason is simple:

> *"[n]o one should be entrusted with power, inasmuch as anyone invested with authority must ... became an oppressor and exploiter of society."* [Bakunin, **The Political Philosophy of Bakunin**, p. 249]

This distinction between forms of authority is important. As Erich Fromm pointed out, *"authority"* is *"a broad term with two entirely different meanings: it can be either 'rational' or 'irrational' authority. Rational authority is based on competence, and it helps the person who leans on it to grow. Irrational authority is based on power and serves to exploit the person subjected to it."* [**To Have or To Be**, pp. 44–45] The same point was made by Bakunin over 100 years earlier when he indicated the difference between authority and *"natural influence."* For Bakunin, individual freedom *"results from th[e] great number of material, intellectual, and moral influences which every individual around him [or her] and which society ... continually exercise ... To abolish this mutual influence would be to die."* Consequently, *"when we reclaim the freedom of the masses, we hardly wish to abolish the effect of any individual's or any group of individual's natural influence upon the masses. What we wish is to abolish artificial, privileged, legal, and official influences."* [**The Basic Bakunin**, p. 140 and p. 141]

It is, in other words, the difference between taking part in a decision and listening to alternative viewpoints and experts (*"natural influence"*) before making your mind up and having a decision **made for you** by a separate group of individuals (who may or may not be elected) because that is their role in an organisation or society. In the former, the individual exercises their judgement and freedom (i.e. is based on rational authority). In the latter, they are subjected to the wills of others, to hierarchical authority (i.e. is based on irrational authority). This is because rational authority *"not only permits but requires constant scrutiny and criticism ... it is always temporary,*

its acceptance depending on its performance." The source of irrational authority, on the other hand, *"is always power over people ... Power on the one side, fear on the other, are always the buttresses on which irrational authority is built."* Thus former is based upon *"equality"* while the latter *"is by its very nature based upon inequality."* [Erich Fromm, **Man for Himself**, pp. 9–10]

This crucial point is expressed in the difference between **having** authority and **being** an authority. Being an authority just means that a given person is generally recognised as competent for a given task, based on his or her individual skills and knowledge. Put differently, it is socially acknowledged expertise. In contrast, having authority is a social relationship based on status and power derived from a hierarchical position, not on individual ability. Obviously this does not mean that competence is not an element for obtaining a hierarchical position; it just means that the real or alleged initial competence is transferred to the title or position of the authority and so becomes independent of individuals, i.e. institutionalised (or what Bakunin termed *"official"*).

This difference is important because the way people behave is more a product of the institutions in which we are raised than of any inherent nature. In other words, social relationships **shape** the individuals involved. This means that the various groups individuals create have traits, behaviours and outcomes that cannot be understood by reducing them to the individuals within them. That is, groups consist not only of individuals, but also relationships between individuals and these relationships will affect those subject to them. For example, obviously *"the exercise of power by some disempowers others"* and so through a *"combination of physical intimidation, economic domination and dependency, and psychological limitations, social institutions and practices affect the way everyone sees the world and her or his place in it."* This, as we discuss in the next section, impacts on those involved in such authoritarian social relationships as *"the exercise of power in any institutionalised form — whether economic, political or sexual — brutalises both the wielder of power and the one over whom it is exercised."* [Martha A. Ackelsberg, **Free Women of Spain**, p. 41]

Authoritarian social relationships means dividing society into (the few) order givers and (the many) order takers, impoverishing the individuals involved (mentally, emotionally and physically) and society as a whole. Human relationships, in all parts of life, are stamped by authority, not liberty. And as freedom can only be created by freedom, authoritarian social relationships (and the obedience they require) do not and cannot educate a person in freedom — only participation (self-management) in all areas of life can do that. *"In a society based on exploitation and servitude,"* in Kropotkin's words, *"human nature itself is degraded"* and it is only *"as servitude disappears"* shall we *"regain our rights."* [**Anarchism**, p. 104]

Of course, it will be pointed out that in any collective undertaking there is a need for co-operation and co-ordination and this need to "subordinate" the individual to group activities is a form of authority. Therefore, it is claimed, a democratically managed group is just as "authoritarian" as one based on hierarchical authority. Anarchists are not impressed by such arguments. Yes, we reply, of course in any group undertaking there is a need make and stick by agreements but anarchists argue that to use the word "authority" to describe two fundamentally different ways of making decisions is playing with words. It obscures the fundamental difference between free association and hierarchical imposition and confuses co-operation with command (as we note in section H.4, Marxists are particularly fond of this fallacy). Simply put, there are two different ways of co-ordinating individual activity within groups — either by authoritarian means or by libertarian means. Proudhon, in relation to workplaces, makes the difference clear:

> *"either the workman... will be simply the employee of the proprietor-capitalist-promoter; or he will participate... [and] have a voice in the council, in a word he will become an associate.*
>
> *"In the first case the workman is subordinated, exploited: his permanent condition is one of obedience... In the second case he resumes his dignity as a man and citizen... he forms part of the producing organisation, of which he was before but the slave; as, in the town, he forms part of the sovereign power, of which he was before but the subject ... we need not hesitate, for we have no choice... it is necessary to form an ASSOCIATION among workers ... because without that, they would remain related as subordinates and superiors, and there would ensue two ... castes of masters and wage-workers, which is repugnant to a free and democratic society."* [**General Idea of the Revolution**, pp. 215–216]

In other words, associations can be based upon a form of **rational** authority, based upon **natural influence** and so reflect freedom, the ability of individuals to think, act and feel and manage their own time and activity. Otherwise, we include elements of slavery into our relationships with others, elements that poison the whole and shape us in negative ways (see section B.1.1). Only the reorganisation of society in a libertarian way (and, we may add, the mental transformation such a change requires and would create) will allow the individual to *"achieve more or less complete blossoming, whilst continuing to develop"* and banish *"that spirit of submission that has been artificially thrust upon him [or her]"* [Nestor Makhno, **The Struggle Against the State and Other Essays**, p. 62]

So, anarchists *"ask nothing better than to see [others]... exercise over us a natural and legitimate influence, freely accepted, and never imposed ... We accept all natural authorities and all influences of fact, but none of right."* [Bakunin, **The Political Philosophy of Bakunin**, p. 255] Anarchist support for free association within directly democratic groups is based upon such organisational forms increasing influence and reducing irrational authority in our lives. Members of such organisations can create and present their own ideas and suggestions, critically evaluate the proposals and suggestions from their fellows, accept those that they agree with or become convinced by and have the option of leaving the association if they are unhappy with its direction. Hence the influence of individuals and their free interaction determine the nature of the decisions reached, and no one has the right to impose their ideas on another. As Bakunin argued, in such organisations *"no function remains fixed and it will not remain permanently and irrevocably attached to one person. Hierarchical order and promotion do not exist... In such a system, power, properly speaking, no longer exists. Power is diffused to the collectivity and becomes the true expression of the liberty of everyone."* [**Bakunin on Anarchism**, p. 415]

Therefore, anarchists are opposed to **irrational** (e.g., illegitimate) authority, in other words, hierarchy — hierarchy being the institutionalisation of authority within a society. Hierarchical social institutions include the state (see section B.2), private property and the class systems it produces (see section B.3) and, therefore, capitalism (see section B.4). Due to their hierarchical nature, anarchists oppose these with passion. *"Every institution, social or civil,"* argued Voltairine de Cleyre, *"that stands between man [or woman] and his [or her] right; every tie that renders one a master, another a serf; every law, every statue, every be-it-enacted that represents tyranny"* anarchists seek to destroy. However, hierarchy exists beyond these institutions. For example, hierarchical social relationships include sexism, racism and homophobia (see section B.1.4), and

anarchists oppose, and fight, them all. Thus, as well as fighting capitalism as being hierarchical (for workers *"slave in a factory,"* albeit *"the slavery ends with the working hours"*) de Cleyre also opposed patriarchal social relationships which produce a *"home that rests on slavery"* because of a *"marriage that represents the sale and transfer of the individuality of one of its parties to the other!"* [**The Voltairine de Cleyre Reader**, p. 72, p. 17 and p. 72]

Needless to say, while we discuss different forms of hierarchy in different sections this does not imply that anarchists think they, and their negative effects, are somehow independent or can be easily compartmentalised. For example, the modern state and capitalism are intimately interrelated and cannot be considered as independent of each other. Similarly, social hierarchies like sexism and racism are used by other hierarchies to maintain themselves (for example, bosses will use racism to divide and so rule their workers). From this it follows that abolishing one or some of these hierarchies, while desirable, would not be sufficient. Abolishing capitalism while maintaining the state would not lead to a free society (and vice versa) — if it were possible. As Murray Bookchin notes:

> *"there can be a decidedly classless, even a non-exploitative society in the **economic** sense that still preserves hierarchical rule and domination in the **social** sense — whether they take the form of the patriarchal family, domination by age and ethnic groups, bureaucratic institutions, ideological manipulation or a pyramidal division of labour ... classless or not, society would be riddles by domination and, with domination, a general condition of command and obedience, of unfreedom and humiliation, and perhaps most decisively, an abortion of each individual's potentiality for consciousness, reason, selfhood, creativity, and the right to assert full control over her or his daily live."* [**Toward an Ecological Society**, pp. 14–5]

This clearly implies that anarchists *"challenge not only class formations but hierarchies, not only material exploitation but domination in every form."* [Bookchin, **Op. Cit.**, p. 15] Hence the anarchist stress on opposing hierarchy rather than just, say, the state (as some falsely assert) or simply economic class and exploitation (as, say, many Marxists do). As noted earlier (in section A.2.8), anarchists consider all hierarchies to be not only harmful but unnecessary, and think that there are alternative, more egalitarian ways to organise social life. In fact, we argue that hierarchical authority creates the conditions it is presumably designed to combat, and thus tends to be self-perpetuating. Thus hierarchical organisations erode the ability of those at the bottom to manage their own affairs directly so requiring hierarchy and some people in positions to give orders and the rest to follow them. Rather than prevent disorder, governments are among its primary causes while its bureaucracies ostensibly set up to fight poverty wind up perpetuating it, because without poverty, the high-salaried top administrators would be out of work. The same applies to agencies intended to eliminate drug abuse, fight crime, etc. In other words, the power and privileges deriving from top hierarchical positions constitute a strong incentive for those who hold them **not** to solve the problems they are supposed to solve. (For further discussion see Marilyn French, **Beyond Power: On Women, Men, and Morals**, Summit Books, 1985).

B.1.1 What are the effects of authoritarian social relationships?

Hierarchical authority is inextricably connected with the marginalisation and disempowerment of those without authority. This has negative effects on those over whom authority is exercised, since *"[t]hose who have these symbols of authority and those who benefit from them must dull their subject people's realistic, i.e. critical, thinking and make them believe the fiction [that irrational authority is rational and necessary], ... [so] the mind is lulled into submission by cliches ... [and] people are made dumb because they become dependent and lose their capacity to trust their eyes and judgement."* [Erich Fromm, **To Have or To Be?**, p. 47]

Or, in the words of Bakunin, *"the principle of authority, applied to men who have surpassed or attained their majority, becomes a monstrosity, a source of slavery and intellectual and moral depravity."* [**God and the State**, p. 41]

This is echoed by the syndicalist miners who wrote the classic **The Miners' Next Step** when they indicate the nature of authoritarian organisations and their effect on those involved. Leadership (i.e. hierarchical authority) *"implies power held by the leader. Without power the leader is inept. The possession of power inevitably leads to corruption... in spite of... good intentions ... [Leadership means] power of initiative, this sense of responsibility, the self-respect which comes from expressed manhood [sic!], is taken from the men, and consolidated in the leader. The sum of their initiative, their responsibility, their self-respect becomes his ... [and the] order and system he maintains is based upon the suppression of the men, from being independent thinkers into being 'the men' ... In a word, he is compelled to become an autocrat and a foe to democracy."* Indeed, for the *"leader,"* such marginalisation can be beneficial, for a leader *"sees no need for any high level of intelligence in the rank and file, except to applaud his actions. Indeed such intelligence from his point of view, by breeding criticism and opposition, is an obstacle and causes confusion."* [**The Miners' Next Step**, pp. 16–17 and p. 15]

Anarchists argue that hierarchical social relationships will have a negative effect on those subject to them, who can no longer exercise their critical, creative and mental abilities **freely**. As Colin Ward argues, people *"do go from womb to tomb without realising their human potential, precisely because the power to initiate, to participate in innovating, choosing, judging, and deciding is reserved for the top men"* (and it usually **is** men!) [**Anarchy in Action**, p, 42]. Anarchism is based on the insight that there is an interrelationship between the authority structures of institutions and the psychological qualities and attitudes of individuals. Following orders all day hardly builds an independent, empowered, creative personality (*"authority and servility walk ever hand in hand."* [Peter Kropotkin, **Anarchism**, p. 81]). As Emma Goldman made clear, if a person's *"inclination and judgement are subordinated to the will of a master"* (such as a boss, as most people have to sell their labour under capitalism) then little wonder such an authoritarian relationship *"condemns millions of people to be mere nonentities."* [**Red Emma Speaks**, p. 50]

As the human brain is a bodily organ, it needs to be used regularly in order to be at its fittest. Authority concentrates decision-making in the hands of those at the top, meaning that most people are turned into executants, following the orders of others. If muscle is not used, it turns to fat; if the brain is not used, creativity, critical thought and mental abilities become blunted and side-tracked onto marginal issues, like sports and fashion. This can only have a negative impact:

> *"Hierarchical institutions foster alienated and exploitative relationships among those who participate in them, disempowering people and distancing them from their own*

> *reality. Hierarchies make some people dependent on others, blame the dependent for their dependency, and then use that dependency as a justification for further exercise of authority... . Those in positions of relative dominance tend to define the very characteristics of those subordinate to them ... Anarchists argue that to be always in a position of being acted upon and never to be allowed to act is to be doomed to a state of dependence and resignation. Those who are constantly ordered about and prevented from thinking for themselves soon come to doubt their own capacities ... [and have] difficulty acting on [their] sense of self in opposition to societal norms, standards and expectations."* [Martha Ackelsberg, **Free Women of Spain**, pp. 40–1]

And so, in the words of Colin Ward, the *"system makes its morons, then despises them for their ineptitude, and rewards its 'gifted few' for their rarity."* [**Op. Cit.**, p. 43]

This negative impact of hierarchy is, of course, not limited to those subject to it. Those in power are affected by it, but in different ways. As we noted in section A.2.15, power corrupts those who have it as well as those subjected to it. The Spanish Libertarian Youth put it this way in the 1930s:

> *"Against the principle of authority because this implies erosion of the human personality when some men submit to the will of others, arousing in these instincts which predispose them to cruelty and indifference in the face of the suffering of their fellows."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 2, p. 76]

Hierarchy impoverishes the human spirit. *"A hierarchical mentality,"* notes Bookchin, *"fosters the renunciation of the pleasures of life. It justifies toil, guilt, and sacrifice by the 'inferiors,' and pleasure and the indulgent gratification of virtually every caprice by their 'superiors.' The objective history of the social structure becomes internalised as a subjective history of the psychic structure."* In other words, being subject to hierarchy fosters the internalisation of oppression — and the denial of individuality necessary to accept it. *"Hierarchy, class, and ultimately the State,"* he stresses, *"penetrate the very integument of the human psyche and establish within it unreflective internal powers of coercion and constraint ... By using guilt and self-blame, the inner State can control behaviour long before fear of the coercive powers of the State have to be invoked."* [**The Ecology of Freedom**, p. 72 and p. 189]

In a nutshell, *"[h]ierarchies, classes, and states warp the creative powers of humanity."* However, that is not all. Hierarchy, anarchists argue, also twists our relationships with the environment. Indeed, *"all our notions of dominating nature stem from the very real domination of human by human ... And it is not until we eliminate domination in all its forms ... that we will really create a rational, ecological society."* For *"the conflicts within a divided humanity, structured around domination, inevitably leads to conflicts with nature. The ecological crisis with its embattled division between humanity and nature stems, above all, from divisions between human and human."* While the *"rise of capitalism, with a law of life based on competition, capital accumulation, and limitless growth, brought these problems — ecological and social — to an acute point,"* anarchists *"emphasise that major ecological problems have their roots in social problems — problems that go back to the very beginnings of patricentric culture itself."* [Murray Bookchin, **Remaking Society**, p. 72, p. 44, p. 72 and pp. 154–5]

Thus, anarchists argue, hierarchy impacts not only on us but also our surroundings. The environmental crisis we face is a result of the hierarchical power structures at the heart of our

society, structures which damage the planet's ecology at least as much as they damage humans. The problems within society, the economic, ethnic, cultural, and gender conflicts, among many others, lie at the core of the most serious ecological dislocations we face. The way human beings deal with each other as social beings is crucial to addressing the ecological crisis. Ultimately, ecological destruction is rooted in the organisation of our society for a degraded humanity can only yield a degraded nature (as capitalism and our hierarchical history have sadly shown).

This is unsurprising as we, as a species, shape our environment and, consequently, whatever shapes us will impact how we do so. This means that the individuals produced by the hierarchy (and the authoritarian mentality it produces) will shape the planet in specific, harmful, ways. This is to be expected as humans act upon their environment deliberately, creating what is most suitable for their mode of existence. If that mode of living is riddled with hierarchies, classes, states and the oppression, exploitation and domination they create then our relations with the natural world will hardly be any better. In other words, social hierarchy and class legitimises our domination of the environment, planting the seeds for the believe that nature exists, like other people, to be dominated and used as required.

Which brings us to another key reason why anarchists reject hierarchy. In addition to these negative psychological effects from the denial of liberty, authoritarian social relationships also produce social inequality. This is because an individual subject to the authority of another has to obey the orders of those above them in the social hierarchy. In capitalism this means that workers have to follow the orders of their boss (see next section), orders that are designed to make the boss richer. And richer they have become, with the Chief Executive Officers (CEOs) of big firms earning 212 times what the average US worker did in 1995 (up from a mere 44 times 30 years earlier). Indeed, from 1994 to 1995 alone, CEO compensation in the USA rose 16 percent, compared to 2.8 percent for workers, which did not even keep pace with inflation, and whose stagnating wages cannot be blamed on corporate profits, which rose a healthy 14.8 percent for that year.

Needless to say, inequality in terms of power will translate itself into inequality in terms of wealth (and vice versa). The effects of such social inequality are wide-reaching. For example, health is affected significantly by inequality. Poor people are more likely to be sick and die at an earlier age, compared to rich people. Simply put, *"the lower the class, the worse the health. Going beyond such static measures, even interruptions in income of the sort caused by unemployment have adverse health effects."* Indeed, the sustained economic hardship associated with a low place in the social hierarchy leads to poorer physical, psychological and cognitive functioning (*"with consequences that last a decade or more"*). *"Low incomes, unpleasant occupations and sustained discrimination,"* notes Doug Henwood, *"may result in apparently physical symptoms that confuse even sophisticated biomedical scientists ... Higher incomes are also associated with lower frequency of psychiatric disorders, as are higher levels of asset ownership."* [**After the New Economy**, pp. 81–2]

Moreover, the ***degree*** of inequality is important (i.e. the size of the gap between rich and poor). According to an editorial in the **British Medical Journal** *"what matters in determining mortality and health in a society is less the overall wealth of that society and more how evenly wealth is distributed. The more equally wealth is distributed the better the health of that society."* [vol. 312, April 20, 1996, p. 985]

Research in the USA found overwhelming evidence of this. George Kaplan and his colleagues measured inequality in the 50 US states and compared it to the age-adjusted death rate for all

causes of death, and a pattern emerged: the more unequal the distribution of income, the greater the death rate. In other words, it is the gap between rich and poor, and not the average income in each state, that best predicts the death rate in each state. [*"Inequality in income and mortality in the United States: analysis of mortality and potential pathways,"* **British Medical Journal**, vol. 312, April 20, 1996, pp. 999–1003]

This measure of income inequality was also tested against other social conditions besides health. States with greater inequality in the distribution of income also had higher rates of unemployment, higher rates of incarceration, a higher percentage of people receiving income assistance and food stamps, a greater percentage of people without medical insurance, greater proportion of babies born with low birth weight, higher murder rates, higher rates of violent crime, higher costs per-person for medical care, and higher costs per person for police protection. Moreover states with greater inequality of income distribution also spent less per person on education, had fewer books per person in the schools, and had poorer educational performance, including worse reading skills, worse mathematics skills, and lower rates of completion of high school.

As the gap grows between rich and poor (indicating an increase in social hierarchy within and outwith of workplaces) the health of a people deteriorates and the social fabric unravels. The psychological hardship of being low down on the social ladder has detrimental effects on people, beyond whatever effects are produced by the substandard housing, nutrition, air quality, recreational opportunities, and medical care enjoyed by the poor (see George Davey Smith, *"Income inequality and mortality: why are they related?"* **British Medical Journal**, Vol. 312, April 20, 1996, pp. 987–988).

So wealth does not determine health. What does is the gap between the rich and the poor. The larger the gap, the sicker the society. Countries with a greater degree of socioeconomic inequality show greater inequality in health status; also, that middle-income groups in relatively unequal societies have worse health than comparable, or even poorer, groups in more equal societies. Unsurprisingly, this is also reflected over time. The widening income differentials in both the USA and the UK since 1980 have coincided with a slowing down of improvements in life-expectancy, for example.

Inequality, in short, is bad for our health: the health of a population depends not just on the size of the economic pie, but on how the pie is shared.

This is not all. As well as inequalities in wealth, inequalities in freedom also play a large role in overall human well-being. According to Michael Marmot's **The Status Syndrome: How Social Standing Affects Our Health and Longevity**, as you move up any kind of hierarchy your health status improves. Autonomy and position in a hierarchy are related (i.e. the higher you are in a hierarchy, the more autonomy you have). Thus the implication of this empirical work is that autonomy is a source of good health, that the more control you have over your work environment and your life in general, the less likely you are to suffer the classic stress-related illnesses, such as heart disease. As public-Health scholars Jeffrey Johnson and Ellen Hall have noted, the *"potential to control one's own environment is differentially distributed along class lines."* [quoted by Robert Kuttner, **Everything for Sale**, p. 153]

As would be expected from the very nature of hierarchy, to *"be in a life situation where one experiences relentless demands by others, over which one has relatively little control, is to be at risk of poor health, physically as well as mentally."* Looking at heart disease, the people with greatest risk *"tended to be in occupations with high demands, low control, and low social support.*

People in demanding positions but with great autonomy were at lower risk." Under capitalism, *"a relatively small elite demands and gets empowerment, self-actualisation, autonomy, and other work satisfaction that partially compensate for long hours"* while *"epidemiological data confirm that lower-paid, lower-status workers are more likely to experience the most clinically damaging forms of stress, in part because they have less control over their work."* [Kuttner, **Op. Cit.**, p. 153 and p. 154]

In other words, the inequality of autonomy and social participation produced by hierarchy is itself a cause of poor health. There would be positive feedback on the total amount of health — and thus of social welfare — if social inequality was reduced, not only in terms of wealth but also, crucially, in power. This is strong evidence in support of anarchist visions of egalitarianism. Some social structures give more people more autonomy than others and acting to promote social justice along these lines is a key step toward improving our health. This means that promoting libertarian, i.e. self-managed, social organisations would increase not only liberty but also people's health and well-being, both physical and mental. Which is, as we argued above, to be expected as hierarchy, by its very nature, impacts negatively on those subject to it.

This dovetails into anarchist support for workers' control. Industrial psychologists have found that satisfaction in work depends on the "span of autonomy" works have. Unsurprisingly, those workers who are continually making decisions for themselves are happier and live longer. It is the power to control all aspects of your life — work particularly – that wealth and status tend to confer that is the key determinant of health. Men who have low job control face a 50% higher risk of new illness: heart attacks, stroke, diabetes or merely ordinary infections. Women are at slightly lower risk but low job control was still a factor in whether they fell ill or not.

So it is the fact that the boss is a boss that makes the employment relationship so troublesome for health issues (and genuine libertarians). The more bossy the boss, the worse, as a rule is the job. So part of autonomy is not being bossed around, but that is only part of the story. And, of course, hierarchy (inequality of power) and exploitation (the source of material inequality) are related. As we indicate in the next section, capitalism is based on wage labour. The worker sell their liberty to the boss for a given period of time, i.e. they loose their autonomy. This allows the possibility of exploitation, as the worker can produce more wealth than they receive back in wages. As the boss pockets the difference, lack of autonomy produces increases in social inequality which, in turn, impacts negatively on your well-being.

Then there is the waste associated with hierarchy. While the proponents of authority like to stress its "efficiency," the reality is different. As Colin Ward points out, being in authority *"derives from your rank in some chain of command ... But knowledge and wisdom are not distributed in order of rank, and they are no one person's monopoly in any undertaking. The fantastic inefficiency of any hierarchical organisation – any factory, office, university, warehouse or hospital — is the outcome of two almost invariable characteristics. One is that the knowledge and wisdom of the people at the bottom of the pyramid finds no place in the decision-making leadership hierarchy of the institution. Frequently it is devoted to making the institution work in spite of the formal leadership structure, or alternatively to sabotaging the ostensible function of the institution, because it is none of their choosing. The other is that they would rather not be there anyway: they are there through economic necessity rather than through identification with a common task which throws up its own shifting and functional leadership."* [**Op. Cit.**, p. 41]

Hierarchy, in other words, blocks the flow of information and knowledge. Rulers, as Malatesta argued, *"can only make use of the forces that exist in society — except for those great forces"*

their action *"paralyses and destroys, and those rebel forces, and all that is wasted through conflicts; inevitable tremendous losses in such an artificial system."* And so as well as individuals being prevented from developing to their fullest, wasting their unfulfilled potentialities, hierarchy also harms society as a whole by reducing efficiency and creativity. This is because input into decisions are limited *"only to those individuals who form the government [of a hierarchical organisation] or who by reason of their position can influence the[ir] policy."* Obviously this means *"that far from resulting in an increase in the productive, organising and protective forces in society,"* hierarchy *"greatly reduce[s] them, limiting initiative to a few, and giving them the right to do everything without, of course, being able to provide them with the gift of being all-knowing."* [**Anarchy**, p. 38 and p. 39]

Large scale hierarchical organisations, like the state, are also marked by bureaucracy. This becomes a necessity in order to gather the necessary information it needs to make decisions (and, obviously, to control those under it). However, soon this bureaucracy becomes the real source of power due to its permanence and control of information and resources. Thus hierarchy cannot *"survive without creating around itself a new privileged class"* as well as being a *"privileged class and cut off from the people"* itself. [Malatesta, **Op. Cit.**, p. 37 and p. 36] This means that those at the top of an institution rarely know the facts on the ground, making decisions in relative ignorance of their impact or the actual needs of the situation or people involved. As economist Joseph Stiglitz concluded from his own experiences in the World Bank, *"immense time and effort are required to effect change even from the inside, in an international bureaucracy. Such organisations are opaque rather than transparent, and not only does far too little information radiate from inside to the outside world, perhaps even less information from outside is able to penetrate the organisation. The opaqueness also means that it is hard for information from the bottom of the organisation to percolate to the top."* [**Globalisation and its Discontents**, p. 33] The same can be said of any hierarchical organisation, whether a nation state or capitalist business.

Moreover, as Ward and Malatesta indicate, hierarchy provokes a struggle between those at the bottom and at the top. This struggle is also a source of waste as it diverts resources and energy from more fruitful activity into fighting it. Ironically, as we discuss in section H.4.4, one weapon forged in that struggle is the ***"work to rule,"*** namely workers bringing their workplace to a grinding halt by following the dictates of the boss to the letter. This is clear evidence that a workplace only operates because workers exercise their autonomy during working hours, an autonomy which authoritarian structures stifle and waste. A participatory workplace, therefore, would be more efficient and less wasteful than the hierarchical one associated with capitalism. As we discuss in section J.5.12, hierarchy and the struggle it creates always acts as a barrier stopping the increased efficiency associated with workers' participation undermining the autocratic workplace of capitalism.

All this is not to suggest that those at the bottom of hierarchies are victims nor that those at the top of hierarchies only gain benefits — far from it. As Ward and Malatesta indicated, hierarchy by its very nature creates resistance to it from those subjected to it and, in the process, the potential for ending it (see section B.1.6 for more discussion). Conversely, at the summit of the pyramid, we also see the evils of hierarchy.

If we look at those at the top of the system, yes, indeed they often do **very** well in terms of material goods and access to education, leisure, health and so on but they lose their humanity and individuality. As Bakunin pointed out, *"power and authority corrupt those who exercise them as much as those who are compelled to submit to them."* [**The Political Philosophy of Bakunin**,

p. 249] Power operates destructively, even on those who have it, reducing their individuality as it *"renders them stupid and brutal, even when they were originally endowed with the best of talents. One who is constantly striving to force everything into a mechanical order at last becomes a machine himself and loses all human feeling."* [Rudolf Rocker, **Anarcho-Syndicalism**, pp. 17–8]

When it boils down to it, hierarchy is self-defeating, for if *"wealth is other people,"* then by treating others as less than yourself, restricting their growth, you lose all the potential insights and abilities these individuals have, so impoverishing your own life and **restricting your own growth.** Unfortunately in these days material wealth (a particularly narrow form of "self-interest") has replaced concern for developing the whole person and leading a fulfilling and creative life (a broad self-interest, which places the individual **within** society, one that recognises that relationships with others shape and develop all individuals). In a hierarchical, class based society everyone loses to some degree, even those at the "top."

Looking at the environment, the self-defeating nature of hierarchy also becomes clear. The destiny of human life goes hand-in-hand with the destiny of the non-human world. While being rich and powerful may mitigate the impact of the ecological destruction produced by hierarchies and capitalism, it will not stop them and will, eventually, impact on the elite as well as the many.

Little wonder, then, that *"anarchism ... works to destroy authority in all its aspects ... [and] refuses all hierarchical organisation."* [Kropotkin, **Anarchism**, p. 137]

B.1.2 Is capitalism hierarchical?

Yes. Under capitalism workers do not exchange the products of their labour they exchange the labour itself for money. They sell themselves for a given period of time, and in return for wages, promise to obey their paymasters. Those who pay and give the orders — owners and managers — are at the top of the hierarchy, those who obey at the bottom. This means that capitalism, by its very nature, is hierarchical.

As Carole Pateman argues:

> *"Capacities or labour power cannot be used without the worker using his will, his understanding and experience, to put them into effect. The use of labour power requires the presence of its 'owner,' and it remains mere potential until he acts in the manner necessary to put it into use, or agrees or is compelled so to act; that is, the worker must labour. To contract for the use of labour power is a waste of resources unless it can be used in the way in which the new owner requires. The fiction 'labour power' cannot be used; what is required is that the worker labours as demanded. The employment contract must, therefore, create a relationship of command and obedience between employer and worker ... In short, the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself. To obtain the right to use another is to be a (civil) master."* [**The Sexual Contract**, pp. 150–1]

You need only compare this to Proudhon's comments quoted in section B.1 to see that anarchists have long recognised that capitalism is, by its very nature, hierarchical. The worker is subjected to the authority of the boss during working hours (sometimes outside work too). As

Noam Chomsky summarises, *"a corporation, factory of business is the economic equivalent of fascism: decisions and control are strictly top-down."* [**Letters from Lexington**, p. 127] The worker's choices are extremely limited, for most people it amount to renting themselves out to a series of different masters (for a lucky few, the option of being a master is available). And master is the right word for, as David Ellerman reminds us, *"[s]ociety seems to have 'covered up' in the popular consciousness the fact that the traditional name [for employer and employee] is '**master and servant.**'"* [**Property and Contract in Economics**, p. 103]

This hierarchical control of wage labour has the effect of alienating workers from their own work, and so from themselves. Workers no longer govern themselves during work hours and so are no longer free. And so, due to capitalism, there is *"an oppression in the land,"* a *"form of slavery"* rooted in current *"property institutions"* which produces *"a social war, inevitable so long as present legal-social conditions endure."* [Voltairine de Cleyre, **Op. Cit.**, pp. 54–5]

Some defenders of capitalism are aware of the contradiction between the rhetoric of the system and its reality for those subject to it. Most utilise the argument that workers consent to this form of hierarchy. Ignoring the economic conditions which force people to sell their liberty on the labour market (see section B.4.3), the issue instantly arises of whether consent is enough in itself to justify the alienation/selling of a person's liberty. For example, there have been arguments for slavery and monarchy (i.e. dictatorship) rooted in consent. Do we really want to say that the only thing wrong with fascism or slavery is that people do not consent to it? Sadly, some right-wing "libertarians" come to that conclusion (see section B.4).

Some try to redefine the reality of the command-and-obey of wage labour. *"To speak of managing, directing, or assigning workers to various tasks is a deceptive way of noting that the employer continually is involved in re-negotiation of contracts on terms that must be acceptable to both parties,"* argue two right-wing economists. [Arman Alchian and Harold Demsetz, quoted by Ellerman, **Op. Cit.**, p. 170] So the employer-employee (or, to use the old, more correct, terminology, master-servant) contract is thus a series of unspoken contracts.

However, if an oral contract is not worth the paper it is written on, how valuable is an unspoken one? And what does this *"re-negotiation of contracts"* amount to? The employee decides whether to obey the command or leave and the boss decides whether the employee is obedient and productive enough to remain in under his or her control. Hardly a relationship based on freedom between equal partners! As such, this capitalist defence of wage labour *"is a deceptive way of noting"* that the employee is paid to obey. The contract between them is simply that of obedience on one side and power on the other. That both sides may break the contract does not alter this fact. Thus the capitalist workplace *"is not democratic in spite of the 'consent of the governed' to the employment contract ... In the employment contract, the workers alienate and transfer their legal rights to the employer to govern their activities 'within the scope of the employment' to the employer."* [David Ellerman, **The Democratic Worker-Owned Firm**, p. 50]

Ultimately, there is ***one*** right that cannot be ceded or abandoned, namely the right to personality. If a person gave up their personality they would cease to be a person yet this is what the employment contract imposes. To maintain and develop their personality is a basic right of humanity and it cannot be transferred to another, permanently or temporarily. To argue otherwise would be to admit that under certain circumstances and for certain periods of time a person is not a person but rather a thing to be used by others. Yet this is precisely what capitalism does due to its hierarchical nature.

This is not all. Capitalism, by treating labour as analogous to all other commodities denies the key distinction between labour and other "resources" — that is to say its inseparability from its bearer — labour, unlike other "property," is endowed with will and agency. Thus when one speaks of selling labour there is a necessary subjugation of will (hierarchy). As Karl Polanyi writes:

> *"Labour is only another name for human activity which goes with life itself, which is in turn not produced for sale but for entirely different reasons, nor can that activity be detached from the rest of life itself, be stored or mobilised ... To allow the market mechanism to be sole director of the fate of human beings and their natural environment ... would result in the demolition of society. For the alleged commodity 'labour power' cannot be shoved about, used indiscriminately, or even left unused, without affecting also the human individual who happens to be the bearer of this peculiar commodity. In disposing of a man's labour power the system would, incidentally, dispose of the physical, psychological, and moral entity 'man' attached to that tag."* [**The Great Transformation**, p. 72]

In other words, labour is much more than the commodity to which capitalism tries to reduce it. Creative, self-managed work is a source of pride and joy and part of what it means to be fully human. Wrenching control of work from the hands of the worker profoundly harms his or her mental and physical health. Indeed, Proudhon went so far as to argue that capitalist companies *"plunder the bodies and souls of the wage-workers"* and were an *"outrage upon human dignity and personality."* [**Op. Cit.**, p. 219] This is because wage labour turns productive activity and the person who does it into a commodity. People *"are not human **beings** so much as human **resources**. To the morally blind corporation, they are tool to generate as much profit as possible. And 'the tool can be treated just like a piece of metal — you use it if you want, you throw it away if you don't want it,' says Noam Chomsky. 'If you can get human beings to become tool like that, it's more efficient by some measure of efficiency ... a measure which is based on dehumanisation. You have to dehumanise it. That's part of the system.'"* [Joel Bakan, **The Corporation**, p. 69]

Separating labour from other activities of life and subjecting it to the laws of the market means to annihilate its natural, organic form of existence — a form that evolved with the human race through tens of thousands of years of co-operative economic activity based on sharing and mutual aid — and replacing it with an atomistic and individualistic one based on contract and competition. Unsurprisingly, this relationship is a very recent development and, moreover, the product of substantial state action and coercion (see section F.8 for some discussion of this). Simply put, *"the early labourer ... abhorred the factory, where he [or she] felt degraded and tortured."* While the state ensured a steady pool of landless workers by enforcing private property rights, the early manufacturers also utilised the state to ensure low wages, primarily for social reasons — only an overworked and downtrodden labourer with no other options would agree to do whatever their master required of them. *"Legal compulsion and parish serfdom as in England,"* noted Polanyi, *"the rigors of an absolutist labour police as on the Continent, indented labour as in the early Americas were the prerequisites of the 'willing worker.'"* [**Op. Cit.**, pp. 164–5]

Ignoring its origins in state action, the social relationship of wage labour is then claimed by capitalists to be a source of "freedom," whereas in fact it is a form of (in)voluntary servitude (see sections B.4 and A.2.14 for more discussion). Therefore a libertarian who did not support economic liberty (i.e. self-government in industry, libertarian socialism) would be no libertarian

at all, and no believer in liberty. Capitalism is based upon hierarchy and the denial of liberty. To present it otherwise denies the nature of wage labour. However, supporters of capitalism try to but — as Karl Polanyi points out — the idea that wage labour is based upon some kind of "natural" liberty is false:

> *"To represent this principle [wage labour] as one of non-interference [with freedom], as economic liberals were wont to do, was merely the expression of an ingrained prejudice in favour of a definite kind of interference, namely, such as would destroy non-contractual relations between individuals and prevent their spontaneous re-formation."* [**Op. Cit.**, p.163]

As noted above, capitalism itself was created by state violence and the destruction of traditional ways of life and social interaction was part of that task. From the start, bosses spent considerable time and energy combating attempts of working people to join together to resist the hierarchy they were subjected to and reassert human values. Such forms of free association between equals (such as trade unions) were combated, just as attempts to regulate the worse excesses of the system by democratic governments. Indeed, capitalists prefer centralised, elitist and/or authoritarian regimes precisely because they are sure to be outside of popular control (see section B.2.5). They are the only way that contractual relations based on market power could be enforced on an unwilling population. Capitalism was born under such states and as well as backing fascist movements, they made high profits in Nazi Germany and Fascist Italy. Today many corporations *"regularly do business with totalitarian and authoritarian regimes — again, because it is profitable to do so."* Indeed, there is a *"trend by US corporations to invest in"* such countries. [Joel Bakan, **Op. Cit.**, p. 89 and p. 185] Perhaps unsurprisingly, as such regimes are best able to enforce the necessary conditions to commodify labour fully.

B.1.3 What kind of hierarchy of values does capitalism create?

Anarchists argue that capitalism can only have a negative impact on ethical behaviour. This flows from its hierarchical nature. We think that hierarchy must, by its very nature, always impact negatively on morality.

As we argued in section A.2.19, ethics is dependent on both individual liberty and equality between individuals. Hierarchy violates both and so the *"great sources of moral depravity"* are *"capitalism, religion, justice, government."* In *"the domain of economy, coercion has lead us to industrial servitude; in the domain of politics to the State ... [where] the nation ... becomes nothing but a mass of obedient **subjects** to a central authority."* This has *"contributed and powerfully aided to create all the present economic, political, and social evils"* and *"has given proof of its absolute impotence to raise the moral level of societies; it has not even been able to maintain it at the level it had already reached."* This is unsurprising, as society developed *"authoritarian prejudices"* and *"men become more and more divided into governors and governed, exploiters and exploited, the moral level fell ... and the spirit of the age declined."* By violating equality, by rejecting social co-operation between equals in favour of top-down, authoritarian, social relationships which turn some into the tools of others, capitalism, like the state, could not help but erode ethical standards as the *"moral level"* of society is *"debased by the practice of authority."* [Kropotkin, **Anarchism**, pp. 137–8, p. 106 and p. 139]

However, as we as promoting general unethical behaviour, capitalism produces a specific perverted hierarchy of values — one that places humanity below property. As Erich Fromm argues:

> *"The use [i.e. exploitation] of man by man is expressive of the* ***system of values*** *underlying the capitalistic system.* ***Capital, the dead past, employs labour — the living vitality and power of the present.*** *In the capitalistic hierarchy of values, capital stands higher than labour, amassed things higher than the manifestations of life. Capital employs labour, and not labour capital. The person who owns capital commands the person who 'only' owns his life, human skill, vitality and creative productivity. 'Things' are higher than man. The conflict between capital and labour is much more than the conflict between two classes, more than their fight for a greater share of the social product. It is the conflict between two principles of value:* ***that between the world of things, and their amassment, and the world of life and its productivity****."* [**The Sane Society**, pp. 94–95]

Capitalism only values a person as representing a certain amount of the commodity called "labour power," in other words, as a **thing**. Instead of being valued as an individual — a unique human being with intrinsic moral and spiritual worth — only one's price tag counts. This replacement of human relationships by economic ones soon results in the replacement of human values by economic ones, giving us an "ethics" of the account book, in which people are valued by how much they earn. It also leads, as Murray Bookchin argues, to a debasement of human values:

> *"So deeply rooted is the market economy in our minds that its grubby language has replaced our most hallowed moral and spiritual expressions. We now 'invest' in our children, marriages, and personal relationships, a term that is equated with words like 'love' and 'care.' We live in a world of 'trade-offs' and we ask for the 'bottom line' of any emotional 'transaction.' We use the terminology of contracts rather than that of loyalties and spiritual affinities."* [**The Modern Crisis**, p. 79]

With human values replaced by the ethics of calculation, and with only the laws of market and state "binding" people together, social breakdown is inevitable. Little wonder modern capitalism has seen a massive increase in crime and dehumanisation under the freer markets established by "conservative" governments, such as those of Thatcher and Reagan and their transnational corporate masters. We now live in a society where people live in self-constructed fortresses, "free" behind their walls and defences (both emotional and physical).

Of course, some people **like** the "ethics" of mathematics. But this is mostly because — like all gods — it gives the worshipper an easy rule book to follow. "Five is greater than four, therefore five is better" is pretty simple to understand. John Steinbeck noticed this when he wrote:

> *"Some of them [the owners] hated the mathematics that drove them [to kick the farmers off their land], and some were afraid, and some worshipped the mathematics because it provided a refuge from thought and from feeling."* [**The Grapes of Wrath**, p. 34]

The debasement of the individual in the workplace, where so much time is spent, necessarily affects a person's self-image, which in turn carries over into the way he or she acts in other areas of life. If one is regarded as a commodity at work, one comes to regard oneself and others in that

way also. Thus all social relationships — and so, ultimately, **all** individuals — are commodified. In capitalism, literally nothing is sacred — "everything has its price" — be it dignity, self-worth, pride, honour — all become commodities up for grabs. Such debasement produces a number of social pathologies. "Consumerism" is one example which can be traced directly to the commodification of the individual under capitalism. To quote Fromm again, *"**Things** have no self, and men who have become things [i.e. commodities on the labour market] can have no self."* [**Op. Cit.**, p. 143]

However, people still feel the **need** for selfhood, and so try to fill the emptiness by consuming. The illusion of happiness, that one's life will be complete if one gets a new commodity, drives people to consume. Unfortunately, since commodities are yet more things, they provide no substitute for selfhood, and so the consuming must begin anew. This process is, of course, encouraged by the advertising industry, which tries to convince us to buy what we don't need because it will make us popular/sexy/happy/free/etc. (delete as appropriate!). But consuming cannot really satisfy the needs that the commodities are bought to satisfy. Those needs can only be satisfied by social interaction based on truly human values and by creative, self-directed work.

This does not mean, of course, that anarchists are against higher living standards or material goods. To the contrary, they recognise that liberty and a good life are only possible when one does not have to worry about having enough food, decent housing, and so forth. Freedom and 16 hours of work a day do not go together, nor do equality and poverty or solidarity and hunger. However, anarchists consider consumerism to be a distortion of consumption caused by the alienating and inhuman "account book" ethics of capitalism, which crushes the individual and his or her sense of identity, dignity and selfhood.

B.1.4 Why do racism, sexism and homophobia exist?

Since racism, sexism and homophobia (hatred/fear of homosexuals) are institutionalised throughout society, sexual, racial and gay oppression are commonplace. The primary cause of these three evil attitudes is the need for ideologies that justify domination and exploitation, which are inherent in hierarchy — in other words, "theories" that "justify" and "explain" oppression and injustice. As Tacitus said, *"We hate those whom we injure."* Those who oppress others always find reasons to regard their victims as "inferior" and hence deserving of their fate. Elites need some way to justify their superior social and economic positions. Since the social system is obviously unfair and elitist, attention must be distracted to other, less inconvenient, "facts," such as alleged superiority based on biology or "nature." Therefore, doctrines of sexual, racial, and ethnic superiority are inevitable in hierarchical, class-stratified societies.

We will take each form of bigotry in turn.

From an economic standpoint, racism is associated with the exploitation of cheap labour at home and imperialism abroad. Indeed, early capitalist development in both America and Europe was strengthened by the bondage of people, particularly those of African descent. In the Americas, Australia and other parts of the world the slaughter of the original inhabitants and the expropriation of their land was also a key aspect in the growth of capitalism. As the subordination of foreign nations proceeds by force, it appears to the dominant nation that it owes its mastery to its special natural qualities, in other words to its "racial" characteristics. Thus imperialists have frequently appealed to the Darwinian doctrine of "Survival of the Fittest" to give their racism a basis in "nature."

In Europe, one of the first theories of racial superiority was proposed by Gobineau in the 1850s to establish the natural right of the aristocracy to rule over France. He argued that the French aristocracy was originally of Germanic origin while the "masses" were Gallic or Celtic, and that since the Germanic race was "superior", the aristocracy had a natural right to rule. Although the French "masses" didn't find this theory particularly persuasive, it was later taken up by proponents of German expansion and became the origin of German racial ideology, used to justify Nazi oppression of Jews and other "non-Aryan" types. Notions of the "white man's burden" and "Manifest Destiny" developed at about the same time in England and to a lesser extent in America, and were used to rationalise Anglo-Saxon conquest and world domination on a "humanitarian" basis.

Racism and authoritarianism at home and abroad has gone hand in hand. As Rudolf Rocker argued, *"[a]ll advocates of the race doctrine have been and are the associates and defenders of every political and social reaction, advocates of the power principle in its most brutal form ... He who thinks that he sees in all political and social antagonisms merely blood-determined manifestations of race, denies all conciliatory influence of ideas, all community of ethical feeling, and must at every crisis take refuge in brute force. In fact, race theory is only the cult of power."* Racism aids the consolidation of elite power for by attacking *"all the achievements ... in the direction of personal freedom"* and the idea of equality *"[n]o better moral justification could be produced for the industrial bondage which our holders of industrial power keep before them as a picture of the future."* [**Nationalism and Culture**, pp. 337–8]

The idea of racial superiority was also found to have great domestic utility. As Paul Sweezy points out, *"[t]he intensification of social conflict within the advanced capitalist countries... has to be directed as far as possible into innocuous channels — innocuous, that is to say, from the standpoint of capitalist class rule. The stirring up of antagonisms along racial lines is a convenient method of directing attention away from class struggle,"* which of course is dangerous to ruling-class interests. [**Theory of Capitalist Development**, p. 311] Indeed, employers have often deliberately fostered divisions among workers on racial lines as part of a strategy of "divide and rule" (in other contexts, like Northern Ireland or Scotland, the employers have used religion in the same way instead).

Employers and politicians have often deliberately fostered divisions among workers on racial lines as part of a strategy of "divide and rule." In other contexts, like Tzarist Russia, Northern Ireland or Scotland, the employers have used religion in the same way. In others, immigrants and native born is the dividing line. The net effect is the same, social oppressions which range from the extreme violence anarchists like Emma Goldman denounced in the American South (*"the atrocities rampant in the South, of negroes lynched, tortured and burned by infuriated crowds without a hand being raised or a word said for their protection"* [**Emma Goldman: A Documentary History of the American Years**, vol. 1, p. 386]) or the pogroms against Jews in Tsarist Russia to discrimination in where people can live, what jobs people can get, less pay and so on.

For those in power, this makes perfect sense as racism (like other forms of bigotry) can be used to split and divide the working class by getting people to blame others of their class for the conditions they all suffer. In this way, the anger people feel about the problems they face are turned away from their real causes onto scapegoats. Thus white workers are subtly (and sometimes not so subtly) encouraged, for example, to blame unemployment, poverty and crime on blacks or Hispanics instead of capitalism and the (white, male) elites who run it and who directly benefit from low wages and high profits. Discrimination against racial minorities and

women makes sense for capitalism, for in this way profits are enlarged directly and indirectly. As jobs and investment opportunities are denied to the disadvantaged groups, their wages can be depressed below prevailing levels and profits, correspondingly, increased. Indirectly, discrimination adds capitalist profits and power by increasing unemployment and setting workers against each other. Such factors ensure that capitalism will never "compete" discrimination way as some free-market capitalist economists argue.

In other words, capitalism has benefited and will continue to benefit from its racist heritage. Racism has provided pools of cheap labour for capitalists to draw upon and permitted a section of the population to be subjected to worse treatment, so increasing profits by reducing working conditions and other non-pay related costs. In America, blacks still get paid less than whites for the same work (around 10% less than white workers with the same education, work experience, occupation and other relevent demographic variables). This is transferred into wealth inequalities. In 1998, black incomes were 54% of white incomes while black net worth (including residential) was 12% and nonresidential net worth just 3% of white. For Hispanics, the picture was similar with incomes just 62% of whites, net worth, 4% and nonresidential net worth 0%. While just under 15% of white households had zero or negative net worth, 27% of black households and 36% Hispanic were in the same situation. Even at similar levels of income, black households were significantly less wealthy than white ones. [Doug Henwood, **After the New Economy**, p. 99 and pp. 125–6]

All this means that racial minorities are *"subjected to oppression and exploitation on the dual grounds of race and class, and thus have to fight the extra battles against racism and discrimination."* [Lorenzo Kom'boa Ervin, **Anarchism and the Black Revolution**, p. 126]

Sexism only required a "justification" once women started to act for themselves and demand equal rights. Before that point, sexual oppression did not need to be "justified" — it was "natural" (saying that, of course, equality between the sexes was stronger before the rise of Christianity as a state religion and capitalism so the "place" of women in society has fallen over the last few hundred years before rising again thanks to the women's movement).

The nature of sexual oppression can be seen from marriage. Emma Goldman pointed out that marriage *"stands for the sovereignty of the man over the women,"* with her *"complete submission"* to the husbands *"whims and commands."* [**Red Emma Speaks**, p. 164] As Carole Pateman notes, until *"the late nineteenth century the legal and civil position of a wife resembled that of a slave... A slave had no independent legal existence apart from his master, and husband and wife became 'one person,' the person of the husband."* Indeed, the law *"was based on the assumption that a wife was (like) property"* and only the marriage contract *"includes the explicit commitment to obey."* [**The Sexual Contract**, p. 119, p. 122 and p. 181]

However, when women started to question the assumptions of male domination, numerous theories were developed to explain why women's oppression and domination by men was "natural." Because men enforced their rule over women by force, men's "superiority" was argued to be a "natural" product of their gender, which is associated with greater physical strength (on the premise that "might makes right"). In the 17th century, it was argued that women were more like animals than men, thus "proving" that women had as much right to equality with men as sheep did. More recently, elites have embraced socio-biology in response to the growing women's movement. By "explaining" women's oppression on biological grounds, a social system run by men and for men could be ignored.

Women's subservient role also has economic value for capitalism (we should note that Goldman considered capitalism to be another *"paternal arrangement"* like marriage, both of which robbed people of their *"birthright," "stunts"* their growth, *"poisons"* their bodies and keeps people in *"ignorance, in poverty and dependence."* [**Op. Cit.**, p. 210]). Women often provide necessary (and unpaid) labour which keeps the (usually) male worker in good condition; and it is primarily women who raise the next generation of wage-slaves (again without pay) for capitalist owners to exploit. Moreover, women's subordination gives working-class men someone to look down upon and, sometimes, a convenient target on whom they can take out their frustrations (instead of stirring up trouble at work). As Lucy Parsons pointed out, a working class woman is *"a slave to a slave."*

Sexism, like all forms of bigotry, is reflected in relative incomes and wealth levels. In the US women, on average, were being paid 57% the amount men were in 2001 (an improvement than the 39% 20 years earlier). Part of this is due to fewer women working than men, but for those who do work outside the home their incomes were 66% than of men's (up from 47% in 1980 and 38% in 1970). Those who work full time, their incomes 76% of men's, up from the 60% average through most of the 1970s. However, as with the black-white gap, this is due in part to the stagnant income of male workers (in 1998 men's real incomes were just 1% above 1989 levels while women's were 14% above). So rather than the increase in income being purely the result of women entering high-paying and largely male occupations and them closing the gender gap, it has also been the result of the intense attacks on the working class since the 1980s which has de-unionised and de-industrialised America. This has resulted in a lot of high-paying male jobs have been lost and more and more women have entered the job market to make sure their families make ends. [Henwood, **Op. Cit.**, p. 91–2]

Turning away from averages, we discover that sexism results in women being paid about 12% less than men during the same job, with the same relative variables (like work experience, education and so forth). Needless to say, as with racism, such "relevant variables" are themselves shaped by discrimination. Women, like blacks, are less likely to get job interviews and jobs. Sexism even affects types of jobs, for example, "caring" professions pay less than non-caring ones because they are seen as feminine and involve the kinds of tasks which women do at home without pay. In general, female dominated industries pay less. In 1998, occupations that were over 90% male had a median wage almost 10% above average while those over 90% female, almost 25% below. One study found that a 30% increase in women in an occupation translated into a 10% decline in average pay. Needless to say, having children is bad economic news for most women (women with children earn 10 to 15% less than women without children while for men the opposite is the case). Having maternity level, incidentally, have a far smaller motherhood penalty. [Henwood, **Op. Cit.**, p. 95–7]

The oppression of lesbians, gays and bisexuals is inextricably linked with sexism. A patriarchal, capitalist society cannot see homosexual practices as the normal human variations they are because they blur that society's rigid gender roles and sexist stereotypes. Most young gay people keep their sexuality to themselves for fear of being kicked out of home and all gays have the fear that some "straights" will try to kick their sexuality out of them if they express their sexuality freely. As with those subject to other forms of bigotry, gays are also discriminated against economically (gay men earning about 4–7% less than the average straight man [Henwood, **Op. Cit.**, p. 100]). Thus the social oppression which result in having an alternative sexuality are experienced on many different levels, from extreme violence to less pay for doing the same work.

Gays are not oppressed on a whim but because of the specific need of capitalism for the nuclear family. The nuclear family, as the primary — and inexpensive — creator of submissive people (growing up within the authoritarian family gets children used to, and "respectful" of, hierarchy and subordination — see section B.1.5) as well as provider and carer for the workforce fulfils an important need for capitalism. Alternative sexualities represent a threat to the family model because they provide a different role model for people. This means that gays are going to be in the front line of attack whenever capitalism wants to reinforce "family values" (i.e. submission to authority, "tradition", "morality" and so on). The introduction of Clause 28 in Britain is a good example of this, with the government making it illegal for public bodies to promote gay sexuality (i.e. to present it as anything other than a perversion). In American, the right is also seeking to demonise homosexuality as part of their campaign to reinforce the values of the patriarchal family unit and submission to "traditional" authority. Therefore, the oppression of people based on their sexuality is unlikely to end until sexism is eliminated.

This is not all. As well as adversely affecting those subject to them, sexism, racism and homophobia are harmful to those who practice them (and in some way benefit from them) within the working class itself. Why this should be the case is obvious, once you think about it. All three divide the working class, which means that whites, males and heterosexuals hurt themselves by maintaining a pool of low-paid competing labour, ensuring low wages for their own wives, daughters, mothers, relatives and friends. Such divisions create inferior conditions and wages for all as capitalists gain a competitive advantage using this pool of cheap labour, forcing all capitalists to cut conditions and wages to survive in the market (in addition, such social hierarchies, by undermining solidarity against the employer on the job and the state possibly create a group of excluded workers who could become scabs during strikes). Also, "privileged" sections of the working class lose out because their wages and conditions are less than those which unity could have won them. Only the boss really wins.

This can be seen from research into this subject. The researcher Al Szymanski sought to systematically and scientifically test the proposition that white workers gain from racism [*"Racial Discrimination and White Gain"*, in **American Sociological Review**, vol. 41, no. 3, June 1976, pp. 403–414]. He compared the situation of "white" and "non-white" (i.e. black, Native American, Asian and Hispanic) workers in United States and found several key things:

So overall, these white workers receive some apparent privileges from racism, but are in fact screwed by it. Thus racism and other forms of hierarchy actually works against the interests of those working class people who practice it — and, by weakening workplace and social unity, benefits the ruling class:

> *"As long as discrimination exists and racial or ethnic minorities are oppressed, the entire working class is weakened. This is so because the Capitalist class is able to use racism to drive down the wages of individual segments of the working class by inciting racial antagonism and forcing a fight for jobs and services. This division is a development that ultimately undercuts the living standards of all workers. Moreover, by pitting Whites against Blacks and other oppressed nationalities, the Capitalist class is able to prevent workers from uniting against their common enemy. As long as workers are fighting each other, the Capitalist class is secure."* [Lorenzo Kom'boa Ervin, **Op. Cit.**, pp. 12–3]

In addition, a wealth of alternative viewpoints, insights, experiences, cultures, thoughts and so on are denied the racist, sexist or homophobe. Their minds are trapped in a cage, stagnating

within a mono-culture — and stagnation is death for the personality. Such forms of oppression are dehumanising for those who practice them, for the oppressor lives as a **role**, not as a person, and so are restricted by it and cannot express their individuality **freely** (and so do so in very limited ways). This warps the personality of the oppressor and impoverishes their own life and personality. Homophobia and sexism also limits the flexibility of all people, gay or straight, to choose the sexual expressions and relationships that are right for them. The sexual repression of the sexist and homophobe will hardly be good for their mental health, their relationships or general development.

From the anarchist standpoint, oppression based on race, sex or sexuality will remain forever intractable under capitalism or, indeed, under any economic or political system based on domination and exploitation. While individual members of "minorities" may prosper, racism as a justification for inequality is too useful a tool for elites to discard. By using the results of racism (e.g. poverty) as a justification for racist ideology, criticism of the status quo can, yet again, be replaced by nonsense about "nature" and "biology." Similarly with sexism or discrimination against gays.

The long-term solution is obvious: dismantle capitalism and the hierarchical, economically class-stratified society with which it is bound up. By getting rid of capitalist oppression and exploitation and its consequent imperialism and poverty, we will also eliminate the need for ideologies of racial or sexual superiority used to justify the oppression of one group by another or to divide and weaken the working class. However, struggles against bigotry cannot be left until after a revolution. If they were two things are likely: one, such a revolution would be unlikely to happen and, two, if it were then these problems would more than likely remain in the new society created by it. Therefore the negative impacts of inequality can and must be fought in the here and now, like any form of hierarchy. Indeed, as we discuss in more detail section B.1.6 by doing so we make life a bit better in the here and now as well as bringing the time when such inequalities are finally ended nearer. Only this can ensure that we can all live as free and equal individuals in a world without the blights of sexism, racism, homophobia or religious hatred.

Needless to say, anarchists totally reject the kind of "equality" that accepts other kinds of hierarchy, that accepts the dominant priorities of capitalism and the state and accedes to the devaluation of relationships and individuality in name of power and wealth. There is a kind of "equality" in having "equal opportunities," in having black, gay or women bosses and politicians, but one that misses the point. Saying "Me too!" instead of "What a mess!" does not suggest real liberation, just different bosses and new forms of oppression. We need to look at the way society is organised, not at the sex, colour, nationality or sexuality of who is giving the orders!

B.1.5 How is the mass-psychological basis for authoritarian civilisation created?

We noted in section A.3.6 that hierarchical, authoritarian institutions tend to be self-perpetuating, because growing up under their influence creates submissive/authoritarian personalities – people who both "respect" authority (based on fear of punishment) and desire to exercise it themselves on subordinates. Individuals with such a character structure do not really want to dismantle hierarchies, because they are afraid of the responsibility entailed by genuine freedom. It seems "natural" and "right" to them that society's institutions, from the authoritarian factory to the

patriarchal family, should be pyramidal, with an elite at the top giving orders while those below them merely obey. Thus we have the spectacle of so-called "Libertarians" and "anarcho" capitalists bleating about "liberty" while at the same time advocating factory fascism and privatised states. In short, authoritarian civilisation reproduces itself with each generation because, through an intricate system of conditioning that permeates every aspect of society, it creates masses of people who support the status quo.

Wilhelm Reich has given one of the most thorough analyses of the psychological processes involved in the reproduction of authoritarian civilisation. Reich based his analysis on four of Freud's most solidly grounded discoveries, namely, (1) that there exists an unconscious part of the mind which has a powerful though irrational influence on behaviour; (2) that even the small child develops a lively "genital" sexuality, i.e. a desire for sexual pleasure which has nothing to do with procreation; (3) that childhood sexuality along with the Oedipal conflicts that arise in parent-child relations under monogamy and patriarchy are usually repressed through fear of punishment or disapproval for sexual acts and thoughts; (4) that this blocking of the child's natural sexual activity and extinguishing it from memory does not weaken its force in the unconscious, but actually intensifies it and enables it to manifest itself in various pathological disturbances and anti-social drives; and (5) that, far from being of divine origin, human moral codes are derived from the educational measures used by the parents and parental surrogates in earliest childhood, the most effective of these being the ones opposed to childhood sexuality.

By studying Bronislaw Malinowsli's research on the Trobriand Islanders, a woman-centred (matricentric) society in which children's sexual behaviour was not repressed and in which neuroses and perversions as well as authoritarian institutions and values were almost non-existent, Reich came to the conclusion that patriarchy and authoritarianism originally developed when tribal chieftains began to get economic advantages from a certain type of marriage ("cross-cousin marriages") entered into by their sons. In such marriages, the brothers of the son's wife were obliged to pay a dowry to her in the form of continuous tribute, thus enriching her husband's clan (i.e. the chief's). By arranging many such marriages for his sons (which were usually numerous due to the chief's privilege of polygamy), the chief's clan could accumulate wealth. Thus society began to be stratified into ruling and subordinate clans based on wealth.

To secure the permanence of these "good" marriages, strict monogamy was required. However, it was found that monogamy was impossible to maintain without the repression of childhood sexuality, since, as statistics show, children who are allowed free expression of sexuality often do not adapt successfully to life-long monogamy. Therefore, along with class stratification and private property, authoritarian child-rearing methods were developed to inculcate the repressive sexual morality on which the new patriarchal system depended for its reproduction. Thus there is a historical correlation between, on the one hand, pre-patriarchal society, primitive libertarian communism (or *"work democracy,"* to use Reich's expression), economic equality, and sexual freedom, and on the other, patriarchal society, a private-property economy, economic class stratification, and sexual repression. As Reich puts it:

> "Every tribe that developed from a [matricentric] to a patriarchal organisation had to change the sexual structure of its members to produce a sexuality in keeping with its new form of life. This was a necessary change because the shifting of power and of wealth from the democratic gens [maternal clans] to the authoritarian family of the chief was mainly implemented with the help of the suppression of the sexual striv-

ings of the people. It was in this way that sexual suppression became an essential factor in the division of society into classes.

"Marriage, and the lawful dowry it entailed, became the axis of the transformation of the one organisation into the other. In view of the fact that the marriage tribute of the wife's gens to the man's family strengthened the male's, especially the chief's, position of power, the male members of the higher ranking gens and families developed a keen interest in making the nuptial ties permanent. At this stage, in other words, only the man had an interest in marriage. In this way natural work-democracy's simple alliance, which could be easily dissolved at any time, was transformed into the permanent and monogamous marital relationship of patriarchy. The permanent monogamous marriage became the basic institution of patriarchal society — which it still is today. To safeguard these marriages, however, it was necessary to impose greater and greater restrictions upon and to depreciate natural genital strivings." [**The Mass Psychology of Fascism**, p. 90]

The suppression of natural sexuality involved in this transformation from matricentric to patriarchal society created various anti-social drives (sadism, destructive impulses, rape fantasies, etc.), which then also had to be suppressed through the imposition of a compulsive morality, which took the place the natural self-regulation that one finds in pre-patriarchal societies. In this way, sex began to be regarded as "dirty," "diabolical," "wicked," etc. — which it had indeed become through the creation of secondary drives. Thus:

"The patriarchal- authoritarian sexual order that resulted from the revolutionary processes of latter-day [matricentrism] (economic independence of the chief's family from the maternal gens, a growing exchange of goods between the tribes, development of the means of production, etc.) becomes the primary basis of authoritarian ideology by depriving the women, children, and adolescents of their sexual freedom, making a commodity of sex and placing sexual interests in the service of economic subjugation. From now on, sexuality is indeed distorted; it becomes diabolical and demonic and has to be curbed." [Reich, **Op. Cit.**, p. 88]

Once the beginnings of patriarchy are in place, the creation of a fully authoritarian society based on the psychological crippling of its members through sexual suppression follows:

*"The moral inhibition of the child's natural sexuality, the last stage of which is the severe impairment of the child's **genital** sexuality, makes the child afraid, shy, fearful of authority, obedient, 'good,' and 'docile' in the authoritarian sense of the words. It has a crippling effect on man's rebellious forces because every vital life-impulse is now burdened with severe fear; and since sex is a forbidden subject, thought in general and man's critical faculty also become inhibited. In short, morality's aim is to produce acquiescent subjects who, despite distress and humiliation, are adjusted to the authoritarian order. Thus, the family is the authoritarian state in miniature, to which the child must learn to adapt himself as a preparation for the general social adjustment required of him later. Man's authoritarian structure — this must be clearly established — is basically produced by the embedding of sexual inhibitions and fear."* [Reich, **Op. Cit.**, p. 30]

In this way, by damaging the individual's power to rebel and think for him/herself, the inhibition of childhood sexuality — and indeed other forms of free, natural expression of bioenergy (e.g. shouting, crying, running, jumping, etc.) — becomes the most important weapon in creating reactionary personalities. This is why every reactionary politician puts such an emphasis on "strengthening the family" and promoting "family values" (i.e. patriarchy, compulsive monogamy, premarital chastity, corporal punishment, etc.). In the words of Reich:

> *"Since authoritarian society reproduces itself in the individual structures of the masses with the help of the authoritarian family, it follows that political reaction has to regard and defend the authoritarian family as* ***the*** *basis of the 'state, culture, and civilisation...' [It is]* ***political reaction's germ cell****, the most important centre for the production of reactionary men and women. Originating and developing from definite social processes, it becomes the most essential institution for the preservation of the authoritarian system that shapes it."* [**Op. Cit.**, pp. 104–105]

The family is the most essential institution for this purpose because children are most vulnerable to psychological maiming in their first few years, from the time of birth to about six years of age, during which time they are mostly in the charge of their parents. The schools and churches then continue the process of conditioning once the children are old enough to be away from their parents, but they are generally unsuccessful if the proper foundation has not been laid very early in life by the parents. Thus A.S. Neill observes that *"the nursery training is very like the kennel training. The whipped child, like the whipped puppy, grows into an obedient, inferior adult. And as we train our dogs to suit our own purposes, so we train our children. In that kennel, the nursery, the human dogs must be clean; they must feed when we think it convenient for them to feed. I saw a hundred thousand obedient, fawning dogs wag their tails in the Templehof, Berlin, when in 1935, the great trainer Hitler whistled his commands."* [**Summerhill: a Radical Approach to Child Rearing**, p. 100]

The family is also the main agency of repression during adolescence, when sexual energy reaches its peak. This is because the vast majority of parents provide no private space for adolescents to pursue undisturbed sexual relationships with their partners, but in fact actively discourage such behaviour, often (as in fundamentalist Christian families) demanding complete abstinence — at the very time when abstinence is most impossible! Moreover, since teenagers are economically dependent on their parents under capitalism, with no societal provision of housing or dormitories allowing for sexual freedom, young people have no alternative but to submit to irrational parental demands for abstention from premarital sex. This in turn forces them to engage in furtive sex in the back seats of cars or other out-of-the-way places where they cannot relax or obtain full sexual satisfaction. As Reich found, when sexuality is repressed and laden with anxiety, the result is always some degree of what he terms *"orgastic impotence"*: the inability to fully surrender to the flow of energy discharged during orgasm. Hence there is an incomplete release of sexual tension, which results in a state of chronic bioenergetic stasis. Such a condition, Reich found, is the breeding ground for neuroses and reactionary attitudes. (For further details see the section J.6).

In this connection it is interesting to note that "primitive" societies, such as the Trobriand Islanders, prior to their developing patriarchal-authoritarian institutions, provided special community houses where teenagers could go with their partners to enjoy undisturbed sexual relationships — and this with society's full approval. Such an institution would be taken for granted

in an anarchist society, as it is implied by the concept of freedom. (For more on adolescent sexual liberation, see section J.6.8.)

Nationalistic feelings can also be traced to the authoritarian family. A child's attachment to its mother is, of course, natural and is the basis of all family ties. Subjectively, the emotional core of the concepts of homeland and nation are mother and family, since the mother is the homeland of the child, just as the family is the "nation in miniature." According to Reich, who carefully studied the mass appeal of Hitler's "National Socialism," nationalistic sentiments are a direct continuation of the family tie and are rooted in a **fixated** tie to the mother. As Reich points out, although infantile attachment to the mother is natural, **fixated** attachment is not, but is a social product. In puberty, the tie to the mother would make room for other attachments, i.e., natural sexual relations, **if** the unnatural sexual restrictions imposed on adolescents did not cause it to be eternalised. It is in the form of this socially conditioned externalisation that fixation on the mother becomes the basis of nationalist feelings in the adult; and it is only at this stage that it becomes a reactionary social force.

Later writers who have followed Reich in analysing the process of creating reactionary character structures have broadened the scope of his analysis to include other important inhibitions, besides sexual ones, that are imposed on children and adolescents. Rianne Eisler, for example, in her book **Sacred Pleasure**, stresses that it is not just a sex-negative attitude but a **pleasure**-negative attitude that creates the kinds of personalities in question. Denial of the value of pleasurable sensations permeates our unconscious, as reflected, for example, in the common idea that to enjoy the pleasures of the body is the "animalistic" (and hence "bad") side of human nature, as contrasted with the "higher" pleasures of the mind and "spirit." By such dualism, which denies a spiritual aspect to the body, people are made to feel guilty about enjoying any pleasurable sensations — a conditioning that does, however, prepare them for lives based on the sacrifice of pleasure (or indeed, even of life itself) under capitalism and statism, with their requirements of mass submission to alienated labour, exploitation, military service to protect ruling-class interests, and so on. And at the same time, authoritarian ideology emphasises the value of suffering, as for example through the glorification of the tough, insensitive warrior hero, who suffers (and inflicts "necessary" suffering on others) for the sake of some pitiless ideal.

Eisler also points out that there is *"ample evidence that people who grow up in families where rigid hierarchies and painful punishments are the norm learn to suppress anger toward their parents. There is also ample evidence that this anger is then often deflected against traditionally disempowered groups (such as minorities, children, and women)."* [**Sacred Pleasure**, p. 187] This repressed anger then becomes fertile ground for reactionary politicians, whose mass appeal usually rests in part on scapegoating minorities for society's problems.

As the psychologist Else Frenkel-Brunswick documents in **The Authoritarian Personality**, people who have been conditioned through childhood abuse to surrender their will to the requirements of feared authoritarian parents, also tend to be very susceptible as adults to surrender their will and minds to authoritarian leaders. *"In other words,"* Frenkel-Brunswick summarises, *"at the same time that they learn to deflect their repressed rage against those they perceive as weak, they also learn to submit to autocratic or 'strong-man' rule. Moreover, having been severely punished for any hint of rebellion (even 'talking back' about being treated unfairly), they gradually also learn to deny to themselves that there was anything wrong with what was done to them as children — and to do it in turn to their own children."* [**The Authoritarian Personality**, p. 187]

These are just some of the mechanisms that perpetuate the status quo by creating the kinds of personalities who worship authority and fear freedom. Consequently, anarchists are generally opposed to traditional child-rearing practices, the patriarchal-authoritarian family (and its "values"), the suppression of adolescent sexuality, and the pleasure-denying, pain-affirming attitudes taught by the Church and in most schools. In place of these, anarchists favour non-authoritarian, non-repressive child-rearing practices and educational methods (see sections J.6 and secJ.5.13, respectively) whose purpose is to prevent, or at least minimise, the psychological crippling of individuals, allowing them instead to develop natural self-regulation and self-motivated learning. This, we believe, is the only way to for people to grow up into happy, creative, and truly freedom-loving individuals who will provide the psychological ground where anarchist economic and political institutions can flourish.

B.1.6 Can hierarchy be ended?

Faced with the fact that hierarchy, in its many distinctive forms, has been with us such a long time and so negatively shapes those subject to it, some may conclude that the anarchist hope of ending it, or even reducing it, is little more than a utopian dream. Surely, it will be argued, as anarchists acknowledge that those subject to a hierarchy adapt to it this automatically excludes the creation of people able to free themselves from it?

Anarchists disagree. Hierarchy can be ended, both in specific forms and in general. A quick look at the history of the human species shows that this is the case. People who have been subject to monarchy have ended it, creating republics where before absolutism reigned. Slavery and serfdom have been abolished. Alexander Berkman simply stated the obvious when he pointed out that *"many ideas, once held to be true, have come to be regarded as wrong and evil. Thus the ideas of divine right of kings, of slavery and serfdom. There was a time when the whole world believed those institutions to be right, just, and unchangeable."* However, they became *"discredited and lost their hold upon the people, and finally the institutions that incorporated those ideas were abolished"* as *"they were useful only to the master class"* and *"were done away with by popular uprisings and revolutions."* [**What is Anarchism?**, p. 178] It is unlikely, therefore, that current forms of hierarchy are exceptions to this process.

Today, we can see that this is the case. Malatesta's comments of over one hundred years ago are still valid: *"the oppressed masses ... have never completely resigned themselves to oppression and poverty ... [and] show themselves thirsting for justice, freedom and wellbeing."* [**Anarchy**, p. 33] Those at the bottom are constantly resisting both hierarchy and its the negative effects and, equally important, creating non-hierarchical ways of living and fighting. This constant process of self-activity and self-liberation can be seen from the labour, women's and other movements — in which, to some degree, people create their own alternatives based upon their own dreams and hopes. Anarchism is based upon, and grew out of, this process of resistance, hope and direct action. In other words, the libertarian elements that the oppressed continually produce in their struggles within and against hierarchical systems are extrapolated and generalised into what is called anarchism. It is these struggles and the anarchistic elements they produce which make the end of all forms of hierarchy not only desirable, but possible.

So while the negative impact of hierarchy is not surprising, neither is the resistance to it. This is because the individual *"is not a blank sheet of paper on which culture can write its text; he [or*

she] is an entity charged with energy and structured in specific ways, which, while adapting itself, reacts in specific and ascertainable ways to external conditions." In this *"process of adaptation,"* people develop *"definite mental and emotional reactions which follow from specific properties"* of our nature. [Eric Fromm, **Man for Himself**, p. 23 and p. 22] For example:

> *"Man can adapt himself to slavery, but he reacts to it by lowering his intellectual and moral qualities ... Man can adapt himself to cultural conditions which demand the repression of sexual strivings, but in achieving this adaptation he develops ... neurotic symptoms. He can adapt to almost any culture pattern, but in so far as these are contradictory to his nature he develops mental and emotional disturbances which force him eventually change these conditions since he cannot change his nature.... If ... man could adapt himself to all conditions without fighting those which are against his nature, he would have no history. Human evolution is rooted in man's adaptability and in certain indestructible qualities of his nature which compel him to search for conditions better adjusted to his intrinsic needs."* [**Op. Cit.**, pp. 22–23]

So as well as adaptation to hierarchy, there is resistance. This means that modern society (capitalism), like any hierarchical society, faces a direct contradiction. On the one hand, such systems divide society into a narrow stratum of order givers and the vast majority of the population who are (officially) excluded from decision making, who are reduced to carrying out (executing) the decisions made by the few. As a result, most people suffer feelings of alienation and unhappiness. However, in practice, people try and overcome this position of powerlessness and so hierarchy produces a struggle against itself by those subjected to it. This process goes on all the time, to a greater or lesser degree, and is an essential aspect in creating the possibility of political consciousness, social change and revolution. People refuse to be treated like objects (as required by hierarchical society) and by so doing hierarchy creates the possibility for its own destruction.

For the inequality in wealth and power produced by hierarchies, between the powerful and the powerless, between the rich and the poor, has not been ordained by god, nature or some other superhuman force. It has been created by a specific social system, its institutions and workings — a system based upon authoritarian social relationships which effect us both physically and mentally. So there is hope. Just as authoritarian traits are learned, so can they be **unlearned.** As Carole Pateman summarises, the evidence supports the argument *"that we do learn to participate by participating"* and that a participatory environment *"might also be effective in diminishing tendencies toward non-democratic attitudes in the individual."* [**Participaton and Democratic Theory**, p. 105] So oppression reproduces resistance and the seeds of its own destruction.

It is for this reason anarchists stress the importance of self-liberation (see section A.2.7) and *"support all struggles for partial freedom, because we are convinced that one learns through struggle, and that once one begins to enjoy a little freedom one ends by wanting it all."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 195] By means of direct action (see section J.2), people exert themselves and stand up for themselves. This breaks the conditioning of hierarchy, breaks the submissiveness which hierarchical social relationships both need and produce. Thus the daily struggles against oppression *"serve as a training camp to develop"* a person's *"understanding of [their] proper role in life, to cultivate [their] self-reliance and independence, teach him [or her] mutual help and co-operation, and make him [or her] conscious of [their] responsibility. [They] will learn to decide and act on [their] own behalf, not leaving it to leaders or politicians to attend to*

[their] affairs and look out for [their] welfare. It will be [them] who will determine, together with [their] fellows ... , what they want and what methods will best serve their aims." [Berkman, **Op. Cit.**, p. 206]

In other words, struggle encourages all the traits hierarchy erodes and, consequently, develop the abilities not only to question and resist authority but, ultimately, end it once and for all. This means that any struggle **changes** those who take part in it, politicising them and transforming their personalities by shaking off the servile traits produced and required by hierarchy. As an example, after the sit-down strikes in Flint, Michigan, in 1937 one eye-witness saw how *"the auto worker became a different human being. The women that had participated actively became a different type of women ... They carried themselves with a different walk, their heads were high, and they had confidence in themselves."* [Genora (Johnson) Dollinger, contained in **Voices of a People's History of the United States**, Howard Zinn and Anthony Arnove (eds.), p. 349] Such changes happen in all struggles (also see section J.4.2). Anarchists are not surprised for, as discussed in section J.1 and J.2.1, we have long recognised the liberating aspects of social struggle and the key role it plays in creating free people and the other preconditions for needed for an anarchist society (like the initial social structure — see section I.2.3).

Needless to say, a hierarchical system like capitalism cannot survive with a non-submissive working class and the bosses spend a considerable amount of time, energy and resources trying to break the spirits of the working class so they will submit to authority (either unwillingly, by fear of being fired, or willingly, by fooling them into believing that hierarchy is natural or by rewarding subservient behaviour). Unsurprisingly, this never completely succeeds and so capitalism is marked by constant struggles between the oppressed and oppressor. Some of these struggles succeed, some do not. Some are defensive, some are not. Some, like strikes, are visible, other less so (such a working slowly and less efficiently than management desires). And these struggles are waged by both sides of the hierarchical divide. Those subject to hierarchy fight to limit it and increase their autonomy and those who exercise authority fight to increase their power over others. Who wins varies. The 1960s and 1970s saw a marked increase in victories for the oppressed all throughout capitalism but, unfortunately, since the 1980s, as we discuss in section C.8.3, there has been a relentless class war conducted by the powerful which has succeeded in inflicting a series of defeats on working class people. Unsurprisingly, the rich have got richer and more powerful since.

So anarchists take part in the on-going social struggle in society in an attempt to end it in the only way possible, the victory of the oppressed. A key part of this is to fight for partial freedoms, for minor or major reforms, as this strengthens the spirit of revolt and starts the process towards the final end of hierarchy. In such struggles we stress the autonomy of those involved and see them not only as the means of getting more justice and freedom in the current unfree system but also as a means of ending the hierarchies they are fighting once and for all. Thus, for example, in the class struggle we argue for *"[o]rganisation from the bottom up, beginning with the shop and factory, on the foundation of the joint interests of the workers everywhere, irrespective of trade, race, or country."* [Alexander Berkman, **Op. Cit.**, p. 207] Such an organisation, as we discuss in section J.5.2, would be run via workplace assemblies and would be the ideal means of replacing capitalist hierarchy in industry by genuine economic freedom, i.e. worker's self-management of production (see section I.3). Similarly, in the community we argue for popular assemblies (see section J.5.1) as a means of not only combating the power of the state but also replaced it with by free, self-managed, communities (see section I.5).

Thus the current struggle itself creates the bridge between what is and what could be:

> *"Assembly and community must arise from within the revolutionary process itself; indeed, the revolutionary process must* ***be*** *the formation of assembly and community, and with it, the destruction of power. Assembly and community must become 'fighting words,' not distant panaceas. They must be created as* ***modes of struggle*** *against the existing society, not as theoretical or programmatic abstractions."* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 104]

This is not all. As well as fighting the state and capitalism, we also need fight all other forms of oppression. This means that anarchists argue that we need to combat social hierarchies like racism and sexism as well as workplace hierarchy and economic class, that we need to oppose homophobia and religious hatred as well as the political state. Such oppressions and struggles are not diversions from the struggle against class oppression or capitalism but part and parcel of the struggle for human freedom and cannot be ignored without fatally harming it.

As part of that process, anarchists encourage and support all sections of the population to stand up for their humanity and individuality by resisting racist, sexist and anti-gay activity and challenging such views in their everyday lives, everywhere (as Carole Pateman points out, *"sexual domination structures the workplace as well as the conjugal home"* [**The Sexual Contract**, p. 142]). It means a struggle of all working class people against the internal and external tyrannies we face – we must fight against own our prejudices while supporting those in struggle against our common enemies, no matter their sex, skin colour or sexuality. Lorenzo Kom'boa Ervin words on fighting racism are applicable to all forms of oppression:

> *"Racism must be fought vigorously wherever it is found, even if in our own ranks, and even in ones own breast. Accordingly, we must end the system of white skin privilege which the bosses use to split the class, and subject racially oppressed workers to super-exploitation. White workers, especially those in the Western world, must resist the attempt to use one section of the working class to help them advance, while holding back the gains of another segment based on race or nationality. This kind of class opportunism and capitulationism on the part of white labour must be directly challenged and defeated. There can be no workers unity until the system of super-exploitation and world White Supremacy is brought to an end."* [**Anarchism and the Black Revolution**, p. 128]

Progress towards equality can and has been made. While it is still true that (in the words of Emma Goldman) *"[n]owhere is woman treated according to the merit of her work, but rather as a sex"* [**Red Emma Speaks**, p. 177] and that education is still patriarchal, with young women still often steered away from traditionally "male" courses of study and work (which teaches children that men and women are assigned different roles in society and sets them up to accept these limitations as they grow up) it is also true that the position of women, like that of blacks and gays, **has** improved. This is due to the various self-organised, self-liberation movements that have continually developed throughout history and these are **the** key to fighting oppression in the short term (and creating the potential for the long term solution of dismantling capitalism and the state).

Emma Goldman argued that emancipation begins *"in [a] woman's soul."* Only by a process of internal emancipation, in which the oppressed get to know their own value, respect themselves and their culture, can they be in a position to effectively combat (and overcome) external oppression and attitudes. Only when you respect yourself can you be in a position to get others to respect you. Those men, whites and heterosexuals who are opposed to bigotry, inequality and injustice, must support oppressed groups and refuse to condone racist, sexist or homophobic attitudes and actions by others or themselves. For anarchists, *"not a single member of the Labour movement may with impunity be discriminated against, suppressed or ignored... Labour [and other] organisations must be built on the principle of equal liberty of all its members. This equality means that only if each worker is a free and independent unit, co-operating with the others from his or her mutual interests, can the whole labour organisation work successfully and become powerful."* [Lorenzo Kom'boa Ervin, **Op. Cit.**, pp. 127–8]

We must all treat people as equals, while at the same time respecting their differences. Diversity is a strength and a source of joy, and anarchists reject the idea that equality means conformity. By these methods, of internal self-liberation and solidarity against external oppression, we can fight against bigotry. Racism, sexism and homophobia can be reduced, perhaps almost eliminated, before a social revolution has occurred by those subject to them organising themselves, fighting back **autonomously** and refusing to be subjected to racial, sexual or anti-gay abuse or to allowing others to get away with it (which plays an essential role in making others aware of their own attitudes and actions, attitudes they may even be blind to!).

The example of the ***Mujeres Libres*** (Free Women) in Spain during the 1930s shows what is possible. Women anarchists involved in the C.N.T. and F.A.I. organised themselves autonomously to raise the issue of sexism in the wider libertarian movement, to increase women's involvement in libertarian organisations and help the process of women's self-liberation against male oppression. Along the way they also had to combat the (all too common) sexist attitudes of their "revolutionary" male fellow anarchists. Martha A. Ackelsberg's book **Free Women of Spain** is an excellent account of this movement and the issues it raises for all people concerned about freedom. Decades latter, the women's movement of the 1960s and 1970s did much the same thing, aiming to challenge the traditional sexism and patriarchy of capitalist society. They, too, formed their own organisations to fight for their own needs as a group. Individuals worked together and drew strength for their own personal battles in the home and in wider society.

Another essential part of this process is for such autonomous groups to actively support others in struggle (including members of the dominant race/sex/sexuality). Such practical solidarity and communication can, when combined with the radicalising effects of the struggle itself on those involved, help break down prejudice and bigotry, undermining the social hierarchies that oppress us all. For example, gay and lesbian groups supporting the 1984/5 UK miners' strike resulted in such groups being given pride of place in many miners' marches. Another example is the great strike by Jewish immigrant workers in 1912 in London which occurred at the same time as a big London Dock Strike. *"The common struggle brought Jewish and non-Jewish workers together. Joint strike meetings were held, and the same speakers spoke at huge joint demonstrations."* The Jewish strike was a success, dealing a *"death-blow to the sweatshop system. The English workers looked at the Jewish workers with quite different eyes after this victory."* Yet the London dock strike continued and many dockers' families were suffering real wants. The successful Jewish strikers started a campaign *"to take some of the dockers' children into their homes."* This practical support *"did a great deal to strengthen the friendship between Jewish and non-Jewish workers."* [Rudolf

Rocker, **London Years**, p. 129 and p. 131] This solidarity was repaid in October 1936, when the dockers were at the forefront in stopping Mosley's fascist blackshirts marching through Jewish areas (the famous battle of Cable street).

For whites, males and heterosexuals, the only anarchistic approach is to support others in struggle, refuse to tolerate bigotry in others and to root out their own fears and prejudices (while refusing to be uncritical of self-liberation struggles — solidarity does not imply switching your brain off!). This obviously involves taking the issue of social oppression into all working class organisations and activity, ensuring that no oppressed group is marginalised within them.

Only in this way can the hold of these social diseases be weakened and a better, non-hierarchical system be created. An injury to one is an injury to all.

B.2 Why are anarchists against the state?

As previously noted (see section B.1), anarchists oppose all forms of hierarchical authority. Historically, however, they have spent most of their time and energy opposing two main forms in particular. One is capitalism, the other, the state. These two forms of authority have a symbiotic relationship and cannot be easily separated:

> "[T]he State ... and Capitalism are facts and conceptions which we cannot separate from each other. In the course of history these institutions have developed, supporting and reinforcing each other.
>
> "They are connected with each other — not as mere accidental co-incidences. They are linked together by the links of cause and effect." [Kropotkin, **Evolution and Environment**, p. 94]

In this section, in consequence, as well as explaining why anarchists oppose the state, we will necessarily have to analyse the relationship between it and capitalism.

So what is the state? As Malatesta put it, anarchists *"have used the word State, and still do, to mean the sum total of the political, legislative, judiciary, military and financial institutions through which the management of their own affairs, the control over their personal behaviour, the responsibility for their personal safety, are taken away from the people and entrusted to others who, by usurpation or delegation, are vested with the power to make laws for everything and everybody, and to oblige the people to observe them, if need be, by the use of collective force."* [**Anarchy**, p. 17]

He continues:

> *"For us, government [or the state] is made up of all the governors; and the governors ... are those who have the power to make **laws** regulating inter-human relations and to see that they are carried out . .. [and] who have the power, to a greater or lesser degree, to make use of the social power, that is of the physical, intellectual and economic power of the whole community, in order to oblige everybody to carry out their wishes. And this power, in our opinion, constitutes the principle of government, of authority."* [**Op. Cit.**, p. 19]

Kropotkin presented a similar analysis, arguing that the state *"not only includes the existence of a power situated above society, but also of a **territorial concentration** as well as the concentration **in the hands of a few of many functions in the life of societies** ... A whole mechanism of legislation and of policing has to be developed in order to subject some classes to the domination of others."* [**The State: Its Historic Role**, p. 10] For Bakunin, all states *"are in essence only machines governing the masses from above, through ... a privileged minority, allegedly knowing the genuine interests of the people better than the people themselves."* [**The Political Philosophy of Bakunin**, p. 211] On this subject Murray Bookchin writes:

> *"Minimally, the State is a professional system of social coercion — not merely a system of social administration as it is still naively regarded by the public and by many political theorists. The word 'professional' should be emphasised as much as the word 'coercion.' .. . It is only when coercion is institutionalised into a professional, systematic and organised form of social control — that is, when people are plucked out of their everyday lives in a community and expected not only to 'administer' it but to do so with the backing of a monopoly of violence — that we can properly speak of a State."* [**Remaking Society**, p. 66]

As Bookchin indicates, anarchists reject the idea that the state is the same as society or that **any** grouping of human beings living and organised together is a state. This confusion, as Kropotkin notes, explains why *"anarchists are generally upbraided for wanting to 'destroy society' and of advocating a return to 'the permanent war of each against all.'"* Such a position *"overlook[s] the fact that Man lived in Societies for thousands of years before the State had been heard of"* and that, consequently, the State *"is only one of the forms assumed by society in the course of history."* [**Op. Cit.**, p. 10]

The state, therefore, is not just federations of individuals or peoples and so, as Malatesta stressed, cannot be used to describe a *"human collectively gathered together in a particular territory and making up what is called a social unit irrespective of the way the way said collectivity are grouped or the state of relations between them."* It cannot be *"used simply as a synonym for society."* [**Op. Cit.**, p. 17] The state is a particular form of social organisation based on certain key attributes and so, we argue, *"the word 'State' ... should be reserved for those societies with the hierarchical system and centralisation."* [Peter Kropotkin, **Ethics**, p. 317f] As such, the state *"is a historic, transitory institution, a temporary form of society"* and one whose *"utter extinction"* is possible as the *"State is not society."* [Bakunin, **Michael Bakunin: Selected Writings**, p. 151]

In summary, the state is a specific way in which human affairs are organised in a given area, a way marked by certain institutions which, in turn, have certain characteristics. This does not imply, however, that the state is a monolithic entity that has been the same from its birth to the present day. States vary in many ways, especially in their degree of authoritarianism, in the size and power of their bureaucracy and how they organise themselves. Thus we have monarchies, oligarchies, theocracies, party dictatorships and (more or less) democratic states. We have ancient states, with minimal bureaucracy, and modern ones, with enormous bureaucracy.

Moreover, anarchists argue that *"the **political** regime ... is always an expression of the **economic** regime which exists at the heart of society."* This means that regardless of how the state changes, it *"continues to be shaped by the economic system, of which it is always the expression and, at the same time, the consecration and the sustaining force."* Needless to say, there is not always an exact match and sometimes *"the political regime of a country finds itself lagging behind the economic changes that are taking place, and in that case it will abruptly be set aside and remodelled in a way appropriate to the economic regime that has been established."* [Kropotkin, **Words of a Rebel**, p. 118]

At other times, the state can change its form to protect the economic system it is an expression of. Thus we see democracies turn to dictatorships in the face of popular revolts and movements. The most obvious examples of Pinochet's Chile, Franco's Spain, Mussolini's Italy and Hitler's Germany are all striking confirmations of Bakunin's comment that while *"[n]o government could serve the economic interests of the bourgeoisie better than a republic,"* that class would *"prefer ...*

military dictatorship" if needed to crush *"the revolts of the proletariat."* [**Bakunin on Anarchism**, p. 417]

However, as much as the state may change its form it still has certain characteristics which identify a social institution as a state. As such, we can say that, for anarchists, the state is marked by three things:

Of these three aspects, the last one (its centralised, hierarchical nature) is the most important simply because the concentration of power into the hands of the few ensures a division of society into government and governed (which necessitates the creation of a professional body to enforce that division). Hence we find Bakunin arguing that *"[w]ith the State there must go also ... all organisation of social life from the top downward, via legislation and government."* [**The Political Philosophy of Bakunin**, p. 242] In other words, *"the people was not governing itself."* [Kropotkin, **Op. Cit.**, p. 120]

This aspect implies the rest. In a state, all the people residing in an area are subject to the state, submitting themselves to the individuals who make up the institution of authority ruling that territory. To enforce the will of this few, they must have a monopoly of force within the territory. As the members of the state collectively monopolise political decision making power, they are a privileged body separated by its position and status from the rest of the population as a whole which means they cannot rely on them to enforce its will. This necessities a professional body of some kind to enforce their decisions, a separate police force or army rather than the people armed.

Given this, the division of society into rulers and ruled is the key to what constitutes a state. Without such a division, we would not need a monopoly of violence and so would simply have an association of equals, unmarked by power and hierarchy (such as exists in many stateless "primitive" tribes and will exist in a future anarchist society). And, it must be stressed, such a division exists even in democratic states as *"with the state there is always a hierarchical and status difference between rulers and ruled. Even if it is a democracy, where we suppose those who rule today are not rulers tomorrow, there are still differences in status. In a democratic system, only a tiny minority will ever have the opportunity to rule and these are invariably drawn from the elite."* [Harold Barclay, **The State**, pp. 23–4]

Thus, the *"essence of government"* is that *"it is a thing apart, developing its own interests"* and so is *"an institution existing for its own sake, preying upon the people, and teaching them whatever will tend to keep it secure in its seat."* [Voltairine de Cleyre, **The Voltairine de Cleyre Reader**, p. 27 and p. 26] And so *"despotism resides not so much in the **form** of the State or power as in the very **principle** of the State and political power."* [Bakunin, **Op. Cit.**, p. 211]

As the state is the delegation of power into the hands of the few, it is obviously based on hierarchy. This delegation of power results in the elected people becoming isolated from the mass of people who elected them and outside of their control (see section B.2.4). In addition, as those elected are given power over a host of different issues and told to decide upon them, a bureaucracy soon develops around them to aid in their decision-making and enforce those decisions once they have been reached. However, this bureaucracy, due to its control of information and its permanency, soon has more power than the elected officials. Therefore *"a highly complex state machine ... leads to the formation of a class especially concerned with state management, which, using its acquired experience, begins to deceive the rest for its personal advantage."* [Kropotkin, **Selected Writings on Anarchism and Revolution**, p. 61] This means that those who serve the people's (so-called) servant have more power than those they serve, just as the politician has

more power than those who elected him. All forms of state-like (i.e. hierarchical) organisations inevitably spawn a bureaucracy about them. This bureaucracy soon becomes the de facto focal point of power in the structure, regardless of the official rules.

This marginalisation and disempowerment of ordinary people (and so the empowerment of a bureaucracy) is the key reason for anarchist opposition to the state. Such an arrangement ensures that the individual is disempowered, subject to bureaucratic, authoritarian rule which reduces the person to an object or a number, **not** a unique individual with hopes, dreams, thoughts and feelings. As Proudhon forcefully argued:

> *"To be GOVERNED is to be kept in sight, inspected, spied upon, directed, law-driven, numbered, enrolled, indoctrinated, preached at, controlled, estimated, valued, censured, commanded, by creatures who have neither the right, nor the wisdom, nor the virtue to do so ... To be GOVERNED is to be at every operation, at every transaction, noted, registered, enrolled, taxed, stamped, measured, numbered, assessed, licensed, authorised, admonished, forbidden, reformed, corrected, punished. It is, under the pretext of public utility, and in the name of the general interest, to be placed under contribution, trained, ransomed, exploited, monopolised, extorted, squeezed, mystified, robbed; then, at the slightest resistance, the first word of complaint, to be repressed, fined, despised, harassed, tracked, abused, clubbed, disarmed, choked, imprisoned, judged, condemned, shot, deported, sacrificed, sold, betrayed; and, to crown it all, mocked, ridiculed, outraged, dishonoured. That is government; that is its justice; that is its morality."* [**General Idea of the Revolution**, p. 294]

Such is the nature of the state that **any** act, no matter how evil, becomes good if it helps forward the interests of the state and the minorities it protects. As Bakunin put it:

> *"**The State ... is the most flagrant, the most cynical, and the most complete negation of humanity.** It shatters the universal solidarity of all men [and women] on the earth, and brings some of them into association only for the purpose of destroying, conquering, and enslaving all the rest ...*
>
> *"This flagrant negation of humanity which constitutes the very essence of the State is, from the standpoint of the State, its supreme duty and its greatest virtue ... Thus, to offend, to oppress, to despoil, to plunder, to assassinate or enslave one's fellowman [or woman] is ordinarily regarded as a crime. In public life, on the other hand, from the standpoint of patriotism, when these things are done for the greater glory of the State, for the preservation or the extension of its power, it is all transformed into duty and virtue. And this virtue, this duty, are obligatory for each patriotic citizen; everyone if supposed to exercise them not against foreigners only but against one's own fellow citizens ... whenever the welfare of the State demands it.*
>
> *"This explains why, since the birth of the State, the world of politics has always been and continues to be the stage for unlimited rascality and brigandage ... This explains why the entire history of ancient and modern states is merely a series of revolting crimes; why kings and ministers, past and present, of all times and all countries — statesmen, diplomats, bureaucrats, and warriors — if judged from the standpoint of simply morality and human justice, have a hundred, a thousand times over earned their sentence to hard*

> *labour or to the gallows. There is no horror, no cruelty, sacrilege, or perjury, no imposture, no infamous transaction, no cynical robbery, no bold plunder or shabby betrayal that has not been or is not daily being perpetrated by the representatives of the states, under no other pretext than those elastic words, so convenient and yet so terrible: '**for reasons of state.**'"* [**Bakunin on Anarchism**, pp. 133–4]

Governments habitually lie to the people they claim to represent in order to justify wars, reductions (if not the destruction) of civil liberties and human rights, policies which benefit the few over the many, and other crimes. And if its subjects protest, the state will happily use whatever force deemed necessary to bring the rebels back in line (labelling such repression "law and order"). Such repression includes the use of death squads, the institutionalisation of torture, collective punishments, indefinite imprisonment, and other horrors at the worse extremes.

Little wonder the state usually spends so much time ensuring the (mis)education of its population — only by obscuring (when not hiding) its actual practises can it ensure the allegiance of those subject to it. The history of the state could be viewed as nothing more than the attempts of its subjects to control it and bind it to the standards people apply to themselves.

Such behaviour is not surprising, given that Anarchists see the state, with its vast scope and control of deadly force, as the "ultimate" hierarchical structure, suffering from all the negative characteristics associated with authority described in the last section. *"Any loical and straightforward theory of the State,"* argued Bakunin, *"is essentially founded upon the principle of* ***authority****, that is the eminently theological, metaphysical, and political idea that the masses,* ***always*** *incapable of governing themselves, must at all times submit to the beneficent yoke of a wisdom and a justice imposed upon them, in some way or other, from above."* [**Bakunin on Anarchism**, p. 142] Such a system of authority cannot help being centralised, hierarchical and bureaucratic in nature. And because of its centralised, hierarchical, and bureaucratic nature, the state becomes a great weight over society, restricting its growth and development and making popular control impossible. As Bakunin put it:

> *"the so-called general interests of society supposedly represented by the State ... [are] in reality ... the general and permanent negation of the positive interests of the regions, communes, and associations, and a vast number of individuals subordinated to the State ... [in which] all the best aspirations, all the living forces of a country, are sanctimoniously immolated and interred."* [**The Political Philosophy of Bakunin**, p. 207]

That is by no means the end of it. As well as its obvious hierarchical form, anarchists object to the state for another, equally important, reason. This is its role as a defender of the economically dominant class in society against the rest of it (i.e. from the working class). This means, under the current system, the capitalists *"need the state to legalise their methods of robbery, to protect the capitalist system."* [Berkman, **What is Anarchism?**, p. 16] The state, as we discuss in section B.2.1, is the defender of private property (see section B.3 for a discussion of what anarchists mean by that term and how it differs from individual possessions).

This means that in capitalist states the mechanisms of state domination are controlled by and for a corporate elite (and hence the large corporations are often considered to belong to a wider *"state-complex"*). Indeed, as we discuss in more depth in section F.8, the *"State has been, and still is, the main pillar and the creator, direct and indirect, of Capitalism and its powers over the masses."*

[Kropotkin, **Evolution and Environment**, p. 97] Section B.2.3 indicates how this is domination is achieved in a representative democracy.

However this does not mean anarchists think that the state is purely an instrument of economic class rule. As Malatesta argued, while *"a special class (government) which, provided with the necessary means of repression, exists to legalise and protect the owning class from the demands of the workers ... it uses the powers at its disposal to create privileges for itself and to subject, if it can, the owning class itself as well."* [**Errico Malatesta: His Life and Ideas**, p. 183] Thus the state has interests of its own, distinct from and sometimes in opposition to the economic ruling elite. This means that both state **and** capitalism needs to be abolished, for the former is as much a distinct (and oppressive and exploitative) class as the former. This aspects of the state is discussed in section B.2.6.

As part of its role as defender of capitalism, the state is involved in not only in political domination but also in economic domination. This domination can take different forms, varying from simply maintaining capitalist property rights to actually owning workplaces and exploiting labour directly. Thus every state intervenes in the economy in some manner. While this is usually to favour the economically dominant, it can also occur try and mitigate the anti-social nature of the capitalist market and regulate its worse abuses. We discuss this aspect of the state in section B.2.2.

Needless to say, the characteristics which mark a state did not develop by chance. As we discuss in section H.3.7, anarchists have an evolutionary perspective on the state. This means that it has a hierarchical nature in order to facilitate the execution of its role, its function. As sections B.2.4 and B.2.5 indicate, the centralisation that marks a state is required to secure elite rule and was deliberately and actively created to do so. This means that states, by their very nature, are top-down institutions which centralise power into a few hands and, as a consequence, a state *"with its traditions, its hierarchy, and its narrow nationalism"* can *"not be utilised as an instrument of emancipation."* [Kropotkon, **Evolution and Environment**, p. 78] It is for this reason that anarchists aim to create a new form of social organisation and life, a decentralised one based on decision making from the bottom-up and the elimination of hierarchy.

Finally, we must point out that anarchists, while stressing what states have in common, do recognise that some forms of the state are better than others. Democracies, for example, tend to be less oppressive than dictatorships or monarchies. As such it would be false to conclude that anarchists, *"in criticising the democratic government we thereby show our preference for the monarchy. We are firmly convinced that the most imperfect republic is a thousand times better than the most enlightened monarchy."* [Bakunin, **Bakunin on Anarchism**, p. 144] However, this does not change the nature or role of the state. Indeed, what liberties we have are **not** dependent on the goodwill of the state but rather the result of people standing against it and exercising their autonomy. Left to itself, the state would soon turn the liberties and rights it says it defends into dead-laws — things that look good in print but not practised in real life.

So in the rest of this section we will discuss the state, its role, its impact on a society's freedom and who benefits from its existence. Kropotkin's classic essay, **The State: It's Historic Role** is recommended for further reading on this subject. Harold Barclay's **The State** is a good overview of the origins of the state, how it has changed over the millenniums and the nature of the modern state.

B.2.1 What is main function of the state?

The main function of the state is to guarantee the existing social relationships and their sources within a given society through centralised power and a monopoly of violence. To use Malatesta's words, the state is basically *"the property owners' **gendarme.**"* This is because there are *"two ways of oppressing men [and women]: either directly by brute force, by physical violence; or indirectly by denying them the means of life and thus reducing them to a state of surrender."* The owning class, *"gradually concentrating in their hands the means of production, the real sources of life, agriculture, industry, barter, etc., end up establishing their own power which, by reason of the superiority of its means ... always ends by more or less openly subjecting the political power, which is the government, and making it into its own **gendarme.**"* [**Op. Cit.**, p. 23, p. 21 and p. 22]

The state, therefore, is *"the political expression of the economic structure"* of society and, therefore, *"the representative of the people who own or control the wealth of the community and the oppressor of the people who do the work which creates the wealth."* [Nicholas Walter, **About Anarchism**, p. 37] It is therefore no exaggeration to say that the state is the extractive apparatus of society's parasites.

The state ensures the exploitative privileges of its ruling elite by protecting certain economic monopolies from which its members derive their wealth. The nature of these economic privileges varies over time. Under the current system, this means defending capitalist property rights (see section B.3.2). This service is referred to as "protecting private property" and is said to be one of the two main functions of the state, the other being to ensure that individuals are "secure in their persons." However, although this second aim is professed, in reality most state laws and institutions are concerned with the protection of property (for the anarchist definition of "property" see section B.3.1).

From this we may infer that references to the "security of persons," "crime prevention," etc., are mostly rationalisations of the state's existence and smokescreens for its perpetuation of elite power and privileges. This does not mean that the state does not address these issues. Of course it does, but, to quote Kropotkin, any *"laws developed from the nucleus of customs useful to human communities ... have been turned to account by rulers to sanctify their own domination." of the people, and maintained only by the fear of punishment."* [**Anarchism**, p. 215]

Simply put, if the state *"presented nothing but a collection of prescriptions serviceable to rulers, it would find some difficulty in insuring acceptance and obedience"* and so the law reflects customs "essential to the very being of society" but these are *"cleverly intermingled with usages imposed by the ruling caste and both claim equal respect from the crowd."* Thus the state's laws have a *"two-fold character."* While its *"origin is the desire of the ruling class to give permanence to customs imposed by themselves for their own advantage"* it also passes into law *"customs useful to society, customs which have no need of law to insure respect"* — unlike those *"other customs useful only to rulers, injurious to the mass of the people, and maintained only by the fear of punishment."* [Kropotkin, **Op. Cit.**, pp. 205–6] To use an obvious example, we find the state using the defence of an individual's possessions as the rationale for imposing capitalist private property rights upon the general public and, consequently, defending the elite and the source of its wealth and power against those subject to it.

Moreover, even though the state does take a secondary interest in protecting the security of persons (particularly elite persons), the vast majority of crimes against persons are motivated by poverty and alienation due to state-supported exploitation and also by the desensitisation

to violence created by the state's own violent methods of protecting private property. In other words, the state rationalises its existence by pointing to the social evils it itself helps to create (either directly or indirectly). Hence, anarchists maintain that without the state and the crime-engendering conditions to which it gives rise, it would be possible for decentralised, voluntary community associations to deal compassionately (not punitively) with the few incorrigibly violent people who might remain (see section I.5.8).

Anarchists think it is pretty clear what the real role of the modern state is. It represents the essential coercive mechanisms by which capitalism and the authority relations associated with private property are sustained. The protection of property is fundamentally the means of assuring the social domination of owners over non-owners, both in society as a whole and in the particular case of a specific boss over a specific group of workers. Class domination is the authority of property owners over those who use that property and it is the primary function of the state to uphold that domination (and the social relationships that generate it). In Kropotkin's words, *"the rich perfectly well know that if the machinery of the State ceased to protect them, their power over the labouring classes would be gone immediately."* [**Evolution and Environment**, p. 98] Protecting private property and upholding class domination are the same thing.

The historian Charles Beard makes a similar point:

> *"Inasmuch as the primary object of a government, beyond mere repression of physical violence, is the making of the rules which determine the property relations of members of society, the dominant classes whose rights are thus to be protected must perforce obtain from the government such rules as are consonant with the larger interests necessary to the continuance of their economic processes, or they must themselves control the organs of government."* ["An Economic Interpretation of the Constitution," quoted by Howard Zinn, **Op. Cit.**, p. 89]

This role of the state — to protect capitalism and the property, power and authority of the property owner — was also noticed by Adam Smith:

> *"[T]he inequality of fortune ... introduces among men a degree of authority and subordination which could not possibly exist before. It thereby introduces some degree of that civil government which is indispensably necessary for its own preservation ... [and] to maintain and secure that authority and subordination. The rich, in particular, are necessarily interested to support that order of things which can alone secure them in the possession of their own advantages. Men of inferior wealth combine to defend those of superior wealth in the possession of their property, in order that men of superior wealth may combine to defend them in the possession of theirs ... [T]he maintenance of their lesser authority depends upon that of his greater authority, and that upon their subordination to him depends his power of keeping their inferiors in subordination to them. They constitute a sort of little nobility, who feel themselves interested to defend the property and to support the authority of their own little sovereign in order that he may be able to defend their property and to support their authority. Civil government, so far as it is instituted for the security of property, is in reality instituted for the defence of the rich against the poor, or of those who have some property against those who have none at all."* [**The Wealth of Nations**, book 5, pp. 412–3]

This is reflected in both the theory and history of the modern state. Theorists of the liberal state like John Locke had no qualms about developing a theory of the state which placed the defence of private property at its heart. This perspective was reflected in the American Revolution. For example, there is the words of John Jay (the first chief justice of the Supreme Court), namely that *"the people who own the country ought to govern it."* [quoted by Noam Chomksy, **Understanding Power**, p. 315] This was the maxim of the Founding Fathers of American *"democracy"* and it has continued ever since.

So, in a nutshell, the state is the means by which the ruling class rules. Hence Bakunin:

> *"The State is authority, domination, and force, organised by the property-owning and so-called enlightened classes against the masses .. . the State's domination ... [ensures] that of the privileged classes who it solely represents."* [**The Basic Bakunin**, p. 140]

Under the current system, this means that the state *"constitutes the chief bulwark of capital"* because of its *"centralisation, law (always written by a minority in the interest of that minority), and courts of justice (established mainly for the defence of authority and capital)."* Thus it is *"the mission of all governments ... is to protect and maintain by force the ... privileges of the possessing classes."* Consequently, while *"[i]n the struggle between the individual and the State, anarchism ... takes the side of the individual as against the State, of society against the authority which oppresses it,"* anarchists are well aware that the state does not exist above society, independent of the classes which make it up. [Kropotkin, **Anarchism**, pp. 149–50, p. 214 and pp. 192–3]

Consequently anarchists reject the idea that the role of the state is simply to represent the interests of the people or "the nation." For *"democracy is an empty pretence to the extent that production, finance and commerce — and along with them, the political processes of the society as well — are under control of 'concentrations of private power.' The 'national interest' as articulated by those who dominate the ... societies will be their special interests. Under these circumstances, talk of 'national interest' can only contribute to mystification and oppression."* [Noam Chomsky, **Radical Priorities**, p. 52] As we discuss in section D.6, nationalism always reflects the interests of the elite, not those who make up a nation and, consequently, anarchists reject the notion as nothing more than a con (i.e. the use of affection of where you live to further ruling class aims and power).

Indeed, part of the state's role as defender of the ruling elite is to do so internationally, defending "national" (i.e. elite) interests against the elites of other nations. Thus we find that at the IMF and World Bank, nations are represented by ministers who are *"closely aligned with particular constituents* ***within*** *their countries. The trade ministers reflect the concerns of the business community"* while the *"finance ministers and central bank governors are closely tied to financial community; they come from financial firms, and after their period in service, that is where they return ... These individuals see the world through the eyes of the financial community."* Unsurprisingly, the *"decisions of any institution naturally reflect the perspectives and interests of those who make the decisions"* and so the *"policies of the international economic institutions are all too often closely aligned with the commercial and financial interests of those in the advanced industrial countries."* [Joseph Stiglitz, **Globalisation and its Discontents**, pp. 19–20]

This, it must be stressed, does not change in the so-called democratic state. Here, however, the primary function of the state is disguised by the "democratic" facade of the representative electoral system, through which it is made to appear that the people rule themselves. Thus

Bakunin writes that the modern state *"unites in itself the two conditions necessary for the prosperity of the capitalistic economy: State centralisation and the actual subjection of ... the people ... to the minority allegedly representing it but actually governing it."* [**Op. Cit.**, p. 210] How this is achieved is discussed in section B.2.3.

B.2.2 Does the state have subsidiary functions?

Yes, it does. While, as discussed in the last section, the state is an instrument to maintain class rule this does not mean that it is limited to just defending the social relationships in a society and the economic and political sources of those relationships. No state has ever left its activities at that bare minimum. As well as defending the rich, their property and the specific forms of property rights they favoured, the state has numerous other subsidiary functions.

What these are has varied considerably over time and space and, consequently, it would be impossible to list them all. However, **why** it does is more straight forward. We can generalise two main forms of subsidiary functions of the state. The first one is to boost the interests of the ruling elite either nationally or internationally beyond just defending their property. The second is to protect society against the negative effects of the capitalist market. We will discuss each in turn and, for simplicity and relevance, we will concentrate on capitalism (see also section D.1).

The first main subsidiary function of the state is when it intervenes in society to help the capitalist class in some way. This can take obvious forms of intervention, such as subsidies, tax breaks, non-bid government contracts, protective tariffs to old, inefficient, industries, giving actual monopolies to certain firms or individuals, bailouts of corporations judged by state bureaucrats as too important to let fail, and so on. However, the state intervenes far more than that and in more subtle ways. Usually it does so to solve problems that arise in the course of capitalist development and which cannot, in general, be left to the market (at least initially). These are designed to benefit the capitalist class as a whole rather than just specific individuals, companies or sectors.

These interventions have taken different forms in different times and include state funding for industry (e.g. military spending); the creation of social infrastructure too expensive for private capital to provide (railways, motorways); the funding of research that companies cannot afford to undertake; protective tariffs to protect developing industries from more efficient international competition (the key to successful industrialisation as it allows capitalists to rip-off consumers, making them rich and increasing funds available for investment); giving capitalists preferential access to land and other natural resources; providing education to the general public that ensures they have the skills and attitude required by capitalists and the state (it is no accident that a key thing learned in school is how to survive boredom, being in a hierarchy and to do what it orders); imperialist ventures to create colonies or client states (or protect citizen's capital invested abroad) in order to create markets or get access to raw materials and cheap labour; government spending to stimulate consumer demand in the face of recession and stagnation; maintaining a "natural" level of unemployment that can be used to discipline the working class, so ensuring they produce more, for less; manipulating the interest rate in order to try and reduce the effects of the business cycle and undermine workers' gains in the class struggle.

These actions, and others like it, ensures that a key role of the state within capitalism *"is essentially to socialise risk and cost, and to privatise power and profit."* Unsurprisingly, *"with all*

the talk about minimising the state, in the OECD countries the state continues to grow relative to GNP." [Noam Chomsky, **Rogue States**, p. 189] Hence David Deleon:

> *"Above all, the state remains an institution for the continuance of dominant socioeconomic relations, whether through such agencies as the military, the courts, politics or the police ... Contemporary states have acquired ... less primitive means to reinforce their property systems [than state violence — which is always the means of last, often first, resort]. States can regulate, moderate or resolve tensions in the economy by preventing the bankruptcies of key corporations, manipulating the economy through interest rates, supporting hierarchical ideology through tax benefits for churches and schools, and other tactics. In essence, it is not a neutral institution; it is powerfully for the status quo. The capitalist state, for example, is virtually a gyroscope centred in capital, balancing the system. If one sector of the economy earns a level of profit, let us say, that harms the rest of the system – such as oil producers' causing public resentment and increased manufacturing costs — the state may redistribute some of that profit through taxation, or offer encouragement to competitors."* [*"Anarchism on the origins and functions of the state: some basic notes"*, **Reinventing Anarchy**, pp. 71–72]

In other words, the state acts to protect the long-term interests of the capitalist class as a whole (and ensure its own survival) by protecting the system. This role can and does clash with the interests of particular capitalists or even whole sections of the ruling class (see section B.2.6). But this conflict does not change the role of the state as the property owners' policeman. Indeed, the state can be considered as a means for settling (in a peaceful and apparently independent manner) upper-class disputes over what to do to keep the system going.

This subsidiary role, it must be stressed, is no accident, It is part and parcel capitalism. Indeed, *"successful industrial societies have consistently relied on departures from market orthodoxies, while condemning their victims [at home and abroad] to market discipline."* [Noam Chomsky, **World Orders, Old and New**, p. 113] While such state intervention grew greatly after the Second World War, the role of the state as active promoter of the capitalist class rather than just its passive defender as implied in capitalist ideology (i.e. as defender of property) has always been a feature of the system. As Kropotkin put it:

> *"every State reduces the peasants and the industrial workers to a life of misery, by means of taxes, and through the monopolies it creates in favour of the landlords, the cotton lords, the railway magnates, the publicans, and the like ... we need only to look round, to see how everywhere in Europe and America the States are constituting monopolies in favour of capitalists at home, and still more in conquered lands [which are part of their empires]."* [**Evolution and Environment**, p. 97]

By *"monopolies,"* it should be noted, Kropotkin meant general privileges and benefits rather than giving a certain firm total control over a market. This continues to this day by such means as, for example, privatising industries but providing them with state subsidies or by (mis-labelled) "free trade" agreements which impose protectionist measures such as intellectual property rights on the world market.

All this means that capitalism has rarely relied on purely economic power to keep the capitalists in their social position of dominance (either nationally, vis-à-vis the working class, or

internationally, vis-à-vis competing foreign elites). While a "free market" capitalist regime in which the state reduces its intervention to simply protecting capitalist property rights has been approximated on a few occasions, this is not the standard state of the system — direct force, i.e. state action, almost always supplements it.

This is most obviously the case during the birth of capitalist production. Then the bourgeoisie wants and uses the power of the state to "regulate" wages (i.e. to keep them down to such levels as to maximise profits and force people attend work regularly), to lengthen the working day and to keep the labourer dependent on wage labour as their own means of income (by such means as enclosing land, enforcing property rights on unoccupied land, and so forth). As capitalism is not and has never been a "natural" development in society, it is not surprising that more and more state intervention is required to keep it going (and if even this was not the case, if force was essential to creating the system in the first place, the fact that it latter can survive without further direct intervention does not make the system any less statist). As such, "regulation" and other forms of state intervention continue to be used in order to skew the market in favour of the rich and so force working people to sell their labour on the bosses terms.

This form of state intervention is designed to prevent those greater evils which might threaten the efficiency of a capitalist economy or the social and economic position of the bosses. It is designed not to provide positive benefits for those subject to the elite (although this may be a side-effect). Which brings us to the other kind of state intervention, the attempts by society, by means of the state, to protect itself against the eroding effects of the capitalist market system.

Capitalism is an inherently anti-social system. By trying to treat labour (people) and land (the environment) as commodities, it has to break down communities and weaken eco-systems. This cannot but harm those subject to it and, as a consequence, this leads to pressure on government to intervene to mitigate the most damaging effects of unrestrained capitalism. Therefore, on one side there is the historical movement of the market, a movement that has not inherent limit and that therefore threatens society's very existence. On the other there is society's natural propensity to defend itself, and therefore to create institutions for its protection. Combine this with a desire for justice on behalf of the oppressed along with opposition to the worse inequalities and abuses of power and wealth and we have the potential for the state to act to combat the worse excesses of the system in order to keep the system as a whole going. After all, the government *"cannot want society to break up, for it would mean that it and the dominant class would be deprived of the sources of exploitation."* [Malatesta, **Op. Cit.**, p. 25]

Needless to say, the thrust for any system of social protection usually comes from below, from the people most directly affected by the negative effects of capitalism. In the face of mass protests the state may be used to grant concessions to the working class in cases where not doing so would threaten the integrity of the system as a whole. Thus, social struggle is the dynamic for understanding many, if not all, of the subsidiary functions acquired by the state over the years (this applies to pro-capitalist functions as these are usually driven by the need to bolster the profits and power of capitalists at the expense of the working class).

State legislation to set the length of the working day is an obvious example this. In the early period of capitalist development, the economic position of the capitalists was secure and, consequently, the state happily ignored the lengthening working day, thus allowing capitalists to appropriate more surplus value from workers and increase the rate of profit without interference. Whatever protests erupted were handled by troops. Later, however, after workers began to organise on a wider and wider scale, reducing the length of the working day became a key de-

mand around which revolutionary socialist fervour was developing. In order to defuse this threat (and socialist revolution is the worst-case scenario for the capitalist), the state passed legislation to reduce the length of the working day.

Initially, the state was functioning purely as the protector of the capitalist class, using its powers simply to defend the property of the few against the many who used it (i.e. repressing the labour movement to allow the capitalists to do as they liked). In the second period, the state was granting concessions to the working class to eliminate a threat to the integrity of the system as a whole. Needless to say, once workers' struggle calmed down and their bargaining position reduced by the normal workings of market (see section B.4.3), the legislation restricting the working day was happily ignored and became "dead laws."

This suggests that there is a continuing tension and conflict between the efforts to establish, maintain, and spread the "free market" and the efforts to protect people and society from the consequences of its workings. Who wins this conflict depends on the relative strength of those involved (as does the actual reforms agreed to). Ultimately, what the state concedes, it can also take back. Thus the rise and fall of the welfare state — granted to stop more revolutionary change (see section D.1.3), it did not fundamentally challenge the existence of wage labour and was useful as a means of regulating capitalism but was "reformed" (i.e. made worse, rather than better) when it conflicted with the needs of the capitalist economy and the ruling elite felt strong enough to do so.

Of course, this form of state intervention does not change the nature nor role of the state as an instrument of minority power. Indeed, that nature cannot help but shape how the state tries to implement social protection and so if the state assumes functions it does so as much in the immediate interest of the capitalist class as in the interest of society in general. Even where it takes action under pressure from the general population or to try and mend the harm done by the capitalist market, its class and hierarchical character twists the results in ways useful primarily to the capitalist class or itself. This can be seen from how labour legislation is applied, for example. Thus even the "good" functions of the state are penetrated with and dominated by the state's hierarchical nature. As Malatesta forcefully put it:

> *"The basic function of government ... is always that of oppressing and exploiting the masses, of defending the oppressors and the exploiters ... It is true that to these basic functions ... other functions have been added in the course of history ... hardly ever has a government existed ... which did not combine with its oppressive and plundering activities others which were useful ... to social life. But this does not detract from the fact that government is by nature oppressive ... and that it is in origin and by its attitude, inevitably inclined to defend and strengthen the dominant class; indeed it confirms and aggravates the position ... [I]t is enough to understand how and why it carries out these functions to find the practical evidence that whatever governments do is always motivated by the desire to dominate, and is always geared to defending, extending and perpetuating its privileges and those of the class of which it is both the representative and defender."* [**Op. Cit.**, pp. 23–4]

This does not mean that these reforms should be abolished (the alternative is often worse, as neo-liberalism shows), it simply recognises that the state is not a neutral body and cannot be expected to act as if it were. Which, ironically, indicates another aspect of social protection

reforms within capitalism: they make for good PR. By appearing to care for the interests of those harmed by capitalism, the state can obscure it real nature:

> *"A government cannot maintain itself for long without hiding its true nature behind a pretence of general usefulness; it cannot impose respect for the lives of the privileged if it does not appear to demand respect for all human life; it cannot impose acceptance of the privileges of the few if it does not pretend to be the guardian of the rights of all."* [Malatesta, **Op. Cit.**, p. 24]

Obviously, being an instrument of the ruling elite, the state can hardly be relied upon to control the system which that elite run. As we discuss in the next section, even in a democracy the state is run and controlled by the wealthy making it unlikely that pro-people legislation will be introduced or enforced without substantial popular pressure. That is why anarchists favour direct action and extra-parliamentary organising (see sections J.2 and J.5 for details). Ultimately, even basic civil liberties and rights are the product of direct action, of *"mass movements among the people"* to *"wrest these rights from the ruling classes, who would never have consented to them voluntarily."* [Rocker, **Anarcho-Syndicalism**, p. 75]

Equally obviously, the ruling elite and its defenders hate any legislation it does not favour — while, of course, remaining silent on its own use of the state. As Benjamin Tucker pointed out about the "free market" capitalist Herbert Spencer, *"amid his multitudinous illustrations ... of the evils of legislation, he in every instance cites some law passed ostensibly at least to protect labour, alleviating suffering, or promote the people's welfare... But never once does he call attention to the far more deadly and deep-seated evils growing out of the innumerable laws creating privilege and sustaining monopoly."* [**The Individualist Anarchists**, p. 45] Such hypocrisy is staggering, but all too common in the ranks of supporters of "free market" capitalism.

Finally, it must be stressed that none of these subsidiary functions implies that capitalism can be changed through a series of piecemeal reforms into a benevolent system that primarily serves working class interests. To the contrary, these functions grow out of, and supplement, the basic role of the state as the protector of capitalist property and the social relations they generate — i.e. the foundation of the capitalist's ability to exploit. Therefore reforms may modify the functioning of capitalism but they can never threaten its basis.

In summary, while the level and nature of statist intervention on behalf of the employing classes may vary, it is always there. No matter what activity it conducts beyond its primary function of protecting private property, what subsidiary functions it takes on, the state always operates as an instrument of the ruling class. This applies even to those subsidiary functions which have been imposed on the state by the general public — even the most popular reform will be twisted to benefit the state or capital, if at all possible. This is not to dismiss all attempts at reform as irrelevant, it simply means recognising that we, the oppressed, need to rely on our own strength and organisations to improve our circumstances.

B.2.3 How does the ruling class maintain control of the state?

In some systems, it is obvious how economic dominant minorities control the state. In feudalism, for example, the land was owned by the feudal lords who exploited the peasantry directly. Economic and political power were merged into the same set of hands, the landlords. Absolutism

saw the monarch bring the feudal lords under his power and the relative decentralised nature of feudalism was replaced by a centralised state.

It was this centralised state system which the raising bourgeoisie took as the model for their state. The King was replaced by a Parliament, which was initially elected on a limited suffrage. In this initial form of capitalist state, it is (again) obvious how the elite maintain control of the state machine. As the vote was based on having a minimum amount of property, the poor were effectively barred from having any (official) say in what the government did. This exclusion was theorised by philosophers like John Locke — the working masses were considered to be an object of state policy rather than part of the body of people (property owners) who nominated the government. In this perspective the state was like a joint-stock company. The owning class were the share-holders who nominated the broad of directors and the mass of the population were the workers who had no say in determining the management personnel and were expected to follow orders.

As would be expected, this system was mightily disliked by the majority who were subjected to it. Such a "classical liberal" regime was rule by an alien, despotic power, lacking popular legitimacy, and utterly unaccountable to the general population. It is quite evident that a government elected on a limited franchise could not be trusted to treat those who owned no real property with equal consideration. It was predictable that the ruling elite would use the state they controlled to further their own interests and to weaken potential resistance to their social, economic and political power. Which is precisely what they did do, while masking their power under the guise of "good governance" and "liberty." Moreover, limited suffrage, like absolutism, was considered an affront to liberty and individual dignity by many of those subject to it.

Hence the call for universal suffrage and opposition to property qualifications for the franchise. For many radicals (including Marx and Engels) such a system would mean that the working classes would hold *"political power"* and, consequently, be in a position to end the class system once and for all. Anarchists were not convinced, arguing that *"universal suffrage, considered in itself and applied in a society based on economic and social inequality, will be nothing but a swindle and snare for the people"* and *"the surest way to consolidate under the mantle of liberalism and justice the permanent domination of the people by the owning classes, to the detriment of popular liberty."* Consequently, anarchists denied that it *"could be used by the people for the conquest of economic and social equality. It must always and necessarily be an instrument hostile to the people, one which supports the* ***de facto*** *dictatorship of the bourgeoisie."* [Bakunin, **Bakunin on Anarchism**, p. 224]

Due to popular mass movements form below, the vote was won by the male working classes and, at a later stage, women. While the elite fought long and hard to retain their privileged position they were defeated. Sadly, the history of universal suffrage proven the anarchists right. Even allegedly *"democratic"* capitalist states are in effect dictatorships of the propertariat. The political history of modern times can be summarised by the rise of capitalist power, the rise, due to popular movements, of (representative) democracy and the continued success of the former to undermine and control the latter.

This is achieved by three main processes which combine to effectively deter democracy. These are the wealth barrier, the bureaucracy barrier and, lastly, the capital barrier. Each will be discussed in turn and all ensure that *"representative democracy"* remains an *"organ of capitalist domination."* [Kropotkin, **Words of a Rebel**, p. 127]

The wealth barrier is the most obvious. It takes money to run for office. In 1976, the total spent on the US Presidential election was $66.9 million. In 1984, it was $103.6 million and in 1996 it was $239.9 million. At the dawn of the 21st century, these figures had increased yet again. 2000 saw $343.1 spent and 2004, $717.9 million. Most of this money was spent by the two main candidates. In 2000, Republican George Bush spent a massive $185,921,855 while his Democratic rival Al Gore spent only $120,031,205. Four years later, Bush spent $345,259,155 while John Kerry managed a mere $310,033,347.

Other election campaigns are also enormously expensive. In 2000, the average winning candidate for a seat in the US House of Representatives spent $816,000 while the average willing senator spent $7 million. Even local races require significant amounts of fundraising. One candidate for the Illinois House raised over $650,000 while another candidate for the Illinois Supreme Court raised $737,000. In the UK, similarly prohibitive amounts were spent. In the 2001 general election the Labour Party spent a total of £10,945,119, the Tories £12,751,813 and the Liberal Democrats (who came a distant third) just £1,361,377.

To get this sort of money, wealthy contributors need to be found and wooed, in other words promised that that their interests will be actively looked after. While, in theory, it is possible to raise large sums from small contributions in practice this is difficult. To raise $1 million you need to either convince 50 millionaires to give you $20,000 or 20,000 people to fork out $50. Given that for the elite $20,000 is pocket money, it is hardly surprising that politicians aim for winning over the few, not the many. Similarly with corporations and big business. It is far easier and more efficient in time and energy to concentrate on the wealthy few (whether individuals or companies).

It is obvious: whoever pays the piper calls the tune. And in capitalism, this means the wealthy and business. In the US corporate campaign donations and policy paybacks have reached unprecedented proportions. The vast majority of large campaign donations are, not surprisingly, from corporations. Most of the wealthy individuals who give large donations to the candidates are CEOs and corporate board members. And, just to be sure, many companies give to more than one party.

Unsurprisingly, corporations and the rich expect their investments to get a return. This can be seen from George W. Bush's administration. His election campaigns were beholden to the energy industry (which has backed him since the beginning of his career as Governor of Texas). The disgraced corporation Enron (and its CEO Kenneth Lay) were among Bush's largest contributors in 2000. Once in power, Bush backed numerous policies favourable to that industry (such as rolling back environmental regulation on a national level as he had done in Texas). His supporters in Wall Street were not surprised that Bush tried to privatise Social Security. Nor were the credit card companies when the Republicans tighten the noose on bankrupt people in 2005. By funding Bush, these corporations ensured that the government furthered their interests rather than the people who voted in the election.

This means that as a *"consequence of the distribution of resources and decision-making power in the society at large ... the political class and the cultural managers typically associate themselves with the sectors that dominate the private economy; they are either drawn directly from those sectors or expect to join them."* [Chomsky, **Necessary Illusions**, p. 23] This can be seen from George W. Bush's quip at an elite fund-raising gala during the 2000 Presidential election: *"This is an impressive crowd — the haves and the have-mores. Some people call you the elites; I call you my base."* Unsurprisingly:

> *"In the real world, state policy is largely determined by those groups that command resources, ultimately by virtue of their ownership and management of the private economy or their status as wealthy professionals. The major decision-making positions in the Executive branch of the government are typically filled by representatives of major corporations, banks and investment firms, a few law firms that cater primarily to corporate interests and thus represent the broad interests of owners and managers rather than some parochial interest .. . The Legislative branch is more varied, but overwhelmingly, it is drawn from the business and professional classes."* [Chomsky, **On Power and Ideology**, pp. 116–7]

That is not the only tie between politics and business. Many politicians also have directorships in companies, interests in companies, shares, land and other forms of property income and so forth. Thus they are less like the majority of constituents they claim to represent and more like the wealthy few. Combine these outside earnings with a high salary (in the UK, MP's are paid more than twice the national average) and politicians can be among the richest 1% of the population. Thus not only do we have a sharing of common interests the elite, the politicians are part of it. As such, they can hardly be said to be representative of the general public and are in a position of having a vested interest in legislation on property being voted on.

Some defend these second jobs and outside investments by saying that it keeps them in touch with the outside world and, consequently, makes them better politicians. That such an argument is spurious can be seen from the fact that such outside interests never involve working in McDonald's flipping burgers or working on an assembly line. For some reason, no politician seeks to get a feeling for what life is like for the average person. Yet, in a sense, this argument **does** have a point. Such jobs and income do keep politicians in touch with the world of the elite rather than that of the masses and, as the task of the state is to protect elite interests, it cannot be denied that this sharing of interests and income with the elite can only aid that task!

Then there is the sad process by which politicians, once they leave politics, get jobs in the corporate hierarchy (particularly with the very companies they had previously claimed to regulate on behalf of the public). This was termed "the revolving door." Incredibly, this has changed for the worse. Now the highest of government officials arrive directly from the executive offices of powerful corporations. Lobbyists are appointed to the jobs whose occupants they once vied to influence. Those who regulate and those supposed to be regulated have become almost indistinguishable.

Thus politicians and capitalists go hand in hand. Wealth selects them, funds them and gives them jobs and income when in office. Finally, once they finally leave politics, they are often given directorships and other jobs in the business world. Little wonder, then, that the capitalist class maintains control of the state.

That is not all. The wealth barrier operates indirectly to. This takes many forms. The most obvious is in the ability of corporations and the elite to lobby politicians. In the US, there is the pervasive power of Washington's army of 24,000 registered lobbyists — and the influence of the corporate interests they represent. These lobbyists, whose job it is to convince politicians to vote in certain ways to further the interests of their corporate clients help shape the political agenda even further toward business interests than it already is. This Lobby industry is immense — and exclusively for big business and the elite. Wealth ensures that the equal opportunity to garner resources to share a perspective and influence the political progress is monopolised by the

few: *"where are the desperately needed countervailing lobbies to represent the interests of average citizens? Where are the millions of dollars acting in **their** interests? Alas, they are notably absent."* [Joel Bakan, **The Corporation**, p. 107]

However, it cannot be denied that it is up to the general population to vote for politicians. This is when the indirect impact of wealth kicks in, namely the role of the media and the Public Relations (PR) industry. As we discuss in section D.3, the modern media is dominated by big business and, unsurprisingly, reflects their interests. This means that the media has an important impact on how voters see parties and specific politicians and candidates. A radical party will, at best, be ignored by the capitalist press or, at worse, subject to smears and attacks. This will have a corresponding negative impact on their election prospects and will involve the affected party having to invest substantially more time, energy and resources in countering the negative media coverage. The PR industry has a similar effect, although that has the advantage of not having to bother with appearing to look factual or unbiased. Add to this the impact of elite and corporation funded *"think tanks"* and the political system is fatally skewed in favour of the capitalist class (also see section D.2).

In a nutshell:

> *"The business class dominates government through its ability to fund political campaigns, purchase high priced lobbyists and reward former officials with lucrative jobs ... [Politicians] have become wholly dependent upon the same corporate dollars to pay for a new professional class of PR consultants, marketeers and social scientists who manage and promote causes and candidates in essentially the same manner that advertising campaigns sell cars, fashions, drugs and other wares."* [John Stauber and Sheldon Rampton, **Toxic Sludge is Good for You**, p. 78]

That is the first barrier, the direct and indirect impact of wealth. This, in itself, is a powerful barrier to deter democracy and, as a consequence, it is usually sufficient in itself. Yet sometimes people see through the media distortions and vote for reformist, even radical, candidates. As we discuss in section J.2.6, anarchists argue that the net effect of running for office is a general **de**-radicalising of the party involved. Revolutionary parties become reformist, reformist parties end up maintaining capitalism and introducing polities the opposite of which they had promised. So while it is unlikely that a radical party could get elected and remain radical in the process, it is possible. If such a party did get into office, the remaining two barriers kicks in: the bureaucracy barrier and the capital barrier.

The existence of a state bureaucracy is a key feature in ensuring that the state remains the ruling class's *"policeman"* and will be discussed in greater detail in section J.2.2 (Why do anarchists reject voting as a means for change?). Suffice to say, the politicians who are elected to office are at a disadvantage as regards the state bureaucracy. The latter is a permanent concentration of power while the former come and go. Consequently, they are in a position to tame any rebel government by means of bureaucratic inertia, distorting and hiding necessary information and pushing its own agenda onto the politicians who are in theory their bosses but in reality dependent on the bureaucracy. And, needless to say, if all else fails the state bureaucracy can play its final hand: the military coup.

This threat has been applied in many countries, most obviously in the developing world (with the aid of Western, usually US, imperialism). The coups in Iran (1953) and Chile (1973) are just

two examples of this process. Yet the so-called developed world is not immune to it. The rise of fascism in Italy, Germany, Portugal and Spain can be considered as variations of a military coup (particularly the last one where fascism was imposed by the military). Wealthy business men funded para-military forces to break the back of the labour movement, forces formed by ex-military people. Even the New Deal in America was threatened by such a coup. [Joel Bakan, **Op. Cit.**, pp. 86–95] While such regimes do protect the interests of capital and are, consequently, backed by it, they do hold problems for capitalism. This is because, as with the Absolutism which fostered capitalism in the first place, this kind of government can get ideas above its station This means that a military coup will only be used when the last barrier, the capital barrier, is used and fails.

The capital barrier is obviously related to the wealth barrier insofar as it relates to the power that great wealth produces. However, it is different in how it is applied. The wealth barrier restricts who gets into office, the capital barrier controls whoever does so. The capital barrier, in other words, are the economic forces that can be brought to bear on any government which is acting in ways disliked of by the capitalist class.

We see their power implied when the news report that changes in government, policies and law have been *"welcomed by the markets."* As the richest 1% of households in America (about 2 million adults) owned 35% of the stock owned by individuals in 1992 — with the top 10% owning over 81% — we can see that the *"opinion"* of the markets actually means the power of the richest 1–5% of a countries population (and their finance experts), power derived from their control over investment and production. Given that the bottom 90% of the US population has a smaller share (23%) of all kinds of investable capital that the richest 1/2% (who own 29%), with stock ownership being even more concentrated (the top 5% holding 95% of all shares), its obvious why Doug Henwood argues that stock markets are *"a way for the very rich as a class to own an economy's productive capital stock as a whole,"* are a source of *"political power"* and a way to have influence over government policy. [**Wall Street: Class Racket**]

The mechanism is simple enough. The ability of capital to disinvest (capital flight) and otherwise adversely impact the economy is a powerful weapon to keep the state as its servant. The companies and the elite can invest at home or abroad, speculate in currency markets and so forth. If a significant number of investors or corporations lose confidence in a government they will simply stop investing at home and move their funds abroad. At home, the general population feel the results as demand drops, layoffs increase and recession kicks in. As Noam Chomsky notes:

> *"In capitalist democracy, the interests that must be satisfied are those of capitalists; otherwise, there is no investment, no production, no work, no resources to be devoted, however marginally, to the needs of the general population."* [**Turning the Tide**, p. 233]

This ensures the elite control of government as government policies which private power finds unwelcome will quickly be reversed. The power which "business confidence" has over the political system ensures that democracy is subservient to big business. As summarised by Malatesta:

> *"Even with universal suffrage — we could well say even more so with universal suffrage — the government remained the bourgeoisie's servant and* ***gendarme.*** *For were it to be otherwise with the government hinting that it might take up a hostile attitude, or that*

*democracy could ever be anything but a pretence to deceive the people, the bourgeoisie, feeling its interests threatened, would by quick to react, and would use all the influence and force at its disposal, by reason of its wealth, to recall the government to its proper place as the bourgeoisie's **gendarme.**"* [**Anarchy**, p. 23]

It is due to these barriers that the state remains an instrument of the capitalist class while being, in theory, a democracy. Thus the state machine remains a tool by which the few can enrich themselves at the expense of the many. This does not mean, of course, that the state is immune to popular pressure. Far from it. As indicated in the last section, direct action by the oppressed can and has forced the state to implement significant reforms. Similarly, the need to defend society against the negative effects of unregulated capitalism can also force through populist measures (particularly when the alternative may be worse than the allowing the reforms, i.e. revolution). The key is that such changes are **not** the natural function of the state.

So due to their economic assets, the elites whose incomes are derived from them — namely, finance capitalists, industrial capitalists, and landlords — are able to accumulate vast wealth from those whom they exploit. This stratifies society into a hierarchy of economic classes, with a huge disparity of wealth between the small property-owning elite at the top and the non-property-owning majority at the bottom. Then, because it takes enormous wealth to win elections and lobby or bribe legislators, the propertied elite are able to control the political process — and hence the state — through the *"power of the purse."* In summary:

> *"No democracy has freed itself from the rule by the well-to-do anymore than it has freed itself from the division between the ruler and the ruled ... at the very least, no democracy has jeopardised the role of business enterprise. Only the wealthy and well off can afford to launch viable campaigns for public office and to assume such positions. Change in government in a democracy is a circulation from one elite group to another."* [Harold Barclay, **Op. Cit.**, p. 47]

In other words, elite control of politics through huge wealth disparities insures the continuation of such disparities and thus the continuation of elite control. In this way the crucial political decisions of those at the top are insulated from significant influence by those at the bottom. Finally, it should be noted that these barriers do not arise accidentally. They flow from the way the state is structured. By effectively disempowering the masses and centralising power into the hands of the few which make up the government, the very nature of the state ensures that it remains under elite control. This is why, from the start, the capitalist class has favoured centralisation. We discuss this in the next two sections.

(For more on the ruling elite and its relation to the state, see C. Wright Mills, **The Power Elite** [Oxford, 1956]; cf. Ralph Miliband, **The State in Capitalist Society** [Basic Books, 1969] and **Divided Societies** [Oxford, 1989]; G. William Domhoff, **Who Rules America?** [Prentice Hall, 1967]; and **Who Rules America Now? A View for the '80s** [Touchstone, 1983]).<.p>

B.2.4 How does state centralisation affect freedom?

It is a common idea that voting every four or so years to elect the public face of a highly centralised and bureaucratic machine means that ordinary people control the state and, as a consequence, free. In reality, this is a false idea. In any system of centralised power the general

population have little say in what affects them and, as a result, their freedom is extremely limited.

Obviously, to say that this idea is false does not imply that there is no difference between a liberal republic and a fascistic or monarchical state. Far from it. The vote is an important victory wrested from the powers that be. That, of course, is not to suggest that anarchists think that libertarian socialism is only possible after universal suffrage has been won or that it is achievable via it. Far from it. It is simply to point out that being able to pick your ruler is a step forward from having one imposed upon you. Moreover, those considered able to pick their ruler is, logically, also able to do without one.

However, while the people are proclaimed to be sovereign in a democratic state, in reality they alienate their power and hand over control of their affairs to a small minority. Liberty, in other words, is reduced to merely the possibility *"to pick rulers"* every four or five years and whose mandate (sic!) is *"to legislate on any subject, and his decision will become law."* [Kropotkin, **Words of a Rebel**, p. 122 and p. 123]

In other words, representative democracy is not "liberty" nor "self-government." It is about alienating power to a few people who then (mis)rule in your name. To imply it is anything else is nonsense. So while we get to pick a politician to govern in our name it does not follow that they represent those who voted for them in any meaningful sense. As shown time and time again, "representative" governments can happily ignore the opinions of the majority while, at the same time, verbally praising the "democracy" it is abusing (New Labour in the UK during the run up to the invasion of Iraq was a classic example of this). Given that politicians can do what they like for four or five years once elected, it is clear that popular control via the ballot box is hardly effective or even meaningful.

Indeed, such "democracy" almost always means electing politicians who say one thing in opposition and do the opposite once in office. Politicians who, at best, ignore their election manifesto when it suits them or, at worse, introduce the exact opposite. It is the kind of "democracy" in which people can protest in their hundreds of thousands against a policy only to see their "representative" government simply ignore them (while, at the same time, seeing their representatives bend over backward ensuring corporate profits and power while speaking platitudes to the electorate and their need to tighten their belts). At best it can be said that democratic governments tend to be less oppressive than others but it does not follow that this equates to liberty.

State centralisation is the means to ensure this situation and the debasement of freedom it implies.

All forms of hierarchy, even those in which the top officers are elected are marked by authoritarianism and centralism. Power is concentrated in the centre (or at the top), which means that society becomes *"a heap of dust animated from without by a subordinating, centralist idea."* [P. J. Proudhon, quoted by Martin Buber, **Paths in Utopia**, p. 29] For, once elected, top officers can do as they please, and, as in all bureaucracies, many important decisions are made by non-elected staff. This means that the democratic state is a contradiction in terms:

> *"In the democratic state the election of rulers by alleged majority vote is a subterfuge which helps individuals to believe that they control the situation. They are selecting persons to do a task for them and they have no guarantee that it will be carried out as they desired. They are abdicating to these persons, granting them the right to impose their own wills by the threat of force. Electing individuals to public office is like being*

> *given a limited choice of your oppressors ... Parliamentary democracies are essentially oligarchies in which the populace is led to believe that it delegates all its authority to members of parliament to do as they think best."* [Harold Barclay, **Op. Cit.**, pp. 46–7]

The nature of centralisation places power into the hands of the few. Representative democracy is based on this delegation of power, with voters electing others to govern them. This cannot help but create a situation in which freedom is endangered — universal suffrage *"does not prevent the formation of a body of politicians, privileged in fact though not in law, who, devoting themselves exclusively to the administration of the nation's public affairs, end by becoming a sort of political aristocracy or oligarchy."* [Bakunin, **The Political Philosophy of Bakunin**, p. 240]

This should not come as a surprise, for to *"create a state is to institutionalise power in a form of machine that exists **apart** from the people. It is to professionalise rule and policy making, to create a distinct interest (be it of bureaucrats, deputies, commissars, legislators, the military, the police, ad nauseam) that, however weak or however well-intentioned it may be at first, eventually takes on a corruptive power of its own."* [Murray Bookchin, *"The Ecological Crisis, Socialism, and the need to remake society,"* pp. 1–10, **Society and Nature**, vol. 2, no. 3, p. 7]

Centralism makes democracy meaningless, as political decision-making is given over to professional politicians in remote capitals. Lacking local autonomy, people are isolated from each other (atomised) by having no political forum where they can come together to discuss, debate, and decide among themselves the issues they consider important. Elections are not based on natural, decentralised groupings and thus cease to be relevant. The individual is just another "voter" in the mass, a political "constituent" and nothing more. The amorphous basis of modern, statist elections *"aims at nothing less than to abolish political life in towns, communes and departments, and through this destruction of all municipal and regional autonomy to arrest the development of universal suffrage."* [Proudhon, quoted by Martin Buber, **Op. Cit.**, p. 29]

Thus people are disempowered by the very structures that claim to allow them to express themselves. To quote Proudhon again, in the centralised state *"the citizen divests himself of sovereignty, the town and the Department and province above it, absorbed by central authority, are no longer anything but agencies under direct ministerial control."* He continues:

> *"The Consequences soon make themselves felt: the citizen and the town are deprived of all dignity, the state's depredations multiply, and the burden on the taxpayer increases in proportion. It is no longer the government that is made for the people; it is the people who are made for the government. Power invades everything, dominates everything, absorbs everything."* [**The Principle of Federation**, p. 59]

As intended, as isolated people are no threat to the powers that be. This process of marginalisation can be seen from American history, for example, when town meetings were replaced by elected bodies, with the citizens being placed in passive, spectator roles as mere "voters" (see next section). Being an atomised voter is hardly an ideal notion of "freedom," despite the rhetoric of politicians about the virtues of a "free society" and "The Free World" — as if voting once every four or five years could ever be classed as "liberty" or even "democracy."

Marginalisation of the people is the key control mechanism in the state and authoritarian organisations in general. Considering the European Community (EC), for example, we find that the *"mechanism for decision-making between EC states leaves power in the hands of officials (from*

Interior ministries, police, immigration, customs and security services) through a myriad of working groups. Senior officials ... play a critical role in ensuring agreements between the different state officials. The EC Summit meetings, comprising the 12 Prime Ministers, simply rubber-stamp the conclusions agreed by the Interior and Justice Ministers. It is only then, in this intergovernmental process, that parliaments and people are informed (and them only with the barest details)." [Tony Bunyon, **Statewatching the New Europe**, p. 39]

As well as economic pressures from elites, governments also face pressures within the state itself due to the bureaucracy that comes with centralism. There is a difference between the state and government. The state is the permanent collection of institutions that have entrenched power structures and interests. The government is made up of various politicians. It's the institutions that have power in the state due to their permanence, not the representatives who come and go. As Clive Ponting (an ex-civil servant himself) indicates, *"the function of a political system in any country ... is to regulate, but not to alter radically, the existing economic structure and its linked power relationships. The great illusion of politics is that politicians have the ability to make whatever changes they like."* [quoted in **Alternatives**, no.5, p. 19]

Therefore, as well as marginalising the people, the state also ends up marginalising "our" representatives. As power rests not in the elected bodies, but in a bureaucracy, popular control becomes increasingly meaningless. As Bakunin pointed out, *"liberty can be valid only when . .. [popular] control [of the state] is valid. On the contrary, where such control is fictitious, this freedom of the people likewise becomes a mere fiction."* [**Op. Cit.**, p. 212] State centralisation ensures that popular control is meaningless.

This means that state centralism can become a serious source of danger to the liberty and well-being of most of the people under it. *"The bourgeois republicans,"* argued Bakunin, *"do not yet grasp this simple truth, demonstrated by the experience of all times and in all lands, that every organised power standing above and over the people necessarily excludes the freedom of peoples. The political state has no other purpose than to protect and perpetuate the exploitation of the labour of the proletariat by the economically dominant classes, and in so doing the state places itself against the freedom of the people."* [**Bakunin on Anarchism**, p. 416]

Unsurprisingly, therefore, *"whatever progress that has been made ... on various issues, whatever things have been done for people, whatever human rights have been gained, have not been gained through the calm deliberations of Congress or the wisdom of presidents or the ingenious decisions of the Supreme Court. Whatever progress has been made ... has come because of the actions of ordinary people, of citizens, of social movements. Not from the Constitution."* That document has been happily ignored by the official of the state when it suits them. An obvious example is the 14th Amendment of the US Constitution, which *"didn't have any meaning until black people rose up in the 1950s and 1960s in the South in mass movements ... They made whatever words there were in the Constitution and the 14th Amendment have some meaning for the first time."* [Howard Zinn, **Failure to Quit**, p. 69 and p. 73]

This is because the *"fact that you have got a constitutional right doesn't mean you're going to get that right. Who has the power on the spot? The policeman on the street. The principal in the school. The employer on job. The Constitution does not cover private employment. In other words, the Constitution does not cover most of reality."* Thus our liberty is not determined by the laws of the state. Rather *"the source and solution of our civil liberties problems are in the situations of every day ... Our actual freedom is determined not by the Constitution or the Court, but by the power the policeman has over us on the street or that of the local judge behind him; by the authority*

of our employers; ... by the welfare bureaucrats if we are poor; ... by landlords if we are tenants." Thus freedom and justice *"are determined by power and money"* rather than laws. This points to the importance of popular participation, of social movements, for what those do are *"to create a countervailing power to the policeman with a club and a gun. That's essentially what movements do: They create countervailing powers to counter the power which is much more important than what is written down in the Constitution or the laws."* [Zinn, **Op. Cit.**, pp. 84–5, pp. 54–5 and p. 79]

It is precisely this kind of mass participation that centralisation kills. Under centralism, social concern and power are taken away from ordinary citizens and centralised in the hands of the few. This results in any formally guaranteed liberties being effectively ignored when people want to use them, if the powers at be so decide. Ultimately, isolated individuals facing the might of a centralised state machine are in a weak position. Which is way the state does what it can to undermine such popular movements and organisations (going so far as to violate its own laws to do so).

As should be obvious, by centralisation anarchists do not mean simply a territorial centralisation of power in a specific central location (such as in a nation state where power rests in a central government located in a specific place). We also mean the centralisation of **power** into a few hands. Thus we can have a system like feudalism which is territorially decentralised (i.e. made up on numerous feudal lords without a strong central state) while having power centralised in a few hands locally (i.e. power rests in the hands of the feudal lords, not in the general population). Or, to use another example, we can have a laissez-faire capitalist system which has a weak central authority but is made up of a multitude of autocratic workplaces. As such, getting rid of the central power (say the central state in capitalism or the monarch in absolutism) while retaining the local authoritarian institutions (say capitalist firms and feudal landlords) would not ensure freedom. Equally, the abolition of local authorities may simply result in the strengthening of central power and a corresponding weakening of freedom.

B.2.5 Who benefits from centralisation?

No social system would exist unless it benefited someone or some group. Centralisation, be it in the state or the company, is no different. In all cases, centralisation directly benefits those at the top, because it shelters them from those who are below, allowing the latter to be controlled and governed more effectively. Therefore, it is in the direct interests of bureaucrats and politicians to support centralism.

Under capitalism, however, various sections of the business class also support state centralism. This is the symbiotic relationship between capital and the state. As will be discussed later (in section F.8), the state played an important role in "nationalising" the market, i.e. forcing the "free market" onto society. By centralising power in the hands of representatives and so creating a state bureaucracy, ordinary people were disempowered and thus became less likely to interfere with the interests of the wealthy. *"In a republic,"* writes Bakunin, *"the so-called people, the legal people, allegedly represented by the State, stifle and will keep on stifling the actual and living people"* by *"the bureaucratic world"* for *"the greater benefit of the privileged propertied classes as well as for its own benefit."* [**Op. Cit.**, p. 211]

Examples of increased political centralisation being promoted by wealthy business interests by can be seen throughout the history of capitalism. *"In revolutionary America, 'the nature of*

city government came in for heated discussion,' observes Merril Jensen ... Town meetings ... 'had been a focal point of revolutionary activity'. The anti-democratic reaction that set in after the American revolution was marked by efforts to do away with town meeting government ... Attempts by conservative elements were made to establish a 'corporate form (of municipal government) whereby the towns would be governed by mayors and councils' elected from urban wards ... [T]he merchants 'backed incorporation consistently in their efforts to escape town meetings.'" [Murray Bookchin, **Towards an Ecological Society**, p. 182]

Here we see local policy making being taken out of the hands of the many and centralised in the hands of the few (who are always the wealthy). France provides another example:

> *"The Government found...the folkmotes [of all households] 'too noisy', too disobedient, and in 1787, elected councils, composed of a mayor and three to six syndics, chosen among the wealthier peasants, were introduced instead."* [Peter Kropotkin, **Mutual Aid**, pp. 185–186]

This was part of a general movement to disempower the working class by centralising decision making power into the hands of the few (as in the American revolution). Kropotkin indicates the process at work:

> *"[T]he middle classes, who had until then had sought the support of the people, in order to obtain constitutional laws and to dominate the higher nobility, were going, now that they had seen and felt the strength of the people, to do all they could to dominate the people, to disarm them and to drive them back into subjection.*
>
> *[...]*
>
> *"[T]hey made haste to legislate in such a way that the political power which was slipping out of the hand of the Court should not fall into the hands of the people. Thus ... [it was] proposed ... to divide the French into two classes, of which one only, the **active** citizens, should take part in the government, whilst the other, comprising the great mass of the people under the name of **passive** citizens, should be deprived of all political rights ... [T]he [National] Assembly divided France into departments ... always maintaining the principle of excluding the poorer classes from the Government ... [T]hey excluded from the primary assemblies the mass of the people ... who could no longer take part in the primary assemblies, and accordingly had no right to nominate the electors [who chose representatives to the National Assembly], or the municipality, or any of the local authorities ...*
>
> *"And finally, the **permanence** of the electoral assemblies was interdicted. Once the middle-class governors were appointed, these assemblies were not to meet again. Once the middle-class governors were appointed, they must not be controlled too strictly. Soon the right even of petitioning and of passing resolutions was taken away — 'Vote and hold your tongue!'*
>
> *"As to the villages ... the general assembly of the inhabitants ... [to which] belonged the administration of the affairs of the commune .. . were forbidden by the ... law. Henceforth only the well-to-do peasants, the **active** citizens, had the right to meet, **once***

> ***a year**, to nominate the mayor and the municipality, composed of three or four middle-class men of the village.*
>
> *"A similar municipal organisation was given to the towns...*
>
> *"[Thus] the middle classes surrounded themselves with every precaution in order to keep the municipal power in the hands of the well-to-do members of the community."* [**The Great French Revolution**, vol. 1, pp. 179–186]

Thus centralisation aimed to take power away from the mass of the people and give it to the wealthy. The power of the people rested in popular assemblies, such as the *"Sections"* and *"Districts"* of Paris (expressing, in Kropotkin's words, *"the principles of anarchism"* and *"practising ... Direct Self-Government"* [**Op. Cit.**, p. 204 and p. 203]) and village assemblies. However, the National Assembly *"tried all it could to lessen the power of the districts ... [and] put an end to those hotbeds of Revolution ... [by allowing] **active** citizens only ... to take part in the electoral and administrative assemblies."* [**Op. Cit.**, p. 211] Thus the *"central government was steadily endeavouring to subject the sections to its authority"* with the state *"seeking to centralise everything in its own hands ... [I]ts depriving the popular organisations ... all ... administrative functions ... and its subjecting them to its bureaucracy in police matters, meant the death of the sections."* [**Op. Cit.**, vol. 2, p. 549 and p. 552]

As can be seen, both the French and American revolutions saw a similar process by which the wealthy centralised power into their own hands (volume one of Murray Bookchin's **The Third Revolution** discusses the French and American revolutions in some detail). This ensured that working class people (i.e. the majority) were excluded from the decision making process and subject to the laws and power of a few. Which, of course, benefits the minority class whose representatives have that power. This was the rationale for the centralisation of power in every revolution. Whether it was the American, French or Russian, the centralisation of power was the means to exclude the many from participating in the decisions that affected them and their communities.

For example, the founding fathers of the American State were quite explicit on the need for centralisation for precisely this reason. For James Madison the key worry was when the *"majority"* gained control of *"popular government"* and was in a position to *"sacrifice to its ruling passion or interest both the public good and the rights of other citizens."* Thus the *"public good"* escaped the *"majority"* nor was it, as you would think, what the public thought of as good (for some reason left unexplained, Madison considered the majority able to pick those who **could** identify the public good). To safeguard against this, he advocated a republic rather than a democracy in which the citizens *"assemble and administer the government in person ... have ever been found incompatible with personal security or the rights of property."* He, of course, took it for granted that *"[t]hose who hold and those who are without property have ever formed distinct interests in society."* His schema was to ensure that private property was defended and, as a consequence, the interests of those who held protected. Hence the need for *"the delegation of the government ... to a small number of citizens elected by the rest."* This centralisation of power into a few hands locally was matched by a territorial centralisation for the same reason. Madison favoured *"a large over a small republic"* as a *"rage for paper money, for an abolition of debts, for an equal division of property, or for any other improper or wicked project, will be less apt to pervade the whole body of the Union than a particular member of it."* [contained in **Voices of a People's History of the United States**,

Howard Zinn and Anthony Arnove (eds.), pp. 109–113] This desire to have a formal democracy, where the masses are mere spectators of events rather than participants, is a recurring theme in capitalism (see the chapter *"Force and Opinion"* in Noam Chomsky's **Deterring Democracy** for a good overview).

On the federal and state levels in the US after the Revolution, centralisation of power was encouraged, since *"most of the makers of the Constitution had some direct economic interest in establishing a strong federal government."* Needless to say, while the rich elite were well represented in formulating the principles of the new order, four groups were not: *"slaves, indentured servants, women, men without property."* Needless to say, the new state and its constitution did not reflect their interests. Given that these were the vast majority, *"there was not only a positive need for strong central government to protect the large economic interests, but also immediate fear of rebellion by discontented farmers."* [Howard Zinn, **A People's History of the United States**, p. 90] The chief event was Shay's Rebellion in western Massachusetts. There the new Constitution had raised property qualifications for voting and, therefore, no one could hold state office without being wealthy. The new state was formed to combat such rebellions, to protect the wealthy few against the many.

Moreover, state centralisation, the exclusion of popular participation, was essential to mould US society into one dominated by capitalism:

> *"In the thirty years leading up to the Civil War, the law was increasingly interpreted in the courts to suit capitalist development. Studying this, Morton Horwitz (**The Transformation of American Law**) points out that the English common-law was no longer holy when it stood in the way of business growth ... Judgements for damages against businessmen were taken out of the hands of juries, which were unpredictable, and given to judges ... The ancient idea of a fair price for goods gave way in the courts to the idea of caveat emptor (let the buyer beware) ... contract law was intended to discriminate against working people and for business ... The pretence of the law was that a worker and a railroad made a contract with equal bargaining power ... 'The circle was completed; the law had come simply to ratify those forms of inequality that the market system had produced.'"* [Zinn, **Op. Cit.**, p. 234]

The US state was created on elitist liberal doctrine and actively aimed to reduce democratic tendencies (in the name of "individual liberty"). What happened in practice (unsurprisingly enough) was that the wealthy elite used the state to undermine popular culture and common right in favour of protecting and extending their own interests and power. In the process, US society was reformed in their own image:

> *"By the middle of the nineteenth century the legal system had been reshaped to the advantage of men of commerce and industry at the expense of farmers, workers, consumers, and other less powerful groups in society... it actively promoted a legal distribution of wealth against the weakest groups in society."* [Morton Horwitz, quoted by Zinn, **Op. Cit.**, p. 235]

In more modern times, state centralisation and expansion has gone hand in glove with rapid industrialisation and the growth of business. As Edward Herman points out, *"[t]o a great extent,*

*it was the growth in business size and power that elicited the countervailing emergence of unions and the growth of government. Bigness **beyond** business was to a large extent a response to bigness **in** business."* [**Corporate Control, Corporate Power**, p. 188 — see also, Stephen Skowronek, **Building A New American State: The Expansion of National Administrative Capacities, 1877–1920**] State centralisation was required to produce bigger, well-defined markets and was supported by business when it acted in their interests (i.e. as markets expanded, so did the state in order to standardise and enforce property laws and so on). On the other hand, this development towards "big government" created an environment in which big business could grow (often encouraged by the state by subsidies and protectionism — as would be expected when the state is run by the wealthy) as well as further removing state power from influence by the masses and placing it more firmly in the hands of the wealthy. It is little wonder we see such developments, for *"[s]tructures of governance tend to coalesce around domestic power, in the last few centuries, economic power."* [Noam Chomsky, **World Orders, Old and New**, p. 178]

State centralisation makes it easier for business to control government, ensuring that it remains their puppet and to influence the political process. For example, the European Round Table (ERT) *"an elite lobby group of ... chairmen or chief executives of large multi-nationals based mainly in the EU ... [with] 11 of the 20 largest European companies [with] combined sales [in 1991] ... exceeding $500 billion, ... approximately 60 per cent of EU industrial production,"* makes much use of the EU. As two researchers who have studied this body note, the ERT *"is adept at lobbying ... so that many ERT proposals and 'visions' are mysteriously regurgitated in Commission summit documents."* The ERT *"claims that the labour market should be more 'flexible,' arguing for more flexible hours, seasonal contracts, job sharing and part time work. In December 1993, seven years after the ERT made its suggestions [and after most states had agreed to the Maastricht Treaty and its "social chapter"], the European Commission published a white paper ... [proposing] making labour markets in Europe more flexible."* [Doherty and Hoedeman, *"Knights of the Road,"* **New Statesman**, 4/11/94, p. 27]

The current talk of globalisation, NAFTA, and the Single European Market indicates an underlying transformation in which state growth follows the path cut by economic growth. Simply put, with the growth of transnational corporations and global finance markets, the bounds of the nation-state have been made economically redundant. As companies have expanded into multi-nationals, so the pressure has mounted for states to follow suit and rationalise their markets across *"nations"* by creating multi-state agreements and unions.

As Noam Chomsky notes, G7, the IMF, the World Bank and so forth are a *"de facto world government,"* and *"the institutions of the transnational state largely serve other masters [than the people], as state power typically does; in this case the rising transnational corporations in the domains of finance and other services, manufacturing, media and communications."* [**Op. Cit.**, p. 179]

As multi-nationals grow and develop, breaking through national boundaries, a corresponding growth in statism is required. Moreover, a *"particularly valuable feature of the rising de facto governing institutions is their immunity from popular influence, even awareness. They operate in secret, creating a world subordinated to the needs of investors, with the public 'put in its place', the threat of democracy reduced"* [Chomsky, **Op. Cit.**, p. 178].

This does not mean that capitalists desire state centralisation for everything. Often, particularly for social issues, relative decentralisation is often preferred (i.e. power is given to local bureaucrats) in order to increase business control over them. By devolving control to local areas, the power which large corporations, investment firms and the like have over the local government increases proportionally. In addition, even middle-sized enterprise can join in and influence,

constrain or directly control local policies and set one workforce against another. Private power can ensure that *"freedom"* is safe, **their** freedom.

No matter which set of bureaucrats are selected, the need to centralise social power, thus marginalising the population, is of prime importance to the business class. It is also important to remember that capitalist opposition to *"big government"* is often financial, as the state feeds off the available social surplus, so reducing the amount left for the market to distribute to the various capitals in competition.

In reality, what capitalists object to about "big government" is its spending on social programs designed to benefit the poor and working class, an "illegitimate" function which "wastes" part of the surplus that might go to capital (and also makes people less desperate and so less willing to work cheaply). Hence the constant push to reduce the state to its "classical" role as protector of private property and the system, and little else. Other than their specious quarrel with the welfare state, capitalists are the staunchest supports of government (and the "correct" form of state intervention, such as defence spending), as evidenced by the fact that funds can always be found to build more prisons and send troops abroad to advance ruling-class interests, even as politicians are crying that there is "no money" in the treasury for scholarships, national health care, or welfare for the poor.

State centralisation ensures that *"as much as the equalitarian principles have been embodied in its political constitutions, it is the bourgeoisie that governs, and it is the people, the workers, peasants included, who obey the laws made by the bourgeoisie"* who *"has in fact if not by right the exclusive privilege of governing."* This means that *"political equality ... is only a puerile fiction, an utter lie."* It takes a great deal of faith to assume that the rich, *"being so far removed from the people by the conditions of its economic and social existence"* can *"give expression in the government and in the laws, to the feelings, the ideas, and the will of the people."* Unsurprisingly, we find that *"in legislation as well as in carrying on the government, the bourgeoisie is guided by its own interests and its own instincts without concerning itself much with the interests of the people."* So while *"on election days even the proudest bourgeois who have any political ambitions are forced to court ... The Sovereign People."* But on the *"day after the elections every one goes back to their daily business"* and the politicians are given carte blanche to rule in the name of the people they claim to represent." [Bakunin, **The Political Philosophy of Bakunin**, p. 218 and p. 219]

B.2.6 Can the state be an independent power within society?

Yes it can. Given the power of the state machine, it would be hard to believe that it could always be simply a tool for the economically dominant minority in a society. Given its structure and powers, it can use them to further its own interests. Indeed, in some circumstances it can be the ruling class itself.

However, in normal times the state is, as we discussed in section B.2.1, a tool of the capitalist class. This, it must be stressed, does not mean that they always see *"eye to eye."* Top politicians, for example, are part of the ruling elite, but they are in competition with other parts of it. In addition, different sectors of the capitalist class are competing against each other for profits, political influence, privileges, etc. The bourgeoisie, argued Malatesta, *"are always at war among themselves ... Thus the games of the swings, the manoeuvres, the concessions and withdrawals, the attempts to find allies among the people against the conservatives, and among the conservatives*

against the people." [**Anarchy**, p. 25] This means that different sections of the ruling class will cluster around different parties, depending on their interests, and these parties will seek to gain power to further those interests. This may bring them into conflict with other sections of the capitalist class. The state is the means by which these conflicts can be resolved.

Given that the role of the state is to ensure the best conditions for capital **as a whole,** this means that, when necessary, it can and does work against the interests of certain parts of the capitalist class. To carry out this function the state needs to be above individual capitalists or companies. This is what can give the state the appearance of being a neutral social institution and can fool people into thinking that it represents the interests of society as a whole. Yet this sometime neutrality with regards to individual capitalist companies exists only as an expression of its role as an instrument of capital in general. Moreover, without the tax money from successful businesses the state would be weakened and so the state is in competition with capitalists for the surplus value produced by the working class. Hence the anti-state rhetoric of big business which can fool those unaware of the hand-in-glove nature of modern capitalism to the state.

As Chomsky notes:

> *"There has always been a kind of love-hate relationship between business interests and the capitalist state. On the one hand, business wants a powerful state to regulate disorderly markets, provide services and subsidies to business, enhance and protect access to foreign markets and resources, and so on. On the other hand, business does not want a powerful competitor, in particular, one that might respond to different interests, popular interests, and conduct policies with a redistributive effect, with regard to income or power."* [**Turning the Tide**, p. 211]

As such, the state is often in conflict with sections of the capitalist class, just as sections of that class use the state to advance their own interests within the general framework of protecting the capitalist system (i.e. the interests of the ruling class **as a class**). The state's role is to resolve such disputes within that class peacefully. Under modern capitalism, this is usually done via the *"democratic"* process (within which we get the chance of picking the representatives of the elite who will oppress us least).

Such conflicts sometimes give the impression of the state being a "neutral" body, but this is an illusion — it exists to defend class power and privilege — but exactly which class it defends can change. While recognising that the state protects the power and position of the economically dominant class within a society anarchists also argue that the state has, due to its hierarchical nature, interests of its own. Thus it cannot be considered as simply the tool of the economically dominant class in society. States have their own dynamics, due to their structure, which generate their own classes and class interests and privileges (and which allows them to escape from the control of the economic ruling class and pursue their own interests, to a greater or lesser degree). As Malatesta put it *"the government, though springing from the bourgeoisie and its servant and protector, tends, as with every servant and every protector, to achieve its own emancipation and to dominate whoever it protects."* [**Op. Cit.**, p. 25]

Thus, even in a class system like capitalism, the state can act independently of the ruling elite and, potentially, act against their interests. As part of its role is to mediate between individual capitalists/corporations, it needs sufficient power to tame them and this requires the state to have some independence from the class whose interests it, in general, defends. And such independence can be used to further its own interests, even to the detriment of the capitalist class,

if the circumstances allow. If the capitalist class is weak or divided then the state can be in a position to exercise its autonomy vis-à-vis the economically dominant elite, using against the capitalists as a whole the tools it usually applies to them individually to further its own interests and powers.

This means that the state it not just *"the guardian of capital"* for it *"has a vitality of its own and constitutes ... a veritable social class apart from other classes ... ; and this class has its own particular parasitical and usurious interests, in conflict with those of the rest of the collectivity which the State itself claims to represent ... The State, being the depository of society's greatest physical and material force, has too much power in its hands to resign itself to being no more than the capitalists' guard dog."* [Luigi Fabbri, quoted by David Berry, **A History of the French Anarchist Movement, 1917–1945**, p. 39]

Therefore the state machine (and structure), while its modern form is intrinsically linked to capitalism, cannot be seen as being a tool usable by the majority. This is because the *"State, any State — even when it dresses-up in the most liberal and democratic form — is essentially based on domination, and upon violence, that is upon despotism — a concealed but no less dangerous despotism."* The State *"denotes power, authority, domination; it presupposes inequality in fact."* [**The Political Philosophy of Michael Bakunin**, p. 211 and p. 240] The state, therefore, has its own specific logic, its own priorities and its own momentum. It constitutes its own locus of power which is not merely a derivative of economic class power. Consequently, the state can be beyond the control of the economically dominant class and it need not reflect economic relations.

This is due to its hierarchical and centralised nature, which empowers the few who control the state machine — *"[e]very state power, every government, by its nature places itself outside and over the people and inevitably subordinates them to an organisation and to aims which are foreign to and opposed to the real needs and aspirations of the people."* If *"the whole proletariat ... [are] members of the government ... there will be no government, no state, but, if there is to be a state there will be those who are ruled and those who are slaves."* [**Bakunin on Anarchism**, p. 328 and p. 330]

In other words, the state bureaucracy is itself directly an oppressor and can exist independently of an economically dominant class. In Bakunin's prophetic words:

> *"What have we seen throughout history? The State has always been the patrimony of some privileged class: the sacerdotal class, the nobility, the bourgeoisie — and finally, when all other classes have exhausted themselves, the class of the bureaucracy enters the stage and then the State falls, or rises, if you please, to the position of a machine."* [**The Political Philosophy of Michael Bakunin**, p. 208]

This is unsurprising. For anarchists, *"the State organisation ... [is] the force to which minorities resorted for establishing and organising their power over the masses."* It does not imply that these minorities need to be the economically dominant class in a society. The state is *"a superstructure built to the advantage of Landlordism, Capitalism, and Officialism."* [**Evolution and Environment**, p. 82 and p. 105] Consequently, we cannot assume that abolishing one or even two of this unholy trinity will result in freedom nor that all three share exactly the same interests or power in relation to the others. Thus, in some situations, the landlord class can promote its interests over those of the capitalist class (and vice versa) while the state bureaucracy can grow at the expense of both.

As such, it is important to stress that the minority whose interests the state defends need not be an economically dominant one (although it usually is). Under some circumstances a priesthood

can be a ruling class, as can a military group or a bureaucracy. This means that the state can also effectively **replace** the economically dominant elite as the exploiting class. This is because anarchists view the state as having (class) interests of its own.

As we discuss in more detail in section H.3.9, the state cannot be considered as merely an instrument of (economic) class rule. History has shown numerous societies were the state **itself** was the ruling class and where no other dominant economic class existed. The experience of Soviet Russia indicates the validity of this analysis. The reality of the Russian Revolution contrasted starkly with the Marxist claim that a state was simply an instrument of class rule and, consequently, the working class needed to build its own state within which to rule society. Rather than being an instrument by which working class people could run and transform society in their own interests, the new state created by the Russian Revolution soon became a power over the class it claimed to represent (see section H.6 for more on this). The working class was exploited and dominated by the new state and its bureaucracy rather than by the capitalist class as previously. This did not happen by chance. As we discuss in section H.3.7, the state has evolved certain characteristics (such as centralisation, delegated power and so on) which ensure its task as enforcer of minority rule is achieved. Keeping those characteristics will inevitably mean keeping the task they were created to serve.

Thus, to summarise, the state's role is to repress the individual and the working class as a whole in the interests of economically dominant minorities/classes and in its own interests. It is *"a society for mutual insurance between the landlord, the military commander, the judge, the priest, and later on the capitalist, in order to support such other's authority over the people, and for exploiting the poverty of the masses and getting rich themselves."* Such was the *"origin of the State; such was its history; and such is its present essence."* [Kropotkin, **Evolution and Environment**, p. 94]

So while the state is an instrument of class rule it does **not** automatically mean that it does not clash with sections of the class it represents nor that it has to be the tool of an economically dominant class. One thing is sure, however. The state is not a suitable tool for securing the emancipation of the oppressed.

B.3 Why are anarchists against private property?

Private property is one of the three things all anarchists oppose, along side hierarchical authority and the state. Today, the dominant system of private property is capitalist in nature and, as such, anarchists tend to concentrate on this system and its property rights regime. We will be reflecting this here but do not, because of this, assume that anarchists consider other forms of private property regime (such as, say, feudalism) as acceptable. This is not the case — anarchists are against every form of property rights regime which results in the many working for the few.

Anarchist opposition to private property rests on two, related, arguments. These were summed up by Proudhon's maxims (from What is Property? that *"property is theft"* and *"property is despotism."* In his words, *"Property ... violates equality by the rights of exclusion and increase, and freedom by despotism ... [and has] perfect identity with robbery."* [Proudhon, What is Property, p. 251] Anarchists, therefore, oppose private property (i.e. capitalism) because it is a source of coercive, hierarchical authority as well as exploitation and, consequently, elite privilege and inequality. It is based on and produces inequality, in terms of both wealth and power.

We will summarise each argument in turn.

The statement *"property is theft"* is one of anarchism's most famous sayings. Indeed, it is no exaggeration to say that anyone who rejects this statement is not an anarchist. This maxim works in two related ways. Firstly, it recognises the fact that the earth and its resources, the common inheritance of all, have been monopolised by a few. Secondly, it argues that, as a consequence of this, those who own property exploit those who do not. This is because those who do not own have to pay or sell their labour to those who do own in order to get access to the resources they need to live and work (such as workplaces, machinery, land, credit, housing, products under patents, and such like — see section B.3.2 for more discussion).

As we discuss in section B.3.3, this exploitation (theft) flows from the fact that workers do not own or control the means of production they use and, as a consequence, are controlled by those who do during work hours. This alienation of control over labour to the boss places the employer in a position to exploit that labour — to get the worker to produce more than they get paid in wages. That is precisely **why** the boss employs the worker. Combine this with rent, interest and intellectual property rights and we find the secret to maintaining the capitalist system as all allow enormous inequalities of wealth to continue and keep the resources of the world in the hands of a few.

Yet labour cannot be alienated. Therefore when you sell your labour you sell yourself, your liberty, for the time in question. This brings us to the second reason why anarchists oppose private property, the fact it produces authoritarian social relationships. For all true anarchists, property is opposed as a source of authority, indeed despotism. To quote Proudhon on this subject:

> *"The proprietor, the robber, the hero, the sovereign — for all these titles are synonymous — imposes his will as law, and suffers neither contradiction nor control; that is, he pretends to be the legislative and the executive power at once ... [and so] property engenders despotism ... That is so clearly the essence of property that, to be convinced of it, one need but remember what it is, and observe what happens around him. Property is the right to* ***use*** *and* ***abuse*** *... if goods are property, why should not the proprietors be kings, and despotic kings — kings in proportion to their* ***facultes bonitaires****? And if each proprietor is sovereign lord within the sphere of his property, absolute king throughout his own domain, how could a government of proprietors be any thing but chaos and confusion?"* [**Op. Cit.**, pp. 266–7]

In other words, private property is the state writ small, with the property owner acting as the *"sovereign lord"* over their property, and so the absolute king of those who use it. As in any monarchy, the worker is the subject of the capitalist, having to follow their orders, laws and decisions while on their property. This, obviously, is the total denial of liberty (and dignity, we may note, as it is degrading to have to follow orders). And so private property (capitalism) necessarily excludes participation, influence, and control by those who use, but do not own, the means of life.

It is, of course, true that private property provides a sphere of decision-making free from outside interference — but only for the property's owners. But for those who are not property owners the situation if radically different. In a system of exclusively private property does not guarantee them any such sphere of freedom. They have only the freedom to sell their liberty to those who **do** own private property. If I am evicted from one piece of private property, where can I go? Nowhere, unless another owner agrees to allow me access to their piece of private property. This means that everywhere I can stand is a place where I have no right to stand without permission and, as a consequence, I exist only by the sufferance of the property owning elite. Hence Proudhon:

> *"Just as the commoner once held his land by the munificence and condescension of the lord, so to-day the working-man holds his labour by the condescension and necessities of the master and proprietor."* [Proudhon, **Op. Cit.**, p. 128]

This means that far from providing a sphere of independence, a society in which all property is private thus renders the property-less completely dependent on those who own property. This ensures that the exploitation of another's labour occurs and that some are subjected to the will of others, in direct contradiction to what the defenders of property promise. This is unsurprising given the nature of the property they are defending:

> *"Our opponents ... are in the habit of justifying the right to private property by stating that property is the condition and guarantee of liberty.*
>
> *"And we agree with them. Do we not say repeatedly that poverty is slavery?*
>
> *"But then why do we oppose them?*
>
> *"The reason is clear: in reality the property that they defend is capitalist property, namely property that allows its owners to live from the work of others and which therefore depends on the existence of a class of the disinherited and dispossessed, forced to*

> *sell their labour to the property owners for a wage below its real value ... This means that workers are subjected to a kind of slavery, which, though it may vary in degree of harshness, always means social inferiority, material penury and moral degradation, and is the primary cause of all the ills that beset today's social order."* [Malatesta, **The Anarchist Revolution**, p. 113]

It will, of course, be objected that no one forces a worker to work for a given boss. However, as we discuss in section B.4.3, this assertion (while true) misses the point. While workers are not forced to work for a **specific** boss, they inevitably have to work for a boss. This is because there is literally no other way to survive – all other economic options have been taken from them by state coercion. The net effect is that the working class has little choice but to hire themselves out to those with property and, as a consequence, the labourer *"has sold and surrendered his liberty"* to the boss. [Proudhon, **Op. Cit.**, p. 130]

Private property, therefore, produces a very specific form of authority structure within society, a structure in which a few govern the many during working hours. These relations of production are inherently authoritarian and embody and perpetuate the capitalist class system. The moment you enter the factory gate or the office door, you lose all your basic rights as a human being. You have no freedom of speech nor association and no right of assembly. If you were asked to ignore your values, your priorities, your judgement, and your dignity, and leave them at the door when you enter your home, you would rightly consider that tyranny yet that is exactly what you do during working hours if you are a worker. You have no say in what goes on. You may as well be a horse (to use John Locke's analogy — see section B.4.2) or a piece of machinery.

Little wonder, then, that anarchists oppose private property as Anarchy is *"the absence of a master, of a sovereign"* [Proudhon, **Op. Cit.**, p. 264] and call capitalism for what it is, namely **wage slavery**!

For these reasons, anarchists agree with Rousseau when he stated:

> *"The first man who, having fenced off a plot of land, thought of saying, 'This is mine' and found people simple enough to believe him was the real founder of civil society. How many crimes, wars, murders, how many miseries and horrors might the human race had been spared by the one who, upon pulling up the stakes or filling in the ditch, had shouted to his fellow men: 'Beware of listening to this impostor; you are lost if you forget the fruits of the earth belong to all and that the earth belongs to no one.'"* [*"Discourse on Inequality,"* **The Social Contract and Discourses**, p. 84]

This explains anarchist opposition to capitalism. It is marked by two main features, *"private property"* (or in some cases, state-owned property — see section B.3.5) and, consequently, wage labour and exploitation and authority. Moreover, such a system requires a state to maintain itself for as *"long as within society a possessing and non-possessing group of human beings face one another in enmity, the state will be indispensable to the possessing minority for the protection for its privileges."* [Rudolf Rocker, Anarcho-Syndicalism, p. 11] Thus private ownership of the means of production is only possible if there is a state, meaning mechanisms of organised coercion at the disposal of the propertied class (see section B.2).

Also, it ought to be easy to see that capitalism, by giving rise to an ideologically inalienable *"right"* to private property, will also quickly give rise to inequalities in the distribution of external

resources, and that this inequality in resource distribution will give rise to a further inequality in the relative bargaining positions of the propertied and the property less. While apologists for capitalism usually attempt to justify private property by claiming that "self-ownership" is a "universal right" (see section B.4.2 — *"Is capitalism based on self-ownership?"*), it is clear that capitalism actually makes universal autonomy implied by the flawed concept of self-ownership (for the appeal of the notion of self-ownership rests on the ideal that people are not used as a means but only as an end in themselves). The capitalist system, however, has undermined autonomy and individual freedom, and ironically, has used the term *"self-ownership"* as the basis for doing so. Under capitalism, as will be seen in section B.4, most people are usually left in a situation where their best option is to allow themselves to be used in just those ways that are logically incompatible with genuine self-ownership, i.e. the autonomy which makes it initially an appealing concept.

Only libertarian socialism can continue to affirm the meaningful autonomy and individual freedom which self-ownership promises whilst building the conditions that guarantee it. Only by abolishing private property can there be access to the means of life for all, so making the autonomy which self-ownership promises but cannot deliver a reality by universalising self-management in all aspects of life.

Before discussing the anti-libertarian aspects of capitalism, it will be necessary to define *"private property"* as distinct from *"personal possessions"* and show in more detail why the former requires state protection and is exploitative.

B.3.1 What is the difference between private property and possession?

Anarchists define *"private property"* (or just *"property,"* for short) as state-protected monopolies of certain objects or privileges which are used to control and exploit others. *"Possession,"* on the other hand, is ownership of things that are not used to exploit others (e.g. a car, a refrigerator, a toothbrush, etc.). Thus many things can be considered as either property or possessions depending on how they are used.

To summarise, anarchists are in favour of the kind of property which *"cannot be used to exploit another — those kinds of personal possessions which we accumulate from childhood and which become part of our lives."* We are opposed to the kind of property *"which can be used only to exploit people — land and buildings, instruments of production and distribution, raw materials and manufactured articles, money and capital."* [Nicholas Walter, **About Anarchism**, p. 40] As a rule of thumb, anarchists oppose those forms of property which are owned by a few people but which are used by others. This leads to the former controlling the latter and using them to produce a surplus for them (either directly, as in the case of a employee, or indirectly, in the case of a tenant).

The key is that *"possession"* is rooted in the concept of *"use rights"* or *"usufruct"* while *"private property"* is rooted in a divorce between the users and ownership. For example, a house that one lives in is a possession, whereas if one rents it to someone else at a profit it becomes property. Similarly, if one uses a saw to make a living as a self-employed carpenter, the saw is a possession; whereas if one employs others at wages to use the saw for one's own profit, it is property. Needless to say, a capitalist workplace, where the workers are ordered about by a boss, is an example

of *"property"* while a co-operative, where the workers manage their own work, is an example of *"possession."* To quote Proudhon:

> *"The proprietor is a man who, having absolute control of an instrument of production, claims the right to enjoy the product of the instrument without using it himself. To this end he lends it."* [**Op. Cit.**, p. 293]

While it may initially be confusing to make this distinction, it is very useful to understand the nature of capitalist society. Capitalists tend to use the word *"property"* to mean anything from a toothbrush to a transnational corporation — two very different things, with very different impacts upon society. Hence Proudhon:

> *"Originally the word **property** was synonymous with **proper** or **individual possession.** It designated each individual's special right to the use of a thing. But when this right of use ... became active and paramount — that is, when the usufructuary converted his right to personally use the thing into the right to use it by his neighbour's labour — then property changed its nature and this idea became complex."* [**Op. Cit.**, pp. 395–6]

Proudhon graphically illustrated the distinction by comparing a lover as a possessor, and a husband as a proprietor! As he stressed, the *"double definition of property — domain and possession — is of highest importance; and must be clearly understood, in order to comprehend"* what anarchism is really about. So while some may question why we make this distinction, the reason is clear. As Proudhon argued, *"it is proper to call different things by different names, if we keep the name 'property' for the former [possession], we must call the latter [the domain of property] robbery, repine, brigandage. If, on the contrary, we reserve the name 'property' for the latter, we must designate the former by the term **possession** or some other equivalent; otherwise we should be troubled with an unpleasant synonym."* [**Op. Cit.**, p. 65 and p. 373]

The difference between property and possession can be seen from the types of authority relations each generates. Taking the example of a capitalist workplace, its clear that those who own the workplace determine how it is used, not those who do the actual work. This leads to an almost totalitarian system. As Noam Chomsky points out, *"the term 'totalitarian' is quite accurate. There is no human institution that approaches totalitarianism as closely as a business corporation. I mean, power is completely top-down. You can be inside it somewhere and you take orders from above and hand 'em down. Ultimately, it's in the hands of owners and investors."* Thus the actual producer does not control their own activity, the product of their labour nor the means of production they use. In modern class societies, the producer is in a position of subordination to those who actually do own or manage the productive process.

In an anarchist society, as noted, actual use is considered the only title. This means that a workplace is organised and run by those who work within it, thus reducing hierarchy and increasing freedom and equality within society. Hence anarchist opposition to private property and capitalism flows naturally from anarchism's basic principles and ideas. Hence all anarchists agree with Proudhon:

> *"Possession is a right; property is against right. Suppress property while maintaining possession."* [**Op. Cit.**, p. 271]

As Alexander Berkman frames this distinction, anarchism *"abolishes private ownership of the means of production and distribution, and with it goes capitalistic business. Personal possession remains only in the things you use. Thus, your watch is your own, but the watch factory belongs to the people. Land, machinery, and all other public utilities will be collective property, neither to be bought nor sold. Actual use will be considered the only title — not to ownership but to possession."* [**What is Anarchism?**, p. 217]

This analysis of different forms of property is at the heart of both social and individualist anarchism. This means that all anarchists seek to change people's opinions on what is to be considered as valid forms of property, aiming to see that *"the Anarchistic view that occupancy and use should condition and limit landholding becomes the prevailing view"* and so ensure that *"individuals should no longer be protected by their fellows in anything but personal occupation and cultivation [i.e. use] of land."* [Benjamin Tucker, **The Individualist Anarchists**, p. 159 and p. 85] The key differences, as we noted in section A.3.1, is how they apply this principle.

This anarchist support for possession does not imply the break up of large scale organisations such as factories or other workplaces which require large numbers of people to operate. Far from it. Anarchists argue for association as the complement of possession. This means applying *"occupancy and use"* to property which is worked by more than one person results in associated labour, i.e. those who collectively work together (i.e. use a given property) manage it and their own labour as a self-governing, directly democratic, association of equals (usually called *"self-management"* for short).

This logically flows from the theory of possession, of *"occupancy and use."* For if production is carried on in groups who is the legal occupier of the land? The employer or their manager? Obviously not, as they are by definition occupying more than they can use by themselves. Clearly, the association of those engaged in the work can be the only rational answer. Hence Proudhon's comment that *"all accumulated capital being social property, no one can be its exclusive proprietor."* *"In order to destroy despotism and inequality of conditions, men must ... become associates"* and this implies workers' self-management — *"leaders, instructors, superintendents ... must be chosen from the labourers by the labourers themselves."* [Proudhon, **Op. Cit.**, p. 130, p. 372 and p. 137]

In this way, anarchists seek, in Proudhon's words, *"abolition of the proletariat"* and consider a key idea of our ideas that *"Industrial Democracy must... succeed Industrial Feudalism."* [Proudhon, **Selected Writings of Pierre-Joseph Proudhon**, p. 179 and p. 167] Thus an anarchist society would be based on possession, with workers' self-management being practised at all levels from the smallest one person workplace or farm to large scale industry (see section I.3 for more discussion).

Clearly, then, all anarchists seek to transform and limit property rights. Capitalist property rights would be ended and a new system introduced rooted in the concept of possession and use. While the exact nature of that new system differs between schools of anarchist thought, the basic principles are the same as they flow from the same anarchist theory of property to be found in Proudhon's, What is Property?.

Significantly, William Godwin in his Enquiry Concerning Political Justice makes the same point concerning the difference between property and possession (although not in the same language) fifty years before Proudhon, which indicates its central place in anarchist thought. For Godwin, there were different kinds of property. One kind was *"the empire to which every [person] is entitled over the produce of his [or her] own industry."* However, another kind was *"a system, in whatever manner established, by which one man enters into the faculty of disposing of the produce*

of another man's industry." This *"species of property is in direct contradiction"* to the former kind (he similarities with subsequent anarchist ideas is striking). For Godwin, inequality produces a *"servile"* spirit in the poor and, moreover, a person who *"is born to poverty, may be said, under a another name, to be born a slave."* [**The Anarchist Writings of William Godwin**, p. 133, p. 134, p. 125 and p. 126]

Needless to say, anarchists have not be totally consistent in using this terminology. Some, for example, have referred to the capitalist and landlord classes as being the *"possessing classes."* Others prefer to use the term *"personal property"* rather than *"possession"* or *"capital"* rather than *"private property."* Some, like many individualist anarchists, use the term *"property"* in a general sense and qualify it with *"occupancy and use"* in the case of land, housing and workplaces. However, no matter the specific words used, the key idea is the same.

B.3.2 What kinds of property does the state protect?

Kropotkin argued that the state was *"the instrument for establishing monopolies in favour of the ruling minorities."* [**Anarchism**, p. 286] In every system of class exploitation, a ruling class controls access to the means of production in order to extract tribute from labour. Capitalism is no exception. In this system the state maintains various kinds of *"class monopolies"* (to use Tucker's phrase) to ensure that workers do not receive their *"natural wage,"* the full product of their labour. While some of these monopolies are obvious (such as tariffs, state granted market monopolies and so on), most are *"behind the scenes"* and work to ensure that capitalist domination does not need extensive force to maintain.

Under capitalism, there are four major kinds of property, or exploitative monopolies, that the state protects:

By enforcing these forms of property, the state ensures that the objective conditions within the economy favour the capitalist, with the worker free only to accept oppressive and exploitative contracts within which they forfeit their autonomy and promise obedience or face misery and poverty. Due to these *"initiations of force"* conducted **previously** to any specific contract being signed, capitalists enrich themselves at our expense because we *"are compelled to pay a heavy tribute to property holders for the right of cultivating land or putting machinery into action."* [Kropotkin, **The Conquest of Bread**, p. 103] These conditions obviously also make a mockery of free agreement (see section B.4).

These various forms of state intervention are considered so normal many people do not even think of them as such. Thus we find defenders of "free market" capitalism thundering against forms of "state intervention" which are designed to aid the poor while seeing nothing wrong in defending intellectual property rights, corporations, absentee landlords and the other multitude of laws and taxes capitalists and their politicians have placed and kept upon the statute-books to skew the labour market in favour of themselves (see section F.8 on the state's role in developing capitalism in the first place).

Needless to say, despite the supposedly subtle role of such *"objective"* pressures in controlling the working class, working class resistance has been such that capital has never been able to dispense with the powers of the state, both direct and indirect. When *"objective"* means of control fail, the capitalists will always turn to the use of state repression to restore the *"natural"* order. Then the *"invisible"* hand of the market is replaced by the visible fist of the state and the indirect

means of securing ruling class profits and power are supplemented by more direct forms by the state. As we indicate in section D.1, state intervention beyond enforcing these forms of private property is the norm of capitalism, not the exception, and is done so to secure the power and profits of the capitalist class.

To indicate the importance of these state backed monopolies, we shall sketch their impact.

The credit monopoly, by which the state controls who can and cannot issue or loan money, reduces the ability of working class people to create their own alternatives to capitalism. By charging high amounts of interest on loans (which is only possible because competition is restricted) few people can afford to create co-operatives or one-person firms. In addition, having to repay loans at high interest to capitalist banks ensures that co-operatives often have to undermine their own principles by having to employ wage labour to make ends meet (see section J.5.11). It is unsurprising, therefore, that the very successful Mondragon co-operatives in the Basque Country created their own credit union which is largely responsible for the experiment's success.

Just as increasing wages is an important struggle within capitalism, so is the question of credit. Proudhon and his followers supported the idea of a **People's Bank.** If the working class could take over and control increasing amounts of money it could undercut capitalist power while building its own alternative social order (for money is ultimately the means of buying labour power, and so authority over the labourer — which is the key to surplus value production). Proudhon hoped that by credit being reduced to cost (namely administration charges) workers would be able to buy the means of production they needed. While most anarchists would argue that increased working class access to credit would no more bring down capitalism than increased wages, all anarchists recognise how more cheap credit, like more wages, can make life easier for working people and how the struggle for such credit, like the struggle for wages, might play a useful role in the development of the power of the working class within capitalism. Obvious cases that spring to mind are those where money has been used by workers to finance their struggles against capital, from strike funds and weapons to the periodical avoidance of work made possible by sufficiently high money income. Increased access to cheap credit would give working class people slightly more options than selling their liberty or facing misery (just as increased wages and unemployment benefit also gives us more options).

Therefore, the credit monopoly reduces competition to capitalism from co-operatives (which are generally more productive than capitalist firms) while at the same time forcing down wages for all workers as the demand for labour is lower than it would otherwise be. This, in turn, allows capitalists to use the fear of the sack to extract higher levels of surplus value from employees, so consolidating capitalist power (within and outwith the workplace) and expansion (increasing set-up costs and so creating oligarchic markets dominated by a few firms). In addition, high interest rates transfer income directly from producers to banks. Credit and money are both used as weapons in the class struggle. This is why, again and again, we see the ruling class call for centralised banking and use state action (from the direct regulation of money itself, to the attempted management of its flows by the manipulation of the interest) in the face of repeated threats to the nature (and role) of money within capitalism.

The credit monopoly has other advantages for the elite. The 1980s were marked by a rising debt burden on households as well as the increased concentration of wealth in the US. The two are linked. Due to *"the decline in real hourly wages, and the stagnation in household incomes, the middle and lower classes have borrowed more to stay in place"* and they have *"borrowed from the*

very rich who have [become] richer." By 1997, US households spent $1 trillion (or 17% of the after-tax incomes) on debt service. *"This represents a massive upward redistribution of income."* And why did they borrow? The bottom 40% of the income distribution *"borrowed to compensate for stagnant or falling incomes"* while the upper 20% borrowed *"mainly to invest."* Thus *"consumer credit can be thought of as a way to sustain mass consumption in the face of stagnant or falling wages. But there's an additional social and political bonus, from the point of view of the creditor class: it reduces pressure for higher wages by allowing people to buy goods they couldn't otherwise afford. It helps to nourish both the appearance and reality of a middle-class standard of living in a time of polarisation. And debt can be a great conservatising force; with a large monthly mortgage and/or MasterCard bill, strikes and other forms of troublemaking look less appealing than they would other wise."* [Doug Henwood, **Wall Street**, pp. 64–6]

Thus credit *"is an important form of social coercion; mortgaged workers are more pliable."* [Henwood, **Op. Cit.**, p. 232] Money is power and any means which lessens that power by increasing the options of workers is considered a threat by the capitalist class — whether it is tight labour markets, state provided unemployment benefit, or cheap, self-organised, credit — will be resisted. The credit monopoly can, therefore, only be fought as part of a broader attack on all forms of capitalist social power.

In summary, the credit monopoly, by artificially restricting the option to work for ourselves, ensures we work for a boss while also enriching the few at the expense of the many.

The land monopoly consists of enforcement by government of land titles which do not rest upon personal occupancy and use. It also includes making the squatting of abandoned housing and other forms of property illegal. This leads to ground-rent, by which landlords get payment for letting others use the land they own but do not actually cultivate or use. It also allows the ownership and control of natural resources like oil, gas, coal and timber. This monopoly is particularly exploitative as the owner cannot claim to have created the land or its resources. It was available to all until the landlord claimed it by fencing it off and barring others from using it.

Until the nineteenth century, the control of land was probably the single most important form of privilege by which working people were forced to accept less than its product as a wage. While this monopoly is less important in a modern capitalist society (as few people know how to farm), it still plays a role (particularly in terms of ownership of natural resources). At a minimum, every home and workplace needs land on which to be built. Thus while cultivation of land has become less important, the use of land remains crucial. The land monopoly, therefore, ensures that working people find no land to cultivate, no space to set up shop and no place to sleep without first having to pay a landlord a sum for the privilege of setting foot on the land they own but neither created nor use. At best, the worker has mortgaged their life for decades to get their wee bit of soil or, at worse, paid their rent and remained as property-less as before. Either way, the landlords are richer for the exchange.

Moreover, the land monopoly did play an important role in **creating** capitalism (also see section F.8.3). This took two main forms. Firstly, the state enforced the ownership of large estates in the hands of a single family. Taking the best land by force, these landlords turned vast tracks of land into parks and hunting grounds so forcing the peasants little option but to huddle together on what remained. Access to superior land was therefore only possible by paying a rent for the privilege, if at all. Thus an elite claimed ownership of vacant lands, and by controlling access to it (without themselves ever directly occupying or working it) they controlled the labouring classes of the time. Secondly, the ruling elite also simply stole land which had traditionally been

owned by the community. This was called enclosure, the process by which common land was turned into private property. Economist William Lazonick summaries this process:

> *"The reorganisation of agricultural land [the enclosure movement] ... inevitably undermined the viability of traditional peasant agriculture . .. [it] created a sizeable labour force of disinherited peasants with only tenuous attachments to the land. To earn a living, many of these peasants turned to 'domestic industry' — the production of goods in their cottages ... It was the eighteenth century expansion of domestic industry ... that laid the basis for the British Industrial Revolution. The emergence of labour-saving machine technology transformed ... textile manufacture ... and the factory replaced the family home as the predominant site of production."* [**Business Organisation and the Myth of the Market Economy**, pp. 3–4]

By being able to *"legally"* bar people from *"their"* property, the landlord class used the land monopoly to ensure the creation of a class of people with nothing to sell but their labour (i.e. liberty). Land was taken from those who traditionally used it, violating common rights, and it was used by the landlord to produce for their own profit (more recently, a similar process has been going on in the Third World as well). Personal occupancy was replaced by landlordism and agricultural wage slavery, and so *"the Enclosure Acts ... reduced the agricultural population to misery, placed them at the mercy of the landowners, and forced a great number of them to migrate to the towns where, as proletarians, they were delivered to the mercy of the middle-class manufacturers."* [Peter Kropotkin, **The Great French Revolution**, vol. 1, pp. 117–8]

A variation of this process took place in countries like America, where the state took over ownership of vast tracks of land and then sold it to farmers. As Howard Zinn notes, the Homestead Act *"gave 160 acres of western land, unoccupied and publicly owned, to anyone who would cultivate it for fives years. Anyone willing to pay $1.25 an acre could buy a homestead. Few ordinary people had the $200 necessary to do this; speculators moved in and bought up much of the land."* [**A People's History of the United States**, p. 233] Those farmers who did pay the money often had to go into debt to do so, placing an extra burden on their labour. Vast tracks of land were also given to railroad and other companies either directly (by gift or by selling cheap) or by lease (in the form of privileged access to state owned land for the purpose of extracting raw materials like lumber and oil). Either way, access to land was restricted and those who actually did work it ended up paying a tribute to the landlord in one form or another (either directly in rent or indirectly by repaying a loan).

This was the land monopoly in action (also see sections F.8.3, F.8.4 and F.8.5 for more details) and from it sprang the tools and equipment monopoly as domestic industry could not survive in the face of industrial capitalism. Confronted with competition from industrial production growing rich on the profits produced from cheap labour, the ability of workers to own their own means of production decreased over time. From a situation where most workers owned their own tools and, consequently, worked for themselves, we now face an economic regime were the tools and equipment needed for work are owned by a capitalists and, consequently, workers now work for a boss.

The tools and equipment monopoly is similar to the land monopoly as it is based upon the capitalist denying workers access to their capital unless the worker pays tribute to the owner for using it. While capital is *"simply stored-up labour which has already received its pay in full"* and

so *"the lender of capital is entitled to its return intact, and nothing more"* (to use Tucker's words), due to legal privilege the capitalist is in a position to charge a *"fee"* for its use. This is because, with the working class legally barred from both the land and available capital (the means of life), members of that class have little option but to agree to wage contracts which let capitalists extract a *"fee"* for the use of their equipment (see section B.3.3).

Thus the capital-monopoly is, like the land monopoly, enforced by the state and its laws. This is most clearly seen if you look at the main form in which such capital is held today, the corporation. This is nothing more than a legal construct. *"Over the last 150 years,"* notes Joel Bakan, *"the corporation has risen from relative obscurity to becomes the world's dominant economic institution."* The law has been changed to give corporations *"limited liability"* and other perks in order *"to attract valuable incorporation business ... by jettisoning unpopular [to capitalists] restrictions from ... corporate laws."* Finally, the courts *"fully transformed the corporation onto a 'person,' with its own identity ... and empowered, like a real person, to conduct business in its own name, acquire assets, employ workers, pay taxes, and go to court to assert its rights and defend its actions."* In America, this was achieved using the 14th Amendment (which was passed to protect freed slaves!). In summary, the corporation *"is not an independent 'person' with its own rights, needs, and desires ... It is a state-created tool for advancing social and economic policy."* [**The Corporation**, p. 5, p. 13, p. 16 and p. 158]

Nor can it be said that this monopoly is the product of hard work and saving. The capital-monopoly is a recent development and how this situation developed is usually ignored. If not glossed over as irrelevant, some fairy tale is spun in which a few bright people saved and worked hard to accumulate capital and the lazy majority flocked to be employed by these (almost superhuman) geniuses. In reality, the initial capital for investing in industry came from wealth plundered from overseas or from the proceeds of feudal and landlord exploitation. In addition, as we discuss in section F.8, extensive state intervention was required to create a class of wage workers and ensure that capital was in the best position to exploit them. This explicit state intervention was scaled down once the capital-monopoly found its own feet.

Once this was achieved, state action became less explicit and becomes focused around defending the capitalists' property rights. This is because the *"fee"* charged to workers was partly reinvested into capital, which reduced the prices of goods, ruining domestic industry and so narrowing the options available to workers in the economy. In addition, investment also increased the set-up costs of potential competitors, which continued the dispossession of the working class from the means of production as these *"natural"* barriers to entry into markets ensured few members of that class had the necessary funds to create co-operative workplaces of appropriate size. So while the land monopoly was essential to create capitalism, the *"tools and equipment"* monopoly that sprang from it soon became the mainspring of the system.

In this way usury became self-perpetuating, with apparently *"free exchanges"* being the means by which capitalist domination survives. In other words, "past initiations of force" combined with the current state protection of property ensure that capitalist domination of society continues with only the use of *"defensive"* force (i.e. violence used to protect the power of property owners against unions, strikes, occupations, etc.). The *"fees"* extracted from previous generations of workers has ensured that the current one is in no position to re-unite itself with the means of life by *"free competition"* (in other words, the paying of usury ensures that usury continues). Needless to say, the surplus produced by this generation will be used to increase the capital stock and so ensure the dispossession of future generations and so usury becomes self-perpetuating. And, of

course, state protection of *"property"* against *"theft"* by working people ensures that property remains theft and the **real** thieves keep their plunder.

As far as the *"ideas"* monopoly is concerned, this has been used to enrich capitalist corporations at the expense of the general public and the inventor. Patents make an astronomical price difference. Until the early 1970s, for example, Italy did not recognise drug patents. As a result, Roche Products charged the British National Health Service over 40 times more for patented components of Librium and Valium than charged by competitors in Italy. As Tucker argued, the patent monopoly *"consists in protecting investors and authors against competition for a period long enough to enable them to extort from the people a reward enormously in excess of the labour measure of their services, — in other words, in giving certain people a right of property for a term of years and facts of nature, and the power to extract tribute from others for the use of this natural wealth which should be open to all."* [**The Individualist Anarchists**, p. 86]

The net effect of this can be terrible. The Uruguay Round of global trade negotiations *"strengthen intellectual property rights. American and other Western drug companies could now stop drug companies in India and Brazil from 'stealing' their intellectual property. But these drug companies in the developing world were making these life-saving drugs available to their citizens at a fraction of the price at which the drugs were sold by the Western drug companies ... Profits of the Western drug companies would go up ... but the increases profits from sales in the developing world were small, since few could afford the drugs ... [and so] thousands were effectively condemned to death, becomes governments and individuals in developing countries could no longer pay the high prices demanded."* [Joseph Stiglitz, **Globalisation and its discontents**, pp. 7–8] While international outrage over AIDS drugs eventually forced the drug companies to sell the drugs at cost price in late 2001, the underlying intellectual property rights regime was still in place.

The irony that this regime was created in a process allegedly about trade liberalisation should not go unnoticed. *"Intellectual property rights,"* as Noam Chomsky correctly points out, *"are a protectionist measure, they have nothing to do with free trade — in fact, they're the exact **opposite** of free trade."* [**Understanding Power**, p. 282] The fundamental injustice of the *"ideas monopoly"* is exacerbated by the fact that many of these patented products are the result of government funding of research and development, with private industry simply reaping monopoly profits from technology it did not spend a penny to develop. In fact, extending government aid for research and development is considered an important and acceptable area of state intervention by governments and companies verbally committed to the neo-liberal agenda.

The *"ideas monopoly"* actually works against its own rationale. Patents suppress innovation as much as they encourage it. The research scientists who actually do the work of inventing are required to sign over patent rights as a condition of employment, while patents and industrial security programs used to bolster competitive advantage on the market actually prevent the sharing of information, so reducing innovation (this evil is being particularly felt in universities as the new *"intellectual property rights"* regime is spreading there). Further research stalls as the incremental innovation based on others' patents is hindered while the patent holder can rest on their laurels as they have no fear of a competitor improving the invention. They also hamper technical progress because, by their very nature, preclude the possibility of independent discovery. Also, of course, some companies own a patent explicitly not to use it but simply to prevent someone else from so doing.

As Noam Chomsky notes, today trade agreements like GATT and NAFTA *"impose a mixture of liberalisation and protection, going far beyond trade, designed to keep wealth and power firmly in*

the hands of the masters." Thus *"investor rights are to be protected and enhanced"* and a key demand *"is increased protection for 'intellectual property,' including software and patents, with patent rights extending to process as well as product"* in order to *"ensure that US-based corporations control the technology of the future"* and so *"locking the poor majority into dependence on high-priced products of Western agribusiness, biotechnology, the pharmaceutical industry and so on."* [**World Orders, Old and New**, p. 183, p. 181 and pp. 182–3] This means that if a company discovers a new, more efficient, way of producing a drug then the *"ideas monopoly"* will stop them and so *"these are not only highly protectionist measures ... they're a blow **against** economic efficiency and technological process — that just shows you how much 'free trade' really is involved in all of this."* [Chomsky, **Understanding Power**, p. 282]

All of which means that the corporations (and their governments) in the developed world are trying to prevent emergence of competition by controlling the flow of technology to others. The "free trade" agreements are being used to create monopolies for their products and this will either block or slow down the rise of competition. While corporate propagandists piously denounce "anti-globalisation" activists as enemies of the developing world, seeking to use trade barriers to maintain their (Western) lifestyles at the expense of the poor nations, the reality is different. The *"ideas monopoly"* is being aggressively used to either suppress or control the developing world's economic activity in order to keep the South as, effectively, one big sweatshop. As well as reaping monopoly profits directly, the threat of "low-wage" competition from the developing world can be used to keep the wage slaves of the developed world in check and so maintain profit levels at home.

This is not all. Like other forms of private property, the usury produced by it helps ensure it becomes self-perpetuating. By creating "legal" absolute monopolies and reaping the excess profits these create, capitalists not only enrich themselves at the expense of others, they also ensure their dominance in the market. Some of the excess profits reaped due to patents and copyrights are invested back into the company, securing advantages by creating various "natural" barriers to entry for potential competitors. Thus patents impact on business structure, encouraging the formation and dominance of big business.

Looking at the end of the nineteenth century, the ideas monopoly played a key role in promoting cartels and, as a result, laid the foundation for what was to become corporate capitalism in the twentieth century. Patents were used on a massive scale to promote concentration of capital, erect barriers to entry, and maintain a monopoly of advanced technology in the hands of western corporations. The exchange or pooling of patents between competitors, historically, has been a key method for the creation of cartels in industry. This was true especially of the electrical appliance, communications, and chemical industries. For example, by the 1890s, two large companies, General Electric and Westinghouse, *"monopolised a substantial part of the American electrical manufacturing industry, and their success had been in large measure the result of patent control."* The two competitors simply pooled their patents and *"yet another means of patent and market control had developed: corporate patent-pooling agreements. Designed to minimise the expense and uncertainties of conflict between the giants, they greatly reinforced the position of each vis-à-vis lesser competitors and new entrants into the field."* [David Noble, **American By Design**, p. 10]

While the patent system is, in theory, promoted to defend the small scale inventor, in reality it is corporate interests that benefit. As David Noble points out, the *"inventor, the original focus of the patent system, tended to increasingly to 'abandon' his patent in exchange for corporate security;*

he either sold or licensed his patent rights to industrial corporations or assigned them to the company of which he became an employee, bartering his genius for a salary. In addition, by means of patent control gained through purchase, consolidation, patent pools, and cross-licensing agreements, as well as by regulated patent production through systematic industrial research, the corporations steadily expanded their 'monopoly of monopolies.'" As well as this, corporations used *"patents to circumvent anti-trust laws."* This reaping of monopoly profits at the expense of the customer made such *"tremendous strides"* between 1900 and 1929 and *"were of such proportions as to render subsequent judicial and legislative effects to check corporate monopoly through patent control too little too late."* [**Op. Cit.**, p. 87, p. 84 and p. 88]

Things have changed little since Edwin Prindle, a corporate patent lawyer, wrote in 1906 that:

> *"Patents are the best and most effective means of controlling competition. They occasionally give absolute command of the market, enabling their owner to name the price without regard to the cost of production... Patents are the only legal form of absolute monopoly .. . The power which a patentee has to dictate the conditions under which his monopoly may be exercised had been used to form trade agreements throughout practically entire industries."* [quoted by Noble, **Op. Cit.**, p. 89]

Thus, the ruling class, by means of the state, is continually trying to develop new forms of private property by creating artificial scarcities and monopolies, e.g. by requiring expensive licenses to engage in particular types of activities, such as broadcasting or producing certain kinds of medicines or products. In the *"Information Age,"* usury (use fees) from intellectual property are becoming a much more important source of income for elites, as reflected in the attention paid to strengthening mechanisms for enforcing copyright and patents in the recent GATT agreements, or in US pressure on foreign countries (like China) to respect such laws.

This allows corporations to destroy potential competitors and ensure that their prices can be set as high as possible (and monopoly profits maintained indefinitely). It also allows them to enclose ever more of the common inheritance of humanity, place it under private ownership and charge the previous users money to gain access to it. As Chomsky notes, *"U.S. corporations must control seeds, plant varieties, drugs, and the means of life generally."* [**World Orders, Old and New**, p. 183] This has been termed *"bio-piracy"* (a better term may be the new enclosures) and it is a process by which *"international companies [are] patenting traditional medicines or foods."* They *"seek to make money from 'resources' and knowledge that rightfully belongs to the developing countries"* and *"in so doing, they squelch domestic firms that have long provided the products. While it is not clear whether these patents would hold up in court if they were effectively challenged, it is clear that the less developed countries many not have the legal and financial resources required to challenge the patent."* [Joseph Stiglitz, **Op. Cit.**, p. 246] They may also not withstand the economic pressures they may experience if the international markets conclude that such acts indicate a regime that is less that business friendly. That the people who were dependent on the generic drugs or plants can no longer afford them is as irrelevant as the impediments to scientific and technological advance they create.

In other words, capitalists desire to skew the *"free market"* in their favour by ensuring that the law reflects and protects their interests, namely their *"property rights."* By this process they ensure that co-operative tendencies within society are crushed by state-supported "market forces." As Noam Chomsky puts it, modern capitalism is *"state protection and public subsidy for the rich,*

market discipline for the poor." [*"Rollback, Part I"*, **Z Magazine**] Self-proclaimed defenders of "free market" capitalism are usually nothing of the kind, while the few who actually support it only object to the *"public subsidy"* aspect of modern capitalism and happily support state protection for property rights.

All these monopolies seek to enrich the capitalist (and increase their capital stock) at the expense of working people, to restrict their ability to undermine the ruling elites power and wealth. All aim to ensure that any option we have to work for ourselves (either individually or collectively) is restricted by tilting the playing field against us, making sure that we have little option but to sell our labour on the *"free market"* and be exploited. In other words, the various monopolies make sure that "natural" barriers to entry (see section C.4) are created, leaving the heights of the economy in the control of big business while alternatives to capitalism are marginalised at its fringes.

So it is these kinds of property and the authoritarian social relationships that they create which the state exists to protect. It should be noted that converting private to state ownership (i.e. nationalisation) does not fundamentally change the nature of property relationships; it just removes private capitalists and replaces them with bureaucrats (as we discuss in section B.3.5).

B.3.3 Why is property exploitative?

To answer this question, consider the monopoly of productive *"tools and equipment."* This monopoly, obtained by the class of industrial capitalists, allows this class in effect to charge workers a *"fee"* for the privilege of using the monopolised tools and equipment.

This occurs because property, in Proudhon words, *"excommunicates"* the working class. This means that private property creates a class of people who have no choice but to work for a boss in order to pay the landlord rent or buy the goods they, as a class, produce but do not own. The state enforces property rights in land, workplaces and so on, meaning that the owner can bar others from using them and enforce **their** rules on those they do let use *"their"* property. So the boss *"gives you a job; that is, permission to work in the factory or mill which was not built by him but by other workers like yourself. And for that permission you help to support him for ... as long as you work for him."* [Alexander Berkman, **What is Anarchism?**, p. 14] This is called wage labour and is, for anarchists, the defining characteristic of capitalism.

This class of people who are dependent on wages to survive was sometimes called the *"proletariat"* by nineteenth century anarchists. Today most anarchists usually call it the *"working class"* as most workers in modern capitalist nations are wage workers rather than peasants or artisans (i.e. self-employed workers who are also exploited by the private property system, but in different ways). It should also be noted that property used in this way (i.e. to employ and exploit other people's labour) is also called ***"capital"*** by anarchists and other socialists. Thus, for anarchists, private property generates a class system, a regime in which the few, due to their ownership of wealth and the means of producing it, rule over the many who own very little (see section B.7 for more discussion of classes).

This ensures that the few can profit from the work of others:

> *"In the capitalist system the working man cannot [in general] work for himself ... So ... you must find an employer. You work for him ... In the capitalist system the whole working class sells its labour power to the employing class. The workers build factories,*

> *make machinery and tools, and produce goods. The employers keep the factories, the machinery, the tools and the goods for themselves as* ***their profit.*** *The workers only get their wages ... Though the workers, as a class, have built the factories, a slice of their daily labour is taken from them for the privilege of* ***using*** *those factories ... Though the workers have made the tools and the machinery, another slice of their daily labour is taken from them for the privilege of* ***using*** *those tools and machinery ...*
>
> *"Can you guess now why the wisdom of Proudhon said that* ***the possessions of the rich are stolen property****? Stolen from the producer, the worker."* [Berkman, **Op. Cit.**, pp. 7–8]

Thus the daily theft/exploitation associated with capitalism is dependent on the distribution of wealth and private property (i.e. the initial theft of the means of life, the land, workplaces and housing by the owning class). Due to the dispossession of the vast majority of the population from the means of life, capitalists are in an ideal position to charge a *"use-fee"* for the capital they own, but neither produced nor use. Having little option, workers agree to contracts within which they forfeit their autonomy during work and the product of that work. This results in capitalists having access to a *"commodity"* (labour) that can potentially produce more value than it gets paid for in wages.

For this situation to arise, for wage labour to exist, workers must not own or control the means of production they use. As a consequence, are controlled by those who do own the means of production they use during work hours. As their labour is owned by their boss and as labour cannot be separated from the person who does it, the boss effectively owns the worker for the duration of the working day and, as a consequence, exploitation becomes possible. This is because during working hours, the owner can dictate (within certain limits determined by worker resistance and solidarity as well as objective conditions, such as the level of unemployment within an industry or country) the organisation, level, duration, conditions, pace and intensity of work, and so the amount of output (which the owner has sole rights over even though they did not produce it).

Thus the *"fee"* (or *"surplus value"*) is created by owners paying workers less than the full value added by their labour to the products or services they create for the firm. The capitalist's profit is thus the difference between this *"surplus value,"* created by and appropriated from labour, minus the firm's overhead and cost of raw materials (See also section C.2 — *"Where do profits come from?"*).

So property is exploitative because it allows a surplus to be monopolised by the owners. Property creates hierarchical relationships within the workplace (the *"tools and equipment monopoly"* might better be called the *"power monopoly"*) and as in any hierarchical system, those with the power use it to protect and further their own interests at the expense of others. Within the workplace there is resistance by workers to this oppression and exploitation, which the *"hierarchical . .. relations of the capitalist enterprise are designed to resolve this conflict in favour of the representatives of capital."* [William Lazonick, **Op. Cit.**, p. 184]

Needless to say, the state is always on hand to protect the rights of property and management against the actions of the dispossessed. When it boils down to it, it is the existence of the state as protector of the *"power monopoly"* that allows it to exist at all.

So, capitalists are able to appropriate this surplus value from workers solely because they own the means of production, not because they earn it by doing productive work themselves. Of course some capitalists **may** also contribute to production, in which case they are in fairness

entitled to the amount of value added to the firm's output by their own labour; but owners typically pay themselves much more than this, and are able to do so because the state guarantees them that right as property owners (which is unsurprising, as they alone have knowledge of the firms inputs and outputs and, like all people in unaccountable positions, abuse that power — which is partly why anarchists support direct democracy as the essential counterpart of free agreement, for no one in power can be trusted not to prefer their own interests over those subject to their decisions). And of course many capitalists hire managers to run their businesses for them, thus collecting income for doing nothing except owning.

Capitalists' profits, then, are a form of state-supported exploitation. This is equally true of the interest collected by bankers and rents collected by landlords. Without some form of state, these forms of exploitation would be impossible, as the monopolies on which they depend could not be maintained. For instance, in the absence of state troops and police, workers would simply take over and operate factories for themselves, thus preventing capitalists from appropriating an unjust share of the surplus they create.

B.3.4 Can private property be justified?

No. Even though a few supporters of capitalism recognise that private property, particularly in land, was created by the use of force, most maintain that private property is just. One common defence of private property is found in the work of Robert Nozick (a supporter of *"free market"* capitalism). For Nozick, the use of force makes acquisition illegitimate and so any current title to the property is illegitimate (in other words, theft and trading in stolen goods does not make ownership of these goods legal). So, if the initial acquisition of land was illegitimate then all current titles are also illegitimate. And since private ownership of land is the basis of capitalism, capitalism itself would be rendered illegal.

To get round this problem, Nozick utilises the work of Locke (*"The Lockean Proviso"*) which can be summarised as:

However, there are numerous flaws in this theory. Most obvious is why does the mixing of something you own (labour) with something owned by all (or unowned) turn it in your property? Surely it would be as likely to simply mean that you have lost the labour you have expended (for example, few would argue that you owned a river simply because you swam or fished in it). Even if we assume the validity of the argument and acknowledge that by working on a piece of land creates ownership, why assume that this ownership must be based on **capitalist** property rights? Many cultures have recognised no such *"absolute"* forms of property, admitted the right of property in what is produced but not the land itself.

As such, the assumption that expending labour turns the soil into private property does not automatically hold. You could equally argue the opposite, namely that labour, while producing ownership of the goods created, does not produce property in land, only possession. In the words of Proudhon:

> *"I maintain that the possessor is paid for his trouble and industry .. . but that he acquires no right to the land. 'Let the labourer have the fruits of his labour.' Very good; but I do not understand that property in products carries with it property in raw material. Does the skill of the fisherman, who on the same coast can catch more fish than his fellows, make him proprietor of the fishing-grounds? Can the expertness of a hunter ever be*

regarded as a property-title to a game-forest? The analogy is perfect, — the industrious cultivator finds the reward of his industry in the abundancy and superiority of his crop. If he has made improvements in the soil, he has the possessor's right of preference. Never, under any circumstances, can he be allowed to claim a property-title to the soil which he cultivates, on the ground of his skill as a cultivator.

"To change possession into property, something is needed besides labour, without which a man would cease to be proprietor as soon as he ceased to be a laborer. Now, the law bases property upon immemorial, unquestionable possession; that is, prescription. Labour is only the sensible sign, the physical act, by which occupation is manifested. If, then, the cultivator remains proprietor after he has ceased to labor and produce; if his possession, first conceded, then tolerated, finally becomes inalienable, — it happens by permission of the civil law, and by virtue of the principle of occupancy. So true is this, that there is not a bill of sale, not a farm lease, not an annuity, but implies it .. .

"Man has created every thing — every thing save the material itself. Now, I maintain that this material he can only possess and use, on condition of permanent labor, — granting, for the time being, his right of property in things which he has produced.

*"This, then, is the first point settled: property in product, if we grant so much, does not carry with it property in the means of production; that seems to me to need no further demonstration. There is no difference between the soldier who possesses his arms, the mason who possesses the materials committed to his care, the fisherman who possesses the water, the hunter who possesses the fields and forests, and the cultivator who possesses the lands: all, if you say so, are proprietors of their products — not one is proprietor of the means of production. The right to product is exclusive –**jus in re**; the right to means is common — **jus ad rem**."* [**What is Property?**, pp. 120–1]

Proudhon's argument has far more historical validity than Nozick's. Common ownership of land combined with personal use has been the dominant form of property rights for tens of thousands of years while Nozick's *"natural law"* theory dates back to Locke's work in the seventh century (itself an attempt to defend the encroachment of capitalist norms of ownership over previous common law ones). Nozick's theory only appears valid because we live in a society where the dominant form of property rights are capitalist. As such, Nozick is begging the question — he is assuming the thing he is trying to prove.

Ignoring these obvious issues, what of Nozick's actual argument?

The first thing to note is that it is a fairy tale, it is a myth. The current property system and its distribution of resources and ownership rights is a product of thousands of years of conflict, coercion and violence. As such, given Nozick's arguments, it is illegitimate and the current owners have no right to deprive others of access to them or to object to taxation or expropriation. However, it is precisely this conclusion which Nozick seeks to eliminate by means of his story. By presenting an ahistoric thought experiment, he hopes to convince the reader to ignore the actual history of property in order to defend the current owners of property from redistribution. Nozick's theory is only taken seriously because, firstly, it assumes the very thing it is trying to justify (i.e. capitalist property rights) and, as such, has a superficial coherence as a result and, secondly, it has obvious political utility for the rich.

The second thing to note is that the argument itself is deeply flawed. To see why, take (as an example) two individuals who share land in common. Nozick allows for one individual to claim the land as their own as long as the *"process normally giving rise to a permanent bequeathable property right in a previously unowned thing will not do so if the position of others no longer at liberty to use the thing is therefore worsened."* [**Anarchy, State and Utopia**, p. 178] Given this, one of our two land sharers can appropriate the land as long as they can provide the other with a wage greater than what they were originally producing. If this situation is achieved then, according to Nozick, the initial appropriation was just and so are all subsequent market exchanges. In this way, the unowned world becomes owned and a market system based on capitalist property rights in productive resources (the land) and labour develop.

Interestingly, for a ideology that calls itself "libertarian" Nozick's theory defines *"worse off"* in terms purely of material welfare, compared to the conditions that existed within the society based upon common use. However, the fact is if one person appropriated the land that the other cannot live off the remaining land then we have a problem. The other person has no choice but to agree to become employed by the landowner. The fact that the new land owner offers the other a wage to work their land that exceeds what the new wage slave originally produced may meet the *"Lockean Proviso"* misses the point. The important issue is that the new wage slave has no option but to work for another and, as a consequence, becomes subject to that person's authority. In other words, being *"worse off"* in terms of liberty (i.e. autonomy or self-government) is irrelevant for Nozick, a **very** telling position to take.

Nozick claims to place emphasis on self-ownership in his ideology because we are separate individuals, each with our own life to lead. It is strange, therefore, to see that Nozick does not emphasise people's ability to act on their own conception of themselves in his account of appropriation. Indeed, there is no objection to an appropriation that puts someone in an unnecessary and undesirable position of subordination and dependence on the will of others.

Notice that the fact that individuals are now subject to the decisions of other individuals is not considered by Nozick in assessing the fairness of the appropriation. The fact that the creation of private property results in the denial of important freedoms for wage slaves (namely, the wage slave has no say over the status of the land they had been utilising and no say over how their labour is used). Before the creation of private property, all managed their own work, had self-government in all aspects of their lives. After the appropriation, the new wage slave has no such liberty and indeed must accept the conditions of employment within which they relinquish control over how they spend much of their time. That this is issue is irrelevant for the Lockean Proviso shows how concerned about liberty capitalism actually is.

Considering Nozick's many claims in favour of self-ownership and why it is important, you would think that the autonomy of the newly dispossessed wage slaves would be important to him. However, no such concern is to be found — the autonomy of wage slaves is treated as if it were irrelevant. Nozick claims that a concern for people's freedom to lead their own lives underlies his theory of unrestricted property-rights, but, this apparently does not apply to wage slaves. His justification for the creation of private property treats only the autonomy of the land owner as relevant. However, as Proudhon rightly argues:

> *"if the liberty of man is sacred, it is equally sacred in all individuals; that, if it needs property for its objective action, that is, for its life, the appropriation of material is equally necessary for all ... Does it not follow that if one individual cannot prevent*

> *another ... from appropriating an amount of material equal to his own, no more can he prevent individuals to come."* [**Op. Cit.**, pp. 84–85]

The implications of Nozick's argument become clear once we move beyond the initial acts of appropriation to the situation of a developed capitalist economy. In such a situation, **all** of the available useful land has been appropriated. There is massive differences in who owns what and these differences are passed on to the next generation. Thus we have a (minority) class of people who own the world and a class of people (the majority) who can only gain access to the means of life on terms acceptable to the former. How can the majority really be said to own themselves if they may do nothing without the permission of others (the owning minority).

Under capitalism people are claimed to own themselves, but this is purely formal as most people do not have independent access to resources. And as they have to use other peoples' resources, they become under the control of those who own the resources. In other words, private property reduces the autonomy of the majority of the population and creates a regime of authority which has many similarities to enslavement. As John Stuart Mill put it:

> *"No longer enslaved or made dependent by force of law, the great majority are so by force of property; they are still chained to a place, to an occupation, and to conformity with the will of an employer, and debarred by the accident of birth to both the enjoyments, and from the mental and moral advantages, which others inherit without exertion and independently of desert. That this is an evil equal to almost any of those against which mankind have hitherto struggles, the poor are not wrong in believing."* [*"Chapters on Socialism"*, **Principles of Political Economy**, pp. 377–8]

Capitalism, even though claiming formal self-ownership, in fact not only restricts the self-determination of working class people, it also makes them a resource for others. Those who enter the market after others have appropriated all the available property are limited to charity or working for others. The latter, as we discuss in section C, results in exploitation as the worker's labour is used to enrich others. Working people are compelled to co-operate with the current scheme of property and are forced to benefit others. This means that self-determination requires resources as well as rights over one's physical and mental being. Concern for self-determination (i.e. meaningful self-ownership) leads us to common property plus workers' control of production and so some form of libertarian socialism — **not** private property and capitalism.

And, of course, the appropriation of the land requires a state to defend it against the dispossessed as well as continuous interference in people's lives. Left to their own devices, people would freely use the resources around them which they considered unjustly appropriated by others and it is only continuous state intervention that prevents then from violating Nozick's principles of justice (to use Nozick's own terminology, the *"Lockean Proviso"* is a patterned theory, his claims otherwise not withstanding).

In addition, we should note that private ownership by one person presupposes non-ownership by others (*"we who belong to the proletaire class, property excommunicates us!"* [Proudhon, **Op. Cit.**, p. 105]) and so the *"free market"* restricts as well as creates liberties just as any other economic system. Hence the claim that capitalism constitutes *"economic liberty"* is obviously false. In fact, it is **based** upon denying liberty for the vast majority during work hours (as well as having serious impacts on liberty outwith work hours due to the effects of concentrations of wealth upon society).

Perhaps Nozick can claim that the increased material benefits of private property makes the acquisition justified. However, it seems strange that a theory supporting "liberty" should consider well off slaves to be better than poor free men and women. As Nozick claims that the wage slaves consent is not required for the initial acquisition, so perhaps he can claim that the gain in material welfare outweighs the loss of autonomy and so allows the initial act as an act of paternalism. But as Nozick opposes paternalism when it restricts private property rights he can hardly invoke it when it is required to generate these rights. And if we exclude paternalism and emphasise autonomy (as Nozick claims he does elsewhere in his theory), then justifying the initial creation of private property becomes much more difficult, if not impossible.

And if each owner's title to their property includes the historical shadow of the Lockean Proviso on appropriation, then such titles are invalid. Any title people have over unequal resources will be qualified by the facts that *"property is theft"* and that *"property is despotism."* The claim that private property is economic liberty is obviously untrue, as is the claim that private property can be justified in terms of anything except *"might is right."*

In summary, *"[i]f the right of life is equal, the right of labour is equal, and so is the right of occupancy."* This means that *"those who do not possess today are proprietors by the same title as those who do possess; but instead of inferring therefrom that property should be shared by all, I demand, in the name of general security, its entire abolition."* [Proudhon, **Op. Cit.**, p. 77 and p. 66] Simply put, if it is right for the initial appropriation of resources to be made then, by that very same reason, it is right for others in the same and subsequent generations to abolish private property in favour of a system which respects the liberty of all rather than a few.

For more anarchist analysis on private property and why it cannot be justified (be it by occupancy, labour, natural right, or whatever) consult Proudhon's classic work What is Property?. For further discussion on capitalist property rights see section F.4.

B.3.5 Is state owned property different from private property?

No, far from it.

State ownership should not be confused with the common or public ownership implied by the concept of *"use rights."* The state is a hierarchical instrument of coercion and, as we discussed in section B.2, is marked by power being concentrated in a few hands. As the general populate is, by design, excluded from decision making within it this means that the state apparatus has control over the property in question. As the general public and those who use a piece of property are excluded from controlling it, state property is identical to private property. Instead of capitalists owning it, the state bureaucracy does.

This can easily be seen from the example of such so-called *"socialist"* states as the Soviet Union or China. To show why, we need only quote a market socialist who claims that China is not capitalist. According to David Schweickart a society is capitalist if, *"[i]n order to gain access to means of production (without which no one can work), most people must contract with people who own (or represent the owners of) such means. In exchange for a wage of a salary, they agree to supply the owners with a certain quantity and quality of labour.* ***It is a crucial characteristic of the institution of wage labour that the goods or services produced do not belong to the workers who produce them but to those who supply the workers with the means of production.***" Anarchists agree with Schweickart's definition of capitalism. As such, he is right

to argue that a *"society of small farmers and artisans .. . is not a capitalist society, since wage labour is largely absent."* He is, however, wrong to assert that a *"society in which most of [the] means of production are owned by the central government or by local communities — contemporary China, for example — is not a capitalist society, since private ownership of the means of production is not dominant."* [**After Capitalism**, p. 23]

The reason is apparent. As Emma Goldman said (pointing out the obvious), if property is nationalised *"it belongs to the state; this is, the government has control of it and can dispose of it according to its wishes and views ... Such a condition of affairs may be called state capitalism, but it would be fantastic to consider it in any sense Communistic"* (as that needs the *"socialisation of the land and of the machinery of production and distribution"* which *"belong[s] to the people, to be settled and used by individuals or groups according to their needs"* based on *"free access"*). [**Red Emma Speaks**, pp. 406–7]

Thus, by Schweickart's own definition, a system based on state ownership **is** capitalist as the workers clearly do not own the own means of production they use, the state does. Neither do they own the goods or services they produce, the state which supplies the workers with the means of production does. The difference is that rather than being a number of different capitalists there is only one, the state. It is, as Kropotkin warned, the *"mere substitution ... of the State as the universal capitalist for the present capitalists."* [**Evolution and Environment**, p. 106] This is why anarchists have tended to call such regimes *"state capitalist"* as the state basically replaces the capitalist as boss.

While this is most clear for regimes like China's which are dictatorships, the logic also applies to democratic states. No matter if a state is democratic, state ownership is a form of exclusive property ownership which implies a social relationship which is totally different from genuine forms of socialism. Common ownership and use rights produce social relationships based on liberty and equality. State ownership, however, presupposes the existence of a government machine, a centralised bureaucracy, which stands above the members of society, both as individuals and as a group, and has the power to coerce and dominate them. In other words, when a state owns the means of life, the members of society remain proletarians, non-owners, excluded from control. Both legally and in reality, the means of life belong not to them, but to the state. As the state is not an abstraction floating above society but rather a social institution made up of a specific group of human beings, this means that this group controls and so effectively owns the property in question, not society as a whole nor those who actually use it. Just as the owning class excludes the majority, so does the state bureaucracy which means it owns the means of production, whether or not this is formally and legally recognised.

This explains why libertarian socialists have consistently stressed workers' self-management of production as the basis of any real form of socialism. To concentrate on ownership, as both Leninism and social democracy have done, misses the point. Needless to say, those regimes which have replaced capitalist ownership with state property have shown the validity the anarchist analysis in these matters (*"all-powerful, centralised Government with State Capitalism as its economic expression,"* to quote Emma Goldman's summation of Lenin's Russia [**Op. Cit.**, p. 388]). State property is in no way fundamentally different from private property — all that changes is who exploits and oppresses the workers.

For more discussion see section H.3.13 — *"Why is state socialism just state capitalism?"*

B.4 How does capitalism affect liberty?

Private property is in many ways like a private form of state. The owner determines what goes on within the area he or she "owns," and therefore exercises a monopoly of power over it. When power is exercised over one's self, it is a source of freedom, but under capitalism it is a source of coercive authority. As Bob Black points out in **The Abolition of Work**:

> *"The liberals and conservatives and Libertarians who lament totalitarianism are phoneys and hypocrites... You find the same sort of hierarchy and discipline in an office or factory as you do in a prison or a monastery... A worker is a part-time slave. The boss says when to show up, when to leave, and what to do in the meantime. He tells you how much work to do and how fast. He is free to carry his control to humiliating extremes, regulating, if he feels like it, the clothes you wear or how often you go to the bathroom. With a few exceptions he can fire you for any reason, or no reason. He has you spied on by snitches and supervisors, he amasses a dossier on every employee. Talking back is called 'insubordination,' just as if a worker is a naughty child, and it not only gets you fired, it disqualifies you for unemployment compensation...The demeaning system of domination I've described rules over half the waking hours of a majority of women and the vast majority of men for decades, for most of their lifespans. For certain purposes it's not too misleading to call our system democracy or capitalism or — better still — industrialism, but its real names are factory fascism and office oligarchy. Anybody who says these people are 'free' is lying or stupid."* [**The Abolition of Work and other essays**, p. 21]

In response to this, defenders of capitalism usually say something along the lines of *"It's a free market and if you don't like it, find another job."* Of course, there are a number of problems with this response. Most obviously is the fact that capitalism is not and has never been a "free market." As we noted in section B.2, a key role of the state has been to protect the interests of the capitalist class and, as a consequence of this, it has intervened time and time again to skew the market in favour of the bosses. As such, to inform us that capitalism is something it has never been in order to defend it from criticism is hardly convincing.

However, there is another more fundamental issue with the response, namely the assumption that tyranny is an acceptable form of human interaction. To say that your option is either tolerate this boss or seek out another (hopefully more liberal) one suggests an utter lack of understanding what freedom is. Freedom is not the opportunity to pick a master, it is to be have autonomy over yourself. What capitalist ideology has achieved is to confuse having the ability to pick a master with freedom, that consent equates to liberty — regardless of the objective circumstances shaping the choices being made or the nature of the social relationships such choices produce.

While we return to this argument in section B.4.3, a few words seem appropriate now. To see why the capitalist response misses the point, we need only transfer the argument from the

economic regime to the political. Let us assume a system of dictatorial states on an island. Each regime is a monarchy (i.e. a dictatorship). The King of each land decrees what his subjects do, who they associate with and, moreover, appropriates the fruit of their labour in exchange for food, clothing and shelter for however many hours a day he wants (the King is generous and allows his subjects some time to themselves in the evening and weekends). Some of the Kings even decree what their subjects will wear and how they will greet their fellow subjects. Few people would say that those subject to such arrangements are free.

Now, if we add the condition that any subject is free to leave a Kingdom but only if another King will let them join his regime, does that make it any more freer? Slightly, but not by much. The subjects how have a limited choice in who can govern them but the **nature** of the regime they are subjected to does not change. What we would expect to see happen is that those subjects whose skills are in demand will get better, more liberal, conditions than the others (as long as they are in demand). For the majority the conditions they are forced to accept will be as bad as before as they are easily replaceable. Both sets of subjects, however, are still under the autocratic rule of the monarchs. Neither are free but the members of one set have a more liberal regime than the others, dependent on the whims of the autocrats and their need for labour.

That this thought experiment reflects the way capitalism operates is clear. Little wonder anarchists have echoed Proudhon's complaint that *"our large capitalist associations [are] organised in the spirit of commercial and industrial feudalism."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 72] Ironically, rather than deny the anarchist claim, defenders of capitalism have tried to convince us that such a regime is liberty incarnate. Yet the statist nature of private property can be seen in (right-wing) "Libertarian" (i.e. "classical" liberal) works representing the extremes of laissez-faire capitalism:

> *"[I]f one starts a private town, on land whose acquisition did not and does not violate the Lockean proviso [of non-aggression], persons who chose to move there or later remain there would have no **right** to a say in how the town was run, unless it was granted to them by the decision procedures for the town which the owner had established."* [Robert Nozick, **Anarchy, State and Utopia**, p. 270]

This is voluntary feudalism, nothing more. And, indeed, it was. Such private towns have existed, most notably the infamous company towns of US history. Howard Zinn summarises the conditions of such "private towns" in the Colorado mine fields:

> *"Each mining camp was a feudal dominion, with the company acting as lord and master. Every camp had a marshal, a law enforcement officer paid by the company. The 'laws' were the company's rules. Curfews were imposed, 'suspicious' strangers were not allowed to visit the homes, the company store had a monopoly on goods sold in the camp. The doctor was a company doctor, the schoolteachers hired by the company ... Political power in Colorado rested in the hands of those who held economic power. This meant that the authority of Colorado Fuel & Iron and other mine operators was virtually supreme ... Company officials were appointed as election judges. Company-dominated coroners and judges prevented injured employees from collecting damages."* [**The Colorado Coal Strike, 1913–14**, pp. 9–11]

Unsurprisingly, when the workers rebelled against this tyranny, they were evicted from their homes and the private law enforcement agents were extremely efficient in repressing the strikers:

"By the end of the strike, most of the dead and injured were miners and their families." The strike soon took on the features of a war, with battles between strikers and their supporters and the company thugs. Ironically, when the National Guard was sent in to "restore order" the *"miners, having faced in the first five weeks of the strike what they considered a reign of terror at the hands of the private guards, ... looked forward"* to their arrival. They *"did not know that the governor was sending these troops under pressure from the mine operators."* Indeed, the banks and corporations lent the state funds to pay for the militia. It was these company thugs, dressed in the uniform of the state militia, who murdered woman and children in the infamous Ludlow Massacre of April 20th, 1914. [**Op. Cit.**, p. 22, p. 25, p. 35]

Without irony the **New York Times** editorialised that the *"militia was as impersonal and impartial as the law."* The corporation itself hired Ivy Lee (*"the father of public relations in the United States"*) to change public opinion after the slaughter. Significantly, Lee produced a series of tracts labelled *"Facts Concerning the Struggle in Colorado for Industrial Freedom."* The head of the corporation (Rockefeller) portrayed his repression of the strikers as blow for workers' freedom, to *"defend the workers' right to work."* [quoted by Zinn, **Op. Cit.**, p. 44, p. 51 and p. 50] So much for the capitalism being the embodiment of liberty.

Of course, it can be claimed that "market forces" will result in the most liberal owners being the most successful, but a nice master is still a master (and, of course, capitalism then was more "free market" than today, suggesting that this is simply wishful thinking). To paraphrase Tolstoy, *"the liberal capitalist is like a kind donkey owner. He will do everything for the donkey — care for it, feed it, wash it. Everything except get off its back!"* And as Bob Black notes, *"Some people giving orders and others obeying them: this is the essence of servitude... . But freedom means more than the right to change masters."* [*The Libertarian as Conservative*, **The Abolition of Work and other essays**, p. 147] That supporters of capitalism often claim that this "right" to change masters **is** the essence of "freedom" is a telling indictment of the capitalist notion of "liberty."

Needless to say, the authoritarianism of capitalism is not limited to the workplace. Capitalists seek to bolster their power within society as a whole, via the state. Capitalists call upon and support the state when it acts in **their** interests and when it supports **their** authority and power. Any apparent "conflict" between state and capital is like two gangsters fighting over the proceeds of a robbery: they will squabble over the loot and who has more power in the gang, but they need each other to appropriate the goods and defend their "property" against those from whom they stole it.

Unlike a company, however, the democratic state can be influenced by its citizens, who are able to act in ways that limit (to some extent) the power of the ruling elite to be "left alone" to enjoy their power. As a result, the wealthy hate the democratic aspects of the state, and its ordinary citizens, as potential threats to their power. This "problem" was noted by Alexis de Tocqueville in early 19th-century America:

> *"It is easy to perceive that the wealthy members of the community entertain a hearty distaste to the democratic institutions of their country. The populace is at once the object of their scorn and their fears."*

These fears have not changed, nor has the contempt for democratic ideas. To quote one US Corporate Executive, *"one man, one vote will result in the eventual failure of democracy as we know it."* [L. Silk and D. Vogel, **Ethics and Profits: The Crisis of Confidence in American Business**, pp. 189f]

This contempt for democracy does not mean that capitalists are **anti**-state. Far from it. As previously noted, capitalists depend on the state. This is because *"[classical] Liberalism, is in theory a kind of anarchy without socialism, and therefore is simply a lie, for freedom is not possible without equality...The criticism liberals direct at government consists only of wanting to deprive it some of its functions and to call upon the capitalists to fight it out amongst themselves, but it cannot attack the repressive functions which are of its essence: for without the **gendarme** the property owner could not exist."* [Errico Malatesta, **Anarchy**, p. 47]

We have discussed the state and how the ruling elite control in section B.2 and will not do so here. Nor we will discuss the ways in which the elite use that state to enforce private property (see section B.3) or use the state to intervene in society (see section D.1). Rather, the rest of this section will discuss how capitalism impacts on freedom and autonomy and why the standard apologetics by defenders of capitalism fail.

B.4.1 Is capitalism based on freedom?

For anarchists, freedom means both *"freedom from"* and *"freedom to."* "Freedom from" signifies not being subject to domination, exploitation, coercive authority, repression, or other forms of degradation and humiliation. "Freedom to" means being able to develop and express one's abilities, talents, and potentials to the fullest possible extent compatible with the maximum freedom of others. Both kinds of freedom imply the need for self-management, responsibility, and independence, which basically means that people have a say in the decisions that affect their lives. And since individuals do not exist in a social vacuum, it also means that freedom **must** take on a collective aspect, with the associations that individuals form with each other (e.g. communities, work groups, social groups) being run in a manner which allows the individual to participate in the decisions that the group makes. Thus freedom for anarchists requires participatory democracy, which means face-to-face discussion and voting on issues by the people affected by them.

Are these conditions of freedom met in the capitalist system? Obviously not. Despite all their rhetoric about "democracy," most of the "advanced" capitalist states remain only superficially democratic — and this because the majority of their citizens are employees who spend about half their waking hours under the thumb of capitalist dictators (bosses) who allow them no voice in the crucial economic decisions that affect their lives most profoundly and require them to work under conditions inimical to independent thinking. If the most basic freedom, namely freedom to think for oneself, is denied, then freedom itself is denied.

The capitalist workplace is profoundly undemocratic. Indeed, as Noam Chomsky points out, the oppressive authority relations in the typical corporate hierarchy would be called fascist or totalitarian if we were referring to a political system. In his words :

> *"There's nothing individualistic about corporations. These are big conglomerate institutions, essentially totalitarian in character, but hardly individualistic. There are few institutions in human society that have such strict hierarchy and top-down control as a business organisation. Nothing there about 'don't tread on me'. You're being tread on all the time."* [**Keeping the Rabble in Line**, p. 280]

Far from being "based on freedom," then, capitalism actually destroys freedom. In this regard, Robert E. Wood, the chief executive officer of Sears, spoke plainly when he said *"[w]e stress the*

advantages of the free enterprise system, we complain about the totalitarian state, but... we have created more or less of a totalitarian system in industry, particularly in large industry." [quoted by Allan Engler, **Apostles of Greed**, p. 68]

Or, as Chomsky puts it, supporters of capitalism do not understand *"the **fundamental** doctrine, that you should be free from domination and control, including the control of the manager and the owner"* [Feb. 14th, 1992 appearance on **Pozner/Donahue**].

Under corporate authoritarianism, the psychological traits deemed most desirable for average citizens to possess are efficiency, conformity, emotional detachment, insensitivity, and unquestioning obedience to authority — traits that allow people to survive and even prosper as employees in the company hierarchy. And of course, for "non-average" citizens, i.e., bosses, managers, administrators, etc., **authoritarian** traits are needed, the most important being the ability and willingness to dominate others.

But all such master/slave traits are inimical to the functioning of real (i.e. participatory/libertarian) democracy, which requires that citizens have qualities like flexibility, creativity, sensitivity, understanding, emotional honesty, directness, warmth, realism, and the ability to mediate, communicate, negotiate, integrate and co-operate. Therefore, capitalism is not only **un**democratic, it is **anti**-democratic, because it promotes the development of traits that make real democracy (and so a libertarian society) impossible.

Many capitalist apologists have attempted to show that capitalist authority structures are "voluntary" and are, therefore, somehow not a denial of individual and social freedom. Milton Friedman (a leading free market capitalist economist) has attempted to do just this. Like most apologists for capitalism he ignores the authoritarian relations explicit within wage labour (within the workplace, "co-ordination" is based upon top-down command, **not** horizontal co-operation). Instead he concentrates on the decision of a worker to sell their labour to a **specific** boss and so ignores the lack of freedom within such contracts. He argues that *"individuals are effectively free to enter or not enter into any particular exchange, so every transaction is strictly voluntary... The employee is protected from coercion by the employer because of other employers for whom he can work."* [**Capitalism and Freedom**, pp. 14–15]

Friedman, to prove the free nature of capitalism, compares capitalism with a simple exchange economy based upon independent producers. He states that in such a simple economy each household *"has the alternative of producing directly for itself, [and so] it need not enter into any exchange unless it benefits from it. Hence no exchange will take place unless both parties do benefit from it. Co-operation is thereby achieved without coercion."* Under capitalism (or the *"complex"* economy) Friedman states that *"individuals are effectively free to enter or not to enter into any particular exchange, so that every transaction is strictly voluntary."* [**Op. Cit.**, p. 13 and p. 14]

A moments thought, however, shows that capitalism is not based on *"strictly voluntary"* transactions as Friedman claims. This is because the proviso that is required to make every transaction *"strictly voluntary"* is **not** freedom not to enter any **particular** exchange, but freedom not to enter into any exchange **at all.**

This, and only this, was the proviso that proved the simple model Friedman presents (the one based upon artisan production) to be voluntary and non-coercive; and nothing less than this would prove the complex model (i.e. capitalism) is voluntary and non-coercive. But Friedman is clearly claiming above that freedom not to enter into any **particular** exchange is enough and so, **only by changing his own requirements**, can he claim that capitalism is based upon freedom.

It is easy to see what Friedman has done, but it is less easy to excuse it (particularly as it is so commonplace in capitalist apologetics). He moved from the simple economy of exchange between independent producers to the capitalist economy without mentioning the most important thing that distinguishes them — namely the separation of labour from the means of production. In the society of independent producers, the worker had the choice of working for themselves — under capitalism this is not the case. For capitalist economists like Friedman, workers choose whether to work or not. The bosses must pay a wage to cover the "disutility" of labour. In reality, of course, most workers face the choice of working or starvation/poverty. Capitalism is based upon the existence of a labour force without access to capital or land, and therefore without a choice as to whether to put its labour in the market or not. Friedman would, hopefully, agree that where there is no choice there is coercion. His attempted demonstration that capitalism co-ordinates without coercion therefore fails.

Capitalist apologists are able to convince some people that capitalism is "based on freedom" only because the system has certain superficial **appearances** of freedom. On closer analysis these appearances turn out to be deceptions. For example, it is claimed that the employees of capitalist firms have freedom because they can always quit. To requote Bob Black:

> *"Some people giving orders and others obeying them: this is the essence of servitude. Of course, as [right-Libertarians] smugly [observe], 'one can at least change jobs,' but you can't avoid having a job — just as under statism one can at least change nationalities but you can't avoid subjection to one nation-state or another. But freedom means more than the right to change masters."* [*"The Libertarian as Conservative"*, **The Abolition of Work and other essays**, p. 147]

Under capitalism, workers have only the Hobson's choice of being governed/exploited or living on the street.

Anarchists point out that for choice to be real, free agreements and associations must be based on the social equality of those who enter into them, and both sides must receive roughly equivalent benefit. But social relations between capitalists and employees can never be equal, because private ownership of the means of production gives rise to social hierarchy and relations of coercive authority and subordination, as was recognised even by Adam Smith (see below).

The picture painted by Walter Reuther (one time head of the US autoworkers' union) of working life in America before the Wagner act is a commentary on class inequality : *"Injustice was as common as streetcars. When men walked into their jobs, they left their dignity, their citizenship and their humanity outside. They were required to report for duty whether there was work or not. While they waited on the convenience of supervisors and foremen they were unpaid. They could be fired without a pretext. They were subjected to arbitrary, senseless rules ... Men were tortured by regulations that made difficult even going to the toilet. Despite grandiloquent statements from the presidents of huge corporations that their door was open to any worker with a complaint, there was no one and no agency to which a worker could appeal if he were wronged. The very idea that a worker could be wronged seemed absurd to the employer."* Much of this indignity remains, and with the globalisation of capital, the bargaining position of workers is further deteriorating, so that the gains of a century of class struggle are in danger of being lost.

A quick look at the enormous disparity of power and wealth between the capitalist class and the working class shows that the benefits of the "agreements" entered into between the two sides

are far from equal. Walter Block, a leading ideologue of the Canadian right-libertarian "think-tank" the Fraser Institute, makes clear the differences in power and benefits when discussing sexual harassment in the workplace:

> *"Consider the sexual harassment which continually occurs between a secretary and a boss ... while objectionable to many women, [it] is not a coercive action. It is rather part of a package deal in which the secretary agrees to **all** aspects of the job when she agrees to accept the job, and especially when she agrees to **keep** the job. The office is, after all, private property. The secretary does not have to remain if the 'coercion' is objectionable."* [quoted by Engler, **Op. Cit.**, p. 101]

The primary goal of the Fraser Institute is to convince people that all other rights must be subordinated to the right to enjoy wealth. In this case, Block makes clear that under private property, only bosses have "freedom to," and most also desire to ensure they have "freedom from" interference with this right.

So, when capitalists gush about the "liberty" available under capitalism, what they are really thinking of is their state-protected freedom to exploit and oppress workers through the ownership of property, a freedom that allows them to continue amassing huge disparities of wealth, which in turn insures their continued power and privileges. That the capitalist class in liberal-democratic states **gives** workers the right to change masters (though this is not true under state capitalism) is far from showing that capitalism is based on freedom, For as Peter Kropotkin rightly points out, *"freedoms are not given, they are taken."* [Peter Kropotkin, **Words of a Rebel**, p. 43] In capitalism, you are "free" to do anything you are permitted to do by your masters, which amounts to "freedom" with a collar and leash.

B.4.2 Is capitalism based on self-ownership?

Murray Rothbard, a leading "libertarian" capitalist, claims that capitalism is based on the *"basic axiom"* of *"the right to self-ownership."* This *"axiom"* is defined as *"the absolute right of each man [sic] ... to control [his or her] body free of coercive interference. Since each individual must think, learn, value, and choose his or her ends and means in order to survive and flourish, the right to self-ownership gives man [sic] the right to perform these vital activities without being hampered by coercive molestation."* [**For a New Liberty**, pp. 26–27]

At first sight, this appears to sound reasonable. That we "own" ourselves and, consequently, we decide what we do with ourselves has an intuitive appeal. Surely this is liberty? Thus, in this perspective, liberty *"is a condition in which a person's ownership rights in his own body and his legitimate material property are **not** invaded, are not aggressed against."* It also lends itself to contrasts with slavery, where one individual owns another and *"the slave has little or no right to self-ownership; his person and his produce are systematically expropriated by his master by the use of violence."* [Rothbard, **Op. Cit.**, p. 41] This means that "self-ownership" can be portrayed as the opposite of slavery: we have the dominion over ourselves that a slaveholder has over their slave. This means that slavery is wrong because the slave owner has stolen the rightful property of the slave, namely their body (and its related abilities). This concept is sometimes expressed as people having a "natural" or "inalienable" right to own their own body and the product of their own labour.

Anarchists, while understanding the appeal of the idea, are not convinced. That "self-ownership," like slavery, places issues of freedom and individuality within the context of private property — as such it shares the most important claim of slavery, namely that people can be objects of the rules of private property. It suggests an alienated perspective and, moreover, a fatal flaw in the dogma. This can be seen from how the axiom is used in practice. In as much as the term "self-ownership" is used simply as an synonym for "individual autonomy" anarchists do not have an issue with it. However, the "basic axiom" is not used in this way by the theorists of capitalism. Liberty in the sense of individual autonomy is not what "self-ownership" aims to justify. Rather, it aims to justify the denial of liberty, not its exercise. It aims to portray social relationships, primarily wage labour, in which one person commands another as examples of liberty rather than what they are, examples of domination and oppression. In other words, "self-ownership" becomes the means by which the autonomy of individuals is limited, if not destroyed, in the name of freedom and liberty.

This is exposed in the right-libertarian slogan *"human rights are property rights."* Assuming this is true, it means that you can alienate your rights, rent them or sell them like any other kind of property. Moreover, if you have no property, you have no human rights as you have no place to exercise them. As Ayn Rand, another ideologue for "free market" capitalism stated, *"there can be no such thing as the right to unrestricted freedom of speech (or of action) on someone else's property."* [**Capitalism: The Unknown Ideal**, p. 258] If you are in someone else's property (say at work) you have no basic rights at all, beyond the right not to be harmed (a right bosses habitually violate anyway by ignoring health and safety issues).

Self-ownership justifies this. You have rented out the property in your person (labour services) and, consequently, another person can tell you what to do, when to do and how to do it. Thus property comes into conflict with liberty. If you argue that *"human rights are property rights"* you automatically ensure that human rights are continually violated in practice simply because there is a conflict between property and liberty. This is not surprising, as the "property rights" theory of liberty was created to justify the denial of other people's liberty and the appropriation of their labour.

Clearly, then, we reach a problem with "self-ownership" (or property in the person) once we take into account private property and its distribution. In a nutshell, capitalists don't pay their employees to perform the other *"vital activities"* listed by Rothbard (learning, valuing, choosing ends and means) — unless, of course, the firm requires that workers undertake such activities in the interests of company profits. Otherwise, workers can rest assured that any efforts to engage in such *"vital activities"* on company time **will** be *"hampered"* by *"coercive molestation."* Therefore wage labour (the basis of capitalism) in practice **denies** the rights associated with "self-ownership," thus alienating the individual from his or her basic rights. Or as Michael Bakunin expressed it, *"the worker sells his person and his liberty for a given time"* under capitalism. [**The Political Philosophy of Bakunin**, p. 187]

In a society of relative equals, "property" would not be a source of power as use would coincidence with occupancy (i.e. private property would be replaced by possession). For example, you would still be able to fling a drunk out of your home. But in a system based on wage labour (i.e. capitalism), property is a different thing altogether, becoming a source of **institutionalised** power and coercive authority through hierarchy. As Noam Chomsky writes, capitalism is based on *"a **particular form** of authoritarian control. Namely, the kind that comes through private ownership and control, which is an **extremely** rigid system of domination."* When "property" is

purely what you, as an individual, use (i.e. **possession**) it is not a source of power. In capitalism, however, "property" rights no longer coincide with **use** rights, and so they become a **denial** of freedom and a source of authority and power over the individual.

As we've seen in the discussion of hierarchy (sections A.2.8 and B.1), all forms of authoritarian control depend on *"coercive molestation"* — i.e. the use or threat of sanctions. This is definitely the case in company hierarchies under capitalism. Bob Black describes the authoritarian nature of capitalism as follows:

> *"[T]he place where [adults] pass the most time and submit to the closest control is at work. Thus ... it's apparent that the source of the greatest direct duress experienced by the ordinary adult is **not** the state but rather the business that employs him. Your foreman or supervisor gives you more or-else orders in a week than the police do in a decade."* [*"The Libertarian as Conservative"*, **The Abolition of Work and other essays**, p. 145]

In developing nations, this control can easily been seen to be an utter affront to human dignity and liberty. There a workplace is often *"surrounded by barbed wire. Behind its locked doors ... workers are supervised by guards who beat and humiliate them on the slightest pretext ... Each worker repeats the same action — sewing on a belt loop, stitching a sleeve — maybe two thousand times a day. They work under painfully bright lights, for twelve- to fourteen-hour shifts, in overheated factories, with too few bathroom breaks, and restricted access to water (to reduce the need for more bathroom breaks), which is often foul and unfit for human consumption in any event."* The purpose is *"to maximise the amount of profit that could be wrung out"* of the workers, with the *"time allocated to each task"* being calculated in *"units of ten thousands of a second."* [Joel Bakan, **The Corporation**, pp. 66–7] While in the developed world the forms of control are, in general, nowhere as extreme (in thanks due to hard won labour organising and struggle) the basic principle is the same. Only a sophist would argue that the workers "owned" themselves and abilities for the period in question — yet this is what the advocates of "self-ownership" do argue.

So if by the term "self-ownership" it is meant "individual autonomy" then, no, capitalism is not based on it. Ironically, the theory of "self-ownership" is used to undercut and destroy genuine self-ownership during working hours (and, potentially, elsewhere). The logic is simple. As I own myself I am, therefore, able to sell myself as well, although few advocates of "self-ownership" are as blunt as this (as we discuss in section F.2.2 right-libertarian Robert Nozick accepts that voluntary slavery flows from this principle). Instead they stress that we "own" our labour and we contract them to others to use. Yet, unlike other forms of property, labour cannot be alienated. Therefore when you sell your labour you sell yourself, your liberty, for the time in question. By alienating your labour power, you alienate the substance of your being, your personality, for the time in question.

As such, "self-ownership" ironically becomes the means of justifying authoritarian social relationships which deny the autonomy it claims to defend. Indeed, these relationships have similarities with slavery, the very thing which its advocates like to contrast "self-ownership" to. While modern defenders of capitalism deny this, classical economist James Mill let the cat out of the bag by directly comparing the two. It is worthwhile to quote him at length:

> *"The great capitalist, the owner of a manufactory, if he operated with slaves instead of free labourers, like the West India planter, would be regarded as owner both of the cap-*

ital, and of the labour. He would be owner, in short, of both instruments of production: and the whole of the produce, without participation, would be his own.

"What is the difference, in the case of the man, who operates by means of labourers receiving wages? The labourer, who receives wages, sells his labour for a day, a week, a month, or a year, as the case may be. The manufacturer, who pays these wages, buys the labour, for the day, the year, or whatever period it may be. He is equally therefore the owner of the labour, with the manufacturer who operates with slaves. The only difference is, in the mode of purchasing. The owner of the slave purchases, at once, the whole of the labour, which the man can ever perform: he, who pays wages, purchases only so much of a man's labour as he can perform in a day, or any other stipulated time. Being equally, however, the owner of the labour, so purchased, as the owner of the slave is of that of the slave, the produce, which is the result of this labour, combined with his capital, is all equally his own. In the state of society, in which we at present exist, it is in these circumstances that almost all production is effected: the capitalist is the owner of both instruments of production: and the whole of the produce is his." [*"Elements of Political Economy"* quoted by David Ellerman, **Property and Contract in Economics**, pp. 53–4

Thus the only *"difference"* between slavery and capitalist labour is the *"mode of purchasing."* The labour itself and its product in both cases is owned by the *"great capitalist."* Clearly this is a case of, to use Rothbard's words, during working hours the worker *"has little or no right to self-ownership; his person and his produce are systematically expropriated by his master."* Little wonder anarchists have tended to call wage labour by the more accurate term ***"wage slavery."*** For the duration of the working day the boss owns the labour power of the worker. As this cannot be alienated from its "owner" this means that the boss effectively owns the worker — and keeps the product of their labour for the privilege of so doing!

There are key differences of course. At the time, slavery was not a voluntary decision and the slaves could not change their master (although in some cultures, such as Ancient Rome, people over the could sell themselves in slavery while *"**voluntary** slavery is sanctioned in the Bible."* [Ellerman, **Op. Cit.**, p. 115 and p. 114]). Yet the fact that under wage slavery people are not forced to take a specific job and can change masters does not change the relations of authority created between the two parties. As we note in the next section, the objection that people can leave their jobs just amounts to saying "love it or leave it!" and does not address the issue at hand. The vast majority of the population cannot avoid wage labour and remain wage workers for most of their adult lives. It is virtually impossible to distinguish being able to sell your liberty/labour piecemeal over a lifetime from alienating your whole lifetime's labour at one go. Changing who you alienate your labour/liberty to does not change the act and experience of alienation.

Thus the paradox of self-ownership. It presupposes autonomy only in order to deny it. In order to enter a contract, the worker exercises autonomy in deciding whether it is advantageous to rent or sell his or her property (their labour power) for use by another (and given that the alternative is, at best, poverty unsurprisingly people do consider it "advantageous" to "consent" to the contract). Yet what is rented or sold is **not** a piece of property but rather a self-governing individual. Once the contract is made and the property rights are transferred, they no longer have autonomy and are treated like any other factor of production or commodity.

In the "self-ownership" thesis this is acceptable due to its assumption that people and their labour power are property. Yet the worker cannot send along their labour by itself to an employer. By its very nature, the worker has to be present in the workplace if this "property" is to be put to use by the person who has bought it. The consequence of contracting out your labour (your property in the person) is that your autonomy (liberty) is restricted, if not destroyed, depending on the circumstances of the particular contract signed. This is because employers hire people, not a piece of property.

So far from being based on the "right to self-ownership," then, capitalism effectively denies it, alienating the individual from such basic rights as free speech, independent thought, and self-management of one's own activity, which individuals have to **give up** when they are employed. But since these rights, according to Rothbard, are the products of humans **as** humans, wage labour alienates them from themselves, exactly as it does the individual's labour power and creativity. For you do not sell your skills, as these skills are **part** of you. Instead, what you have to sell is your **time**, your labour power, and so **yourself.** Thus under wage labour, rights of "self-ownership" are always placed below property rights, the only "right" being left to you is that of finding another job (although even this right is denied in some countries if the employee owes the company money).

It should be stressed that this is **not** a strange paradox of the "self-ownership" axiom. Far from it. The doctrine was most famously expounded by John Locke, who argued that *"every Man has a **Property** in his own **Person.** This no Body has any Right to but himself."* However, a person can sell, *"for a certain time, the Service he undertakes to do, in exchange for Wages he is to receive."* The buyer of the labour then owns both it and its product. *"Thus the Grass my Horse has bit; the Turfs my Servant has cut; and the Ore I have digg'd in any place where I have a right to them in common with others, becomes my **Property,** without the assignation or consent of any body. The **labour** that was mine ... hath **fixed** my **Property** in them."* [**Second Treatise on Government**, Section 27, Section 85 and Section 28]

Thus a person (the servant) becomes the equivalent of an animal (the horse) once they have sold their labour to the boss. Wage labour denies the basic humanity and autonomy of the worker. Rather than being equals, private property produces relations of domination and alienation. Proudhon compared this to an association in which, *"while the partnership lasts, the profits and losses are divided between them; since each produces, not for himself, but for the society; when the time of distribution arrives it is not the producer who is considered, but the associated. That is why the slave, to whom the planter gives straw and rice; and the civilised labour, to whom the capitalist pays a salary which is always too small, — not being associated with their employers, although producing with them, — are disregarded when the product is divided. Thus the horse who draws our coaches ... produce with us, but are not associated with us; we take their product but do not share it with them. The animals and labourers whom we employ hold the same relation to us."* [**What is Property?**, p. 226]

So while the capitalist Locke sees nothing wrong in comparing a person to an animal, the anarchist Proudhon objects to the fundamental injustice of a system which turns a person into a resource for another to use. And we do mean resource, as the self-ownership thesis is also the means by which the poor become little more than spare parts for the wealthy. After all, the poor own their bodies and, consequently, can sell all or part of it to a willing party. This means that someone in dire economic necessity can sell parts of their body to the rich. Ultimately, *"[t]o tell a poor man that he **has** property because he **has** arms and legs — that the hunger from which he*

suffers, and his power to sleep in the open air are his property, — is to play upon words, and to add insult to injury." [Proudhon, **Op. Cit.**, p. 80]

Obviously the ability to labour is **not** the property of a person — it is their possession. Use and ownership are fused and cannot be separated out. As such, anarchists argue that the history of capitalism shows that there is a considerable difference whether one said (like the defenders of capitalism) that slavery is wrong because every person has a natural right to the property of their own body, or because every person has a natural right freely to determine their own destiny (like the anarchists). The first kind of right is alienable and in the context of a capitalist regime ensures that the many labour for those who own the means of life. The second kind of right is inalienable as long as a person remained a person and, therefore, liberty or self-determination is not a claim to ownership which might be both acquired and surrendered, but an inextricable aspect of the activity of being human.

The anarchist position on the inalienable nature of human liberty also forms the basis for the excluded to demand access to the means necessary to labour. *"From the distinction between possession and property,"* argued Proudhon, *"arise two sorts of rights: the **jus in re**, the right **in** a thing, the right by which I may reclaim the property which I have acquired, in whatever hands I find it; and **jus ad rem**, the right **to** a thing, which gives me a claim to become a proprietor ... In the first, possession and property are united; the second includes only naked property. With me who, as a labourer, have a right to the possession of the products of Nature and my own industry — and who, as a proletaire, enjoy none of them — it is by virtue of the **jus de rem** that I demand admittance to the **jus in re**."* [**Op. Cit.**, p. 65] Thus to make the self-ownership of labour and its products a reality for those who do the actual work in society rather than a farce, property must be abolished — both in terms of the means of life and also in defining liberty and what it means to be free.

So, contrary to Rothbard's claim, capitalism in practice uses the rhetoric of self-ownership to alienate the right to genuine self-ownership because of the authoritarian structure of the workplace, which derives from private property. If we desire real self-ownership, we cannot renounce it for most of our adult lives by becoming wage slaves. Only workers' self-management of production, not capitalism, can make self-ownership a reality:

> *"They speak of 'inherent rights', 'inalienable rights', 'natural rights,' etc ... Unless the material conditions for equality exist, it is worse than mockery to pronounce men equal. And unless there is equality (and by equality I mean equal chances for every one to make the most of himself [or herself]) unless, I say, these equal changes exist, freedom, either of though, speech, or action, is equally a mockery ... As long as the working-people ... tramp the streets, whose stones they lay, whose filth they clean, whose sewers they dig, yet upon which they must not stand too long lest the policeman bid them 'move on'; as long as they go from factory to factory, begging for the opportunity to be a slave, receiving the insults of bosses and foreman, getting the old 'no,' the old shake of the head, in these factories they built, whose machines they wrought; so long as they consent to be herd like cattle, in the cities, driven year after year, more and more, off the mortgaged land, the land they cleared, fertilised, cultivated, rendered of value . .. so long as they continue to do these things vaguely relying upon some power outside themselves, be it god, or priest, or politician, or employer, or charitable society, to remedy matters, so long deliverance will be delayed. When they conceive the possibility of a complete*

international federation of labour, whose constituent groups shall take possession of land, mines, factories, all the instruments of production ... , in short, conduct their own industry without regulative interference from law-makers or employers, then we may hope for the only help which counts for aught — Self-Help; the only condition which can guarantee free speech [along with their other rights] (and no paper guarantee needed)." [Voltairine de Cleyre, **The Voltairine de Cleyre Reader**, pp. 4–6]

To conclude, the idea that capitalism is based on self-ownership is radically at odds with reality if, by self-ownership, it is meant self-determination or individual autonomy. However, this is not surprising given that the rationale behind the self-ownership thesis is precisely to justify capitalist hierarchy and its resulting restrictions on liberty. Rather than being a defence of liberty, self-ownership is designed to facilitate its erosion. In order to make the promise of autonomy implied by the concept of "self-ownership" a reality, private property will need to be abolished.

For more discussion of the limitations, contradictions and fallacies of defining liberty in terms of self-ownership and property rights, see section F.2.

B.4.3 But no one forces you to work for them!

Of course it is claimed that entering wage labour is a "voluntary" undertaking, from which both sides allegedly benefit. However, due to **past** initiations of force (e.g. the seizure of land by conquest), the control of the state by the capitalist class plus the tendency for capital to concentrate, a relative handful of people now control vast wealth, depriving all others access to the means of life. Thus denial of free access to the means of life is based ultimately on the principle of "might makes right." And as Murray Bookchin so rightly points out, *"the means of life must be taken for what they literally are: the means without which life is impossible. To deny them to people is more than 'theft' ... it is outright homicide."* [**Remaking Society**, p. 187]

David Ellerman has also noted that the past use of force has resulted in the majority being limited to those options allowed to them by the powers that be:

"It is a veritable mainstay of capitalist thought ... that the moral flaws of chattel slavery have not survived in capitalism since the workers, unlike the slaves, are free people making voluntary wage contracts. But it is only that, in the case of capitalism, the denial of natural rights is less complete so that the worker has a residual legal personality as a free 'commodity owner.' He is thus allowed to voluntarily put his own working life to traffic. When a robber denies another person's right to make an infinite number of other choices besides losing his money or his life and the denial is backed up by a gun, then this is clearly robbery even though it might be said that the victim making a 'voluntary choice' between his remaining options. When the legal system itself denies the natural rights of working people in the name of the prerogatives of capital, and this denial is sanctioned by the legal violence of the state, then the theorists of 'libertarian' capitalism do not proclaim institutional robbery, but rather they celebrate the 'natural liberty' of working people to choose between the remaining options of selling their labour as a commodity and being unemployed." [quoted by Noam Chomsky, **The Chomsky Reader**, p. 186]

Therefore the existence of the labour market depends on the worker being separated from the means of production. The natural basis of capitalism is wage labour, wherein the majority have little option but to sell their skills, labour and time to those who **do** own the means of production. In advanced capitalist countries, less than 10% of the working population are self-employed (in 1990, 7.6% in the UK, 8% in the USA and Canada — however, this figure includes **employers** as well, meaning that the number of self-employed **workers** is even smaller!). Hence for the vast majority, the labour market is their only option.

Michael Bakunin notes that these facts put the worker in the position of a serf with regard to the capitalist, even though the worker is formally "free" and "equal" under the law:

> *"Juridically they are both equal; but economically the worker is the serf of the capitalist ... thereby the worker sells his person and his liberty for a given time. The worker is in the position of a serf because this terrible threat of starvation which daily hangs over his head and over his family, will force him to accept any conditions imposed by the gainful calculations of the capitalist, the industrialist, the employer... .The worker always has the **right** to leave his employer, but has he the means to do so? No, he does it in order to sell himself to another employer. He is driven to it by the same hunger which forces him to sell himself to the first employer. Thus the worker's liberty ... is only a theoretical freedom, lacking any means for its possible realisation, and consequently it is only a fictitious liberty, an utter falsehood. The truth is that the whole life of the worker is simply a continuous and dismaying succession of terms of serfdom — voluntary from the juridical point of view but compulsory from an economic sense — broken up by momentarily brief interludes of freedom accompanied by starvation; in other words, it is real slavery."* [**The Political Philosophy of Bakunin**, pp. 187–8]

Obviously, a company cannot **force** you to work for them but, in general, you have to work for **someone**. How this situation developed is, of course, usually ignored. If not glossed over as irrelevant, some fairy tale is spun in which a few bright people saved and worked hard to accumulate capital and the lazy majority flocked to be employed by these (almost superhuman) geniuses. In the words of one right-wing economist (talking specifically of the industrial revolution but whose argument is utilised today):

> *"The factory owners did not have the power to compel anybody to take a factory job. They could only hire people who were ready to work for the wages offered to them. Low as these wage rates were, they were nonetheless much more than these paupers could earn in any other field open to them."* [Ludwig von Mises, **Human Action**, pp. 619–20]

Notice the assumptions. The workers just happen have such a terrible set of options — the employing classes have absolutely nothing to do with it. And these owners just happen to have all these means of production on their hands while the working class just happen to be without property and, as a consequence, forced to sell their labour on the owners' terms. That the state enforces capitalist property rights and acts to defend the power of the owning class is just another co-incidence among many. The possibility that the employing classes might be directly implicated in state policies that reduced the available options of workers is too ludicrous even to mention.

Yet in the real world, the power of coincidence to explain all is less compelling. Here things are more grim as the owning class clearly benefited from numerous acts of state violence and a general legal framework which restricted the options available for the workers. Apparently we are meant to believe that it is purely by strange co-incidence the state was run by the wealthy and owning classes, not the working class, and that a whole host of anti-labour laws and practices were implemented by random chance.

It should be stressed that this nonsense, with its underlying assumptions and inventions, is still being peddled today. It is being repeated to combat the protests that "multinational corporations exploit people in poor countries." Yes, it will be readily admitted, multinationals **do** pay lower wages in developing countries than in rich ones: that is why they go there. However, it is argued, this represents economic advancement compares to what the other options available are. As the corporations do not force them to work for them and they would have stayed with what they were doing previously the charge of exploitation is wrong. Would you, it is stressed, leave your job for one with less pay and worse conditions? In fact, the bosses are doing them a favour in paying such low wages for the products the companies charge such high prices in the developed world for.

And so, by the same strange co-incidence that marked the industrial revolution, capitalists today (in the form of multinational corporations) gravitate toward states with terrible human rights records. States where, at worse, death squads torture and "disappear" union and peasant co-operative organisers or where, at best, attempts to organise a union can get you arrested or fired and blacklisted. States were peasants are being forced of their land as a result of government policies which favour the big landlords. By an equally strange coincidence, the foreign policy of the American and European governments is devoted to making sure such anti-labour regimes stay in power. It is a co-incidence, of course, that such regimes are favoured by the multinationals and that these states spend so much effort in providing a "market friendly" climate to tempt the corporations to set up their sweatshops there. It is also, apparently, just a co-incidence that these states are controlled by the local wealthy owning classes and subject to economic pressure by the transnationals which invest and wish to invest there.

It is clear that when a person who is mugged hands over their money to the mugger they do so because they prefer it to the "next best alternative." As such, it is correct that people agree to sell their liberty to a boss because their "next best alternative" is worse (utter poverty or starvation are not found that appealing for some reason). But so what? As anarchists have been pointing out over a century, the capitalists have systematically used the state to create a limit options for the many, to create buyers' market for labour by skewing the conditions under which workers can sell their labour in the bosses favour. To then merrily answer all criticisms of this set-up with the response that the workers "voluntarily agreed" to work on those terms is just hypocrisy. Does it really change things if the mugger (the state) is only the agent (hired thug) of another criminal (the owning class)?

As such, hymns to the "free market" seem somewhat false when the reality of the situation is such that workers do not need to be forced at gun point to enter a specific workplace because of **past** (and more often than not, current) "initiation of force" by the capitalist class and the state which have created the objective conditions within which we make our employment decisions. Before any **specific** labour market contract occurs, the separation of workers from the means of production is an established fact (and the resulting "labour" market usually gives the advantage to the capitalists as a class). So while we can usually pick which capitalist to work for, we, in

general, cannot choose to work for ourselves (the self-employed sector of the economy is tiny, which indicates well how spurious capitalist liberty actually is). Of course, the ability to leave employment and seek it elsewhere is an important freedom. However, this freedom, like most freedoms under capitalism, is of limited use and hides a deeper anti-individual reality.

As Karl Polanyi puts it:

> *"In human terms such a postulate [of a labour market] implied for the worker extreme instability of earnings, utter absence of professional standards, abject readiness to be shoved and pushed about indiscriminately, complete dependence on the whims of the market. [Ludwig Von] Mises justly argued that if workers 'did not act as trade unionists, but reduced their demands and changed their locations and occupations according to the labour market, they would eventually find work.' This sums up the position under a system based on the postulate of the commodity character of labour. It is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed."* [**The Great Transformation**, p. 176]

(Although we should point out that von Mises argument that workers will "eventually" find work as well as being nice and vague — how long is "eventually"?, for example — is contradicted by actual experience. As the Keynesian economist Michael Stewart notes, in the nineteenth century workers *"who lost their jobs had to redeploy fast or starve (and even this feature of the ninetheenth century economy... did not prevent prolonged recessions)"* [**Keynes in the 1990s**, p. 31] Workers "reducing their demands" may actually worsen an economic slump, causing more unemployment in the short run and lengthening the length of the crisis. We address the issue of unemployment and workers "reducing their demands" in more detail in section C.9).

It is sometimes argued that capital needs labour, so both have an equal say in the terms offered, and hence the labour market is based on "liberty." But for capitalism to be based on real freedom or on true free agreement, both sides of the capital/labour divide must be equal in bargaining power, otherwise any agreement would favour the most powerful at the expense of the other party. However, due to the existence of private property and the states needed to protect it, this equality is de facto impossible, regardless of the theory. This is because. in general, capitalists have three advantages on the "free" labour market– the law and state placing the rights of property above those of labour, the existence of unemployment over most of the business cycle and capitalists having more resources to fall back on. We will discuss each in turn.

The first advantage, namely property owners having the backing of the law and state, ensures that when workers go on strike or use other forms of direct action (or even when they try to form a union) the capitalist has the full backing of the state to employ scabs, break picket lines or fire "the ring-leaders." This obviously gives employers greater power in their bargaining position, placing workers in a weak position (a position that may make them, the workers, think twice before standing up for their rights).

The existence of unemployment over most of the business cycle ensures that *"employers have a structural advantage in the labour market, because there are typically more candidates... than jobs for them to fill."* This means that *"[c]ompetition in labour markets us typically skewed in favour of employers: it is a buyers market. And in a buyer's market, it is the sellers who compromise. Competition for labour is not strong enough to ensure that workers' desires are always satisified."*

[Juliet B. Schor, **The Overworked American**, p. 71, p. 129] If the labour market generally favours the employer, then this obviously places working people at a disadvantage as the threat of unemployment and the hardships associated with it encourages workers to take any job and submit to their bosses demands and power while employed. Unemployment, in other words, serves to discipline labour. The higher the prevailing unemployment rate, the harder it is to find a new job, which raises the cost of job loss and makes it less likely for workers to strike, join unions, or to resist employer demands, and so on.

As Bakunin argued, *"the property owners... are **likewise** forced to seek out and purchase labour... **but not in the same measure** ... [there is no] equality between those who offer their labour and those who purchase it."* [**Op. Cit.**, p. 183] This ensures that any "free agreements" made benefit the capitalists more than the workers (see the next section on periods of full employment, when conditions tilt in favour of working people).

Lastly, there is the issue of inequalities in wealth and so resources. The capitalist generally has more resources to fall back on during strikes and while waiting to find employees (for example, large companies with many factories can swap production to their other factories if one goes on strike). And by having more resources to fall back on, the capitalist can hold out longer than the worker, so placing the employer in a stronger bargaining position and so ensuring labour contracts favour them. This was recognised by Adam Smith:

> *"It is not difficult to foresee which of the two parties [workers and capitalists] must, upon all ordinary occasions... force the other into a compliance with their terms... In all such disputes the masters can hold out much longer... though they did not employ a single workman [the masters] could generally live a year or two upon the stocks which they already acquired. Many workmen could not subsist a week, few could subsist a month, and scare any a year without employment. In the long-run the workman may be as necessary to his master as his master is to him; but the necessity is not so immediate... [I]n disputes with their workmen, masters must generally have the advantage."* [**Wealth of Nations**, pp. 59–60]

How little things have changed.

So, while it is definitely the case that no one forces you to work for them, the capitalist system is such that you have little choice but to sell your liberty and labour on the "free market." Not only this, but the labour market (which is what makes capitalism capitalism) is (usually) skewed in favour of the employer, so ensuring that any "free agreements" made on it favour the boss and result in the workers submitting to domination and exploitation. This is why anarchists support collective organisation (such as unions) and resistance (such as strikes), direct action and solidarity to make us as, if not more, powerful than our exploiters and win important reforms and improvements (and, ultimately, change society), even when faced with the disadvantages on the labour market we have indicated. The despotism associated with property (to use Proudhon's expression) is resisted by those subject to it and, needless to say, the boss does not always win.

B.4.4 But what about periods of high demand for labour?

Of course there are periods when the demand for labour exceeds supply, but these periods hold the seeds of depression for capitalism, as workers are in an excellent position to challenge, both

individually and collectively, their allotted role as commodities. This point is discussed in more detail in section C.7 (What causes the capitalist business cycle?) and so we will not do so here. For now it's enough to point out that during normal times (i.e. over most of the business cycle), capitalists often enjoy extensive authority over workers, an authority deriving from the unequal bargaining power between capital and labour, as noted by Adam Smith and many others.

However, this changes during times of high demand for labour. To illustrate, let us assume that supply and demand approximate each other. It is clear that such a situation is only good for the worker. Bosses cannot easily fire a worker as there is no one to replace them and the workers, either collectively by solidarity or individually by "exit" (i.e. quitting and moving to a new job), can ensure a boss respects their interests and, indeed, can push these interests to the full. The boss finds it hard to keep their authority intact or from stopping wages rising and causing a profits squeeze. In other words, as unemployment drops, workers power increases.

Looking at it another way, giving someone the right to hire and fire an input into a production process vests that individual with considerable power over that input unless it is costless for that input to move; that is unless the input is perfectly mobile. This is only approximated in real life for labour during periods of full employment, and so perfect mobility of **labour** costs problems for a capitalist firm because under such conditions workers are not dependent on a particular capitalist and so the level of worker effort is determined far more by the decisions of workers (either collectively or individually) than by managerial authority. The threat of firing cannot be used as a threat to increase effort, and hence production, and so full employment increases workers power.

With the capitalist firm being a fixed commitment of resources, this situation is intolerable. Such times are bad for business and so occur rarely with free market capitalism (we must point out that in neo-classical economics, it is assumed that all inputs — including capital — are perfectly mobile and so the theory ignores reality and assumes away **capitalist production** itself!).

During the last period of capitalist boom, the post-war period, we can see the breakdown of capitalist authority and the fear this held for the ruling elite. The Trilateral Commission's 1975 report, which attempted to "understand" the growing discontent among the general population, makes our point well. In periods of full employment, according to the report, there is *"an excess of democracy."* In other words, due to the increased bargaining power workers gained during a period of high demand for labour, people started thinking about and acting upon their needs as **humans,** not as commodities embodying labour power. This naturally had devastating effects on capitalist and statist authority: *"People no longer felt the same compulsion to obey those whom they had previously considered superior to themselves in age, rank, status, expertise, character, or talent".*

This loosening of the bonds of compulsion and obedience led to *"previously passive or unorganised groups in the population, blacks, Indians, Chicanos, white ethnic groups, students and women... embark[ing] on concerted efforts to establish their claims to opportunities, rewards, and privileges, which they had not considered themselves entitled to before."*

Such an *"excess"* of participation in politics of course posed a serious threat to the status quo, since for the elites who authored the report, it was considered axiomatic that *"the effective operation of a democratic political system usually requires some measure of apathy and non-involvement on the part of some individuals and groups... . In itself, this marginality on the part of some groups is inherently undemocratic, but it is also one of the factors which has enabled democracy to function effectively."* Such a statement reveals the hollowness of the establishment's concept of 'democ-

racy,' which in order to function effectively (i.e. to serve elite interests) must be *"inherently undemocratic."*

Any period where people feel empowered allows them to communicate with their fellows, identify their needs and desires, and resist those forces that deny their freedom to manage their own lives. Such resistance strikes a deadly blow at the capitalist need to treat people as commodities, since (to re-quote Polanyi) people no longer feel that it *"is not for the commodity to decide where it should be offered for sale, to what purpose it should be used, at what price it should be allowed to change hands, and in what manner it should be consumed or destroyed."* Instead, as thinking and feeling people, they act to reclaim their freedom and humanity.

As noted at the beginning of this section, the economic effects of such periods of empowerment and revolt are discussed in section C.7. We will end by quoting the Polish economist Michal Kalecki, who noted that a continuous capitalist boom would **not** be in the interests of the ruling class. In 1943, in response to the more optimistic Keynesians, he noted that *"to maintain the high level of employment... in the subsequent boom, a strong opposition of 'business leaders' is likely to be encountered... lasting full employment is not at all to their liking. The workers would 'get out of hand' and the 'captains of industry' would be anxious 'to teach them a lesson'"* because *"under a regime of permanent full employment, 'the sack' would cease to play its role as a disciplinary measure. The social position of the boss would be undermined and the self assurance and class consciousness of the working class would grow. Strikes for wage increases and improvements in conditions of work would create political tension... 'discipline in the factories' and 'political stability' are more appreciated by business leaders than profits. Their class interest tells them that lasting full employment is unsound from their point of view and that unemployment is an integral part of the normal capitalist system."* [quoted by Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 139 and p. 138]

Therefore, periods when the demand for labour outstrips supply are not healthy for capitalism, as they allow people to assert their freedom and humanity — both fatal to the system. This is why news of large numbers of new jobs sends the stock market plunging and why capitalists are so keen these days to maintain a "natural" rate of unemployment (that it has to be maintained indicates that it is **not** "natural"). Kalecki, we must point out, also correctly predicted the rise of *"a powerful bloc"* between *"big business and the rentier interests"* against full employment and that *"they would probably find more than one economist to declare that the situation was manifestly unsound."* The resulting *"pressure of all these forces, and in particular big business"* would *"induce the Government to return to... orthodox policy."* [Kalecki, quoted by Sawyer, **Op. Cit.**, p. 140] This is exactly what happened in the 1970s, with the monetarists and other sections of the "free market" right providing the ideological support for the business lead class war, and whose "theories" (when applied) promptly generated massive unemployment, thus teaching the working class the required lesson.

So, although detrimental to profit-making, periods of recession and high unemployment are not only unavoidable but are necessary to capitalism in order to *"discipline"* workers and *"teach them a lesson."* And in all, it is little wonder that capitalism rarely produces periods approximating full employment — they are **not** in its interests (see also section C.9). The dynamics of capitalism makes recession and unemployment inevitable, just as it makes class struggle (which creates these dynamics) inevitable.

B.4.5 But I want to be "left alone"!

It is ironic that supporters of laissez-faire capitalism, such as "Libertarians" and "anarcho"-capitalists, should claim that they want to be "left alone," since capitalism **never** allows this. As Max Stirner expressed it:

> *"Restless acquisition does not let us take breath, take a calm **enjoyment**. We do not get the comfort of our possessions..."* [Max Stirner **The Ego and Its Own**, p. 268]

Capitalism cannot let us *"take breath"* simply because it needs to grow or die, which puts constant pressure on both workers and capitalists (see section D.4.1). Workers can never relax or be free of anxiety about losing their jobs, because if they do not work, they do not eat, nor can they ensure that their children will get a better life. Within the workplace, they are not "left alone" by their bosses in order to manage their own activities. Instead, they are told what to do, when to do it and how to do it. Indeed, the history of experiments in workers' control and self-management within capitalist companies confirms our claims that, for the worker, capitalism is incompatible with the desire to be "left alone." As an illustration we will use the

"Pilot Program" conducted by General Electric between 1968 and 1972.

General Electric proposed the "Pilot Program" as a means of overcoming the problems they faced with introducing Numeric Control (N/C) machinery into its plant at Lynn River Works, Massachusetts. Faced with rising tensions on the shop floor, bottle-necks in production and low-quality products, GE management tried a scheme of *"job enrichment"* based on workers' control of production in one area of the plant. By June 1970 the workers' involved were *"on their own"* (as one manager put it) and *"[i]n terms of group job enlargement this was when the Pilot Project really began, with immediate results in increased output and machine utilisation, and a reduction on manufacturing losses. As one union official remarked two years later, 'The fact that we broke down a traditional policy of GE [that the union could never have a hand in managing the business] was in itself satisfying, especially when we could throw success up to them to boot.'"* [David Noble, **Forces of Production**, p. 295]

The project, after some initial scepticism, proved to be a great success with the workers involved. Indeed, other workers in the factory desired to be included and the union soon tried to get it spread throughout the plant and into other GE locations. The success of the scheme was that it was based on workers' managing their own affairs rather than being told what to do by their bosses — *"We are human beings,"* said one worker, *"and want to be treated as such."* [quoted by Noble, **Op. Cit.**, p. 292] To be fully human means to be free to govern oneself in all aspects of life, including production.

However, just after a year of the workers being given control over their working lives, management stopped the project. Why? *"In the eyes of some management supporters of the 'experiment,' the Pilot Program was terminated because management as a whole refused to give up any of its traditional authority ... [t]he Pilot Program foundered on the basic contradiction of capitalist production: Who's running the shop?"* [Noble, **Op. Cit.**, p. 318]

Noble goes on to argue that to GE's top management, *"the union's desire to extend the program appeared as a step toward greater workers control over production and, as such, a threat to the traditional authority rooted in private ownership of the means of production. Thus the decision to terminate represented a defence not only of the prerogatives of production supervisors and*

plant managers but also of the power vested in property ownership." He notes that this result was not an isolated case and that the *"demise of the GE Pilot Program followed the typical pattern for such 'job enrichment experiments'"* [**Op. Cit.**, p. 318 and p. 320] Even though *"[s]everal dozen well-documented experiments show that productivity increases and social problems decrease when workers participate in the work decisions affecting their lives"* [Department of Health, Education and Welfare study quoted by Noble, **Op. Cit.**, p. 322] such schemes are ended by bosses seeking to preserve their own power, the power that flows from private property.

As one worker in the GE Pilot Program stated, *"[w]e just want to be left alone."* They were not — capitalist social relations prohibit such a possibility (as Noble correctly notes, *"the 'way of life' for the management meant controlling the lives of others"* [**Op. Cit.**, p. 294 and p. 300]). In spite of improved productivity, projects in workers' control are scrapped because they undermined both the power of the capitalists — and by undermining their power, you potentially undermine their profits too (*"If we're all one, for manufacturing reasons, we must share in the fruits equitably, just like a co-op business."* [GE Pilot Program worker, quoted by Noble, **Op. Cit.**, p. 295]).

As we argue in more detail in section J.5.12, profit maximisation can work against efficiency, meaning that capitalism can harm the overall economy by promoting less efficient production techniques (i.e. hierarchical ones against egalitarian ones) because it is in the interests of capitalists to do so and the capitalist market rewards that behaviour. This is because, ultimately, profits are unpaid labour. If you empower labour, give workers' control over their work then they will increase efficiency and productivity (they know how to do their job the best) but you also erode authority structures within the workplace. Workers' will seek more and more control (freedom naturally tries to grow) and this, as the Pilot Program worker clearly saw, implies a co-operative workplace in which workers', **not** managers, decide what to do with the surplus produced. By threatening power, you threaten profits (or, more correctly, who controls the profit and where it goes). With the control over production **and** who gets to control any surplus in danger, it is unsurprising that companies soon abandon such schemes and return to the old, less efficient, hierarchical schemes based on *"Do what you are told, for as long as you are told."* Such a regime is hardly fit for free people and, as Noble notes, the regime that replaced the GE Pilot Program was *"designed to 'break' the pilots of their new found 'habits' of self-reliance, self-discipline, and self-respect."* [**Op. Cit.**, p. 307]

Thus the experience of workers' control project within capitalist firms indicates well that capitalism cannot *"leave you alone"* if you are a wage slave.

Moreover, capitalists themselves cannot relax because they must ensure their workers' productivity rises faster than their workers' wages, otherwise their business will fail (see sections C.2 and C.3). This means that every company has to innovate or be left behind, to be put out of business or work. Hence the boss is not "left alone" — their decisions are made under the duress of market forces, of the necessities imposed by competition on individual capitalists. Restless acquisition – in this context, the necessity to accumulate capital in order to survive in the market — always haunts the capitalist. And since unpaid labour is the key to capitalist expansion, work must continue to exist and grow — necessitating the boss to control the working hours of the worker to ensure that they produce more goods than they receive in wages. The boss is not "left alone" nor do they leave the worker alone.

These facts, based upon the authority relations associated with private property and relentless competition, ensure that the desire to be "left alone" cannot be satisfied under capitalism.

As Murray Bookchin observes:

> *"Despite their assertions of autonomy and distrust of state authority . .. classical liberal thinkers did not in the last instance hold to the notion that the individual is completely free from lawful guidance. Indeed, their interpretation of autonomy actually presupposed quite definite arrangements beyond the individual — notably, the laws of the marketplace. Individual autonomy to the contrary, these laws constitute a social organising system in which all 'collections of individuals' are held under the sway of the famous 'invisible hand' of competition. Paradoxically, the laws of the marketplace override the exercise of 'free will' by the same sovereign individuals who otherwise constitute the "collection of individuals."* [*"Communalism: The Democratic Dimension of Anarchism"*, pp. 1–17, **Democracy and Nature** no. 8, p. 4]

Human interaction is an essential part of life. Anarchism proposes to eliminate only undesired social interactions and authoritarian impositions, which are inherent in capitalism and indeed in any hierarchical form of socio-economic organisation (e.g. state socialism). Hermits soon become less than human, as social interaction enriches and develops individuality. Capitalism may attempt to reduce us to hermits, only "connected" by the market, but such a denial of our humanity and individuality inevitably feeds the spirit of revolt. In practice the "laws" of the market and the hierarchy of capital will never "leave one alone," but instead, crush one's individuality and freedom. Yet this aspect of capitalism conflicts with the human "instinct for freedom," as Noam Chomsky describes it, and hence there arises a counter-tendency toward radicalisation and rebellion among any oppressed people (see section J).

One last point. The desire to "be left alone" often expresses two drastically different ideas — the wish to be your own master and manage your own affairs and the desire by bosses and landlords to have more power over their property. However, the authority exercised by such owners over their property is also exercised over **those who use that property.** Therefore, the notion of "being left alone" contains two contradictory aspects within a class ridden and hierarchical society. Obviously anarchists are sympathetic to the first, inherently libertarian, aspect — the desire to manage your own life, in your own way — but we reject the second aspect and any implication that it is in the interests of the governed to leave those in power alone. Rather, it is in the interest of the governed to subject those with authority over them to as much control as possible — for obvious reasons.

Therefore, working people are more or less free to the extent that they **restrict** the ability of their bosses to be "left alone." One of the aims of anarchists within a capitalist society is **ensure** that those in power are **not** "left alone" to exercise their authority over those subject to it. We see solidarity, direct action and workplace and community organisation as a means of interfering with the authority of the state, capitalists and property owners until such time as we can destroy such authoritarian social relationships once and for all.

Hence anarchist dislike of the term "laissez-faire" — within a class society it can only mean protecting the powerful against the working class (under the banner of "neutrally" enforcing property rights and so **the power derived from them**). However, we are well aware of the other, libertarian, vision expressed in the desire to be "left alone." That is the reason we have discussed why capitalist society can never actually achieve that desire — it is handicapped by its hierarchical and competitive nature — and how such a desire can be twisted into a means of enhancing the power of the few over the many.

B.5 Is capitalism empowering and based on human action?

A key element of the social vision propounded by capitalism, particularly "libertarian" capitalism, is that of "voting" by the "customer," which is compared to political voting by the "citizen." According to Milton Friedman, *"when you vote in the supermarket, you get precisely what you voted for and so does everyone else."* Such "voting" with one's pocket is then claimed to be an example of the wonderful "freedom" people enjoy under capitalism (as opposed to "socialism," always equated by right-wingers with **state** socialism, which will be discussed in section H). However, in evaluating this claim, the difference between customers and citizens is critical.

The customer chooses between products on the shelf that have been designed and built by others for the purpose of profit. The consumer is the end-user, essentially a spectator rather than an actor, merely choosing between options created elsewhere by others. Market decision making is therefore fundamentally **passive** and **reactionary,** i.e. based on reacting to developments initiated by others. In contrast, the "citizen" is actively involved, at least ideally, in all stages of the decision making process, either directly or through elected delegates. Therefore, given decentralised and participatory-democratic organisations, decision making by citizens can be **pro-active,** based on human **action** in which one takes the initiative and sets the agenda oneself. Indeed, most supporters of the "citizen" model support it precisely **because** it actively involves individuals in participating in social decision making, so creating an educational aspect to the process and developing the abilities and powers of those involved.

In addition, the power of the consumer is not evenly distributed across society. Thus the expression "voting" when used in a market context expresses a radically different idea than the one usually associated with it. In political voting everyone gets one vote, in the market it is one vote per dollar. What sort of "democracy" is it that gives one person more votes than tens of thousands of others combined?

Therefore the "consumer" idea fails to take into account the differences in power that exist on the market as well as assigning an essentially passive role to the individual. At best they can act on the market as isolated individuals through their purchasing power. However, such a position is part of the problem for, as E.F. Schumacher argues, the *"buyer is essentially a bargain hunter; he is not concerned with the origin of the goods or the conditions under which they have been produced. His sole concern is to obtain the best value for money."* He goes on to note that the market *"therefore respects only the surface of society and its significance relates to the momentary situation as it exists there and then. There is no probing into the depths of things, into the natural or social facts that lie behind them."* [**Small is Beautiful**, p. 29]

Indeed, the "customer" model actually works **against** any attempt to "probe" the facts of things. Firstly, consumers rarely know the significance or implications of the goods they are offered because the price mechanism withholds such information from them. Secondly, because the atomistic nature of the market makes discussion about the "why" and "how" of production difficult —

we get to choose between various "whats". Instead of critically evaluating the pros and cons of certain economic practices, all we are offered is the option of choosing between things already produced. We can only **re**-act when the damage is already done by picking the option which does least damage (often we do not have even that choice). And to discover a given products social and ecological impact we have to take a pro-active role by joining groups which provide this sort of information (information which, while essential for a rational decision, the market does not and cannot provide).

Moreover, the "consumer" model fails to recognise that the decisions we make on the market to satisfy our "wants" are determined by social and market forces. What we are capable of wanting is relative to the forms of social organisation we live in. For example, people choose to buy cars because General Motors bought up and destroyed the tram network in the 1930s and people buy "fast food" because they have no time to cook because of increasing working hours. This means that our decisions within the market are often restricted by economic pressures. For example, the market forces firms, on pain of bankruptcy, to do whatever possible to be cost-effective. Firms that pollute, have bad working conditions and so on often gain competitive advantage in so doing and other firms either have to follow suit or go out of business. A "race to the bottom" ensures, with individuals making "decisions of desperation" just to survive. Individual commitments to certain values, in other words, may become irrelevant simply because the countervailing economic pressures are simply too intense (little wonder Robert Owen argued that the profit motive was *"a principle entirely unfavourable to individual and public happiness"*).

And, of course, the market also does not, and cannot, come up with goods that we do not want in our capacity as consumers but desire to protect for future generations or because of ecological reasons. By making the protection of the planet, eco-systems and other such "goods" dependent on the market, capitalism ensures that unless we put our money where our mouth is we can have no say in the protection of such goods as eco-systems, historical sites, and so on. The need to protect such "resources" in the long term is ignored in favour of short-termism — indeed, if we do not "consume" such products today they will not be there tomorrow. Placed within a society that the vast majority of people often face difficulties making ends meet, this means that capitalism can never provide us with goods which we would like to see available as **people** (either for others or for future generations or just to protect the planet) but cannot afford or desire as **consumers.**

It is clearly a sign of the increasing dominance of capitalist ideology that the "customer" model is being transferred to the political arena. This reflects the fact that the increasing scale of political institutions has reinforced the tendency noted earlier for voters to become passive spectators, placing their "support" behind one or another "product" (i.e. party or leader). As Murray Bookchin comments, *"educated, knowledgeable citizens become reduced to mere taxpayers who exchange money for 'services.'"* [**Remaking Society**, p. 71] In practice, due to state centralism, this turns the political process into an extension of the market, with "citizens" being reduced to "consumers." Or, in Erich Fromm's apt analysis, *"The functioning of the political machinery in a democratic country is not essentially different from the procedure on the commodity market. The political parties are not too different from big commercial enterprises, and the professional politicians try to sell their wares to the public."* [**The Sane Society**, pp. 186–187]

But does it matter? Friedman suggests that being a customer is **better** than being a citizen as you get "precisely" what you, and everyone else, wants.

The key questions here are whether people always get what they want when they shop. Do consumers who buy bleached newsprint and toilet paper **really** want tons of dioxins and other

organochlorides in rivers, lakes and coastal waters? Do customers who buy cars **really** want traffic jams, air pollution, motorways carving up the landscape and the greenhouse effect? And what of those who do not buy these things? They are also affected by the decisions of others. The notion that only the consumer is affected by his or her decision is nonsense — as is the childish desire to get "precisely" what you want, regardless of the social impact.

Perhaps Friedman could claim that when we consume we also approve of its impact. But when we "vote" on the market we cannot say that we approved of the resulting pollution (or distribution of income or power) because that was not a choice on offer. Such changes are **pre-defined** or an aggregate outcome and can only be chosen by a collective decision. In this way we can modify outcomes we could bring about individually but which harm us collectively. And unlike the market, in politics we can **change our minds** and revert back to a former state, undoing the mistakes made. No such option is available on the market.

So Friedman's claims that in elections *"you end up with something different from what you voted for"* is equally applicable to the market place.

These considerations indicate that the "consumer" model of human action is somewhat limited (to say the least!). Instead we need to recognise the importance of the "citizen" model, which we should point out includes the "consumer" model within it. Taking part as an active member of the community does not imply that we stop making individual consumption choices between those available, all it does is potentially enrich our available options by removing lousy choices (such as ecology or profit, cheap goods or labour rights, family or career).

In addition we must stress its role in developing those who practice the "citizen" model and how it can enrich our social and personal life. Being active within participatory institutions fosters and develops an active, "public-spirited" type of character. Citizens, because they are making **collective** decisions have to weight other interests **as well as** their own and so consider the impact on themselves, others, society and the environment of possible decisions. It is, by its very nature, an educative process by which all benefit by developing their critical abilities and expanding their definition of self-interest to take into account themselves as part of a society and eco-system **as well as** as an individual. The "consumer" model, with its passive and exclusively private/money orientation develops few of people's faculties and narrows their self-interest to such a degree that their "rational" actions can actually (indirectly) harm them.

As Noam Chomsky argues, it is *"now widely realised that the economists 'externalities' can no longer be consigned to footnotes. No one who gives a moment's thought to the problems of contemporary society can fail to be aware of the social costs of consumption and production, the progressive destruction of the environment, the utter irrationality of the utilisation of contemporary technology, the inability of a system based on profit or growth maximisation to deal with needs that can only be expressed collectively, and the enormous bias this system imposes towards maximisation of commodities for personal use in place of the general improvement of the quality of life."* [**Radical Priorities**, pp. 190–1]

The "citizen" model takes on board the fact that the sum of rational individual decisions may not yield a rational collective outcome (which, we must add, harms the individuals involved and so works against their self-interest). Social standards, created and enriched by a process of discussion and dialogue can be effective in realms where the atomised "consumer" model is essentially powerless to achieve constructive social change, never mind protect the individual from "agreeing" to "decisions of desperation" that leave them and society as a whole worse off (see also sections E.3 and E.5).

This is **not** to suggest that anarchists desire to eliminate individual decision making, far from it. An anarchist society will be based upon individuals making decisions on what they want to consume, where they want to work, what kind of work they want to do and so on. So the aim of the "citizen" model is not to "replace" the "consumer" model, but only to improve the social environment within which we make our individual consumption decisions. What the "citizen" model of human action desires is to place such decisions within a social framework, one that allows each individual to take an active part in improving the quality of life for us all by removing "Hobson choices" as far as possible.

B.6 But won't decisions made by individuals with their own money be the best?

This question refers to an argument commonly used by capitalists to justify the fact that investment decisions are removed from public control under capitalism, with private investors making all the decisions. Clearly the assumption behind this argument is that individuals suddenly lose their intelligence when they get together and discuss their common interests. But surely, through debate, we can enrich our ideas by social interaction. In the marketplace we do not discuss but instead act as atomised individuals.

This issue involves the *"Isolation Paradox,"* according to which the very logic of individual decision-making is different from that of collective decision-making. An example is the *"tyranny of small decisions."* Let us assume that in the soft drink industry some companies start to produce (cheaper) non-returnable bottles. The end result of this is that most, if not all, the companies making returnable bottles lose business and switch to non-returnables. Result? Increased waste and environmental destruction.

This is because market price fails to take into account social costs and benefits, indeed it **mis**-estimates them for both buyer/seller and to others not involved in the transaction. This is because, as Schumacher points out, the *"strength of the idea of private enterprise lies in its terrifying simplicity. It suggests that the totality of life can be reduced to one aspect — profits..."* [**Small is Beautiful**, p. 215] But life cannot be reduced to one aspect without impoverishing it and so capitalism *"knows the price of everything but the value of nothing."*

Therefore the market promotes "the tyranny of small decisions" and this can have negative outcomes for those involved. The capitalist "solution" to this problem is no solution, namely to act after the event. Only after the decisions have been made and their effects felt can action be taken. But by then the damage has been done. Can suing a company **really** replace a fragile ecosystem? In addition, the economic context has been significantly altered, because investment decisions are often difficult to unmake.

In other words, the operations of the market provide an unending source of examples for the argument that the aggregate results of the pursuit of private interest may well be collectively damaging. And as collectives are made up of individuals, that means damaging to the individuals involved. The remarkable ideological success of "free market" capitalism is to identify the anti-social choice with self-interest, so that any choice in the favour of the interests which we share collectively is treated as a piece of self-sacrifice. However, by atomising decision making, the market often actively works against the self-interest of the individuals that make it up.

Game theory is aware that the sum of rational choices do not automatically yield a rational group outcome. Indeed, it terms such situations as "collective action" problems. By not agreeing common standards, a "race to the bottom" can ensue in which a given society reaps choices that we as individuals really don't want. The rational pursuit of individual self-interest leaves the group, and so most individuals, worse off. The problem is not bad individual judgement (far from

it, the individual is the only person able to know what is best for them in a given situation). It is the absence of social discussion and remedies that compels people to make unbearable choices because the available menu presents no good options.

By **not** discussing the impact of their decisions with everyone who will be affected, the individuals in question have not made a better decision. Of course, under our present highly centralised statist and capitalist system, such a discussion would be impossible to implement, and its closest approximation — the election process — is too vast, bureaucratic and dominated by wealth to do much beyond passing a few toothless laws which are generally ignored when they hinder profits.

However, let's consider what the situation would be like under libertarian socialism, where the local community assemblies discuss the question of returnable bottles along with the workforce. Here the function of specific interest groups (such as consumer co-operatives, ecology groups, workplace Research and Development action committees and so on) would play a critical role in producing information. Knowledge, as Bakunin, Kropotkin, etc. knew, is widely dispersed throughout society and the role of interested parties is essential in making it available to others. Based upon this information and the debate it provokes, the collective decision reached would most probably favour returnables over waste. This would be a better decision from a social and ecological point of view, and one that would benefit the individuals who discussed and agreed upon its effects on themselves and their society.

In other words, anarchists think we have to take an active part in creating the menu as well as picking options from it which reflect our individual tastes and interests.

It needs to be emphasised that such a system does not involve discussing and voting on everything under the sun, which would paralyse all activity. To the contrary, most decisions would be left to those interested (e.g. workers decide on administration and day-to-day decisions within the factory), the community decides upon policy (e.g. returnables over waste). Neither is it a case of electing people to decide for us, as the decentralised nature of the confederation of communities ensures that power lies in the hands of local people.

This process in no way implies that "society" decides what an individual is to consume. That, like all decisions affecting the individual only, is left entirely up to the person involved. Communal decision-making is for decisions that impact both the individual and society, allowing those affected by it to discuss it among themselves as equals, thus creating a rich social context within which individuals can act. This is an obvious improvement over the current system, where decisions that often profoundly alter people's lives are left to the discretion of an elite class of managers and owners, who are supposed to "know best."

There is, of course, the danger of "tyranny of the majority" in any democratic system, but in a direct libertarian democracy, this danger would be greatly reduced, for reasons discussed in section I.5.6 (Won't there be a danger of a "tyranny of the majority" under libertarian socialism?).

B.7 What classes exist within modern society?

For anarchists, class analysis is an important means of understanding the world and what is going on in it. While recognition of the fact that classes actually exist is less prevalent now than it once was, this does not mean that classes have ceased to exist. Quite the contrary. As we'll see, it means only that the ruling class has been more successful than before in obscuring the existence of class.

Class can be objectively defined: the relationship between an individual and the sources of power within society determines his or her class. We live in a class society in which a few people possess far more political and economic power than the majority, who usually work for the minority that controls them and the decisions that affect them. This means that class is based both on exploitation **and** oppression, with some controlling the labour of others for their own gain. The means of oppression have been indicated in earlier parts of section B, while section C (What are the myths of capitalist economics?) indicates exactly how exploitation occurs within a society apparently based on free and equal exchange. In addition, it also highlights the effects on the economic system itself of this exploitation. The social and political impact of the system and the classes and hierarchies it creates is discussed in depth in section D (How do statism and capitalism affect society?).

We must emphasise at the outset that the idea of the "working class" as composed of nothing but industrial workers is simply false. It is **not** applicable today, if it ever was. Power, in terms of hire/fire and investment decisions, is the important thing. Ownership of capital as a means of determining a person's class, while still important, does not tell the whole story. An obvious example is that of the higher layers of management within corporations. They have massive power within the company, basically taking over the role held by the actual capitalist in smaller firms. While they may technically be "salary slaves" their power and position in the social hierarchy indicate that they are members of the ruling class in practice (and, consequently, their income is best thought of as a share of profits rather than a wage). Much the same can be said of politicians and state bureaucrats whose power and influence does not derive from the ownership of the means of production but rather then control over the means of coercion. Moreover, many large companies are owned by other large companies, through pension funds, multinationals, etc. (in 1945, 93% of shares were owned by individuals; by 1997, this had fallen to 43%). Needless to say, if working-class people own shares that does not make them capitalists as the dividends are **not** enough to live on nor do they give them any say in how a company is run).

For most anarchists, there are two main classes:

Obviously there are "grey" areas in any society, individuals and groups who do not fit exactly into either the working or ruling class. Such people include those who work but have some control over other people, e.g. power of hire/fire. These are the people who make the minor, day-

to-day decisions concerning the running of capital or state. This area includes lower to middle management, professionals, and small capitalists.

There is some argument within the anarchist movement whether this "grey" area constitutes another ("middle") class or not. Most anarchists say no, most of this "grey" area are working class, others (such as the British **Class War Federation**) argue it is a different class. One thing is sure, all anarchists agree that most people in this "grey" area have an interest in getting rid of the current system just as much as the working class (we should point out here that what is usually called "middle class" in the USA and elsewhere is nothing of the kind, and usually refers to working class people with decent jobs, homes, etc. As class is considered a rude word in polite society in the USA, such mystification is to be expected).

So, there will be exceptions to this classification scheme. However, most of society share common interests, as they face the economic uncertainties and hierarchical nature of capitalism.

We do not aim to fit all of reality into this class scheme, but only to develop it as reality indicates, based on our own experiences of the changing patterns of modern society. Nor is this scheme intended to suggest that all members of a class have identical interests or that competition does not exist between members of the same class, as it does between the classes. Capitalism, by its very nature, is a competitive system. As Malatesta pointed out, *"one must bear in mind that on the one hand the bourgeoisie (the property owners) are always at war amongst themselves... and that on the other hand the government, though springing from the bourgeoisie and its servant and protector, tends, as every servant and every protector, to achieve its own emancipation and to dominate whoever it protects. Thus the game of the swings, the manoeuvres, the concessions and the withdrawals, the attempts to find allies among the people and against the conservatives, and among conservatives against the people, which is the science of the governors, and which blinds the ingenuous and phlegmatic who always wait for salvation to come down to them from above."* [**Anarchy**, p. 25]

However, no matter how much inter-elite rivalry goes on, at the slightest threat to the system from which they benefit, the ruling class will unite to defend their common interests. Once the threat passes, they will return to competing among themselves for power, market share and wealth. Unfortunately, the working class rarely unites as a class, mainly due to its chronic economic and social position. At best, certain sections unite and experience the benefits and pleasure of co-operation. Anarchists, by their ideas and action try to change this situation and encourage solidarity within the working class in order to resist, and ultimately get rid of, capitalism. However, their activity is helped by the fact that those in struggle often realise that *"solidarity is strength"* and so start to work together and unite their struggles against their common enemy. Indeed, history is full of such developments.

B.7.1 But do classes actually exist?

So do classes actually exist, or are anarchists making them up? The fact that we even need to consider this question points to the pervasive propaganda efforts by the ruling class to suppress class consciousness, which will be discussed further on. First, however, let's examine some statistics, taking the USA as an example. We have done so because the state has the reputation of being a land of opportunity and capitalism. Moreover, class is seldom talked about there (although its business class is **very** class conscious). Moreover, when countries have followed the US model

of freer capitalism (for example, the UK), a similar explosion of inequality develops along side increased poverty rates and concentration of wealth into fewer and fewer hands.

There are two ways of looking into class, by income and by wealth. Of the two, the distribution of wealth is the most important to understanding the class structure as this represents your assets, what you own rather than what you earn in a year. Given that wealth is the source of income, this represents the impact and power of private property and the class system it represents. After all, while all employed workers have an income (i.e. a wage), their actual wealth usually amounts to their personal items and their house (if they are lucky). As such, their wealth generates little or no income, unlike the owners of resources like companies, land and patents. Unsurprisingly, wealth insulates its holders from personal economic crises, like unemployment and sickness, as well as gives its holders social and political power. It, and its perks, can also be passed down the generations. Equally unsurprisingly, the distribution of wealth is much more unequal than the distribution of income.

At the start of the 1990s, the share of total US income was as follows: one third went to the top 10% of the population, the next 30% gets another third and the bottom 60% gets the last third. Dividing the wealth into thirds, we find that the top 1% owns a third, the next 9% owns a third, and bottom 90% owns the rest. [David Schweickart, **After Capitalism**, p. 92] Over the 1990s, the inequalities in US society have continued to increase. In 1980, the richest fifth of Americans had incomes about ten times those of the poorest fifth. A decade later, they has twelve times. By 2001, they had incomes over fourteen times greater. [Doug Henwood, **After the New Economy**, p. 79] Looking at the figures for private family wealth, we find that in 1976 the wealthiest one percent of Americans owned 19% of it, the next 9% owned 30% and the bottom 90% of the population owned 51%. By 1995 the top 1% owned 40%, more than owned by the bottom 92% of the US population combined — the next 9% had 31% while the bottom 90% had only 29% of total (see Edward N. Wolff, **Top Heavy: A Study of Increasing Inequality in America** for details).

So in terms of wealth ownership, we see a system in which a very small minority own the means of life. In 1992 the richest 1% of households — about 2 million adults — owned 39% of the stock owned by individuals. The top 10%, owned over 81%. In other words, the bottom 90% of the population had a smaller share (23%) of investable capital of all kinds than the richest 1/2% (29%). Stock ownership was even more densely concentrated, with the richest 5% holding 95% of all shares. [Doug Henwood, **Wall Street: Class racket**] Three years later, *"the richest 1% of households ... owned 42% of the stock owned by individuals, and 56% of the bonds ... the top 10% together owned nearly 90% of both."* Given that around 50% of all corporate stock is owned by households, this means that 1% of the population *"owns a quarter of the productive capital and future profits of corporate America; the top 10% nearly half."* [Doug Henwood, **Wall Street**, pp. 66–7] Unsurprisingly, the Congressional Budget Office estimates that more than half of corporate profits ultimately accrue to the wealthiest 1 percent of taxpayers, while only about 8 percent go to the bottom 60 percent.

Henwood summarises the situation by noting that *"the richest tenth of the population has a bit over three-quarters of all the wealth in this society, and the bottom half has almost none — but it has lots of debt."* Most middle-income people have most of their (limited) wealth in their homes and if we look at non-residential wealth we find a *"very, very concentrated"* situation. The *"bottom half of the population claimed about 20% of all income in 2001 — but only 2% of non-residential wealth.*

The richest 5% of the population claimed about 23% of income, a bit more than the entire bottom half. But it owned almost two-thirds — 65% — of the wealth." [**After the New Economy**, p. 122]

In terms of income, the period since 1970 has also been marked by increasing inequalities and concentration:

> *"According to estimates by the economists Thomas Piketty and Emmanuel Saez — confirmed by data from the Congressional Budget Office — between 1973 and 2000 the average real income of the bottom 90 percent of American taxpayers actually fell by 7 percent. Meanwhile, the income of the top 1 percent rose by 148 percent, the income of the top 0.1 percent rose by 343 percent and the income of the top 0.01 percent rose 599 percent."* [Paul Krugman, *"The Death of Horatio Alger"*, **The Nation**, January 5, 2004]

Doug Henwood provides some more details on income [**Op. Cit.**, p. 90]:

By far the biggest gainers from the wealth concentration since the 1980s have been the super-rich. The closer you get to the top, the bigger the gains. In other words, it is not simply that the top 20 percent of families have had bigger percentage gains than the rest. Rather, the top 5 percent have done better than the next 15, the top 1 percent better than the next 4 per cent, and so on.

As such, if someone argues that while the share of national income going to the top 10 percent of earners has increased that it does not matter because anyone with an income over $81,000 is in that top 10 percent they are missing the point. The lower end of the top ten per cent were not the big winners over the last 30 years. Most of the gains in the share in that top ten percent went to the top 1 percent (who earn at least $230,000). Of these gains, 60 percent went to the top 0.1 percent (who earn more than $790,000). And of these gains, almost half went to the top 0.01 percent (a mere 13,000 people who had an income of at least $3.6 million and an average income of $17 million). [Paul Krugman, *"For Richer"*, **New York Times**, 20/10/02]

All this proves that classes do in fact exist, with wealth and power concentrating at the top of society, in the hands of the few.

To put this inequality of income into some perspective, the average full-time Wal-Mart employee was paid only about $17,000 a year in 2004. Benefits are few, with less than half the company's workers covered by its health care plan. In the same year Wal-Mart's chief executive, Scott Lee Jr., was paid $17.5 million. In other words, every two weeks he was paid about as much as his average employee would earn after a lifetime working for him.

Since the 1970s, most Americans have had only modest salary increases (if that). The average annual salary in America, expressed in 1998 dollars (i.e., adjusted for inflation) went from $32,522 in 1970 to $35,864 in 1999. That is a mere 10 percent increase over nearly 30 years. Over the same period, however, according to Fortune magazine, the average real annual compensation of the top 100 C.E.O.'s went from $1.3 million — 39 times the pay of an average worker — to $37.5 million, more than 1,000 times the pay of ordinary workers.

Yet even here, we are likely to miss the real picture. The average salary is misleading as this does not reflect the distribution of wealth. For example, in the UK in the early 1990s, two-thirds of workers earned the average wage or below and only a third above. To talk about the "average" income, therefore, is to disguise remarkable variation. In the US, adjusting for inflation, average family income — total income divided by the number of families — grew 28% between 1979 and 1997. The median family income — the income of a family in the middle (i.e. the income where half of families earn more and half less) grew by only 10%. The median is a better indicator of how typical American families are doing as the distribution of income is so top heavy in the USA (i.e. the average income is considerably higher than the median). It should also be noted that the incomes of the bottom fifth of families actually fell slightly. In other words, the benefits of economic growth over nearly two decades have **not** trickled down to ordinary families. Median family income has risen only about 0.5% per year. Even worse, *"just about all of that increase was due to wives working longer hours, with little or no gain in real wages."* [Paul Krugman, *"For Richer"*, **Op. Cit.**]

So if America does have higher average or per capita income than other advanced countries, it is simply because the rich are richer. This means that a high average income level can be misleading if a large amount of national income is concentrated in relatively few hands. This means that large numbers of Americans are worse off economically than their counterparts in other advanced countries. Thus Europeans have, in general, shorter working weeks and longer holidays than Americans. They may have a lower average income than the United States but they do not have the same inequalities. This means that the median European family has a standard of living roughly comparable with that of the median U.S. family — wages may even be higher.

As Doug Henwood notes, *"[i]nternational measures put the United States in a disgraceful light... The soundbite version of the LIS [Luxembourg Income Study] data is this: for a country th[at] rich, [it] ha[s] a lot of poor people."* Henwood looked at both relative and absolute measures of income and poverty using the cross-border comparisons of income distribution provided by the LIS and discovered that *"[f]or a country that thinks itself universally middle class [i.e. middle income], the United States has the second-smallest middle class of the nineteen countries for which good LIS data exists."* Only Russia, a country in near-total collapse was worse (40.9% of the population were middle income compared to 46.2% in the USA. Households were classed as poor if their incomes were under 50 percent of the national medium; near-poor, between 50 and 62.5 percent; middle, between 62.5 and 150 percent; and well-to-do, over 150 percent. The USA rates for poor (19.1%), near-poor (8.1%) and middle (46.2%) were worse than European countries like Germany (11.1%, 6.5% and 64%), France (13%, 7.2% and 60.4%) and Belgium (5.5%, 8.0% and 72.4%) as well as Canada (11.6%, 8.2% and 60%) and Australia (14.8%, 10% and 52.5%).

The reasons for this? Henwood states that the *"reasons are clear — weak unions and a weak welfare state. The social-democratic states — the ones that interfere most with market incomes — have the largest [middles classes]. The US poverty rate is nearly twice the average of the other eighteen."* Needless to say, "middle class" as defined by income is a very blunt term (as Henwood states). It says nothing about property ownership or social power, for example, but income is often taken in the capitalist press as the defining aspect of "class" and so is useful to analyse in order to refute the claims that the free-market promotes general well-being (i.e. a larger "middle class"). That the most free-market nation has the worse poverty rates **and** the smallest "middle class" indicates well the anarchist claim that capitalism, left to its own devices, will benefit the strong (the ruling class) over the weak (the working class) via "free exchanges" on the "free" market (as we argue in section C.7, only during periods of full employment — and/or wide scale working class solidarity and militancy — does the balance of forces change in favour of working class people. Little wonder, then, that periods of full employment also see falling inequality — see James K. Galbraith's **Created Unequal** for more details on the correlation of unemployment and inequality).

Of course, it could be objected that this relative measure of poverty and income ignores the fact that US incomes are among the highest in the world, meaning that the US poor may be pretty well off by foreign standards. Henwood refutes this claim, noting that *"even on absolute measures, the US performance is embarrassing. LIS researcher Lane Kenworthy estimated poverty rates for fifteen countries using the US poverty line as the benchmark... Though the United States has the highest average income, it's far from having the lowest poverty rate."* Only Italy, Britain and Australia had higher levels of absolute poverty (and Australia exceeded the US value by 0.2%, 11.9% compared to 11.7%). Thus, in both absolute **and** relative terms, the USA compares

badly with European countries. [Doug Henwood, *"Booming, Borrowing, and Consuming: The US Economy in 1999"*, pp.120–33, **Monthly Review**, vol. 51, no. 3, pp. 129–31]

In summary, therefore, taking the USA as being the most capitalist nation in the developed world, we discover a class system in which a very small minority own the bulk of the means of life and get most of the income. Compared to other Western countries, the class inequalities are greater and the society is more polarised. Moreover, over the last 20–30 years those inequalities have increased spectacularly. The ruling elite have become richer and wealth has flooded upwards rather than trickled down.

The cause of the increase in wealth and income polarisation is not hard to find. It is due to the increased economic and political power of the capitalist class and the weakened position of working class people. As anarchists have long argued, any "free contract" between the powerful and the powerless will benefit the former far more than the latter. This means that if the working class's economic and social power is weakened then we will be in a bad position to retain a given share of the wealth we produce but is owned by our bosses and accumulates in the hands of the few.

Unsurprisingly, therefore, there has been an increase in the share of total income going to capital (i.e., interest, dividends, and rent) and a decrease in the amount going to labour (wages, salaries, and benefits). Moreover, an increasing part of the share to labour is accruing to high-level management (in electronics, for example, top executives used to paid themselves 42 times the average worker in 1991, a mere 5 years later it was 220 times as much).

Since the start of the 1980s, unemployment and globalisation has weakened the economic and social power of the working class. Due to the decline in the unions and general labour militancy, wages at the bottom have stagnated (real pay for most US workers is lower in 2005 than it was in 1973!). This, combined with "trickle-down" economic policies of tax cuts for the wealthy, tax raises for the working classes, the maintaining of a "natural" law of unemployment (which weakens unions and workers power) and cutbacks in social programs, has seriously eroded living standards for all but the upper strata — a process that is clearly leading toward social breakdown, with effects that will be discussed later (see section D.9).

Little wonder Proudhon argued that the law of supply and demand was a *"deceitful law ... suitable only for assuring the victory of the strong over the weak, of those who own property over those who own nothing."* [quoted by Alan Ritter, **The Political Thought of Pierre-Joseph Proudhon**, p. 121]

B.7.2 Does social mobility make up for class inequality?

Faced with the massive differences between classes under capitalism we highlighted in the last section, many supporters of capitalism still deny the obvious. They do so by confusing a **caste** system with a **class** system. In a caste system, those born into it stay in it all their lives. In a class system, the membership of classes can and does change over time.

Therefore, it is claimed, what is important is not the existence of classes but of social mobility (usually reflected in income mobility). According to this argument, if there is a high level of social/income mobility then the degree of inequality in any given year is unimportant. This is because the redistribution of income over a person's life time would be very even. Thus the

inequalities of income and wealth of capitalism does not matter as capitalism has high social mobility.

Milton Friedman puts the argument in this way:

> *"Consider two societies that have the same distribution of annual income. In one there is a great mobility and change so that the position of particular families in the income hierarchy varies widely from year to year. In the other, there is great rigidity so that each family stays in the same position. Clearly, in any meaningful sense, the second would be the more unequal society. The one kind of inequality is a sign of dynamic change, social mobility, equality of opportunity; the other of a status society. The confusion behind these two kinds of inequality is particularly important, precisely because competitive free-enterprise capitalism tends to substitute the one for the other."* [**Capitalism and Freedom**, p. 171]

As with so many things, Friedman is wrong in his assertion (and that is all it is, no evidence is provided). The more free market capitalist regimes have **less** social mobility than those, like Western Europe, which have extensive social intervention in the economy. As an added irony, the facts suggest that implementing Friedman's suggested policies in favour of his beloved "competitive free-enterprise capitalism" has made social mobility less, not greater. In effect, as with so many things, Friedman ensured the refutation of his own dogmas.

Taking the USA as an example (usually considered one of the most capitalist countries in the world) there is income mobility, but not enough to make income inequality irrelevant. Census data show that 81.6 percent of those families who were in the bottom quintile of the income distribution in 1985 were still there in the next year; for the top quintile, it was 76.3 percent.

Over longer time periods, there is more mixing but still not that much and those who do slip into different quintiles are typically at the borders of their category (e.g. those dropping out of the top quintile are typically at the bottom of that group). Only around 5% of families rise from bottom to top, or fall from top to bottom. In other words, the class structure of a modern capitalist society is pretty solid and *"much of the movement up and down represents fluctuations around a fairly fixed long term distribution."* [Paul Krugman, **Peddling Prosperity**, p. 143]

Perhaps under a "pure" capitalist system things would be different? Ronald Reagan helped make capitalism more "free market" in the 1980s, but there is no indication that income mobility increased significantly during that time. In fact, according to one study by Greg Duncan of the University of Michigan, the middle class shrank during the 1980s, with fewer poor families moving up or rich families moving down. Duncan compared two periods. During the first period (1975 to 1980) incomes were more equal than they are today. In the second (1981 to 1985) income inequality began soaring. In this period there was a reduction in income mobility upward from low to medium incomes of over 10%.

Here are the exact figures [cited by Paul Krugman, *"The Rich, the Right, and the Facts,"* **The American Prospect** no. 11, Fall 1992, pp. 19–31]:

Percentages of families making transitions to and from middle class (5-year period before and after 1980)

Transition	Before 1980	After 1980
Middle income to low income	8.5	9.8
Middle income to high income	5.8	6.8
Low income to middle income	35.1	24.6
High income to middle income	30.8	27.6

Writing in 2004, Krugman returned to this subject. The intervening twelve years had made things worse. America, he notes, is *"more of a caste society than we like to think. And the caste lines have lately become a lot more rigid."* Before the rise of neo-liberalism in the 1980s, America had more intergenerational mobility. *"A classic 1978 survey found that among adult men whose fathers were in the bottom 25 percent of the population as ranked by social and economic status, 23 percent had made it into the top 25 percent. In other words, during the first thirty years or so after World War II, the American dream of upward mobility was a real experience for many people."* However, a new survey of today's adult men *"finds that this number has dropped to only 10 percent. That is, over the past generation upward mobility has fallen drastically. Very few children of the lower class are making their way to even moderate affluence. This goes along with other studies indicating that rags-to-riches stories have become vanishingly rare, and that the correlation between fathers' and sons' incomes has risen in recent decades. In modern America, it seems, you're quite likely to stay in the social and economic class into which you were born."* [Paul Krugman, *"The Death of Horatio Alger"*, **The Nation**, January 5, 2004]

British Keynesian economist Will Hutton quotes US data from 2000–1 which *"compare[s] the mobility of workers in America with the four biggest European economies and three Nordic economies."* The US *"has the lowest share of workers moving from the bottom fifth of workers into the second fifth, the lowest share moving into the top 60 per cent and the highest share unable to sustain full-time employment."* He cites an OECD study which *"confirms the poor rates of relative upward mobility for very low-paid American workers; it also found that full-time workers in Britain, Italy and Germany enjoy much more rapid growth in their earnings than those in the US … However, downward mobility was more marked in the US; American workers are more likely to suffer a reduction in their real earnings than workers in Europe."* Thus even the OECD (the *"high priest of deregulation"*) was *"forced to conclude that countries with more deregulated labour and product markets (pre-eminently the US) do not appear to have higher relative mobility, nor do low-paid workers in these economies experience more upward mobility. The OECD is pulling its punches. The US experience is worse than Europe's."* Numerous studies have shown that *"either there is no difference"* in income mobility between the USA and Europe *"or that there is less mobility in the US."* [**The World We're In**, pp. 166–7]

Little wonder, then, that Doug Henwood argues that *"the final appeal of apologists of the American way is an appeal to our legendary mobility"* fails. In fact, *"people generally don't move far from the income class they are born into, and there is little difference between US and European mobility patterns. In fact, the United States has the largest share of what the OECD called 'low-wage' workers, and the poorest performance on the emergence from the wage cellar of any country it studied."* [**Op. Cit.**, p. 130]

Indeed, *"both the US and British poor were more likely to stay poor for a long period of time: almost half of all people who were poor for one year stayed poor for five or more years, compared with 30% in Canada and 36% in Germany. And, despite claims of great upward mobility in the US, 45% of the poor rose out of poverty in a given year, compared with 45% in the UK, 53% in Germany, and 56% in Canada. And of those who did exit poverty, 15% of Americans were likely to make a round trip back under the poverty line, compared with 16% in Germany, 10% in the UK, and 7% in Canada."* [Doug Henwood, **After the New Economy**, pp. 136–7]

A 2005 study of income mobility by researchers at the London School of Economics (on behalf of the educational charity the Sutton Trust) confirms that the more free market a country, the worse is its levels of social mobility. [Jo Blanden, Paul Gregg and Stephen Machin, **Intergenerational Mobility in Europe and North America**, April, 2005] They found that Britain has one of the worst records for social mobility in the developed world, beaten only by the USA out of eight European and North American countries. Norway was the best followed by Denmark, Sweden, Finland, Germany and Canada.

This means that children born to poor families in Britain and the USA are less likely to fulfil their full potential than in other countries and are less likely to break free of their backgrounds than in the past. In other words, we find it harder to earn more money and get better jobs than our parents. Moreover, not only is social mobility in Britain much lower than in other advanced countries, it is actually declining and has fallen markedly over time. The findings were based on studies of two groups of children, one set born in the 1950s and the other in the 1970s. In the UK, while 17 per cent of the former made it from the bottom quarter income group to the top, only 11 per cent of the latter did so. Mobility in the Nordic countries was twice that of the UK. While only the US did worse than the UK in social mobility

The puzzle of why, given that there is no evidence of American exceptionalism or higher social mobility, the myth persists has an easy solution. It has utility for the ruling class in maintaining the system. By promoting the myth that people can find the path to the top easy then the institutions of power will not be questioned, just the moral character of the many who do not.

Needless to say, income mobility does not tell the whole story. Increases in income do not automatically reflect changes in class, far from it. A better paid worker is still working class and, consequently, still subject to oppression and exploitation during working hours. As such, income mobility, while important, does not address inequalities in power. Similarly, income mobility does not make up for a class system and its resulting authoritarian social relationships and inequalities in terms of liberty, health and social influence. And the facts suggest that the capitalist dogma of "meritocracy" that attempts to justify this system has little basis in reality. Capitalism is a class ridden system and while there is some changes in the make-up of each class they are remarkably fixed, particularly once you get to the top 5–10% of the population (i.e. the ruling class).

Logically, this is not surprising. There is no reason to think that more unequal societies should be more mobile. The greater the inequality, the more economic power those at the top will have and, consequently, the harder it will be those at the bottom to climb upwards. To suggest otherwise is to argue that it is easier to climb a mountain than a hill! Unsurprisingly the facts support the common sense analysis that the higher the inequality of incomes and wealth, the lower the equality of opportunity and, consequently, the lower the social mobility.

Finally, we should point out even if income mobility was higher it does not cancel out the fact that a class system is marked by differences in **power** which accompany the differences in

income. In other words, because it is possible (in theory) for everyone to become a boss this does not make the power and authority that bosses have over their workers (or the impact of their wealth on society) any more legitimate (just because everyone — in theory — can become a member of the government does not make government any less authoritarian). Because the membership of the boss class can change does not negate the fact that such a class exists.

Ultimately, using (usually highly inflated) notions of social mobility to defend a class system is unconvincing. After all, in most slave societies slaves could buy their freedom and free people could sell themselves into slavery (to pay off debts). If someone tried to defend slavery with the reference to this fact of social mobility they would be dismissed as mad. The evil of slavery is not mitigated by the fact that a few slaves could stop being slaves if they worked hard enough.

B.7.3 Why is the existence of classes denied?

It is clear, then, that classes do exist, and equally clear that individuals can rise and fall within the class structure — though, of course, it's easier to become rich if you're born in a rich family than a poor one. Thus James W. Loewen reports that *"ninety-five percent of the executives and financiers in America around the turn of the century came from upper-class or upper-middle-class backgrounds. Fewer than 3 percent started as poor immigrants or farm children. Throughout the nineteenth century, just 2 percent of American industrialists came from working-class origins"* [in *"Lies My Teacher Told Me"* citing William Miller, *"American Historians and the Business Elite,"* in **Men in Business**, pp. 326–28; cf. David Montgomery, **Beyond Equality**, pg. 15] And this was at the height of USA "free market" capitalism. According to a survey done by C. Wright Mills and reported in his book **The Power Elite**, about 65% of the highest-earning CEOs in American corporations come from wealthy families. Meritocracy, after all, does not imply a "classless" society, only that some mobility exists between classes. Yet we continually hear that class is an outmoded concept; that classes don't exist any more, just atomised individuals who all enjoy "equal opportunity," "equality before the law," and so forth. So what's going on?

The fact that the capitalist media are the biggest promoters of the "end-of-class" idea should make us wonder exactly **why** they do it. Whose interest is being served by denying the existence of classes? Clearly it is those who run the class system, who gain the most from it, who want everyone to think we are all "equal." Those who control the major media don't want the idea of class to spread because they themselves are members of the ruling class, with all the privileges that implies. Hence they use the media as propaganda organs to mould public opinion and distract the middle and working classes from the crucial issue, i.e., their own subordinate status. This is why the mainstream news sources give us nothing but superficial analyses, biased and selective reporting, outright lies, and an endless barrage of yellow journalism, titillation, and "entertainment," rather than talking about the class nature of capitalist society (see section D.3 — "How does wealth influence the mass media?")

The universities, think tanks, and private research foundations are also important propaganda tools of the ruling class. This is why it is virtually taboo in mainstream academic circles to suggest that anything like a ruling class even exists in the United States. Students are instead indoctrinated with the myth of a "pluralist" and "democratic" society — a Never-Never Land where all laws and public policies supposedly get determined only by the amount of "public

support" they have — certainly not by any small faction wielding power in disproportion to its size.

To deny the existence of class is a powerful tool in the hands of the powerful. As Alexander Berkman points out, *"[o]ur social institutions are founded on certain ideas; so long as the latter are generally believed, the institutions built on them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present day conditions means the ultimate breakdown of government and capitalism."* [*"Author's Foreword,"* **What is Anarchism?**, p. xii]

Unsurprisingly, to deny the existence of classes is an important means of bolstering capitalism, to undercut social criticism of inequality and oppression. It presents a picture of a system in which only individuals exist, ignoring the differences between one set of people (the ruling class) and the others (the working class) in terms of social position, power and interests. This obviously helps those in power maintain it by focusing analysis away from that power and its sources (wealth, hierarchy, etc.).

It also helps maintain the class system by undermining collective struggle. To admit class exists means to admit that working people share common interests due to their common position in the social hierarchy. And common interests can lead to common action to change that position. Isolated consumers, however, are in no position to act for themselves. One individual standing alone is easily defeated, whereas a ***union*** of individuals supporting each other is not. Throughout the history of capitalism there have been attempts by the ruling class — often successful — to destroy working class organisations. Why? Because in union there is power — power which can destroy the class system as well as the state and create a new world.

That's why the very existence of class is denied by the elite. It's part of their strategy for winning the battle of ideas and ensuring that people remain as atomised individuals. By *"manufacturing consent"* (to use Walter Lipman's expression for the function of the media), force need not be used. By limiting the public's sources of information to propaganda organs controlled by state and corporate elites, all debate can be confined within a narrow conceptual framework of capitalist terminology and assumptions, and anything premised on a different conceptual framework can be marginalised. Thus the average person is brought to accept current society as "fair" and "just," or at least as "the best available," because no alternatives are ever allowed to be discussed.

B.7.4 What do anarchists mean by *"class consciousness"*?

Given that the existence of classes is often ignored or considered unimportant ("boss and worker have common interests") in mainstream culture, its important to continually point out the facts of the situation: that a wealthy elite run the world and the vast majority are subjected to hierarchy and work to enrich this elite. To be class conscious means that we are aware of the objective facts and act appropriately to change them.

This is why anarchists stress the need for ***"class consciousness,"*** for recognising that classes exist and that their interests are in **conflict.** The reason why this is the case is obvious enough. As Alexander Berkman argues, *"the interests of capital and labour are not the same. No greater lie was ever invented than the so-called 'identity of interests' [between capital and labour] ... labour*

produces all the wealth of the world ... [and] capital is owned by the masters is stolen property, stolen products of labour. Capitalist industry is the process of continuing to appropriate the products of labour for the benefit of the master class ... It is clear that your interests as a worker are ***different*** *from the interests of your capitalistic masters. More than different: they are entirely opposite; in fact, contrary, antagonistic to each other. The better wages the boss pays you, the less profit he makes out of you. It does not require great philosophy to understand that."* [**What is Anarchism?**, pp. 75–6]

That classes are in conflict can be seen from the post-war period in most developed countries. Taking the example of the USA, the immediate post-war period (the 1950s to the 1970s) were marked by social conflict, strikes and so forth. From the 1980s onwards, there was a period of relative social peace because the bosses managed to inflict a series of defeats on the working class. Workers became less militant, the trade unions went into a period of decline and the success of capitalism proclaimed. If the interests of both classes were the same we would expect that all sections of society would have benefited more in the 1980s onwards than between the 1950s to 1970s. This is **not** the case. While income grew steadily across the board between 1950 and 1980s, since then wealth has flooded up to the top while those at the bottom found it harder to make ends meet.

A similar process occurred in the 1920s when Alexander Berkman stated the obvious:

> *"The masters have found a very effective way to paralyse the strength of organised labour. They have persuaded the workers that they have the same interests as the employers ... that what is good for the employer is good for his employees ... [that] the workers will not think of fighting their masters for better conditions, but they will be patient and wait till the employer can 'share his prosperity' with them. They will also consider the interests of 'their' country and they will not 'disturb industry' and the 'orderly life of the community' by strikes and stoppage of work. If you listen to your exploiters and their mouthpieces you will be 'good' and consider only the interests of your masters, of your city and country — but no one cares about* ***your*** *interests and those of your family, the interests of your union and of your fellow workers of the labouring class. 'Don't be selfish,' they admonish you, while the boss is getting rich by your being good and unselfish. And they laugh in their sleeves and thank the Lord that you are such an idiot."* [**Op. Cit.**, pp. 74–5]

So, in a nutshell, class consciousness is to look after your own interest as a member of the working class. To be aware that there is inequality in society and that you cannot expect the wealthy and powerful to be concerned about anyone's interest except their own. That only by struggle can you gain respect and an increased slice of the wealth you produce but do not own. And that there is *"an irreconcilable antagonism"* between the ruling class and working class *"which results inevitably from their respective stations in life."* The riches of the former are *"based on the exploitation and subjugation of the latter's labour"* which means *"war between"* the two *"is unavoidable."* For the working class desires *"only equality"* while the ruling elite *"exist[s] only through inequality."* For the latter, *"as a separate class, equality is death"* while for the former *"the least inequality is slavery."* [Bakunin, **The Basic Bakunin**, p. 97 and pp. 91–2]

Although class analysis may at first appear to be a novel idea, the conflicting interests of the classes is **well** recognised on the other side of the class divide. For example, James Madison in the **Federalist Paper** #10 states that *"those who hold and those who are without have ever*

formed distinct interests in society." For anarchists, class consciousness means to recognise what the bosses already know: the importance of solidarity with others in the same class position as oneself and of acting together as equals to attain common goals. The difference is that the ruling class wants to keep the class system going while anarchists seek to end it once and for all.

It could therefore be argued that anarchists actually want an ***"anti-class"*** consciousness to develop — that is, for people to recognise that classes exist, to understand **why** they exist, and act to abolish the root causes for their continued existence (*"class consciousness,"* argues Vernon Richards, *"but not in the sense of wanting to perpetuate classes, but the consciousness of their existence, an understanding of why they exist, and a determination, informed by knowledge and militancy, to abolish them."* [**The Impossibilities of Social Democracy**, p. 133]). In short, anarchists want to eliminate classes, not universalise the class of "wage worker" (which would presuppose the continued existence of capitalism).

More importantly, class consciousness does not involve "worker worship." To the contrary, as Murray Bookchin points out, *"[t]he worker begins to become a revolutionary when he undoes his [or her] 'workerness', when he [or she] comes to detest his class status here and now, when he begins to shed... his work ethic, his character-structure derived from industrial discipline, his respect for hierarchy, his obedience to leaders, his consumerism, his vestiges of puritanism."* [**Post-Scarcity Anarchism**, p. 119] For, in the end, anarchists *"cannot build until the working class gets rid of its illusions, its acceptance of bosses and faith in leaders."* [Marie-Louise Berneri, **Neither East Nor West**, p. 19]

It may be objected that there are only individuals and anarchists are trying to throw a lot of people in a box and put a label like "working class" on them. In reply, anarchists agree, yes, there are "only" individuals but some of them are bosses, most of them are working class. This is an objective division within society which the ruling class does its best to hide but which comes out during social struggle. And such struggle is part of the process by which more and more oppressed people subjectivity recognise the objective facts. And by more and more people recognising the facts of capitalist reality, more and more people will want to change them.

Currently there are working class people who want an anarchist society and there are others who just want to climb up the hierarchy to get to a position where they can impose their will to others. But that does not change the fact that their current position is that they are subjected to the authority of hierarchy and so can come into conflict with it. And by so doing, they must practise self-activity and this struggle can change their minds, what they think, and so they become radicalised. This, the radicalising effects of self-activity and social struggle, is a key factor in why anarchists are involved in it. It is an important means of creating more anarchists and getting more and more people aware of anarchism as a viable alternative to capitalism.

Ultimately, it does not matter what class you are, it's what you **believe in** that matters. And what you **do.** Hence we see anarchists like Bakunin and Kropotkin, former members of the Russian ruling class, or like Malatesta, born into an Italian middle class family, rejecting their backgrounds and its privileges and becoming supporters of working class self-liberation. But anarchists base their activity primarily on the working class (including peasants, self-employed artisans and so on) because the working class is subject to hierarchy and so have a real need to resist to exist. This process of resisting the powers that be can and does have a radicalising effect on those involved and so what they believe in and what they do **changes.** Being subject to hierarchy, oppression and exploitation means that it is in the working class people's *"own interest to abolish them. It has been truly said that 'the emancipation of the workers must be accomplished*

*by the workers themselves,' for no social class will do it for them ... It is ... **the interest** of the proletariat to emancipate itself from bondage ... It is only be growing to a true realisation of their present position, by visualising their possibilities and powers, by learning unity and co-operation, and practising them, that the masses can attain freedom."* [Alexander Berkman, **Op. Cit.**, pp. 187–8]

We recognise, therefore, that only those at the bottom of society have a **self**-interest in freeing themselves from the burden of those at the top, and so we see the importance of class consciousness in the struggle of oppressed people for self-liberation. Thus, *"[f]ar from believing in the messianic role of the working class, the anarchists' aim is to **abolish** the working class in so far as this term refers to the underprivileged majority in all existing societies... What we do say is that no revolution can succeed without the active participation of the working, producing, section of the population... The power of the State, the values of authoritarian society can only be challenged and destroyed by a greater power and new values."* [Vernon Richards, **The Raven**, no. 14, pp. 183–4] Anarchists also argue that one of the effects of direct action to resist oppression and exploitation of working class people would be the **creation** of such a power and new values, values based on respect for individual freedom and solidarity (see sections J.2 and J.4 on direct action and its liberating potential).

As such, class consciousness also means recognising that working class people not only have an interest in ending its oppression but that we also have the power to do so. *"This power, the people's power,"* notes Berkman, *"is **actual**: it cannot be taken away, as the power of the ruler, of the politician, or of the capitalist can be. It cannot be taken away because it does not consist of possessions but in ability. It is the ability to create, to produce; the power that feeds and clothes the world, that gives us life, health and comfort, joy and pleasure."* The power of government and capital *"disappear when the people refuse to acknowledge them as masters, refuse to let them lord it over them."* This is *"the all-important **economic power**"* of the working class. [**Op. Cit.**, p. 87, p. 86 and p. 88]

This potential power of the oppressed, anarchist argue, shows that not only are classes wasteful and harmful, but that they can be ended once those at the bottom seek to do so and reorganise society appropriately. This means that we have the power to transform the economic system into a non-exploitative and classless one as *"only a productive class may be libertarian in nature, because it does not need to exploit."* [Albert Meltzer, **Anarchism: Arguments For and Against**, p. 23]

Finally, it is important to stress that anarchists think that class consciousness **must** also mean to be aware of **all** forms of hierarchical power, not just economic oppression. As such, class consciousness and class conflict is not simply about inequalities of wealth or income but rather questioning all forms of domination, oppression and exploitation.

For anarchists, *"[t]he class struggle does not centre around material exploitation alone but also around spiritual exploitation, ... [as well as] psychological and environmental oppression."* [Bookchin, **Op. Cit.**, p. 151] This means that we do not consider economic oppression to be the only important thing, ignoring struggles and forms of oppression outside the workplace. To the contrary, workers are human beings, not the economically driven robots of capitalist and Leninist mythology. They are concerned about everything that affects them — their parents, their children, their friends, their neighbours, their planet and, very often, total strangers.

Section C — What are the myths of capitalist economics?

Within capitalism, economics plays an important ideological role. Economics has been used to construct a theory from which exploitation and oppression are excluded, by definition. We will attempt here to explain why capitalism is deeply exploitative. Elsewhere, in section B, we have indicated why capitalism is oppressive and will not repeat ourselves here.

In many ways economics plays the role within capitalism that religion played in the Middle Ages, namely to provide justification for the dominant social system and hierarchies. *"The priest keeps you docile and subjected,"* argued Malatesta, *"telling you everything is God's will; the economist say it's the law of nature."* They *"end up saying that no one is responsible for poverty, so there's no point rebelling against it."* [**Fra Contadini**, p. 21] Even worse, they usually argue that collective action by working class people is counterproductive and, like the priest, urge us to tolerate current oppression and exploitation with promises of a better future (in heaven for the priest, for the economist it is an unspecified "long run"). It would be no generalisation to state that if you want to find someone to rationalise and justify an obvious injustice or form of oppression then you should turn to an economist (preferably a "free market" one).

That is not the only similarity between the "science" of economics and religion. Like religion, its basis in science is usually lacking and its theories more based upon "leaps of faith" than empirical fact. Indeed, it is hard to find a "science" more unconcerned about empirical evidence or building realistic models than economics. Just looking at the assumptions made in "perfect competition" shows that (see section C.1 for details). This means that economics is immune to such trivialities as evidence and fact, although that does not stop economics being used to rationalise and justify certain of these facts (such as exploitation and inequality). A classic example is the various ways economists have sought to explain what anarchists and other socialists have tended to call ***"surplus value"*** (i.e. profits, interest and rent). Rather than seek to explain its origin by an empirical study of the society it exists in (capitalism), economists have preferred to invent "just-so" stories, little a-historic parables about a past which never existed is used to illustrate (and so defend) a present class system and its inequalities and injustices. The lessons of a fairy tale about a society that has never existed are used as a guide for one which does and, by some strange co-incidence, they happen to justify the existing class system and its distribution of income. Hence the love of Robinson Crusoe in economics.

Ironically, this favouring of theory (ideology would be a better term) is selective as their exposure as fundamentally flawed does not stop them being repeated. As we discuss in section C.2, the neoclassical theory of capital was proven to be incorrect by left-wing economists. This was admitted by their opponents: *"The question that confronts us is not whether the Cambridge Criticism is theoretically valid. It is. Rather the question is an empirical or econometric one: is there sufficient substitutability within the system to establish neo-classical results?"* Yet this did not stop this theory being taught to this day and the successful critique forgotten. Nor has econometrics successfully refuted the analysis, as capital specified in terms of money cannot reflect a theoretical substance (neo-classical "capital") which could not exist in reality. However, that is unimportant for *"[u]ntil the econometricians have the answer for us, placing reliance upon neo-classical economic theory is a matter of faith,"* which, of course, he had [C. E. Ferguson, **The Neo-classical Theory of Production and Distribution**, p. 266 and p. xvii]

Little wonder that Joan Robinson, one of the left-wing economists who helped expose the bankruptcy of the neo-classical theory of capital, stated that economics was *"back where it was, a branch of theology."* [**Collected Economic Papers**, Vol. 4, p. 127] It remains there more than thirty years later:

> *"Economics is not a science. Many economists — particularly those who believe that decisions on whether to get married can be reduced to an equation — see the world as a complex organism that can be understood using the right differential calculus. Yet everything we know about economics suggests that it is a branch and not a particularly advanced one, of witchcraft."* [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 226]

The weakness of economics is even acknowledged by some within the profession itself. According to Paul Ormerod, *"orthodox economics is in many ways an empty box. Its understanding of the world is similar to that of the physical sciences in the Middle Ages. A few insights have been obtained which stand the test of time, but they are very few indeed, and the whole basis of conventional economics is deeply flawed."* Moreover, he notes the *"overwhelming empirical evidence against the validity of its theories."* It is rare to see an economist be so honest. The majority of economists seem happy to go on with their theories, trying to squeeze life into the Procrustean bed of their models. And, like the priests of old, make it hard for non-academics to question their dogmas as *"economics is often intimidating. Its practitioners ... have erected around the discipline a barrier of jargon and mathematics which makes the subject difficult to penetrate for the non-initiated."* [**The Death of Economics**, p. ix, p. 67 and p. ix]

So in this section of our FAQ, we will try to get to the heart of modern capitalism, cutting through the ideological myths that supporters of the system have created around it. This will be a difficult task, as the divergence of the reality of capitalism and the economics that is used to explain (justify, more correctly) it is large. For example, the preferred model used in neo-classical economics is that of "perfect competition" which is based on a multitude of small firms producing homogenous products in a market which none of them are big enough to influence (i.e. have no market power). This theory was developed in the late 19th century when the real economy was marked by the rise of big business, a dominance which continues to this day. Nor can it be said that even small firms produce identical products — product differentiation and brand loyalty are key factors for any business. In other words, the model reflected (and still reflects) the exact opposite of reality.

In spite of the theoretical models of economics having little or no relation to reality, they are used to both explain and justify the current system. As for the former, the truly staggering aspect of economics for those who value the scientific method is the immunity of its doctrines to empirical refutation (and, in some cases, theoretical refutation). The latter is the key to not only understanding why economics is in such a bad state but also why it stays like that. While economists like to portray themselves as objective scientists, merely analysing the system, the development of their "science" has always been marked with apologetics, with rationalising the injustices of the existing system. This can be seen best in attempts by economists to show that Chief Executive Officers (CEOs) of firms, capitalists and landlords all deserve their riches while workers should be grateful for what they get. As such, economics has never been value free simply because what it says affects people and society. This produces a market for economic ideology in which those economists who supply the demand will prosper. Thus we find many *"fields of economics and economic policy where the responses of important economic professionals and the publicity given economic findings are correlated with the increased market demand for specific conclusions and a particular ideology."* [Edward S. Herman, *"The Selling of Market Economics,"* pp. 173–199, **New Ways of Knowing**, Marcus G. Raskin and Herbert J. Bernstein (eds.), p.192]

Even if we assume the impossible, namely that economists and their ideology can truly be objective in the face of market demand for their services, there is a root problem with capitalist economics. This is that it the specific social relations and classes produced by capitalism have become embedded into the theory. Thus, as an example, the concepts of the marginal productivity of land and capital are assumed to universal in spite the fact that neither makes any sense outside an economy where one class of people owns the means of life while another sells their labour to them. Thus in an artisan/peasant society or one based around co-operatives, there would be no need for such concepts for in such societies, the distinction between wages and profits has no meaning and, as a result, there is no income to the owners of machinery and land and no need to explain it in terms of the "marginal productivity" of either. Thus mainstream economics takes the class structure of capitalism as a natural, eternal, fact and builds up from there. Anarchists, like other socialists, stress the opposite, namely that capitalism is a specific historical phase and, consequently, there are no universal economic laws and if you change the system the laws of economics change. Unless you are a capitalist economist, of course, when the same laws apply no matter what.

In our discussion, it is important to remember that capitalist economics is **not** the same as the capitalist economy. The latter exists quite independently of the former (and, ironically, usually flourishes best when the policy makers ignore it). Dissident economist Steve Keen provides a telling analogy between economics and meteorology. Just as *"the climate would exist even if there were no intellectual discipline of meteorology, the economy itself would exist whether or not the intellectual pursuit of economics existed."* Both share *"a fundamental raison d'etre,"* namely *"that of attempting to understand a complex system."* However, there are differences. Like weather forecasters, *"economists frequently get their forecasts of the economic future wrong. But in fact, though weather forecasts are sometimes incorrect, overall meteorologists have an enviable record of accurate prediction — whereas the economic record is tragically bad."* This means it is impossible to ignore economics (*"to treat it and its practitioners as we these days treat astrologers"*) as it is a social discipline and so what we *"believe about economics therefore has an impact upon human society and the way we relate to one another."* Despite *"the abysmal predictive record of their discipline,"* economists *"are forever recommending ways in which the institutional environment should be altered to make the economy work better."* By that they mean make the real economy more like their models, as *"the hypothetical pure market performs better than the mixed economy in which we live."* [**Debunking Economics**, pp. 6–8] Whether this actually makes the world a better place is irrelevant (indeed, economics has been so developed as to make such questions irrelevant as what happens on the market is, by definition, for the best).

Here we expose the apologetics for what they are, expose the ideological role of economics as a means to justify, indeed ignore, exploitation and oppression. In the process of our discussion we will often expose the ideological apologetics that capitalist economics create to defend the status quo and the system of oppression and exploitation it produces. We will also attempt to show the deep flaws in the internal inconsistencies of mainstream economics. In addition, we will show how important reality is when evaluating the claims of economics.

That this needs to be done can be seen by comparing the promise of economics with its actual results when applied in reality. Mainstream economics argues that it is based on the idea of "utility" in consumption, i.e. the subjective pleasure of individuals. Thus production is, it is claimed, aimed at meeting the demands of consumers. Yet for a system supposedly based on maximising individual happiness ("utility"), capitalism produces a hell of a lot of unhappy people.

Some radical economists have tried to indicate this and have created an all-embracing measure of well-being called the Index of Sustainable Economic Welfare (ISEW). Their conclusions, as summarised by Elliot and Atkinson, are significant:

> *"In the 1950s and 1960s the ISEW rose in tandem with per capita GDP. It was a time not just of rising incomes, but of greater social equity, low crime, full employment and expanding welfare states. But from the mid-1970s onwards the two measures started to move apart. GDP per head continued its inexorable rise, but the ISEW started to decline as a result of lengthening dole queues, social exclusion, the explosion in crime, habitat loss, environmental degradation and the growth of environment- and stress-related illness. By the start of the 1990s, the ISEW was almost back to the levels at which it started in the early 1950s."* [Larry Elliot and Dan Atkinson, **Op. Cit.**, p. 248]

So while capitalism continues to produce more and more goods and, presumably, maximises more and more individual utility, actual real people are being "irrational" and not realising they are, in fact, better off and happier. Ironically, when such unhappiness is pointed out most defenders of capitalism dismiss people's expressed woe's as irrelevant. Apparently **some** subjective evaluations are considered more important than others!

Given that the mid-1970s marked the start of neo-liberalism, the promotion of the market and the reduction of government interference in the economy, this is surely significant. After all, the *"global economy of the early 21st century looks a lot more like the economic textbook ideal that did the world of the 1950s ... All these changes have followed the advance of economists that the unfettered market is the best way to allocate resources, and that well-intentioned interventions which oppose market forces will actually do more harm than good."* As such, *"[w]ith the market so much more in control of the global economy now than fifty years ago, then if economists are right, the world **should be** a manifestly better place: it should be growing faster, with more stability, and income should go to those who deserve it."* However, *"[u]nfortunately, the world refuses to dance the expected tune. In particularly, the final ten years of the 20th century were marked, not by tranquil growth, but by crises."* [Steve Keen, **Op. Cit.**, p. 2]

These problems and the general unhappiness with the way society is going is related to various factors, most of which are impossible to reflect in mainstream economic analysis. They flow from the fact that capitalism is a system marked by inequalities of wealth and power and so how it develops is based on them, not the subjective evaluations of atomised individuals that economics starts with. This in itself is enough to suggest that capitalist economics is deeply flawed and presents a distinctly flawed picture of capitalism and how it actually works.

Anarchists argue that this is unsurprising as economics, rather than being a science is, in fact, little more than an ideology whose main aim is to justify and rationalise the existing system. We agree with libertarian Marxist Paul Mattick's summation that economics is *"actually no more than a sophisticated apology for the social and economic **status quo**"* and hence the *"growing discrepancy between [its] theories and reality."* [**Economics, Politics and the Age of Inflation**, p. vii] Anarchists, unsurprisingly, see capitalism as a fundamentally exploitative system rooted in inequalities of power and wealth dominated by hierarchical structures (capitalist firms). In the sections that follow, the exploitative nature of capitalism is explained in greater detail. We would like to point out that for anarchists, exploitation is not more important than domination. Anarchists are opposed to both equally and consider them to be two sides of the same coin. You

cannot have domination without exploitation nor exploitation without domination. As Emma Goldman pointed out, under capitalism:

> *"wealth means power; the power to subdue, to crush, to exploit, the power to enslave, to outrage, to degrade ... Nor is this the only crime ... Still more fatal is the crime of turning the producer into a mere particle of a machine, with less will and decision than his master of steel and iron. Man is being robbed not merely of the products of his labour, but of the power of free initiative, of originality, and the interest in, or desire for, the things he is making."* [**Red Emma Speaks**, pp. 66–7]

Needless to say, it would be impossible to discuss or refute **every** issue covered in a standard economics book or every school of economics. As economist Nicholas Kaldor notes, *"[e]ach year new fashions sweep the 'politico-economic complex' only to disappear again with equal suddenness ... These sudden bursts of fashion are a sure sign of the 'pre-scientific' stage [economics is in], where any crazy idea can get a hearing simply because nothing is known with sufficient confidence to rule it out."* [**The Essential Kaldor**, p. 377] We will have to concentrate on key issues like the flaws in mainstream economics, why capitalism is exploitative, the existence and role of economic power, the business cycle, unemployment and inequality.

Nor do we wish to suggest that all forms of economics are useless or equally bad. Our critique of capitalist economics does not suggest that no economist has contributed worthwhile and important work to social knowledge or our understanding of the economy. Far from it. As Bakunin put it, property *"is a god"* and has *"its metaphysics. It is the science of the bourgeois economists. Like any metaphysics it is a sort of twilight, a compromise between truth and falsehood, with the latter benefiting from it. It seeks to give falsehood the appearance of truth and leads truth to falsehood."* [**The Political Philosophy of Bakunin**, p. 179] How far this is true varies form school to school, economist to economist. Some have a better understanding of certain aspects of capitalism than others. Some are more prone to apologetics than others. Some are aware of the problems of modern economics and *"some of the most committed economists have concluded that, if economics is to become less of a religion and more of a science, then the foundations of economics should be torn down and replaced"* (although, *"left to [their] own devices"*, economists *"would continue to build an apparently grand edifice upon rotten foundations."*). [Keen, **Op. Cit.**, p. 19]

As a rule of thumb, the more free market a particular economist or school of economics is, the more likely they will be prone to apologetics and unrealistic assumptions and models. Nor are we suggesting that if someone has made a positive contribution in one or more areas of economic analysis that their opinions on other subjects are correct or compatible with anarchist ideas. It is possible to present a correct analysis of capitalism or capitalist economics while, at the same time, being blind to the problems of Keynesian economics or the horrors of Stalinism. As such, our quoting of certain critical economists does not imply agreement with their political opinions or policy suggestions.

Then there is the issue of what do we mean by the term "capitalist economics"? Basically, any form of economic theory which seeks to rationalise and defend capitalism. This can go from the extreme of free market capitalist economics (such as the so-called "Austrian" school and Monetarists) to those who advocate state intervention to keep capitalism going (Keynesian economists). We will not be discussing those economists who advocate state capitalism. As a

default, we will take "capitalist economics" to refer to the mainstream "neoclassical" school as this is the dominant form of the ideology and many of its key features are accepted by the others. This seems applicable, given that the current version of capitalism being promoted is neo-liberalism where state intervention is minimised and, when it does happen, directed towards benefiting the ruling elite.

Lastly, one of the constant refrains of economists is the notion that the public is ignorant of economics. The implicit assumption behind this bemoaning of ignorance by economists is that the world should be run either by economists or on their recommendations. In section C.11 we present a case study of a nation, Chile, unlucky enough to have that fate subjected upon it. Unsurprisingly, this rule by economists could only be imposed as a result of a military coup and subsequent dictatorship. As would be expected, given the biases of economics, the wealthy did very well, workers less so (to put it mildly), in this experiment. Equally unsurprising, the system was proclaimed an economic miracle — before it promptly collapsed.

So this section of the FAQ is our modest contribution to making economists happier by making working class people less ignorant of their subject. As Joan Robinson put it:

> *"In short, no economic theory gives us ready-made answers. Any theory that we follow blindly will lead us astray. To make good use of an economic theory, we must first sort out the relations of the propagandist and the scientific elements in it, then by checking with experience, see how far the scientific element appears convincing, and finally re-combine it with our own political views. The purpose of studying economics is not to acquire a set of ready-made answers to economic questions, but to learn how to avoid being deceived by economists."* [**Contributions to Modern Economics**, p. 75]

C.1 What is wrong with economics?

In a nutshell, a lot. While economists like to portray their discipline as "scientific" and "value free", the reality is very different. It is, in fact, very far from a science and hardly "value free." Instead it is, to a large degree, deeply ideological and its conclusions almost always (by a strange co-incidence) what the wealthy, landlords, bosses and managers of capital want to hear. The words of Kropotkin still ring true today:

> *"Political Economy has always confined itself to stating facts occurring in society, and justifying them in the interest of the dominant class ... Having found [something] profitable to capitalists, it has set it up as a* ***principle.****"* [**The Conquest of Bread**, p. 181]

This is at its best, of course. At its worse economics does not even bother with the facts and simply makes the most appropriate assumptions necessary to justify the particular beliefs of the economists and, usually, the interests of the ruling class. This is the key problem with economics: it is **not** a science. It is **not** independent of the class nature of society, either in the theoretical models it builds or in the questions it raises and tries to answer. This is due, in part, to the pressures of the market, in part due to the assumptions and methodology of the dominant forms of economics. It is a mishmash of ideology and genuine science, with the former (unfortunately) being the bulk of it.

The argument that economics, in the main, is not a science it not one restricted to anarchists or other critics of capitalism. Some economists are well aware of the limitations of their profession. For example, Steve Keen lists many of the flaws of mainstream (neoclassical) economics in his excellent book **Debunking Economics**, noting that (for example) it is based on a *"dynamically irrelevant and factually incorrect instantaneous static snap-shot"* of the real capitalist economy. [**Debunking Economics**, p. 197] The late Joan Robinson argued forcefully that the neoclassical economist *"sets up a 'model' on arbitrarily constructed assumptions, and then applies 'results' from it to current affairs, without even trying to pretend that the assumptions conform to reality."* [**Collected Economic Papers**, vol. 4, p. 25] More recently, economist Mark Blaug has summarised many of the problems he sees with the current state of economics:

> *"Economics has increasing become an intellectual games played for its own sake and not for its practical consequences. Economists have gradually converted the subject into a sort of social mathematics in which analytical rigor as understood in math departments is everything and empirical relevance (as understood in physics departments) is nothing ... general equilibrium theory ... using economic terms like 'prices', 'quantities', 'factors of production,' and so on, but that nevertheless is clearly and even scandalously unrepresentative of any recognisable economic system...*
>
> *"Perfect competition never did exist and never could exist because, even when firms are small, they do not just take the price but strive to make the price. All the current*

textbooks say as much, but then immediately go on to say that the 'cloud-cuckoo' fantasyland of perfect competition is the benchmark against which we may say something significant about real-world competition ... But how can an idealised state of perfection be a benchmark when we are never told how to measure the gap between it and real-world competition? It is implied that all real-world competition is 'approximately' like perfect competition, but the degree of the approximation is never specified, even vaguely ...

"Think of the following typical assumptions: perfectly infallible, utterly omniscient, infinitely long-lived identical consumers; zero transaction costs; complete markets for all time-stated claims for all conceivable events, no trading of any kind at disequilibrium prices; infinitely rapid velocities of prices and quantities; no radical, incalculable uncertainty in real time but only probabilistically calculable risk in logical time; only linearly homogeneous production functions; no technical progress requiring embodied capital investment, and so on, and so on — all these are not just unrealistic but also unrobust assumptions. And yet they figure critically in leading economic theories." [*"Disturbing Currents in Modern Economics"*, **Challenge!**, Vol. 41, No. 3, May-June, 1998]

So neoclassical ideology is based upon special, virtually ad hoc, assumptions. Many of the assumptions are impossible, such as the popular assertion that individuals can accurately predict the future (as required by "rational expectations" and general equilibrium theory), that there are a infinite number of small firms in every market or that time is an unimportant concept which can be abstracted from. Even when we ignore those assumptions which are obviously nonsense, the remaining ones are hardly much better. Here we have a collection of apparently valid positions which, in fact, rarely have any basis in reality. As we discuss in section C.1.2, an essential one, without which neoclassical economics simply disintegrates, has very little basis in the real world (in fact, it was invented simply to ensure the theory worked as desired). Similarly, markets often adjust in terms of quantities rather than price, a fact overlooked in general equilibrium theory. Some of the assumptions are mutually exclusive. For example, the neo-classical theory of the supply curve is based on the assumption that some factor of production cannot be changed in the short run. This is essential to get the concept of diminishing marginal productivity which, in turn, generates a rising marginal cost and so a rising supply curve. This means that firms **within** an industry cannot change their capital equipment. However, the theory of perfect competition requires that in the short period there are no barriers to entry, i.e. that anyone **outside** the industry can create capital equipment and move into the market. These two positions are logically inconsistent.

In other words, although the symbols used in mainstream may have economic sounding names, the theory has no point of contact with empirical reality (or, at times, basic logic):

*"Nothing in these abstract economic models actually **works** in the real world. It doesn't matter how many footnotes they put in, or how many ways they tinker around the edges. The whole enterprise is totally rotten at the core: it has no relation to reality."* [Noam Chomsky, **Understanding Power**, pp. 254–5]

As we will indicate, while its theoretical underpinnings are claimed to be universal, they are specific to capitalism and, ironically, they fail to even provide an accurate model of that system

as it ignores most of the real features of an actual capitalist economy. So if an economist does not say that mainstream economics has no bearing to reality, you can be sure that what he or she tells you will be more likely ideology than anything else. "Economic reality" is not about facts; it's about faith in capitalism. Even worse, it is about blind faith in what the economic ideologues say about capitalism. The key to understanding economists is that they believe that if it is in an economic textbook, then it must be true — particularly if it confirms any initial prejudices. The opposite is usually the case.

The obvious fact that the real world is not like that described by economic text books can have some funny results, particularly when events in the real world contradict the textbooks. For most economists, or those who consider themselves as such, the textbook is usually preferred. As such, much of capitalist apologetics is faith-driven. Reality has to be adjusted accordingly.

A classic example was the changing positions of pundits and "experts" on the East Asian economic miracle. As these economies grew spectacularly during the 1970s and 1980s, the experts universally applauded them as examples of the power of free markets. In 1995, for example, the right-wing Heritage Foundation's index of economic freedom had four Asian countries in its top seven countries. The **Economist** explained at the start of 1990s that Taiwan and South Korea had among the least price-distorting regimes in the world. Both the Word Bank and IMF agreed, downplaying the presence of industrial policy in the region. This was unsurprising. After all, their ideology said that free markets would produce high growth and stability and so, logically, the presence of both in East Asia must be driven by the free market. This meant that, for the true believers, these nations were paradigms of the free market, reality not withstanding. The markets agreed, putting billions into Asian equity markets while foreign banks loaned similar vast amounts.

In 1997, however, all this changed when all the Asian countries previously qualified as "free" saw their economies collapse. Overnight the same experts who had praised these economies as paradigms of the free market found the cause of the problem — extensive state intervention. The free market paradise had become transformed into a state regulated hell! Why? Because of ideology — the free market is stable and produces high growth and, consequently, it was impossible for any economy facing crisis to be a free market one! Hence the need to disown what was previously praised, without (of course) mentioning the very obvious contradiction.

In reality, these economies had always been far from the free market. The role of the state in these "free market" miracles was extensive and well documented. So while East Asia *"had not only grown faster and done better at reducing poverty than any other region of the world ... it had also been more stable,"* these countries *"had been successful not only in spite of the fact that they had not followed most of the dictates of the Washington Consensus [i.e. neo-liberalism], but* ***because*** *they had not."* The government had played *"important roles ... far from the minimalist [ones] beloved"* of neo-liberalism. During the 1990s, things had changed as the IMF had urged a *"excessively rapid financial and capital market liberalisation"* for these countries as sound economic policies. This *"was probably the single most important cause of the [1997] crisis"* which saw these economies suffer meltdown, *"the greatest economic crisis since the Great Depression"* (a meltdown worsened by IMF aid and its underlying dogmas). Even worse for the believers in market fundamentalism, those nations (like Malaysia) that refused IMF suggestions and used state intervention has a *"shorter and shallower"* downturn than those who did not. [Joseph Stiglitz, **Globalisation and its Discontents**, p. 89, p. 90, p. 91 and p. 93] Even worse, the obvious conclusion from these events is more than just the ideological perspective of economists, it is that "the market" is not

all-knowing as investors (like the experts) failed to see the statist policies so bemoaned by the ideologues of capitalism **after** 1997.

This is not to say that the models produced by neoclassical economists are not wonders of mathematics or logic. Few people would deny that a lot of very intelligent people have spent a lot of time producing some quite impressive mathematical models in economics. It is a shame that they are utterly irrelevant to reality. Ironically, for a theory claims to be so concerned about allocating scarce resources efficiently, economics has used a lot of time and energy refining the analyses of economies which have not, do not, and will not ever exist. In other words, scare resources have been inefficiently allocated to produce waste.

Why? Perhaps because there is a demand for such nonsense? Some economists are extremely keen to apply their methodology in all sorts of areas outside the economy. No matter how inappropriate, they seek to colonise every aspect of life. One area, however, seems immune to such analysis. This is the market for economic theory. If, as economists stress, every human activity can be analysed by economics then why not the demand and supply of economics itself? Perhaps because if that was done some uncomfortable truths would be discovered?

Basic supply and demand theory would indicate that those economic theories which have utility to others would be provided by economists. In a system with inequalities of wealth, effective demand is skewed in favour of the wealthy. Given these basic assumptions, we would predict that only these forms of economists which favour the requirements of the wealthy would gain dominance as these meet the (effective) demand. By a strange co-incidence, this is **precisely** what has happened. This did and does not stop economists complaining that dissidents and radicals were and are biased. As Edward Herman points out:

> *"Back in 1849, the British economist Nassau Senior chided those defending trade unions and minimum wage regulations for expounding an 'economics of the poor.' The idea that he and his establishment confreres were putting forth an 'economics of the rich' never occurred to him; he thought of himself as a scientist and spokesperson of true principles. This self-deception pervaded mainstream economics up to the time of the Keynesian Revolution of the 1930s. Keynesian economics, though quickly tamed into an instrument of service to the capitalist state, was disturbing in its stress on the inherent instability of capitalism, the tendency toward chronic unemployment, and the need for substantial government intervention to maintain viability. With the resurgent capitalism of the past 50 years, Keynesian ideas, and their implicit call for intervention, have been under incessant attack, and, in the intellectual counterrevolution led by the Chicago School, the traditional laissez-faire ('let-the-fur-fly') economics of the rich has been re-established as the core of mainstream economics."* [**The Economics of the Rich**]

Herman goes on to ask *"[w]hy do the economists serve the rich?"* and argues that *"[f]or one thing, the leading economists are among the rich, and others seek advancement to similar heights. Chicago School economist Gary Becker was on to something when he argued that economic motives explain a lot of actions frequently attributed to other forces. He of course never applied this idea to economics as a profession .. ."* There are a great many well paying think tanks, research posts, consultancies and so on that create an *"'effective demand' that should elicit an appropriate supply resource."*

Elsewhere, Herman notes the *"class links of these professionals to the business community were strong and the ideological element was realised in the neoclassical competitive model ... Spin-off*

negative effects on the lower classes were part of the 'price of progress.' It was the elite orientation of these questions [asked by economics], premises, and the central paradigm [of economic theory] that caused matters like unemployment, mass poverty, and work hazards to escape the net of mainstream economist interest until well into the twentieth century." Moreover, *"the economics profession in the years 1880–1930 was by and large strongly conservative, reflecting in its core paradigm its class links and sympathy with the dominant business community, fundamentally anti-union and suspicious of government, and tending to view competition as the true and durable state of nature."* [Edward S. Herman, *"The Selling of Market Economics,"* pp. 173–199, **New Ways of Knowing**, Marcus G. Raskin and Herbert J. Bernstein (eds.),p. 179–80 and p. 180]

Rather than scientific analysis, economics has always been driven by the demands of the wealthy (*"How did [economics] get instituted? As a weapon of class warfare."* [Chomsky, **Op. Cit.**, p. 252]). This works on numerous levels. The most obvious is that most economists take the current class system and wealth/income distribution as granted and generate general *"laws"* of economics from a specific historical society. As we discuss in the next section, this inevitably skews the "science" into ideology and apologetics. The analysis is also (almost inevitably) based on individualistic assumptions, ignoring or downplaying the key issues of groups, organisations, class and the economic and social power they generate. Then there are the assumptions used and questions raised. As Herman argues, this has hardly been a neutral process:

> *"the theorists explicating these systems, such as Carl Menger, Leon Walras, and Alfred Marshall, were knowingly assuming away formulations that raised disturbing questions (income distribution, class and market power, instability, and unemployment) and creating theoretical models compatible with their own policy biases of status quo or modest reformism ... Given the choice of 'problem,' ideology and other sources of bias may still enter economic analysis if the answer is predetermined by the structure of the theory or premises, or if the facts are selected or bent to prove the desired answer."* [**Op. Cit.**, p. 176]

Needless to say, economics is a "science" with deep ramifications within society. As a result, it comes under pressure from outside influences and vested interests far more than, say, anthropology or physics. This has meant that the wealthy have always taken a keen interest that the "science" teaches the appropriate lessons. This has resulted in a demand for a "science" which reflects the interests of the few, not the many. Is it **really** just a co-incidence that the lessons of economics are just what the bosses and the wealthy would like to hear? As non-neoclassical economist John Kenneth Galbraith noted in 1972:

> *"Economic instruction in the United States is about a hundred years old. In its first half century economists were subject to censorship by outsiders. Businessmen and their political and ideological acolytes kept watch on departments of economics and reacted promptly to heresy, the latter being anything that seemed to threaten the sanctity of property, profits, a proper tariff policy and a balanced budget, or that suggested sympathy for unions, public ownership, public regulation or, in any organised way, for the poor."* [**The Essential Galbraith**, p. 135]

It is **really** surprising that having the wealthy fund (and so control) the development of a "science" has produced a body of theory which so benefits their interests? Or that they would

be keen to educate the masses in the lessons of said "science", lessons which happen to conclude that the best thing workers should do is obey the dictates of the bosses, sorry, the market? It is really just a co-incidence that the repeated use of economics is to spread the message that strikes, unions, resistance and so forth are counter-productive and that the best thing worker can do is simply wait patiently for wealth to trickle down?

This co-incidence has been a feature of the "science" from the start. The French Second Empire in the 1850s and 60s saw *"numerous private individuals and organisation, municipalities, and the central government encouraged and founded institutions to instruct workers in economic principles."* The aim was to *"impress upon [workers] the salutary lessons of economics."* Significantly, the *"weightiest motive"* for so doing *"was fear that the influence of socialist ideas upon the working class threatened the social order."* The revolution of 1848 *"convinced many of the upper classes that the must prove to workers that attacks upon the economic order were both unjustified and futile."* Another reason was the recognition of the right to strike in 1864 and so workers *"had to be warned against abuse of the new weapon."* The instruction *"was always with the aim of refuting socialist doctrines and exposing popular misconceptions. As one economist stated, it was not the purpose of a certain course to initiate workers into the complexities of economic science, but to define principles useful for 'our conduct in the social order.'"* The interest in such classes was related to the level of *"worker discontent and agitation."* The impact was less than desired: *"The future Communard Lefrancais referred mockingly to the economists ... and the 'banality' and 'platitudes' of the doctrine they taught. A newspaper account of the reception given to the economist Joseph Garnier states that Garnier was greeted with shouts of: 'He is an economist' ... It took courage, said the article, to admit that one was an economist before a public meeting."* [David I. Kulstein, *"Economics Instruction for Workers during the Second Empire,"* pp. 225–234, **French Historical Studies**, vol. 1, no. 2, p. 225, p. 226, p. 227 and p. 233]

This process is still at work, with corporations and the wealthy funding university departments and posts as well as their own *"think tanks"* and paid PR economists. The control of funds for research and teaching plays it part in keeping economics the *"economics of the rich."* Analysing the situation in the 1970s, Herman notes that the *"enlarged private demand for the services of economists by the business community ... met a warm supply response."* He stressed that *"if the demand in the market is for specific policy conclusions and particular viewpoints that will serve such conclusions, the market will accommodate this demand."* Hence *"blatantly ideological models ... are being spewed forth on a large scale, approved and often funded by large vested interests"* which helps *"shift the balance between ideology and science even more firmly toward the former."* [**Op. Cit.**, p. 184, p. 185 and p. 179] The idea that "experts" funded and approved by the wealthy would be objective scientists is hardly worth considering. Unfortunately, many people fail to exercise sufficient scepticism about economists and the economics they support. As with most experts, there are two obvious questions with which any analysis of economics should begin: *"Who is funding it?"* and *"Who benefits from it?"*

However, there are other factors as well, namely the hierarchical organisation of the university system. The heads of economics departments have the power to ensure the continuation of their ideological position due to the position as hirer and promoter of staff. As economics *"has mixed its ideology into the subject so well that the ideologically unconventional usually appear to appointment committees to be scientifically incompetent."* [Benjamin Ward, **What's Wrong with Economics?**, p. 250] Galbraith termed this *"a new despotism,"* which consisted of *"defining scientific excellence in economics not as what is true but as whatever is closest to belief and method to the scholarly*

tendency of the people who already have tenure in the subject. This is a pervasive test, not the less oppress for being, in the frequent case, both self-righteous and unconscious. It helps ensure, needless to say, the perpetuation of the neoclassical orthodoxy." [**Op. Cit.**, p. 135] This plays a key role in keeping economics an ideology rather than a science:

> *"The power inherent in this system of quality control within the economics profession is obviously very great. The discipline's censors occupy leading posts in economics departments at the major institutions ... Any economist with serious hopes of obtaining a tenured position in one of these departments will soon be made aware of the criteria by which he is to be judged ... the entire academic program ... consists of indoctrination in the ideas and techniques of the science."* [Ward, **Op. Cit.**, pp. 29–30]

All this has meant that the "science" of economics has hardly changed in its basics in over one hundred years. Even notions which have been debunked (and have been acknowledged as such) continue to be taught:

> *"The so-called mainline teaching of economic theory has a curious self-sealing capacity. Every breach that is made in it by criticism is somehow filled up by admitting the point but refusing to draw any consequence from it, so that the old doctrines can be repeated as before. Thus the Keynesian revolution was absorbed into the doctrine that, 'in the long run,' there is a natural tendency for a market economy to achieve full employment of available labour and full utilisation of equipment; that the rate of accumulation is determined by household saving; and that the rate of interest is identical with the rate of profit on capital. Similarly, Piero Sraffa's demolition of the neoclassical production function in labour and 'capital' was admitted to be unanswerable, but it has not been allowed to affect the propagation of the 'marginal productivity' theory of wages and profits.*
>
> *"The most sophisticated practitioners of orthodoxy maintain that the whole structure is an exercise in pure logic which has no application to real life at all. All the same they give their pupils the impression that they are being provided with an instrument which is valuable, indeed necessary, for the analysis of actual problems."* [Joan Robinson, **Op. Cit.**, vol. 5, p. 222]

The social role of economics explains this process, for *"orthodox traditional economics ... was a plan for explaining to the privileged class that their position was morally right and was necessary for the welfare of society. Even the poor were better off under the existing system that they would be under any other ... the doctrine [argued] that increased wealth of the propertied class brings about an automatic increase of income to the poor, so that, if the rich were made poorer, the poor would necessarily become poorer too."* [Robinson, **Op. Cit.**, vol. 4, p. 242]

In such a situation, debunked theories would continue to be taught simply because what they say has a utility to certain sections of society:

> *"Few issues provide better examples of the negative impact of economic theory on society than the distribution of income. Economists are forever opposing 'market interventions' which might raise the wages of the poor, while defending astronomical salary levels*

for top executives on the basis that if the market is willing to pay them so much, they must be worth it. In fact, the inequality which is so much a characteristic of modern society reflects power rather than justice. This is one of the many instances where unsound economic theory makes economists the champions of policies which, is anything, undermine the economic foundations of modern society." [Keen, **Op. Cit.**, p. 126]

This argument is based on the notion that wages equal the marginal productivity of labour. This is supposed to mean that as the output of workers increase, their wages rise. However, as we note in section C.1.5, this law of economics has been violated for the last thirty-odd years in the US. Has this resulted in a change in the theory? Of course not. Not that the theory is actually correct. As we discuss in section C.2.5, marginal productivity theory has been exposed as nonsense (and acknowledged as flawed by leading neo-classical economists) since the early 1960s. However, its utility in defending inequality is such that its continued use does not really come as a surprise.

This is not to suggest that mainstream economics is monolithic. Far from it. It is riddled with argument and competing policy recommendations. Some theories rise to prominence, simply to disappear again (*"See, the 'science' happens to be a very flexible one: you can change it to do whatever you feel like, it's that kind of 'science.'"* [Chomsky, **Op. Cit.**, p. 253]). Given our analysis that economics is a commodity and subject to demand, this comes as no surprise. Given that the capitalist class is always in competition within itself and different sections have different needs at different times, we would expect a diversity of economics beliefs within the "science" which rise and fall depending on the needs and relative strengths of different sections of capital. While, overall, the "science" will support basic things (such as profits, interest and rent are **not** the result of exploitation) but the actual policy recommendations will vary. This is not to say that certain individuals or schools will not have their own particular dogmas or that individuals rise above such influences and act as real scientists, of course, just that (in general) supply is not independent of demand or class influence.

Nor should we dismiss the role of popular dissent in shaping the "science." The class struggle has resulted in a few changes to economics, if only in terms of the apologetics used to justify non-labour income. Popular struggles and organisation play their role as the success of, say, union organising to reduce the working day obviously refutes the claims made against such movements by economists. Similarly, the need for economics to justify reforms can become a pressing issue when the alternative (revolution) is a possibility. As Chomsky notes, during the 19th century (as today) popular struggle played as much of a role as the needs of the ruling class in the development of the "science":

*"[Economics] changed for a number of reasons. For one thing, these guys had won, so they didn't need it so much as an ideological weapon anymore. For another, they recognised that they themselves needed a powerful interventionist state to defend industry form the hardships of competition in the open market — as they had always **had** in fact. And beyond that, eliminating people's 'right to live' was starting to have some negative side-effects. First of all, it was causing riots all over the place ... Then something even worse happened — the population started to organise: you got the beginning of an organised labour movement ... then a socialist movement developed. And at that point, the elites ... recognised that the game had to be called off, else they **really** would be in*

> *trouble ... it wasn't until recent years that laissez-faire ideology was revived again — and again, it was a weapon of class warfare ... And it doesn't have any more validity than it had in the early nineteenth century — in fact it has even* ***less.*** *At least in the early nineteenth century ... [the] assumptions had* ***some*** *relation to reality. Today those assumptions have* ***not*** *relation to reality."* [**Op. Cit.**, pp. 253–4]

Whether the *"economics of the rich"* or the *"economics of the poor"* win out in academia is driven far more by the state of the class war than by abstract debating about unreal models. Thus the rise of monetarism came about due to its utility to the dominant sections of the ruling class rather than it winning any intellectual battles (it was decisively refuted by leading Keynesians like Nicholas Kaldor who saw their predicted fears become true when it was applied — see section C.8). Hopefully by analysing the myths of capitalist economics we will aid those fighting for a better world by giving them the means of counteracting those who claim the mantle of "science" to foster the *"economics of the rich"* onto society.

To conclude, neo-classical economics shows the viability of an unreal system and this is translated into assertions about the world that we live in. Rather than analyse reality, economics evades it and asserts that the economy works *"as if"* it matched the unreal assumptions of neo-classical economics. No other science would take such an approach seriously. In biology, for example, the notion that the world can be analysed *"as if"* God created it is called Creationism and rightly dismissed. In economics, such people are generally awarded professorships or even the (so-called) Nobel prize in economics (Keen critiques the *"as if"* methodology of economics in chapter 7 of his **Debunking Economics**). Moreover, and even worse, policy decisions will be enacted based on a model which has no bearing in reality — with disastrous results (for example, the rise and fall of Monetarism).

Its net effect to justify the current class system and diverts serious attention from critical questions facing working class people (for example, inequality and market power, what goes on in production, how authority relations impact on society and in the workplace). Rather than looking to how things are produced, the conflicts generated in the production process and the generation as well as division of products/surplus, economics takes what was produced as given, as well as the capitalist workplace, the division of labour and authority relations and so on. The individualistic neoclassical analysis by definition ignores such key issues as economic power, the possibility of a structural imbalance in the way economic growth is distributed, organisation structure, and so on.

Given its social role, it comes as no surprise that economics is not a genuine science. For most economists, the *"scientific method (the inductive method of natural sciences) [is] utterly unknown to them."* [Kropotkin, **Anarchism**, p. 179] The argument that most economics is not a science is not limited to just anarchists or other critics of capitalism. Many dissident economics recognise this fact as well, arguing that the profession needs to get its act together if it is to be taken seriously. Whether it could retain its position as defender of capitalism if this happens is a moot point as many of the theorems developed were done so explicitly as part of this role (particularly to defend non-labour income — see section C.2). That economics can become much broader and more relevant is always a possibility, but to do so would mean to take into account an unpleasant reality marked by class, hierarchy and inequality rather than logic deductions derived from Robinson Crusoe. While the latter can produce mathematical models to reach the conclusions

that the market is already doing a good job (or, at best, there are some imperfections which can be counterbalanced by the state), the former cannot.

Anarchists, unsurprisingly, take a different approach to economics. As Kropotkin put it, *"we think that to become a science, Political Economy has to be built up in a different way. It must be treated as a natural science, and use the methods used in all exact, empirical sciences."* [**Evolution and Environment**, p. 93] This means that we must start with the world as it is, not as economics would like it to be. It must be placed in historical context and key facts of capitalism, like wage labour, not taken for granted. It must not abstract from such key facts of life as economic and social power. In a word, economics must reject those features which turn it into a sophisticated defence of the status quo. Given its social role within capitalism (and the history and evolution of economic thought), it is doubtful it will ever become a real science simply because it if did it would hardly be used to defend that system.

C.1.1 Is economics really value free?

Modern economists try and portray economics as a "value-free science." Of course, it rarely dawns on them that they are usually just taking existing social structures for granted and building economic dogmas around them, so justifying them. At best, as Kropotkin pointed out:

> *"[A]ll the so-called laws and theories of political economy are in reality no more than statements of the following nature: 'Granting that there are always in a country a considerable number of people who cannot subsist a month, or even a fortnight, without earning a salary and accepting for that purpose the conditions of work imposed upon them by the State, or offered to them by those whom the State recognises as owners of land, factories, railways, etc., then the results will be so and so.'*
>
> *"So far academic political economy has been only an enumeration of what happens under these conditions — without distinctly stating the conditions themselves. And then, having described **the facts** which arise in our society under these conditions, they represent to us these **facts** as rigid, **inevitable economic laws.**"* [**Anarchism**, p. 179]

In other words, economists usually take the political and economic aspects of capitalist society (such as property rights, inequality and so on) as given and construct their theories around it. At best. At worse, economics is simply speculation based on the necessary assumptions required to prove the desired end. By some strange coincidence these ends usually bolster the power and profits of the few and show that the free market is the best of all possible worlds. Alfred Marshall, one of the founders of neoclassical economics, once noted the usefulness of economics to the elite:

> *"From Metaphysics I went to Ethics, and found that the justification of the existing conditions of society was not easy. A friend, who had read a great deal of what are called the Moral Sciences, constantly said: 'Ah! if you understood Political Economy you would not say that'"* [quoted by Joan Robinson, **Collected Economic Papers**, vol. 4, p. 129]

Joan Robinson added that *"[n]owadays, of course, no one would put it so crudely. Nowadays, the hidden persuaders are concealed behind scientific objectivity, carefully avoiding value judgements; they are persuading all the better so."* [**Op. Cit.**, p. 129] The way which economic theory systematically says what bosses and the wealthy want to hear is just one of those strange co-incidences of life, one which seems to befall economics with alarming regularity.

How does economics achieve this strange co-incidence, how does the "value free" "science" end up being wedded to producing apologetics for the current system? A key reason is the lack of concern about history, about how the current distribution of income and wealth was created. Instead, the current distribution of wealth and income is taken for granted.

This flows, in part, from the static nature of neoclassical economics. If your economic analysis starts and ends with a snapshot of time, with a given set of commodities, then how those commodities get into a specific set of hands can be considered irrelevant — particularly when you modify your theory to exclude the possibility of proving income redistribution will increase overall utility (see section C.1.3). It also flows from the social role of economics as defender of capitalism. By taking the current distribution of income and wealth as given, then many awkward questions can be automatically excluded from the "science."

This can be seen from the rise of neoclassical economics in the 1870s and 1880s. The break between classical political economy and economics was marked by a change in the kind of questions being asked. In the former, the central focus was on distribution, growth, production and the relations between social classes. The exact determination of individual prices was of little concern, particularly in the short run. For the new economics, the focus became developing a rigorous theory of price determination. This meant abstracting from production and looking at the amount of goods available at any given moment of time. Thus economics avoided questions about class relations by asking questions about individual utility, so narrowing the field of analysis by asking politically harmless questions based on unrealistic models (for all its talk of rigour, the new economics did not provide an answer to how real prices were determined any more than classical economics had simply because its abstract models had no relation to reality).

It did, however, provide a naturalistic justification for capitalist social relations by arguing that profit, interest and rent are the result of individual decisions rather than the product of a specific social system. In other words, economics took the classes of capitalism, internalised them within itself, gave them universal application and, by taking for granted the existing distribution of wealth, justified the class structure and differences in market power this produces. It does not ask (or investigate) **why** some people own all the land and capital while the vast majority have to sell their labour on the market to survive. As such, it internalises the class structure of capitalism. Taking this class structure as a given, economics simply asks the question how much does each "factor" (labour, land, capital) contribute to the production of goods.

Alfred Marshall justified this perspective as follows:

> *"In the long run the earnings of each agent (of production) are, as a rule, sufficient only to recompense the sum total of the efforts and sacrifices required to produce them ... with a partial exception in the case of land ... especially much land in old countries, if we could trace its record back to their earliest origins. But the attempt would raise controversial questions in history and ethics as well as in economics; and the aims of our present inquiry are prospective rather than retrospective."* [**Principles of Economics**, p. 832]

Which is wonderfully handy for those who benefited from the theft of the common heritage of humanity. Particularly as Marshall himself notes the dire consequences for those without access to the means of life on the market:

> *"When a workman is in fear of hunger, his need of money is very great; and, if at starting he gets the worst of the bargaining, it remains great ... That is all the more probably because, while the advantage in bargaining is likely to be pretty well distributed between the two sides of a market for commodities, it is more often on the side of the buyers than on that of the sellers in a market for labour."* [**Op. Cit.**, pp. 335–6]

Given that market exchanges will benefit the stronger of the parties involved, this means that inequalities become stronger and more secure over time. Taking the current distribution of property as a given (and, moreover, something that must not be changed) then the market does not correct this sort of injustice. In fact, it perpetuates it and, moreover, it has no way of compensating the victims as there is no mechanism for ensuring reparations. So the impact of previous acts of aggression has an impact on how a specific society developed and the current state of the world. To dismiss *"retrospective"* analysis as it raises *"controversial questions"* and *"ethics"* is not value-free or objective science, it is pure ideology and skews any *"prospective"* enquiry into apologetics.

This can be seen when Marshall noted that labour *"is often sold under special disadvantages, arising from the closely connected group of facts that labour power is 'perishable,' that the sellers of it are commonly poor and have no reserve fund, and that they cannot easily withhold it from the market."* Moreover, the *"disadvantage, wherever it exists, is likely to be cumulative in its effects."* Yet, for some reason, he still maintains that *"wages of every class of labour tend to be equal to the net product due to the additional labourer of this class."* [**Op. Cit.**, p. 567, p. 569 and p. 518] Why should it, given the noted fact that workers are at a disadvantage in the market place? Hence Malatesta:

> *"Landlords, capitalists have robbed the people, with violence and dishonesty, of the land and all the means of production, and in consequence of this initial theft can each day take away from workers the product of their labour."* [**Errico Malatesta: His Life and Ideas**, p. 168]

As such, how could it possibly be considered "scientific" or "value-free" to ignore history? It is hardly *"retrospective"* to analyse the roots of the current disadvantage working class people have in the current and *"prospective"* labour market, particularly given that Marshall himself notes their results. This is a striking example of what Kropotkin deplored in economics, namely that in the rare situations when social conditions were *"mentioned, they were forgotten immediately, to be spoken of no more."* Thus reality is mentioned, but any impact this may have on the distribution of income is forgotten for otherwise you would have to conclude, with the anarchists, that the *"appropriation of the produce of human labour by the owners of capital [and land] exists only because millions of men [and women] have literally nothing to live upon, unless they sell their labour force and their intelligence at a price that will make the net profit of the capitalist and 'surplus value' possible."* [**Evolution and Environment**, p. 92 and p. 106]

This is important, for respecting property rights is easy to talk about but it only faintly holds some water if the existing property ownership distribution is legitimate. If it is illegitimate, if

the current property titles were the result of theft, corruption, colonial conquest, state intervention, and other forms of coercion then things are obviously different. That is why economics rarely, if ever, discusses this. This does not, of course, stop economists arguing against current interventions in the market (particularly those associated with the welfare state). In effect, they are arguing that it is okay to reap the benefits of past initiations of force but it is wrong to try and rectify them. It is as if someone walks into a room of people, robs them at gun point and then asks that they should respect each others property rights from now on and only engage in voluntary exchanges with what they had left. Any attempt to establish a moral case for the "free market" in such circumstances would be unlikely to succeed. This is free market capitalist economics in a nutshell: never mind past injustices, let us all do the best we can given the current allocations of resources.

Many economists go one better. Not content in ignoring history, they create little fictional stories in order to justify their theories or the current distribution of wealth and income. Usually, they start from isolated individual or a community of approximately equal individuals (a community usually without any communal institutions). For example, the "waiting" theories of profit and interest (see section C.2.7) requires such a fiction to be remotely convincing. It needs to assume a community marked by basic equality of wealth and income yet divided into two groups of people, one of which was industrious and farsighted who abstained from directly consuming the products created by their **own** labour while the other was lazy and consumed their income without thought of the future. Over time, the descendants of the diligent came to own the means of life while the descendants of the lazy and the prodigal have, to quote Marx, *"nothing to sell but themselves."* In that way, modern day profits and interest can be justified by appealing to such *"insipid childishness."* [**Capital**, vol. 1, p. 873] The real history of the rise of capitalism is, as we discuss in section F.8, grim.

Of course, it may be argued that this is just a model and an abstraction and, consequently, valid to illustrate a point. Anarchists disagree. Yes, there is often the need for abstraction in studying an economy or any other complex system, but this is not an abstraction, it is propaganda and a historical invention used not to illustrate an abstract point but rather a specific system of power and class. That these little parables and stories have all the necessary assumptions and abstractions required to reach the desired conclusions is just one of those co-incidences which seem to regularly befall economics.

The strange thing about these fictional stories is that they are given much more credence than real history within economics. Almost always, fictional "history" will always top actual history in economics. If the actual history of capitalism is mentioned, then the defenders of capitalism will simply say that we should not penalise current holders of capital for actions in the dim and distant past (that current and future generations of workers are penalised goes unmentioned). However, the fictional "history" of capitalism suffers from no such dismissal, for invented actions in the dim and distant past justify the current owners holdings of wealth and the income that generates. In other words, heads I win, tails you loose.

Needless to say, this (selective) myopia is not restricted to just history. It is applied to current situations as well. Thus we find economists defending current economic systems as "free market" regimes in spite of obvious forms of state intervention. As Chomsky notes:

> *"when people talk about ... free-market 'trade forces' inevitably kicking all these people out of work and driving the whole world towards a kind of a Third World-type polar-*

> *isation of wealth ... that's true if you take a narrow enough perspective on it. But if you look into the factors that **made** things the way they are, it doesn't even come **close** to being true, it's not remotely in touch with reality. But when you're studying economics in the ideological institutions, that's all irrelevant and you're not supposed to ask questions like these."* [**Understanding Power**, p. 260]

To ignore all that and simply take the current distribution of wealth and income as given and then argue that the "free market" produces the best allocation of resources is staggering. Particularly as the claim of *"efficient allocation"* does not address the obvious question: "efficient" for whose benefit? For the idealisation of freedom in and through the market ignores the fact that this freedom is very limited in scope to great numbers of people as well as the consequences to the individuals concerned by the distribution of purchasing power amongst them that the market throws up (rooted, of course in the original endowments). Which, of course, explains why, even **if** these parables of economics were true, anarchists would still oppose capitalism. We extend Thomas Jefferson's comment that the *"earth belongs always to the living generation"* to economic institutions as well as political — the past should not dominate the present and the future (Jefferson: *"Can one generation bind another and all others in succession forever? I think not. The Creator has made the earth for the living, not for the dead. Rights and powers can only belong to persons, not to things, not to mere matter unendowed with will"*). For, as Malatesta argued, people should *"not have the right ... to subject people to their rule and even less of bequeathing to the countless successions of their descendants the right to dominate and exploit future generations."* [**At the Cafe**, p. 48]

Then there is the strange co-incidence that "value free" economics generally ends up blaming all the problems of capitalism on workers. Unemployment? Recession? Low growth? Wages are too high! Proudhon summed up capitalist economic theory well when he stated that *"Political economy — that is, proprietary despotism — can never be in the wrong: it must be the proletariat."* [**System of Economical Contradictions**, p. 187] And little has changed since 1846 (or 1776!) when it comes to economics "explaining" capitalism's problems (such as the business cycle or unemployment).

As such, it is hard to consider economics as "value free" when economists regularly attack unions while being silent or supportive of big business. According to neo-classical economic theory, both are meant to be equally bad for the economy but you would be hard pressed to find many economists who would urge the breaking up of corporations into a multitude of small firms as their theory demands, the number who will thunder against "monopolistic" labour is substantially higher (ironically, as we note in section C.1.4, their own theory shows that they must urge the break up of corporations or support unions for, otherwise, unorganised labour **is** exploited). Apparently arguing that high wages are always bad but high profits are always good is value free.

So while big business is generally ignored (in favour of arguments that the economy works *"as if"* it did not exist), unions are rarely given such favours. Unlike, say, transnational corporations, unions are considered monopolistic. Thus we see the strange situation of economists (or economics influenced ideologies like right-wing "libertarians") enthusiastically defending companies that raise their prices in the wake of, say, a natural disaster and making windfall profits while, at the same time, attacking workers who decide to raise their wages by striking for being selfish. It is, of course, unlikely that they would let similar charges against bosses pass without

comment. But what can you expect from an ideology which presents unemployment as a good thing (namely, increased leisure — see section C.1.5) and being rich as, essentially, a **disutility** (the pain of abstaining from present consumption falls heaviest on those with wealth – see section C.2.7).

Ultimately, only economists would argue, with a straight face, that the billionaire owner of a transnational corporation is exploited when the workers in his sweatshops successfully form a union (usually in the face of the economic and political power wielded by their boss). Yet that is what many economists argue: the transnational corporation is not a monopoly but the union is and monopolies exploit others! Of course, they rarely state it as bluntly as that. Instead they suggest that unions get higher wages for their members be forcing other workers to take less pay (i.e. by exploiting them). So when bosses break unions they are doing this **not** to defend their profits and power but really to raise the standard of other, less fortunate, workers? Hardly. In reality, of course, the reason why unions are so disliked by economics is that bosses, in general, hate them. Under capitalism, labour is a cost and higher wages means less profits (all things being equal). Hence the need to demonise unions, for one of the less understood facts is that while unions increase wages for members, they also increase wages for non-union workers. This should not be surprising as non-union companies have to raise wages stop their workers unionising and to compete for the best workers who will be drawn to the better pay and conditions of union shops (as we discuss in section C.9, the neoclassical model of the labour market is seriously flawed).

Which brings us to another key problem with the claim that economics is "value free," namely the fact that it takes the current class system of capitalism and its distribution of wealth as not only a fact but as an ideal. This is because economics is based on the need to be able to differentiate between each factor of production in order to determine if it is being used optimally. In other words, the given class structure of capitalism is required to show that an economy uses the available resources efficiently or not. It claims to be "value free" simply because it embeds the economic relationships of capitalist society into its assumptions about nature.

Yet it is impossible to define profit, rent and interest independently of the class structure of any given society. Therefore, this *"type of distribution is the peculiarity of capitalism. Under feudalism the surplus was extracted as land rent. In an artisan economy each commodity is produced by a men with his own tools; the distinction between wages and profits has no meaning there."* This means that *"the very essence of the theory is bound up with a particular institution — wage labour. The central doctrine is that 'wages tend to equal marginal product of labour.' Obviously this has no meaning for a peasant household where all share the work and the income of their holding according to the rules of family life; nor does it apply in a [co-operative] where, the workers' council has to decide what part of net proceeds to allot to investment, what part to a welfare found and what part to distribute as wage."* [Joan Robinson, **Collected Economic Papers**, p. 26 and p. 130]

This means that the "universal" principles of economics end up by making any economy which does **not** share the core social relations of capitalism inherently "inefficient." If, for example, workers own all three "factors of production" (labour, land and capital) then the "value-free" laws of economics concludes that this will be inefficient. As there is only "income", it is impossible to say which part of it is attributable to labour, land or machinery and, consequently, if these factors are being efficiently used. This means that the "science" of economics is bound up with the current system and its specific class structure and, therefore, as a *"ruling class paradigm, the competitive model"* has the *"substantial"* merit that *"it can be used to rule off the agenda any pro-*

posals for substantial reform or intervention detrimental to large economic interests ... as the model allows (on its assumptions) a formal demonstration that these would reduce efficiency." [Edward S. Herman, *"The Selling of Market Economics,"* pp. 173–199, **New Ways of Knowing**, Marcus G. Raskin and Herbert J. Bernstein (eds.), p. 178]

Then there are the methodological assumptions based on individualism. By concentrating on individual choices, economics abstracts from the social system within which such choices are made and what influences them. Thus, for example, the analysis of the causes of poverty is turned towards the failings of individuals rather than the system as a whole (to be poor becomes a personal stigma). That the reality on the ground bears little resemblance to the myth matters little — when people with two jobs still fail to earn enough to feed their families, it seems ridiculous to call them lazy or selfish. It suggests a failure in the system, not in the poor themselves. An individualistic analysis is guaranteed to exclude, by definition, the impact of class, inequality, social hierarchies and economic/social power and any analysis of any inherent biases in a given economic system, its distribution of wealth and, consequently, its distribution of income between classes.

This abstracting of individuals from their social surroundings results in the generating economic "laws" which are applicable for all individuals, in all societies, for all times. This results in all concrete instances, no matter how historically different, being treated as expressions of the same universal concept. In this way the uniqueness of contemporary society, namely its basis in wage labour, is ignored (*"The period through which we are passing ... is distinguished by a special characteristic — WAGES."* [Proudhon, **Op. Cit.**, p. 199]). Such a perspective cannot help being ideological rather than scientific. By trying to create a theory applicable for all time (and so, apparently, value free) they just hide the fact their theory assumes and justifies the inequalities of capitalism (for example, the assumption of given needs and distribution of wealth and income secretly introduces the social relations of the current society back into the model, something which the model had supposedly abstracted from). By stressing individualism, scarcity and competition, in reality economic analysis reflects nothing more than the dominant ideological conceptions found in capitalist society. Every few economic systems or societies in the history of humanity have actually reflected these aspects of capitalism (indeed, a lot of state violence has been used to create these conditions by breaking up traditional forms of society, property rights and customs in favour of those desired by the current ruling elite).

The very general nature of the various theories of profit, interest and rent should send alarm bells ringing. Their authors construct these theories based on the deductive method and stress how they are applicable in **every** social and economic system. In other words, the theories are just that, theories derived independently of the facts of the society they are in. It seems somewhat strange, to say the least, to develop a theory of, say, interest independently of the class system within which it is charged but this is precisely what these "scientists" do. It is understandable why. By ignoring the current system and its classes and hierarchies, the economic aspects of this system can be justified in terms of appeals to universal human existence. This will raise less objections than saying, for example, that interest exists because the rich will only part with their money if they get more in return and the poor will pay for this because they have little choice due to their socio-economic situation. Far better to talk about "time preference" rather than the reality of class society (see section C.2.6).

Neoclassical economics, in effect, took the "political" out of "political economy" by taking capitalist society for granted along with its class system, its hierarchies and its inequalities. This

is reflected in the terminology used. These days even the term capitalism has gone out of fashion, replaced with the approved terms *"market system,"* the *"free market"* or *"free enterprise."* Yet, as Chomsky noted, terms such as *"free enterprise"* are used *"to designate a system of autocratic governance of the economy in which neither the community nor the workforce has any role (a system we would call 'fascist' if translated to the political sphere)."* [**Language and Politics**, p. 175] As such, it seems hardly "value-free" to proclaim a system free when, in reality, most people are distinctly not free for most of their waking hours and whose choices outside production are influenced by the inequality of wealth and power which that system of production create.

This shift in terminology reflects a political necessity. It effectively removes the role of wealth (capital) from the economy. Instead of the owners and manager of capital being in control or, at the very least, having significant impact on social events, we have the impersonal activity of *"the markets"* or *"market forces."* That such a change in terminology is the interest of those whose money accords them power and influence goes without saying. By focusing on the market, economics helps hide the real sources of power in an economy and attention is drawn away from such a key questions of how money (wealth) produces power and how it skews the "free market" in its favour. All in all, as dissident economist John Kenneth Galbraith once put it, *"[w]hat economists believe and teach is rarely hostile to the institutions that reflect the dominant economic power. Not to notice this takes effort, although many succeed."* [**The Essential Galbraith**, p. 180]

This becomes obvious when we look at how the advice economics gives to working class people. In theory, economics is based on individualism and competition yet when it comes to what workers should do, the "laws" of economics suddenly switch. The economist will now deny that competition is a good idea and instead urge that the workers co-operate (i.e. obey) their boss rather than compete (i.e. struggle over the division of output and authority in the workplace). They will argue that there is *"harmony of interests"* between worker and boss, that it is in the **self**-interest of workers **not** to be selfish but rather to do whatever the boss asks to further **the bosses** interests (i.e. profits).

That this perspective implicitly recognises the **dependent** position of workers, goes without saying. So while the sale of labour is portrayed as a market exchange between equals, it is in fact an authority relation between servant and master. The conclusions of economics is simply implicitly acknowledging that authoritarian relationship by identifying with the authority figure in the relationship and urging obedience to them. It simply suggests workers make the best of it by refusing to be independent individuals who need freedom to flourish (at least during working hours, outside they can express their individuality by shopping).

This should come as no surprise, for, as Chomsky notes, economics is rooted in the notion that *"you only harm the poor by making them believe that they have rights other than what they can win on the market, like a basic right to live, because that kind of right interferes with the market, and with efficiency, and with growth and so on — so ultimately people will just be worse off if you try to recognise them."* [**Op. Cit.**, p. 251] Economics teaches that you must accept change without regard to whether it is appropriate it not. It teaches that you must not struggle, you must not fight. You must simply accept whatever change happens. Worse, it teaches that resisting and fighting back are utterly counter-productive. In other words, it teaches a servile mentality to those subject to authority. For business, economics is ideal for getting their employees to change their attitudes rather than collectively change how their bosses treat them, structure their jobs or how they are paid — or, of course, change the system.

Of course, the economist who says that they are conducting "value free" analysis are indifferent to the kinds of relationships within society is being less than honest. Capitalist economic theory is rooted in very specific assumptions and concepts such as "economic man" and "perfect competition." It claims to be "value-free" yet its preferred terminology is riddled with value connotations. For example, the behaviour of "economic man" (i.e., people who are self-interested utility maximisation machines) is described as *"rational."* By implication, then, the behaviour of real people is *"irrational"* whenever they depart from this severely truncated account of human nature and society. Our lives consist of much more than buying and selling. We have goals and concerns which cannot be bought or sold in markets. In other words, humanity and liberty transcend the limits of property and, as a result, economics. This, unsurprisingly, affects those who study the "science" as well:

> *"Studying economics also seems to make you a nastier person. Psychological studies have shown that economics graduate students are more likely to 'free ride' — shirk contributions to an experimental 'public goods' account in the pursuit of higher private returns — than the general public. Economists also are less generous that other academics in charitable giving. Undergraduate economics majors are more likely to defect in the classic prisoner's dilemma game that are other majors. And on other tests, students grow less honest — expressing less of a tendency, for example, to return found money — after studying economics, but not studying a control subject like astronomy.*
>
> *"This is no surprise, really. Mainstream economics is built entirely on a notion of self-interested individuals, rational self-maximisers who can order their wants and spend accordingly. There's little room for sentiment, uncertainty, selflessness, and social institutions. Whether this is an accurate picture of the average human is open to question, but there's no question that capitalism as a system and economics as a discipline both reward people who conform to the model."* [Doug Henwood, **Wall Street**, p, 143]

So is economics "value free"? Far from it. Given its social role, it would be surprising that it were. That it tends to produce policy recommendations that benefit the capitalist class is not an accident. It is rooted in the fibre of the "science" as it reflects the assumptions of capitalist society and its class structure. Not only does it take the power and class structures of capitalism for granted, it also makes them the ideal for any and every economy. Given this, it should come as no surprise that economists will tend to support policies which will make the real world conform more closely to the standard (usually neoclassical) economic model. Thus the models of economics become more than a set of abstract assumptions, used simply as a tool in theoretical analysis of the casual relations of facts. Rather they become political goals, an ideal towards which reality should be forced to travel.

This means that economics has a dual character. On the one hand, it attempts to prove that certain things (for example, that free market capitalism produces an optimum allocation of resources or that, given free competition, price formation will ensure that each person's income corresponds to their productive contribution). On the other, economists stress that economic "science" has nothing to do with the question of the justice of existing institutions, class structures or the current economic system. And some people seem surprised that this results in policy recommendations which consistently and systematically favour the ruling class.

C.1.2 Is economics a science?

In a word, no. If by "scientific" it is meant in the usual sense of being based on empirical observation and on developing an analysis that was consistent with and made sense of the data, then most forms of economics are not a science.

Rather than base itself on a study of reality and the generalisation of theory based on the data gathered, economics has almost always been based on generating theories rooted on whatever assumptions were required to make the theory work. Empirical confirmation, if it happens at all, is usually done decades later and if the facts contradict the economics, so much the worse for the facts.

A classic example of this is the neo-classical theory of production. As noted previously, neo-classical economics is focused on individual evaluations of existing products and, unsurprisingly, economics is indelibly marked by *"the dominance of a theoretical vision that treats the inner workings of the production process as a 'black box.'"* This means that the *"neoclassical theory of the 'capitalist' economy makes no qualitative distinction between the corporate enterprise that employs tens of thousands of people and the small family undertaking that does no employ any wage labour at all. As far as theory is concerned, it is technology and market forces, not structures of social power, that govern the activities of corporate capitalists and petty proprietors alike."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 34 and pp. 33–4] Production in this schema just happens — inputs go in, outputs go out — and what happens inside is considered irrelevant, a technical issue independent of the social relationships those who do the actual production form between themselves — and the conflicts that ensure.

The theory does have a few key assumptions associated with it, however. First, there are diminishing returns. This plays a central role. In mainstream diminishing returns are required to produce a downward sloping demand curve for a given factor. Second, there is a rising supply curve based on rising marginal costs produced by diminishing returns. The average variable cost curve for a firm is assumed to be U-shaped, the result of first increasing and then diminishing returns. These are logically necessary for the neo-classical theory to work.

Non-economists would, of course, think that these assumptions are generalisations based on empirical evidence. However, they are not. Take the U-shaped average cost curve. This was simply invented by A. C. Pigou, *"a loyal disciple of [leading neo-classical Alfred] Marshall and quite innocent of any knowledge of industry. He therefore constructed a U-shaped average cost curve for a firm, showing economies of scale up to a certain size and rising costs beyond it."* [Joan Robinson, **Collected Economic Papers**, vol. 5, p. 11] The invention was driven by need of the theory, not the facts. With increasing returns to scale, then large firms would have cost advantages against small ones and would drive them out of business in competition. This would destroy the concept of perfect competition. However, the invention of the average cost curve allowed the theory to work as "proved" that a competitive market could **not** become dominated by a few large firms, as feared.

The model, in other words, was adjusted to ensure that it produced the desired result rather than reflect reality. The theory was required to prove that markets remained competitive and the existence of diminishing marginal returns to scale of production **did** tend by itself to limit the size of individual firms. That markets did become dominated by a few large firms was neither here nor there. It did not happen in theory and, consequently, that was the important thing and so *"when the great concentrations of power in the multinational corporations are bringing the*

age of national employment policy to an end, the text books are still illustrated by U-shaped curves showing the limitation on the size of firms in a perfectly competitive market." [Joan Robinson, **Contributions to Modern Economics**, p. 5]

To be good, a theory must have two attributes: They accurately describe the phenomena in question and they make accurate predictions. Neither holds for Pigou's invention: reality keeps getting in the way. Not only did the rise of a few large firms dominating markets indirectly show that the theory was nonsense, when empirical testing was finally done decades after the theory was proposed it showed that in most cases the opposite is the case: that there were constant or even falling costs in production. Just as the theories of marginality and diminishing marginal returns taking over economics, the real world was showing how wrong it was with the rise of corporations across the world.

So the reason why the market become dominated by a few firms should be obvious enough: actual corporate price is utterly different from the economic theory. This was discovered when researchers did what the original theorists did not think was relevant: they actually asked firms what they did and the researchers consistently found that, for the vast majority of manufacturing firms their average costs of production declined as output rose, their marginal costs were always well below their average costs, and substantially smaller than 'marginal revenue', and the concept of a 'demand curve' (and therefore its derivative 'marginal revenue') was simply irrelevant.

Unsurprisingly, real firms set their prices prior to sales, based on a mark-up on costs at a target rate of output. In other words, they did not passively react to the market. These prices are an essential feature of capitalism as prices are set to maintain the long-term viability of the firm. This, and the underlying reality that per-unit costs fell as output levels rose, resulted in far more stable prices than were predicted by traditional economic theory. One researcher concluded that administered prices *"differ so sharply from the behaviour to be expected from"* the theory *"as to challenge the basic conclusions"* of it. He warned that until such time as *"economic theory can explain and take into account the implications"* of this empirical data, *"it provides a poor basis for public policy."* Needless to say, this did not disturb neo-classical economists or stop them providing public policy recommendations. [Gardiner C. Means, *"The Administered-Price Thesis Reconfirmed"*, **The American Economic Review**, pp. 292–306, Vol. 62, No. 3, p. 304]

One study in 1952 showed firms a range of hypothetical cost curves, and asked firms which ones most closely approximated their own costs. Over 90% of firms chose a graph with a declining average cost rather than one showing the conventional economic theory of rising marginal costs. These firms faced declining average cost, and their marginal revenues were much greater than marginal cost at all levels of output. Unsurprisingly, the study's authors concluded if this sample was typical then it was *"obvious that short-run marginal price theory should be revised in the light of reality."* We are still waiting. [Eiteman and Guthrie, *"The Shape of the Average Cost Curve"*, **The American Economic Review**, pp. 832–8, Vol. 42, No. 5, p. 838]

A more recent study of the empirical data came to the same conclusions, arguing that it is *"overwhelming bad news ... for economic theory."* While economists treat rising marginal cost as the rule, 89% of firms in the study reported marginal costs which were either constant or declined with output. As for price elasticity, it is not a vital operational concept for corporations. In other words, the *"firms that sell 40 percent of GDP believe their demand is totally insensitive to price"* while *"only about one-sixth of GDP is sold under conditions of elastic demand."* [A.S. Blinder, E. Cabetti, D. Lebow and J. Rudd, **Asking About Prices**, p. 102 and p. 101]

Thus empirical research has concluded that actual price setting has nothing to do with clearing the market by equating market supply to market demand (i.e. what economic theory sees as the role of prices). Rather, prices are set to enable the firm to continue as a going concern and equating supply and demand in any arbitrary period of time is irrelevant to a firm which hopes to exist for the indefinite future. As Lee put it, basing himself on extensive use of empirical research, *"market prices are not market-clearing or profit-maximising prices, but rather are enterprise-, and hence transaction-reproducing prices."* Rather than a non-existent equilibrium or profit maximisation at a given moment determining prices, the market price is *"set and the market managed for the purpose of ensuring continual transactions for those enterprises in the market, that is for the benefit of the business leaders and their enterprises."* A significant proportion of goods have prices based on mark-up, normal cost and target rate of return pricing procedures and are relatively stable over time. Thus *"the existence of stable, administered market prices implies that the markets in which they exist are not organised like auction markets or like the early retail markets and oriental bazaars"* as imagined in mainstream economic ideology. [Frederic S. Lee, **Post Keynesian Price Theory**, p. 228 and p. 212]

Unsurprisingly, most of these researchers were highly critical the conventional economic theory of markets and price setting. One viewed the economists' concepts of perfect competition and monopoly as virtual nonsense and *"the product of the itching imaginations of uninformed and inexperienced armchair theorisers."* [Tucker, quoted by Lee, **Op. Cit.**, p. 73f] Which **was** exactly how it was produced.

No other science would think it appropriate to develop theory utterly independently of phenomenon under analysis. No other science would wait decades before testing a theory against reality. No other science would then simply ignore the facts which utterly contradicted the theory and continue to teach that theory as if it were a valid generalisation of the facts. But, then, economics is not a science.

This strange perspective makes sense once it is realised how key the notion of diminishing costs is to economics. In fact, if the assumption of increasing marginal costs is abandoned then so is perfect competition and *"the basis of which economic laws can be constructed ... is shorn away,"* causing the *"wreckage of the greater part of general equilibrium theory."* This will have *"a very destructive consequence for economic theory,"* in the words of one leading neo-classical economist. [John Hicks, **Value and Capital**, pp. 83–4] As Steve Keen notes, this is extremely significant:

> *"Strange as it may seem ... this is a very big deal. If marginal returns are constant rather than falling, then the neo-classical explanation of everything collapses. Not only can economic theory no longer explain how much a firm produces, it can explain nothing else.*
>
> *"Take, for example, the economic theory of employment and wage determination ... The theory asserts that the real wage is equivalent to the marginal product of labour ... An employer will employ an additional worker if the amount the worker adds to output — the worker's marginal product — exceeds the real wage ... [This] explains the economic predilection for blaming everything on wages being too high – neo-classical economics can be summed up, as [John Kenneth] Galbraith once remarked, in the twin propositions that the poor don't work hard enough because they're paid too much, and the rich don't work hard enough because they're not paid enough ...*

> *"If in fact the output to employment relationship is relatively constant, then the neo-classical explanation for employment and output determination collapses. With a flat production function, the marginal product of labour will be constant, and it will* ***never*** *intersect the real wage. The output of the form then can't be explained by the cost of employing labour... [This means that] neo-classical economics simply cannot explain anything: neither the level of employment, nor output, nor, ultimately, what determines the real wage ...the entire edifice of economics collapses."* [**Debunking Economics**, pp. 76–7]

It should be noted that the empirical research simply confirmed an earlier critique of neo-classical economics presented by Piero Sraffa in 1926. He argued that while the neo-classical model of production works in theory only if we accept its assumptions. If those assumptions do not apply in practice, then it is irrelevant. He therefore *"focussed upon the economic assumptions that there were 'factors of production' which were fixed in the short run, and that supply and demand were independent of each other. He argued that these two assumptions could be fulfilled simultaneously. In circumstances where it was valid to say some factor of production was fixed in the short term, supply and demand could not independent, so that every point on the supply curve would be associated with a different demand curve. On the other hand, in circumstances where supply and demand could justifiably be treated as independent, then it would be impossible for any factor of production to be fixed. Hence the marginal costs of production would be constant."* He stressed firms would have to be irrational to act otherwise, foregoing the chance to make profits simply to allow economists to build their models of how they should act. [Keen, **Op. Cit.**, pp. 66–72]

Another key problem in economics is that of time. This has been known, and admitted, by economists for some time. Marshall, for example, stated that *"the element of* ***time****"* was *"the source of many of the greatest difficulties of economics."* [**Principles of Economics**, p. 109] The founder of general equilibrium theory, Walras, recognised that the passage of time wrecked his whole model and stated that we *"shall resolve the ... difficulty purely and simply by ignoring the time element at this point."* This was due, in part, because production *"requires a certain lapse of time."* [**Elements of Pure Economics**, p. 242] This was generalised by Gerard Debreu (in his Nobel Prize for economics winning **Theory of Value**) who postulated that everyone makes their sales and purchases for all time in one instant.

Thus the cutting edge of neo-classical economics, general equilibrium ignores both time **and** production. It is based on making time stop, looking at finished goods, getting individuals to bid for them and, once all goods are at equilibrium, allowing the transactions to take place. For Walras, this was for a certain moment of time and was repeated, for his followers it happened once for all eternity. This is obviously not the way markets work in the real world and, consequently, the dominant branch of economics is hardly scientific. Sadly, the notion of individuals having full knowledge of both now and the future crops up with alarming regularly in the "science" of economics.

Even if we ignore such minor issues as empirical evidence and time, economics has problems even with its favoured tool, mathematics. As Steve Keen has indicated, economists have *"obscured reality using mathematics because they have practised mathematics badly, and because they have not realised the limits of mathematics."* indeed, there are *"numerous theorems in economics that reply upon mathematically fallacious propositions."* [**Op. Cit.**, p. 258 and p. 259] For a theory born from the desire to apply calculus to economics, this is deeply ironic. As an example, Keen

points to the theory of perfect competition which assumes that while the demand curve for the market as a whole is downward sloping, an individual firm in perfect competition is so small that it cannot affect the market price and, consequently, faces a horizontal demand curve. Which is utterly impossible. In other words, economics breaks the laws of mathematics.

These are just two examples, there are many, many more. However, these two are pretty fundamental to the whole edifice of modern economic theory. Much, if not most, of mainstream economics is based upon theories which have little or no relation to reality. Kropotkin's dismissal of *"the metaphysical definitions of the academical economists"* is as applicable today. [**Evolution and Environment**, p. 92] Little wonder dissident economist Nicholas Kaldor argued that:

> *"The Walrasian [i.e. general] equilibrium theory is a highly developed intellectual system, much refined and elaborated by mathematical economists since World War II — an intellectual experiment ... But it does not constitute a scientific hypothesis, like Einstein's theory of relativity or Newton's law of gravitation, in that its basic assumptions are axiomatic and not empirical, and no specific methods have been put forward by which the validity or relevance of its results could be tested. The assumptions make assertions about reality in their implications, but these are not founded on direct observation, and, in the opinion of practitioners of the theory at any rate, they cannot be contradicted by observation or experiment."* [**The Essential Kaldor**, p. 416]

C.1.3 Can you have an economics based on individualism?

In a word, no. No economic system is simply the sum of its parts. The idea that capitalism is based on the subjective evaluations of individuals for goods flies in the face of both logic and the way capitalism works. In other words, modern economists is based on a fallacy. While it would be expected for critics of capitalism to conclude this, the ironic thing is that economists themselves have proven this to be the case.

Neoclassical theory argues that marginal utility determines demand and price, i.e. the price of a good is dependent on the intensity of demand for the marginal unit consumed. This was in contrast to classic economics, which argued that price (exchange value) was regulated by the cost of production, ultimately the amount of labour used to create it. While realistic, this had the political drawback of implying that profit, rent and interest were the product of unpaid labour and so capitalism was exploitative. This conclusion was quickly seized upon by numerous critics of capitalism, including Proudhon and Marx. The rise of marginal utility theory meant that such critiques could be ignored.

However, this change was not unproblematic. The most obvious problem with it is that it leads to circular reasoning. Prices are supposed to measure the "marginal utility" of the commodity, yet consumers need to know the price **first** in order to evaluate how best to maximise their satisfaction. Hence it *"obviously rest[s] on circular reasoning. Although it tries to explain prices, prices [are] necessary to explain marginal utility."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p.58] In the end, as Jevons (one of the founders of the new economics) acknowledged, the price of a commodity is the only test we have of the utility of the commodity to the producer. Given that marginality utility was meant to explain those prices, the failure of the theory could not be more striking.

However, this is the least of its problems. At first, the neoclassical economists used cardinal utility as their analysis tool. Cardinal utility meant that it was measurable between individuals, i.e. that the utility of a given good was the same for all. While this allowed prices to be determined, it caused obvious political problems as it obviously justified the taxation of the wealthy. As cardinal utility implied that the "utility" of an extra dollar to a poor person was clearly greater than the loss of one dollar to a rich man, it was appropriated by reformists precisely to justify social reforms and taxation.

Capitalist economists had, yet again, created a theory that could be used to attack capitalism and the income and wealth hierarchy it produces. As with classical economics, socialists and other social reformists used the new theories to do precisely that, appropriating it to justify the redistribution of income and wealth downward (i.e. back into the hands of the class who had created it in the first place). Combine this with the high levels of class conflict at the time and it should come as no surprise that the "science" of economics was suitably revised.

There was, of course, a suitable "scientific" rationale for this revision. It was noted that as individual evaluations are inherently subjective, it is obvious that cardinal utility was impossible in practice. Of course, cardinality was not totally rejected. Neoclassical economics retained the idea that capitalists maximise profits, which is a cardinal quantity. However for demand utility became "ordinal," that is utility was considered an individual thing and so could not be measured. This resulted in the conclusion that there was no way of making interpersonal comparisons between individuals and, consequently, no basis for saying a pound in the hands of a poor person had more utility than if it had remained in the pocket of a billionaire. The economic case for taxation was now, apparently, closed. While you may think that income redistribution was a good idea, it was now proven by "science" that this little more than a belief as all interpersonal comparisons were now impossible. That this was music to the ears of the wealthy was, of course, just one of those strange co-incidences which always seems to plague economic "science."

The next stage of the process was to abandon then ordinal utility in favour of "indifference curves" (the continued discussion of "utility" in economics textbooks is primarily heuristic). In this theory consumers are supposed to maximise their utility by working out which bundle of goods gives them the highest level of satisfaction based on the twin constraints of income and given prices (let us forget, for the moment, that marginal utility was meant to determines prices in the first place). To do this, it is assumed that incomes and tastes are independent and that consumers have pre-existing preferences for all possible bundles.

This produces a graph that shows different quantities of two different goods, with the "indifference curves" showing the combinations of goods which give the consumer the same level of satisfaction (hence the name, as the consumer is "indifferent" to any combination along the curve). There is also a straight line representing relative prices and the consumer's income and this budget line shows the uppermost curve the consumer can afford to reach. That these indifference curves could not be observed was not an issue although leading neo-classical economist Paul Samuelson provided an apparent means see these curves by his concept of *"revealed preference"* (a basic tautology). There is a reason why "indifference curves" cannot be observed. They are literally impossible for human beings to calculate once you move beyond a trivially small set of alternatives and it is impossible for actual people to act as economists argue they do. Ignoring this slight problem, the "indifference curve" approach to demand can be faulted for another, even more basic, reason. It does not prove what it seeks to show:

> *"Though mainstream economics began by assuming that this hedonistic, individualist approach to analysing consumer demand was intellectually sound,* ***it ended up proving that it was not.*** *The critics were right: society is more than the sum of its individual members."* [Steve Keen, **Debunking Economics**, p. 23]

As noted above, to fight the conclusion that redistributing wealth would result in a different level of social well-being, economists had to show that *"altering the distribution of income did not alter social welfare. They worked out that two conditions were necessary for this to be true: (a) that all people have the same tastes; (b) that each person's tastes remain the same as her income changes, so that every additional dollar of income was spent exactly the same way as all previous dollars."* The former assumption *"in fact amounts to assuming that there is only one person in society"* or that *"society consists of a multitude of identical drones"* or clones. The latter assumption *"amounts to assuming that there is only one commodity — since otherwise spending patterns would necessary change as income rose."* [Keen, **Op. Cit.**, p. 24] This is the real meaning of the assumption that all goods and consumers can be considered *"representative."* Sadly, such individuals and goods do not exist. Thus:

> *"Economics can prove that 'the demand curve slows downward in price' for a single individual and a single commodity. But in a society consisting of many different individuals with many different commodities, the 'market demand curve' is more probably jagged, and slopes every which way. One essential building block of the economic analysis of markets, the demand curve, therefore does not have the characteristics needed for economic theory to be internally consistent . .. most mainstream academic economists are aware of this problem, but they pretend that the failure can be managed with a couple of assumptions. Yet the assumptions themselves are so absurd that only someone with a grossly distorted sense of logic could accept them. That grossly distorted sense of logic is acquired in the course of a standard education in economics."* [**Op. Cit.**, pp. 25–7]

Rather than produce a *"social indifference map which had the same properties as the individual indifference maps"* by adding up all the individual maps, economics *"proved that this consistent summation from individual to society could* ***not*** *be achieved."* Any sane person would have rejected the theory at this stage, but not economists. Keen states the obvious: *"That economists, in general, failed to draw this inference speaks volumes for the unscientific nature of economic theory."* They simply invented *"some fudge to disguise the gapping hole they have uncovered in the theory."* [**Op. Cit.**, p. 40 and p. 48] Ironically, it took over one hundred years and advanced mathematical logic to reach the same conclusion that the classical economists took for granted, namely that individual utility could not be measured and compared. However, instead of seeking exchange value (price) in the process of production, neoclassical economists simply that made a few absurd assumptions and continued on its way as if nothing was wrong.

This is important because *"economists are trying to prove that a market economy necessarily maximises social welfare. If they can't prove that the market demand curve falls smoothly as price rises, they can't prove that the market maximises social welfare."* In addition, *"the concept of a social indifference curve is crucial to many of the key notions of economics: the argument that free trade is necessarily superior to regulated trade, for example, is first constructed using a social indifference*

curve. Therefore, if the concept of a social indifference curve itself is invalid, then so too are many of the most treasured notions of economics." [Keen, **Op. Cit.**, p. 50] This means much of economic theory is invalidated and with it the policy recommendations based on it.

This elimination of individual differences in favour of a society of clones by marginalism is not restricted to demand. Take the concept of the *"representative firm"* used to explain supply. Rather than a theoretical device to deal with variety, it ignores diversity. It is a heuristic concept which deals with a varied collection of firms by identifying a single set of distinct characteristics which are deemed to represent the essential qualities of the industry as a whole. It is **not** a single firm or even a typical or average firm. It is an imaginary firm which exhibits the "representative" features of the entire industry, i.e. it treats an industry as if it were just one firm. Moreover, it should be stressed that this concept is driven by the needs to prove the model, not by any concern over reality. The *"real weakness"* of the *"representative firm"* in neo-classical economics is that it is *"no more than a firm which answers the requirements expected from it by the supply curve"* and because it is *"nothing more than a small-scale replica of the industry's supply curve that it is unsuitable for the purpose it has been called into being."* [Kaldor, **The Essential Kaldor**, p. 50]

Then there is neoclassical analysis of the finance market. According to the Efficient Market Hypothesis, information is disseminated equally among all market participants, they all hold similar interpretations of that information and all can get access to all the credit they need at any time at the same rate. In other words, everyone is considered to be identical in terms of what they know, what they can get and what they do with that knowledge and cash. This results in a theory which argues that stock markets accurately price stocks on the basis of their unknown future earnings, i.e. that these identical expectations by identical investors are correct. In other words, investors are able to correctly predict the future and act in the same way to the same information. Yet if everyone held identical opinions then there would be no trading of shares as trading obviously implies **different** opinions on how a stock will perform. Similarly, in reality investors are credit rationed, the rate of borrowing tends to rise as the amount borrowed increases and the borrowing rate normally exceeds the leading rate. The developer of the theory was honest enough to state that the *"consequence of accommodating such aspects of reality are likely to be disastrous in terms of the usefulness of the resulting theory ... The theory is in a shambles."* [W.F Sharpe, quoted by Keen, **Op. Cit.**, p. 233]

Thus the world was turned into a single person simply to provide a theory which showed that stock markets were "efficient" (i.e. accurately reflect unknown future earnings). In spite of these slight problems, the theory was accepted in the mainstream as an accurate reflection of finance markets. Why? Well, the implications of this theory are deeply political as it suggests that finance markets will never experience bubbles and deep slumps. That this contradicts the well-known history of the stock market was considered unimportant. Unsurprisingly, *"as time went on, more and more data turned up which was not consistent with"* the theory. This is because the model's world *"is clearly not our world."* The theory *"cannot apply in a world in which investors differ in their expectations, in which the future is uncertain, and in which borrowing is rationed."* It *"should never have been given any credibility — yet instead it became an article of faith for academics in finance, and a common belief in the commercial world of finance."* [Keen, **Op. Cit.**, p. 246 and p. 234]

This theory is at the root of the argument that finance markets should be deregulated and as many funds as possible invested in them. While the theory may benefit the minority of share holders who own the bulk of shares and help them pressurise government policy, it is hard to see

how it benefits the rest of society. Alternative, more realistic theories, argue that finance markets show endogenous instability, result in bad investment as well as reducing the overall level of investment as investors will not fund investments which are not predicted to have a sufficiently high rate of return. All of which has a large and negative impact on the real economy. Instead, the economic profession embraced a highly unreal economic theory which has encouraged the world to indulge in stock market speculation as it argues that they do not have bubbles, booms or bursts (that the 1990s stock market bubble finally burst like many previous ones is unlikely to stop this). Perhaps this has to do the implications for economic theory for this farcical analysis of the stock market? As two mainstream economists put it:

> *"To reject the Efficient Market Hypothesis for the whole stock market . .. implies broadly that production decisions based on stock prices will lead to inefficient capital allocations. More generally, if the application of rational expectations theory to the virtually 'idea' conditions provided by the stock market fails, then what confidence can economists have in its application to other areas of economics ... ?"* [Marsh and Merton, quoted by Doug Henwood, **Wall Street**, p. 161]

Ultimately, neoclassical economics, by means of the concept of "representative" agent, has proved that subjective evaluations could not be aggregated and, as a result, a market supply and demand curves cannot be produced. In other words, neoclassical economics has shown that if society were comprised of one individual, buying one good produced by one factory then it could accurately reflect what happened in it. *"It is stating the obvious,"* states Keen, *"to call the representative agent an 'ad hoc' assumption, made simply so that economists can pretend to have a sound basis for their analysis, when in reality they have no grounding whatsoever."* [**Op. Cit.**, p. 188]

There is a certain irony about the change from cardinal to ordinal utility and finally the rise of the impossible nonsense which are "indifference curves." While these changes were driven by the need to deny the advocates of redistributive taxation policies the mantel of economic science to justify their schemes, the fact is by rejecting cardinal utility, it becomes impossible to say whether state action like taxes decreases utility at all. With ordinal utility and its related concepts, you cannot actually show that government intervention actually harms "social utility." All you can say is that they are indeterminate. While the rich may lose income and the poor gain, it is impossible to say anything about social utility without making an interpersonal (cardinal) utility comparison. Thus, ironically, ordinal utility based economics provides a much weaker defence of free market capitalism by removing the economist of the ability to call any act of government "inefficient" and they would have to be evaluated in, horror of horrors, non-economic terms. As Keen notes, it is *"ironic that this ancient defence of inequality ultimately backfires on economics, by making its impossible to construct a market demand curve which is independent on the distribution of income ... economics cannot defend any one distribution of income over any other. A redistribution of income that favours the poor over the rich cannot be formally opposed by economic theory."* [**Op. Cit.**, p. 51]

Neoclassical economics has also confirmed that the classical perspective of analysing society in terms of classes is also more valid than the individualistic approach it values. As one leading neo-classical economist has noted, if economics is *"to progress further we may well be forced to theorise in terms of groups who have collectively coherent behaviour."* Moreover, the classical

economists would not be surprised by the admission that *"the addition of production **can** help"* economic analysis nor the conclusion that the *"idea that we should start at the level of the isolated individual is one which we may well have to abandon ... If we aggregate over several individuals, such a model is unjustified."* [Alan Kirman, *"The Intrinsic Limits of Modern Economy Theory"*, pp. 126–139, The Economic Journal, Vol. 99, No. 395, p. 138, p. 136 and p. 138]

So why all the bother? Why spend over 100 years driving economics into a dead-end? Simply because of political reasons. The advantage of the neoclassical approach was that it abstracted away from production (where power relations are clear) and concentrated on exchange (where power works indirectly). As libertarian Marxist Paul Mattick notes, the *"problems of bourgeois economics seemed to disappear as soon as one ignored production and attended only to the market ... Viewed apart from production, the price problem can be dealt with purely in terms of the market."* [**Economic Crisis and Crisis Theory**, p. 9] By ignoring production, the obvious inequalities of power produced by the dominant social relations within capitalism could be ignored in favour of looking at abstract individuals as buyers and sellers. That this meant ignoring such key concepts as time by forcing economics into a static, freeze frame, model of the economy was a price worth paying as it allowed capitalism to be justified as the best of all possible worlds:

> *"On the one hand, it was thought essential to represent the winning of profit, interest, and rent as participation in the creation of wealth. On the other, it was thought desirable to found the authority of economics on the procedures of natural science. This second desire prompted a search for general economic laws independent of time and circumstances. If such laws could be proven, the existing society would thereby be legitimated and every idea of changing it refuted. Subjective value theory promised to accomplish both tasks at once. Disregarding the exchange relationship peculiar to capitalism — that between the sellers and buyers of labour power — it could explain the division of the social product, under whatever forms, as resulting from the needs of the exchangers themselves."* [Mattick, **Op. Cit.**, p. 11]

The attempt to ignore production implied in capitalist economics comes from a desire to hide the exploitative and class nature of capitalism. By concentrating upon the "subjective" evaluations of individuals, those individuals are abstracted away from real economic activity (i.e. production) so the source of profits and power in the economy can be ignored (section C.2 indicates why exploitation of labour in production is the source of profit, interest and rent and **not** exchanges in the market).

Hence the flight from classical economics to the static, timeless world of individuals exchanging pre-existing goods on the market. The evolution of capitalist economics has always been towards removing any theory which could be used to attack capitalism. Thus classical economics was rejected in favour of utility theory once socialists and anarchists used it to show that capitalism was exploitative. Then this utility theory was modified over time in order to purge it of undesirable political consequences. In so doing, they ended up not only proving that an economics based on individualism was impossible but also that it cannot be used to oppose redistribution policies after all.

C.1.4 What is wrong with equilibrium analysis?

The dominant form of economic analysis since the 1880s has been equilibrium analysis. While equilibrium had been used by classical economics to explain what regulated market prices, it did not consider it as reflecting any real economy. This was because classical economics analysed capitalism as a mode of production rather than as a mode of exchange, as a mode of circulation, as neo-classical economics does. It looked at the process of creating products while neo-classical economics looked at the price ratios between already existing goods (this explains why neo-classical economists have such a hard time understanding classical or Marxist economics, the schools are talking about different things and why they tend to call any market system "capitalism" regardless of whether wage labour predominates of not). The classical school is based on an analysis of markets based on production of commodities through time. The neo-classical school is based on an analysis of markets based on the exchange of the goods which exist at any moment of time.

This indicates what is wrong with equilibrium analysis, it is essentially a static tool used to analyse a dynamic system. It assumes stability where none exists. Capitalism is always unstable, always out of equilibrium, since *"growing out of capitalist competition, to heighten exploitation, ... the relations of production ... [are] in a state of perpetual transformation, which manifests itself in changing relative prices of goods on the market. Therefore the market is continuously in disequilibrium, although with different degrees of severity, thus giving rise, by its occasional approach to an equilibrium state, to the illusion of a tendency toward equilibrium."* [Mattick, **Op. Cit.**, p. 51] Given this obvious fact of the real economy, it comes as no surprise that dissident economists consider equilibrium analysis as *"a major obstacle to the development of economics as a **science** — meaning by the term 'science' a body of theorems based on assumptions that are **empirically** derived (from observations) and which embody hypotheses that are capable of verification both in regard to the assumptions and the predictions."* [Kaldor, **The Essential Kaldor**, p. 373]

Thus the whole concept is an unreal rather than valid abstraction of reality. Sadly, the notions of "perfect competition" and (Walrasian) "general equilibrium" are part and parcel of neoclassical economics. It attempts to show, in the words of Paul Ormerod, *"that under certain assumptions the free market system would lead to an allocation of a given set of resources which was in a very particular and restricted sense optimal from the point of view of every individual and company in the economy."* [**The Death of Economics**, p. 45] This was what Walrasian general equilibrium proved. However, the assumptions required prove to be somewhat unrealistic (to understate the point). As Ormerod points out:

> *"[i]t cannot be emphasised too strongly that ... the competitive model is far removed from being a reasonable representation of Western economies in practice... [It is] a travesty of reality. The world does not consist, for example, of an enormous number of small firms, none of which has any degree of control over the market ... The theory introduced by the marginal revolution was based upon a series of postulates about human behaviour and the workings of the economy. It was very much an experiment in pure thought, with little empirical rationalisation of the assumptions."* [**Op. Cit.**, p. 48]

Indeed, *"the weight of evidence"* is *"against the validity of the model of competitive general equilibrium as a plausible representation of reality."* [**Op. Cit.**, p. 62] For example, to this day,

economists still start with the assumption of a multitude of firms, even worse, a "continuum" of them exist in **every** market. How many markets are there in which there is an infinite number of traders? This means that from the start the issues and problems associated with oligopoly and imperfect competition have been abstracted from. This means the theory does not allow one to answer interesting questions which turn on the asymmetry of information and bargaining power among economic agents, whether due to size, or organisation, or social stigmas, or whatever else. In the real world, oligopoly is common place and asymmetry of information and bargaining power the norm. To abstract from these means to present an economic vision at odds with the reality people face and, therefore, can only propose solutions which harm those with weaker bargaining positions and without information.

General equilibrium is an entirely static concept, a market marked by perfect knowledge and so inhabited by people who are under no inducement or need to act. It is also timeless, a world without a future and so with no uncertainty (any attempt to include time, and so uncertainty, ensures that the model ceases to be of value). At best, economists include "time" by means of comparing one static state to another, i.e. *"the features of one non-existent equilibrium were compared with those of a later non-existent equilibrium."* [Mattick, **Op. Cit.**, p. 22] How the economy actually changed from one stable state to another is left to the imagination. Indeed, the idea of any long-run equilibrium is rendered irrelevant by the movement towards it as the equilibrium also moves. Unsurprisingly, therefore, to construct an equilibrium path through time requires all prices for all periods to be determined at the start and that everyone foresees future prices correctly for eternity — including for goods not invented yet. Thus the model cannot easily or usefully account for the reality that economic agents do not actually know such things as future prices, future availability of goods, changes in production techniques or in markets to occur in the future, etc. Instead, to achieve its results — proofs about equilibrium conditions – the model assumes that actors have perfect knowledge at least of the probabilities of all possible outcomes for the economy. The opposite is obviously the case in reality:

> *"Yet the main lessons of these increasingly abstract and unreal theoretical constructions are also increasingly taken on trust ... It is generally taken for granted by the great majority of academic economists that the economy always approaches, or is near to, a state of 'equilibrium' ... all propositions which the **pure** mathematical economist has shown to be valid only on assumptions that are manifestly unreal — that is to say, directly contrary to experience and not just 'abstract.' In fact, equilibrium theory has reached the stage where the pure theorist has successfully (though perhaps inadvertently) demonstrated that the main implications of this theory cannot possibly hold in reality, but has not yet managed to pass his message down the line to the textbook writer and to the classroom."* [Kaldor, **Op. Cit.**, pp. 376–7]

In this timeless, perfect world, "free market" capitalism will prove itself an efficient method of allocating resources and all markets will clear. In part at least, General Equilibrium Theory is an abstract answer to an abstract and important question: Can an economy relying only on price signals for market information be orderly? The answer of general equilibrium is clear and definitive — one can describe such an economy with these properties. However, no actual economy has been described and, given the assumptions involved, none could ever exist. A theoretical question has been answered involving some amount of intellectual achievement, but

it is a answer which has no bearing to reality. And this is often termed the "high theory" of equilibrium. Obviously most economists must treat the real world as a special case.

Little wonder, then, that Kaldor argued that his *"basic objection to the theory of general equilibrium is not that it is abstract — all theory is abstract and must necessarily be so since there can be no analysis without abstraction — but that it starts from the wrong kind of abstraction, and therefore gives a misleading 'paradigm' ... of the world as it is; it gives a misleading impression of the nature and the manner of operation of economic forces."* Moreover, belief that equilibrium theory is the only starting point for economic analysis has survived *"despite the increasing (**not** diminishing) arbitrariness of its based assumptions — which was forced upon its practitioners by the ever more precise cognition of the needs of logical consistency. In terms of gradually converting an 'intellectual experiment' ... into a scientific theory — in other words, a set of theorems directly related to observable phenomena — the development of theoretical economics was one of continual **de**gress, not **pro**gress ... The process ... of **relaxing** the unreal basis assumptions .. . has not yet started. Indeed, [they get] ... thicker and more impenetrable with every successive reformation of the theory."* [**Op. Cit.**, p. 399 and pp. 375–6]

Thus General Equilibrium theory analyses an economic state which there is no reason to suppose will ever, or has ever, come about. It is, therefore, an abstraction which has no discernible applicability or relevance to the world as it is. To argue that it can give insights into the real world is ridiculous. While it is true that there are certain imaginary intellectual problems for which the general equilibrium model is well designed to provide precise answers (if anything really could), in practice this means the same as saying that if one insists on analysing a problem which has no real world equivalent or solution, it may be appropriate to use a model which has no real-world application. Models derived to provide answers to imaginary problems will be unsuitable for resolving practical, real-world economic problems or even providing a useful insight into how capitalism works and develops.

This can have devastating real world impact, as can be seen from the results of neoclassical advice to Eastern Europe and other countries in their transition from state capitalism (Stalinism) to private capitalism. As Joseph Stiglitz documents it was a disaster for all but the elite due to the *"market fundamentalism preached"* by economists It resulted in *"a marked deterioration"* in most peoples *"basic standard of living, reflected in a host of social indicators"* and well as large drops in GDP. [**Globalisation and its discontents**, p. 138 and p. 152] Thus real people can be harmed by unreal theory. That the advice of neoclassical economists has made millions of people look back at Stalinism as "the good old days" should be enough to show its intellectual and moral bankruptcy.

What can you expect? Mainstream economic theory begins with axioms and assumptions and uses a deductive methodology to arrive at conclusions, its usefulness in discovering how the world works is limited. The deductive method is **pre-scientific** in nature. The axioms and assumptions can be considered fictitious (as they have negligible empirical relevance) and the conclusions of deductive models can only really have relevance to the structure of those models as the models themselves bear no relation to economic reality:

> *"Some theorists, even among those who reject general equilibrium as useless, praise its logical elegance and completeness ... But if any proposition drawn from it is applied to an economy inhabited by human beings, it immediately becomes self-contradictory. Human life does not exist outside history and no one had correct foresight of his own*

future behaviour, let alone of the behaviour of all the other individuals which will impinge upon his. I do not think that it is right to praise the logical elegance of a system which becomes self-contradictory when it is applied to the question that it was designed to answer." [Joan Robinson, **Contributions to Modern Economics**, pp. 127–8]

Not that this deductive model is internally sound. For example, the assumptions required for perfect competition are mutually exclusive. In order for the market reach equilibrium, economic actors need to able to affect it. So, for example, if there is an excess supply some companies must lower their prices. However, such acts contradict the basic assumption of "perfect competition," namely that the number of buyers and sellers is so huge that no one individual actor (a firm or a consumer) can determine the market price by their actions. In other words, economists assume that the impact of each firm is zero but yet when these zeroes are summed up over the whole market the total is greater than zero. This is impossible. Moreover, the *"requirements of equilibrium are carefully examined in the Walrasian argument but there is no way of demonstrating that a market which starts in an out-of-equilibrium position will tend to get into equilibrium, except by putting further very severe restrictions on the already highly abstract argument."* [Joan Robinson, **Collected Economic Papers**, vol. 5, p. 154] Nor does the stable unique equilibrium actually exist for, ironically, *"mathematicians have shown that, under fairly general conditions, general equilibrium is unstable."* [Keen, **Debunking Economics**, p. 173]

Another major problem with equilibrium theory is the fact that it does not, in fact, describe a capitalist economy. It should go without saying that models which focus purely on exchange cannot, by definition, offer a realistic analysis, never mind description, of the capitalism or the generation of income in an industrialised economy. As Joan Robinson summarises:

> *"The neo-classical theory ... pretends to derive a system of prices from the relative scarcity of commodities in relation to the demand for them. I say **pretend** because this system cannot be applied to capitalist production.*
>
> *"The Walrasian conception of equilibrium arrived at by higgling and haggling in a market illuminates the account of prisoners of war swapping the contents of their Red Cross parcels.*
>
> *"It makes sense also, with some modifications, in an economy of artisans and small traders ...*
>
> *"Two essential characteristics of industrial capitalism are absent in these economic systems — the distinction between income from work and income from property and the nature of investments made in the light of uncertain expectations about a long future."* [**Collected Economic Papers**, vol. 5, p. 34]

p> Even such basic things as profits and money have a hard time fitting into general equilibrium theory. In a perfectly competitive equilibrium, super-normal profit is zero so profit fails to appear. Normal profit is assumed to be the contribution capital makes to output and is treated as a cost of production and notionally set as the zero mark. A capitalism without profit? Or growth, *"since there is no profit or any other sort of surplus in the neoclassical equilibrium, there can be no expanded reproduction of the system."* [Mattick, **Op. Cit.**, p. 22] It also treats capitalism as little more than a barter economy. The concept of general equilibrium is incompatible with the actual

role of money in a capitalist economy. The assumption of *"perfect knowledge"* makes the keeping of cash reserves as a precaution against unexpected developments would not be necessary as the future is already known. In a world where there was absolute certainty about the present and future there would be no need for a medium of exchange like money at all. In the real world, money has a real effect on production an economic stability. It is, in other words, not neutral (although, conveniently, in a fictional world with neutral money *"crises **do not occur**"* and it *"assumed away the very matter under investigation,"* namely depressions. [Keynes, quoted by Doug Henwood, **Wall Street**, p. 199]).

Given that general equilibrium theory does not satisfactorily encompass such things as profit, money, growth, instability or even firms, how it can be considered as even an adequate representation of any real capitalist economy is hard to understand. Yet, sadly, this perspective has dominated economics for over 100 years. There is almost no discussion of how scarce means are organised to yield outputs, the whole emphasis is on exchanges of ready made goods. This is unsurprising, as this allows economics to abstract from such key concepts as power, class and hierarchy. It shows the *"the bankruptcy of academic economic teaching. The structure of thought which it expounds was long ago proven to be hollow. It consisted of a set of propositions which bore hardly any relation to the structure and evolution of the economy that they were supposed to depict."* [Joan Robinson, **Op. Cit.**, p. 90]

Ultimately, equilibrium analysis simply presents an unreal picture of the real world. Economics treat a dynamic system as a static one, building models rooted in the concept of equilibrium when a non-equilibrium analysis makes obvious sense. As Steven Keen notes, it is not only the real world that has suffered, so has economics:

> *"This obsession with equilibrium has imposed enormous costs on economics ... unreal assumptions are needed to maintain conditions under which there will be a unique, 'optimal' equilibrium ... If you believe you can use unreality to model reality, then eventually your grip on reality itself can become tenuous."* [**Op. Cit.**, p. 177]

Ironically, given economists usual role in society as defenders of big business and the elite in general, there is one conclusion of general equilibrium theory which does have some relevance to the real world. In 1956, two economists *"demonstrated that serious problems exist for the model of competitive equilibrium if any of its assumptions are breached."* They were *"not dealing with the fundamental problem of whether a competitive equilibrium exists,"* rather they wanted to know what happens if the assumptions of the model were violated. Assuming that two violations existed, they worked out what would happen if only one of them were removed. The answer was a shock for economists — *"If just one of many, or even just one of two [violations] is removed, it is not possible to prejudge the outcome. The economy as a whole can theoretically be worse off it just one violation exists than it is when two such violations exist."* In other words, any single move towards the economists' ideal market may make the world worse off. [Ormerod, **Op. Cit.**, pp. 82–4]

What Kelvin Lancaster and Richard Lipsey had shown in their paper *"The General Theory of the Second Best"* [**Review of Economic Studies**, December 1956] has one obvious implication, namely that neoclassical economics itself has shown that trade unions were essential to stop workers being exploited under capitalism. This is because the neoclassical model requires there to be a multitude of small firms and no unions. In the real world, most markets are dominated by

a few big firms. Getting rid of unions in such a less than competitive market would result in the wage being less than the price for which the marginal worker's output can be sold, i.e. workers are exploited by capital. In other words, economics has **itself** disproved the neoclassical case against trade unions. Not that you would know that from neoclassical economists, of course. In spite of knowing that, in their own terms, breaking union power while retaining big business would result, in the exploitation of labour, neoclassical economists lead the attack on "union power" in the 1970s and 1980s. The subsequent explosion in inequality as wealth flooded upwards provided empirical confirmation of this analysis.

Strangely, though, most neoclassical economists are still as anti-union as ever — in spite of both their own ideology and the empirical evidence. That the anti-union message is just what the bosses want to hear can just be marked up as yet another one of those strange co-incidences which the value-free science of economics is so prone to. Suffice to say, if the economics profession ever questions general equilibrium theory it will be due to conclusions like this becoming better known in the general population.

C.1.5 Does economics really reflect the reality of capitalism?

As we discussed in section C.1.2, mainstream economics is rooted in capitalism and capitalist social relations. It takes the current division of society into classes as both given **as well as** producing the highest form of efficiency. In other words, mainstream economics is rooted in capitalist assumptions and, unsurprisingly, its conclusions are, almost always, beneficial to capitalists, managers, landlords, lenders and the rich rather than workers, tenants, borrowers and the poor.

However, on another level mainstream capitalist economics simply does **not** reflect capitalism at all. While this may seem paradoxical, it is not. Neoclassical economics has always been marked by apologetics. Consequently, it must abstract or ignore from the more unpleasant and awkward aspects of capitalism in order to present it in the best possible light.

Take, for example, the labour market. Anarchists, like other socialists, have always stressed that under capitalism workers have the choice between selling their liberty/labour to a boss or starving to death (or extreme poverty, assuming some kind of welfare state). This is because they do not have access to the means of life (land and workplaces) unless they sell their labour to those who own them. In such circumstances, it makes little sense to talk of liberty as the only real liberty working people have is, if they are lucky, agreeing to be exploited by one boss rather than another. How much an person works, like their wages, will be based on the relative balance of power between the working and capitalist classes in a given situation.

Unsurprisingly, neoclassical economics does not portray the choice facing working class people in such a realistic light. Rather, it argues that the amount of hours an individual works is based on their preference for income and leisure time. Thus the standard model of the labour market is somewhat paradoxical in that there is no actual labour in it. There is only income, leisure and the preference of the individual for more of one or the other. It is leisure that is assumed to be a "normal good" and labour is just what is left over after the individual "consumes" all the leisure they want. This means that working resolves itself into the vacuous double negative of not-not-working and the notion that all unemployment is voluntary.

That this is nonsense should be obvious. How much "leisure" can someone indulge in without an income? How can an economic theory be considered remotely valid when it presents unemployment (i.e. no income) as the ultimate utility in an economy where everything is (or should be) subject to a price? Income, then, has an overwhelming impact upon the marginal utility of leisure time. Equally, this perspective cannot explain why the prospect of job loss is seen with such fear by most workers. If the neoclassical (non-)analysis of the labour market were true, workers would be happy to be made unemployed. In reality, fear of the sack is a major disciplining tool within capitalism. That free market capitalist economists have succeeded in making unemployment appear as a desirable situation suggests that its grip on the reality of capitalism is slim to say the least (here, as in many other areas, Keynes is more realistic although most of his followers have capitulated faced with neoclassical criticism that standard Keynesian theory had bad micro-economic foundations rather than admit that later was nonsense and the former *"an emasculated version of Keynes"* inflicted on the world by J.R. Hicks. [Keen, **Op. Cit.**, p. 211]).

However, this picture of the "labour" market does hide the reality of working class dependency and, consequently, the power of the capitalist class. To admit that workers do not exercise any free choice over whether they work or not and, once in work, have to accept the work hours set by their employers makes capitalism seem less wonderful than its supporters claim. Ultimately, this fiction of the labour market being driven by the workers' desire for "leisure" and that all unemployment is "voluntary" is rooted in the need to obscure the fact that unemployment is an essential feature of capitalism and, consequently, is endemic to it. This is because it is the fundamental disciplinary mechanism of the system (*"it is a whip in [the bosses'] hands, constantly held over you, so you will slave hard for him and 'behave' yourself,"* to quote Alexander Berkman). As we argued in section B.4.3, capitalism **must** have unemployment in order to ensure that workers will obey their bosses and not demand better pay and conditions (or, even worse, question why they have bosses in the first place). It is, in other words, *"inherent in the wage system"* and *"the fundamental condition of successful capitalist production."* While it is *"dangerous and degrading"* to the worker, it is *"very advantageous to the boss"* and so capitalism *"can't exist without it."* [Berkman, **What is Anarchism?**, p. 26] The experience of state managed full employment between (approximately) 1950 and 1970 confirms this analysis, as does the subsequent period (see section C.7.1).

For the choice of leisure and labour to be a reality, then workers need an independent source of income. The model, in other words, assumes that workers need to be enticed by the given wage and this is only the case when workers have the option of working for themselves, i.e. that they own their own means of production. If this were the case, then it would not be capitalism. In other words, the vision of the labour market in capitalist economics assumes a non-capitalist economy of artisans and peasant farmers — precisely the kind of economy capitalism destroyed (with the help of the state). An additional irony of this neoclassical analysis is that those who subscribe to it most are also those who attack the notion of a generous welfare state (or oppose the idea of welfare state in all forms). Their compliant is that with a welfare state, the labour market becomes "inefficient" as people can claim benefits and so need not seek work. Yet, logically, they should support a generous welfare state as it gives working people a genuine choice between labour and leisure. That bosses find it hard to hire people should be seen as a good thing as work is obviously being evaluated as a "disutility" rather than as a necessity. As an added irony, as we discuss in section C.9, the capitalist analysis of the labour market is **not** based on any firm empirical evidence nor does it have any real logical basis (it is just an assumption). In fact, the

evidence we do have points against it and in favour of the socialist analysis of unemployment and the labour market.

One of the reasons why neoclassical economics is so blas□bout unemployment is because it argues that it should never happen. That capitalism has always been marked by unemployment and that this rises and falls as part of the business cycle is a inconvenient fact which neoclassical economics avoided seriously analysing until the 1930s. This flows from Say's law, the argument that supply creates its own demand. This theory, and its more formally put Walras' Law, is the basis on which the idea that capitalism could never face a general economic crisis is rooted in. That capitalism has **always** been marked by boom and bust has never put Say's Law into question except during the 1930s and even then it was quickly put back into the centre of economic ideology.

For Say, *"every producer asks for money in exchange for his products only for the purpose of employing that money again immediately in the purchase of another product."* However, this is not the case in a capitalist economy as capitalists seek to accumulate wealth and this involves creating a difference between the value of commodities someone desired to sell and buy on the market. While Say asserts that people simply want to consume commodities, capitalism is marked by the desire (the need) to accumulate. The ultimate aim is **not** consumption, as Say asserted (and today's economists repeat), but rather to make as much profit as possible. To ignore this is to ignore the essence of capitalism and while it may allow the economist to reason away the contradictions of that system, the reality of the business cycle cannot be ignored.

Say's law, in other words, assumes a world without **capital**:

> *"what is a given stock of capital? In this context, clearly, it is the actual equipment and stocks of commodities that happen to be in existence today, the result of recent or remote past history, together with the know-how, skill of labour, etc., that makes up the state of technology. Equipment ... is designed for a particular range of uses, to be operated by a particular labour force. There is not a great deal of play in it. The description of the stock of equipment in existence at any moment as 'scare means with alternative uses' is rather exaggerated. The uses in fact are fairly specific, though they may be changed over time. But they **can** be utilised, at any moment, by offering less or more employment to labour. This is a characteristic of the wage economy. In an artisan economy, where each producer owns his own equipment, each produces what he can and sells it for what it will fetch. Say's law, that goods are the demand for goods, was ceasing to be true at the time he formulated it."* [Joan Robinson, **Collected Economic Papers**, vol. 4, p. 133]

As Keen notes, Say's law *"evisage[s] an exchange-only economy: an economy in which goods exist at the outset, but where no production takes place. The market simply enables the exchange of pre-existing goods."* However, once we had capital to the economy, things change as capitalists wish *"to supply more than they demand, and to accumulate the difference as profit which adds to their wealth."* This results in an excess demand and, consequently, the possibility of a crisis. Thus mainstream capitalist economics *"is best suited to the economic irrelevance of an exchange-only economy, or a production economy in which growth does not occur. If production and growth do occur, then they take place outside the market, when ironically the market is the main intellectual focus of neoclassical economics. Conventional economics is this a theory which suits a static economy*

... when what is needed are theories to analyse dynamic economies." [**Debunking Economics**, p. 194, p. 195 and p. 197]

Ultimately, capital assets are not produced for their own stake but in expectation of profits. This obvious fact is ignored by Say's law, but was recognised by Marx (and subsequently acknowledged by Keynes as being correct). As Keen notes, unlike Say and his followers, *"Marx's perspective thus integrates production, exchange and credit as holistic aspects of a capitalist economy, and therefore as essential elements of any theory of capitalism. Conventional economics, in contrast, can only analyse an exchange economy in which money is simply a means to make barter easier."* [**Op. Cit.**, pp. 195–6]

Rejecting Say's Law as being applicable to capitalism means recognising that the capitalist economy is not stable, that it can experience booms and slumps. That this reflects the reality of that economy should go without saying. It also involves recognising that it can take time for unemployed workers to find new employment, that unemployment can by involuntary and that bosses can gain advantages from the fear of unemployment by workers.

That last fact, the fear of unemployment is used by bosses to get workers to accept reductions in wages, hours and benefits, is key factor facing workers in any real economy. Yet, according to the economic textbooks, workers should have been falling over themselves to maximise the utility of leisure and minimise the disutility of work. Similarly, workers should not fear being made unemployed by globalisation as the export of any jobs would simply have generated more economic activity and so the displaced workers would immediately be re-employed (albeit at a lower wage, perhaps). Again, according to the economic textbooks, these lower wages would generate even more economic activity and thus lead, in the long run, to higher wages. If only workers had only listened to the economists then they would realise that that not only did they actually gain (in the long run) by their wages, hours and benefits being cut, many of them also gained (in the short term) increased utility by not having to go to work. That is, assuming the economists know what they are talking about.

Then there is the question of income. For most capitalist economics, a given wage is supposed to be equal to the *"marginal contribution"* that an individual makes to a given company. Are we **really** expected to believe this? Common sense (and empirical evidence) suggests otherwise. Consider Mr. Rand Araskog, the CEO of ITT in 1990, who in that year was paid a salary of $7 million. Is it conceivable that an ITT accountant calculated that, all else being the same, the company's $20.4 billion in revenues that year would have been $7 million less without Mr. Araskog – hence determining his marginal contribution to be $7 million? This seems highly unlikely.

Which feeds into the question of exploding CEO pay. While this has affected most countries, the US has seen the largest increases (followed by the UK). In 1979 the CEO of a UK company earned slightly less than 10 times as much as the average worker on the shop floor. By 2002 a boss of a FTSE 100 company could expect to make 54 times as much as the typical worker. This means that while the wages for those on the shopfloor went up a little, once inflation is taken into account, the bosses wages arose from £200,000 per year to around £1.4m a year. In America, the increase was even worse. In 1980, the ratio of CEO to worker pay 50 to 1. Twenty years later it was 525 to 1, before falling back to 281 to 1 in 2002 following the collapse of the share price bubble. [Larry Elliott, *"Nice work if you can get it: chief executives quietly enrich themselves for mediocrity,"* **The Guardian**, 23 January, 2006]

The notion of marginal productivity is used to justify many things on the market. For example, the widening gap between high-paid and low-paid Americans (it is argued) simply reflects a labour market efficiently rewarding more productive people. Thus the compensation for corporate chief executives climbs so sharply because it reflects their marginal productivity. The strange thing about this kind of argument is that, as we indicate in section C.2.5, the problem of defining and measuring capital wrecked the entire neoclassical theory of marginal factor productivity and with it the associated marginal productivity theory of income back in the 1960s — and was admitted as the leading neo-classical economists of the time. That marginal productivity theory is still invoked to justify capitalist inequalities shows not only how economics ignores the reality of capitalism but also the intellectual bankruptcy of the "science" and whose interests it, ultimately, serves.

In spite of this awkward little fact, what of the claims made based on it? Is this pay **really** the result of any increased productivity on the part of CEOs? The evidence points the other way. This can be seen from the performance of the economies and companies in question. In Britain trend growth was a bit more than 2% in 1980 and is still a bit more than 2% a quarter of a century later. A study of corporate performance in Britain and the United States looked at the companies that make up the FTSE 100 index in Britain and the S&P 500 in the US and found that executive income is rarely justified by improved performance. [Julie Froud, Sukhdev Johal, Adam Leaver and Karel Williams, **Financialisation and Strategy: Narrative and Number**] Rising stock prices in the 1990s, for example, were the product of one of the financial market's irrational bubbles over which the CEO's had no control or role in creating.

During the same period as soaring CEO pay, workers' real wages remained flat. Are we to believe that since the 1980s, the marginal contribution of CEOs has increased massively whereas workers' marginal contributions remained stagnant? According to economists, in a free market wages should increase until they reach their marginal productivity. In the US, however, during the 1960s *"pay and productivity grew in tandem, but they separated in the 1970s. In the 1990s boom, pay growth lagged behind productivity by almost 30%."* Looking purely at direct pay, *"overall productivity rose four times as fast as the average real hourly wage — and twenty times as fast in manufacturing."* Pay did catch up a bit in the late 1990s, but after 2000 *"pay returned to its lagging position."* [Doug Henwood, **After the New Economy**, pp. 45–6] In other words, over two decades of free market reforms has produced a situation which has refuted the idea that a workers wage equals their marginal productivity.

The standard response by economists would be to state that the US economy is not a free market. Yet the 1970s, after all, saw the start of reforms based on the recommendations of free market capitalist economists. The 1980s and 1990s saw even more. Regulation was reduced, if not effectively eliminated, the welfare state rolled back and unions marginalised. So it staggers belief to state that the US was **more** free market in the 1950s and 1960s than in the 1980s and 1990s but, logically, this is what economists suggest. Moreover, this explanation sits ill at ease with the multitude of economists who justified growing inequality and skyrocketing CEO pay and company profits during this period in terms of free market economics. What is it to be? If the US is not a free market, then the incomes of companies and the wealth are **not** the result of their marginal contribution but rather are gained at the expense of the working class. If the US is a free market, then the rich are justified (in terms of economic theory) in their income but workers' wages do not equal their marginal productivity. Unsurprisingly, most economists do not raise the question, never mind answer it.

So what is the reason for this extreme wage difference? Simply put, it's due to the totalitarian nature of capitalist firms (see section B.4). Those at the bottom of the company have no say in what happens within it; so as long as the share-owners are happy, wage differentials will rise and rise (particularly when top management own large amounts of shares!). It is capitalist property relations that allow this monopolisation of wealth by the few who own (or boss) but do not produce. The workers do not get the full value of what they produce, nor do they have a say in how the surplus value produced by their labour gets used (e.g. investment decisions). Others have monopolised both the wealth produced by workers and the decision-making power within the company (see section C.2 for more discussion). This is a private form of taxation without representation, just as the company is a private form of statism. Unlike the typical economist, most people would not consider it too strange a coincidence that the people with power in a company, when working out who contributes most to a product, decide it's themselves!

Whether workers will tolerate stagnating wages depends, of course, on the general economic climate. High unemployment and job insecurity help make workers obedient and grateful for any job and this has been the case for most of the 1980s and 1990s in both America and the UK. So a key reason for the exploding pay is to be found in the successful class struggle the ruling class has been waging since the 1970s. There has *"been a real shift in focus, so that the beneficiaries of corporate success (such as it is) are no longer the workers and the general public as a whole but shareholders. And given that there is evidence that only households in the top half of the income distribution in the UK and the US hold shares, this represents a significant redistribution of money and power."* [Larry Elliott, **Op. Cit.**] That economics ignores the social context of rising CEO pay says a lot about the limitations of modern economics and how it can be used to justify the current system.

Then there is the trivial little thing of production. Economics used to be called "political economy" and was production orientated. This was replaced by an economics based on marginalism and subjective evaluations of a given supply of goods is fixed. For classical economics, to focus on an instant of time was meaningless as time does not stop. To exclude production meant to exclude time, which as we noted in section C.1.2 this is precisely and knowingly what marginalist economics did do. This means modern economics simply ignores production as well as time and given that profit making is a key concern for any firm in the real world, such a position shows how irrelevant neoclassical economics really is.

Indeed, the neo-classical theory falls flat on its face. Basing itself, in effect, on a snapshot of time its principles for the rational firm are, likewise, based on time standing still. It argues that profit is maximised where marginal cost equals marginal revenue yet this is only applicable when you hold time constant. However, a real firm will not maximise profit with respect to quantity but also in respect to time. The neoclassical rule about how to maximise profit *"is therefore correct if the quantity produced never changes"* and *"by ignoring time in its analysis of the firm, economic theory ignores some of the most important issues facing a firm."* Neo-classical economics exposes its essentially static nature again. It *"ignores time, and is therefore only relevant in a world in which time does no matter."* [Keen, **Op. Cit.**, pp. 80–1]

Then there is the issue of consumption. While capitalist apologists go on about *"consumer sovereignty"* and the market as a *"consumers democracy,"* the reality is somewhat different. Firstly, and most obviously, big business spends a lot of money trying to shape and influence demand by means of advertising. Not for them the neoclassical assumption of "given" needs, determined

outside the system. So the reality of capitalism is one where the "sovereign" is manipulated by others. Secondly, there is the distribution of resources within society.

Market demand is usually discussed in terms of tastes, not in the distribution of purchasing power required to satisfy those tastes. Income distribution is taken as given, which is very handy for those with the most wealth. Needless to say, those who have a lot of money will be able to maximise their satisfactions far easier than those who have little. Also, of course, they can outbid those with less money. If capitalism is a "consumers" democracy then it is a strange one, based on *"one dollar, one vote."* It should be obvious whose values are going to be reflected most strongly in the market. If we start with the orthodox economics (convenient) assumption of a *"given distribution of income"* then any attempt to determine the best allocation of resources is flawed to start with as money replaces utility from the start. To claim after that the market based distribution is the best one is question begging in the extreme.

In other words, under capitalism, it is not individual need or "utility" as such that is maximised, rather it is ***effective*** utility (usually called "effective demand") — namely utility that is backed up with money. This is the reality behind all the appeals to the marvels of the market. As right-wing guru von Hayek put, the *"[s]pontaneous order produced by the market does not ensure that what general opinion regards as more important needs are always met before the less important ones."* [*"Competition as a discovery process",* **The Essence of Hayek**, p. 258] Which is just a polite way of referring to the process by which millionaires build a new mansion while thousands are homeless or live in slums or feed luxury food to their pets while humans go hungry. It is, in effect, to dismiss the needs of, for example, the 37 million Americans who lived below the poverty line in 2005 (12.7% of the population, the highest percentage in the developed world and is based on the American state's absolute definition of poverty, looking at relative levels, the figures are worse). Similarly, the 46 million Americans without health insurance may, of course, think that their need to live should be considered as *"more important"* than, say, allowing Paris Hilton to buy a new designer outfit. Or, at the most extreme, when agribusiness grow cash crops for foreign markets while the landless starve to death. As E.P. Thompson argues, Hayek's answer:

> *"promote[s] the notion that high prices were a (painful) remedy for dearth, in drawing supplies to the afflicted region of scarcity. But what draws supply are not high prices but sufficient money in their purses to pay high prices. A characteristic phenomenon in times of dearth is that it generates unemployment and empty pursues; in purchasing necessities at inflated prices people cease to be able to buy inessentials [causing unemployment] ... Hence the number of those able to pay the inflated prices declines in the afflicted regions, and food may be exported to neighbouring, less afflicted, regions where employment is holding up and consumers still have money with which to pay. In this sequence, high prices can actually withdraw supply from the most afflicted area."* [**Customs in Common**, pp. 283–4]

Therefore *"the law of supply and demand"* may not be the "most efficient" means of distribution in a society based on inequality. This is clearly reflected in the "rationing" by purse which this system is based on. While in the economics books, price is the means by which scare resources are "rationed" in reality this creates many errors. As Thompson notes, *"[h]owever persuasive the metaphor, there is an elision of the real Relationships assigned by price, which suggests ... ideological sleight-of-mind. Rationing by price does not allocate resources equally among those in need; it*

reserves the supply to those who can pay the price and excludes those who can't ... The raising of prices during dearth could 'ration' them [the poor] out of the market altogether." [**Op. Cit.**, p. 285] Which is precisely what does happen. As economist (and famine expert) Amartya Sen notes:

> *"Take a theory of entitlements based on a set of rights of 'ownership, transfer and rectification.' In this system a set of holdings of different people are judged to be just (or unjust) by looking at past history, and not by checking the consequences of that set of holdings. But what if the consequences are recognisably terrible? .. .[R]efer[ing] to some empirical findings in a work on famines ... evidence [is presented] to indicate that in many large famines in the recent past, in which millions of people have died, there was no over-all decline in food availability at all, and the famines occurred precisely because of shifts in entitlement resulting from exercises of rights that are perfectly legitimate... . [Can] famines ... occur with a system of rights of the kind morally defended in various ethical theories, including Nozick's. I believe the answer is straightforwardly yes, since for many people the only resource that they legitimately possess, viz. their labour-power, may well turn out to be unsaleable in the market, giving the person no command over food ... [i]f results such as starvations and famines were to occur, would the distribution of holdings still be morally acceptable despite their disastrous consequences? There is something deeply implausible in the affirmative answer."* [**Resources, Values and Development**, pp. 311–2]

Recurring famines were a constant problem during the lassiez-faire period of the British Empire. While the Irish Potato famine is probably the best known, the fact is that millions died due to starvation mostly due to a firm believe in the power of the market. In British India, according to the most reliable estimates, the deaths from the 1876–1878 famine were in the range of 6–8 million and between 1896 and 1900, were between 17 to 20 million. According to a British statistician who analysed Indian food security measures in the two millennia prior to 1800, there was one major famine a century in India. Under British rule there was one every four years. Over all, the late 1870s and the late 1890s saw somewhere between 30 to 60 million people die in famines in India, China and Brazil (not including the many more who died elsewhere). While bad weather started the problem by placing the price of food above the reach of the poorest, the market and political decisions based on profound belief in it made the famine worse. Simply put, had the authorities distributed what food existed, most of the victims would have survived yet they did not as this would have, they argued, broke the laws of the market and produced a culture of dependency. [Mike Davis, **Late Victorian Holocausts**] This pattern, incidentally, has been repeated in third world countries to this day with famine countries exporting food as the there is no "demand" for it at home.

All of which puts Hayek's glib comments about *"spontaneous order"* into a more realistic context. As Kropotkin put it:

> *"The very essence of the present economic system is that the worker can never enjoy the well-being he [or she] has produced ... Inevitably, industry is directed ... not towards what is needed to satisfy the needs of all, but towards that which, at a given moment, brings in the greatest profit for a few. Of necessity, the abundance of some will be based on the poverty of others, and the straitened circumstances of the greater number will*

> *have to be maintained at all costs, that there may be hands to sell themselves for a part only of what which they are capable of producing; without which private accumulation of capital is impossible."* [**Anarchism**, p. 128]

In other words, the market cannot be isolated and abstracted from the network of political, social and legal relations within which it is situated. This means that all that "supply and demand" tells us is that those with money can demand more, and be supplied with more, than those without. Whether this is the "most efficient" result for society cannot be determined (unless, of course, you assume that rich people are more valuable than working class ones **because** they are rich). This has an obvious effect on production, with "effective demand" twisting economic activity and so, under capitalism, meeting needs is secondary as the *"only aim is to increase the profits of the capitalist."* [Kropotkin, **Op. Cit.**, p. 55]). George Barrett brings home of evil effects of such a system:

> *"To-day the scramble is to compete for the greatest profits. If there is more profit to be made in satisfying my lady's passing whim than there is in feeding hungry children, then competition brings us in feverish haste to supply the former, whilst cold charity or the poor law can supply the latter, or leave it unsupplied, just as it feels disposed. That is how it works out."* [**Objections to Anarchism**, p. 347]

Therefore, as far as consumption is concerned, anarchists are well aware of the need to create and distribute necessary goods to those who require them. This, however, cannot be achieved under capitalism and for all its talk of "utility," "demand", "consumer sovereignty" and so forth the real facts are those with most money determine what is an "efficient" allocation of resources. This is directly, in terms of their control over the means of life as well as indirectly, by means of skewing market demand. For if financial profit is the sole consideration for resource allocation, then the wealthy can outbid the poor and ensure the highest returns. The less wealthy can do without.

All in all, the world assumed by neo-classical economics is not the one we actually live in, and so applying that theory is both misleading and (usually) disastrous (at least to the "have-nots"). While this may seen surprisingly, it is not once we take into account its role as apologist and defender of capitalism. Once that is recognised, any apparent contradiction falls away.

C.1.6 Is it possible to a non-equilibrium based capitalist economics?

Yes, it is but it would be unlikely to be free-market based as the reality of capitalism would get the better of its apologetics. This can be seen from the two current schools of economics which, rightly, reject the notion of equilibrium — the post-Keynesian school and the so-called Austrian school.

The former has few illusions in the nature of capitalism. At its best, this school combines the valid insights of classical economics, Marx and Keynes to produce a robust radical (even socialist) critique of both capitalism and capitalist economics. At its worse, it argues for state intervention to save capitalism from itself and, politically, aligns itself with social democratic (*"liberal",* in the USA) movements and parties. If economics does become a science, then this

school of economics will play a key role in its development. Economists of this school include Joan Robinson, Nicholas Kaldor, John Kenneth Galbraith, Paul Davidson and Steven Keen. Due to its non-apologetic nature, we will not discuss it here.

The Austrian school has a radically different perspective. This school, so named because its founders were Austrian, is passionately pro-capitalist and argues against **any** form of state intervention (bar, of course, the definition and defence of capitalist property rights and the power that these create). Economists of this school include Eugen von Böhm-Bawerk, Ludwig von Mises, Murray Rothbard, Israel Kirzner and Frederick von Hayek (the latter is often attacked by other Austrian economists as not being sufficiently robust in his opposition to state intervention). It is very much a minority school.

As it shares many of the same founding fathers as neoclassical economics and is rooted in marginalism, the Austrian school is close to neoclassical economics in many ways. The key difference is that it rejects the notion that the economy is in equilibrium and embraces a more dynamic model of capitalism. It is rooted in the notion of entrepreneurial activity, the idea that entrepreneurs act on information and disequilibrium to make super profits and bring the system closer to equilibrium. Thus, to use their expression, their focus is on the market process rather than a non-existent end state. As such, it defends capitalism in terms of how it reacts of **dis**-equilibrium and presents a theory of the market process that brings the economy closer to equilibrium. And fails.

The claim that markets tend continually towards equilibrium, as the consequence of entrepreneurial actions, is hard to justify in terms of its own assumptions. While the adjustments of a firm may bring the specific market it operates in more towards equilibrium, their ramifications may take other markets away from it and so any action will have stabilising and destabilising aspects to it. It strains belief to assume that entrepreneurial activity will only push an economy more towards equilibrium as any change in the supply and demand for any specific good leads to changes in the markets for other goods (including money). That these adjustments will all (mostly) tend towards equilibrium is little more than wishful thinking.

While being more realistic than mainstream neo-classical theory, this method abandons the possibility of demonstrating that the market outcome is in any sense a realisation of the individual preferences of whose interaction it is an expression. It has no way of establishing the supposedly stabilising character of entrepreneurial activity or its alleged socially beneficial character as the dynamic process could lead to a divergence rather than a convergence of behaviour. A dynamic system need not be self-correcting, particularly in the labour market, nor show any sign of self-equilibrium (i.e. it will be subject to the business cycle).

Given that the Austrian theory is, in part, based on Say's Law the critique we presented in the last section also applies here. However, there is another reason to think the Austrian self-adjusting perspective on capitalism is flawed and this is rooted in their own analysis. Ironically enough, economists of this school often maintain that while equilibrium does not exist their analysis is rooted on two key markets being in such a state: the labour market and the market for credit. The reason for these strange exceptions to their general assumption is, fundamentally, political. The former is required to deflect claims that "pure" capitalism would result in the exploitation of the working class, the latter is required to show that such a system would be stable.

Looking at the labour market, the Austrians argue that free market capitalism would experience full employment. That this condition is one of equilibrium does not seem to cause them

much concern. Thus we find von Hayek, for example, arguing that the *"cause of unemployment ... is a deviation of prices and wages from their equilibrium position which would establish itself with a free market and stable money. But we can never know at what system of relative prices and wages such an equilibrium would establish itself."* Therefore, *"the deviation of existing prices from that equilibrium position ... is the cause of the impossibility of selling part of the labour supply."* [**New Studies**, p. 201] Therefore, we see the usual embrace of equilibrium theory to defend capitalism against the evils it creates even by those who claim to know better.

Of course, the need to argue that there would be full employment under "pure" capitalism is required to maintain the fiction that everyone will be better off under it. It is hard to say that working class people will benefit if they are subject to high levels of unemployment and the resulting fear and insecurity that produces. As would be expected, the Austrian school shares the same perspective on unemployment as the neoclassical school, arguing that it is *"voluntary"* and the result of the price of labour being too high (who knew that depressions were so beneficial to workers, what with some having more leisure to enjoy and the others having higher than normal wages?). The reality of capitalism is very different than this abstract model.

Anarchists have long realised that the capitalist market is based upon inequalities and changes in power. Proudhon argued that *"[t]he manufacturer says to the labourer, 'You are as free to go elsewhere with your services as I am to receive them. I offer you so much.' The merchant says to the customer, 'Take it or leave it; you are master of your money, as I am of my goods. I want so much.' Who will yield? The weaker."* He, like all anarchists, saw that domination, oppression and exploitation flow from inequalities of market/economic power and that the *"power of invasion lies in superior strength."* [**What is Property?**, p. 216 and p. 215] This is particularly the case in the labour market, as we argued in section B.4.3.

As such, it is unlikely that "pure" capitalism would experience full employment for under such conditions the employers loose the upper hand. To permanently experience a condition which, as we indicate in section C.7, causes "actually existing" capitalism so many problems seems more like wishful thinking than a serious analysis. If unemployment is included in the Austrian model (as it should) then the bargaining position of labour is obviously weakened and, as a consequence, capital will take advantage and gather profits at the expense of labour. Conversely, if labour is empowered by full employment then they can use their position to erode the profits and managerial powers of their bosses. Logically, therefore, we would expect less than full unemployment and job insecurity to be the normal state of the economy with short periods of full unemployment before a slump. Given this, we would expect "pure" capitalism to be unstable, just as the approximations to it in history have always been. Austrian economics gives no reason to believe that would change in the slightest. Indeed, given their obvious hatred of trade unions and the welfare state, the bargaining power of labour would be weakened further during most of the business cycle and, contra Hayek, unemployment would remain and its level would fluctuate significantly throughout the business cycle.

Which brings us to the next atypical market in Austrian theory, namely the credit market. According to the Austrian school, "pure" capitalism would not suffer from a business cycle (or, at worse, a very mild one). This is due to the lack of equilibrium in the credit market due to state intervention (or, more correctly, state non-intervention). Austrian economist W. Duncan Reekie provides a summary:

> *"The business cycle is generated by monetary expansion and contraction ... When new money is printed it appears as if the supply of savings has increased. Interest rates fall and businessmen are misled into borrowing additional founds to finance extra investment activity ... This would be of no consequence if it had been the outcome of [genuine saving] ... — but the change was government induced. The new money reaches factor owners in the form of wages, rent and interest ... the factor owners will then spend the higher money incomes in their existing consumption:investment proportions ... Capital goods industries will find their expansion has been in error and malinvestments have been incurred."* [**Markets, Entrepreneurs and Liberty**, pp. 68–9]

This analysis is based on their notion that the interest rate reflects the "time preference" of individuals between present and future goods (see section C.2.6 for more details). The argument is that banks or governments manipulate the money supply or interest rates, making the actual interest rate different from the "real" interest rate which equates savings and loans. Of course, that analysis is dependent on the interest rate equating savings and loans which is, of course, an equilibrium position. If we assume that the market for credit shows the same disequilibrium tendencies as other markets, then the possibility for malinvestment is extremely likely as banks and other businesses extend credit based on inaccurate assumptions about present conditions and uncertain future developments in order to secure greater profits. Unsurprisingly, the Austrians (like most economists) expect the working class to bear the price for any recession in terms of real wage cuts in spite of their theory indicating that its roots lie in capitalists and bankers seeking more profits and, consequently, the former demanding and the latter supplying more credit than the "natural" interest rate would supply.

Ironically, therefore, the Austrian business cycle is rooted in the concept of **dis**-equilibrium in the credit market, the condition it argues is the standard situation in all other markets. In effect, they think that the money supply and interest rates are determined exogenously (i.e. outside the economy) by the state. However, this is unlikely as the evidence points the other way, i.e. to the endogenous nature of the money supply itself. This account of money (proposed strongly by, among others, the post-Keynesian school) argues that the money supply is a function of the demand for credit, which itself is a function of the level of economic activity. In other words, the banking system creates as much money as people need and any attempt to control that creation will cause economic problems and, perhaps, crisis. Money, in other words, emerges from **within** the system and so the Austrian attempt to *"blame the state"* is simply wrong. As we discuss in section C.8, attempts by the state to control the money during the Monetarist disasters of the early 1980s failed and it is unlikely that this would change in a *"pure"* capitalism marked by a totally privatised banking system.

It should also be noted that in the 1930s, the Austrian theory of the business cycle lost the theoretical battle with the Keynesian one (not to be confused with the neoclassical-Keynesian synthesis of the post-war years). This was for three reasons. Firstly, it was irrelevant (its conclusion was do nothing). Secondly, it was arrogant (it essentially argued that the slump would not have happened if people had listened to them and the pain of depression was fully deserved for not doing so). Thirdly, and most importantly, the leading Austrian theorist on the business cycle was completely refuted by Piero Sraffa and Nicholas Kaldor (Hayek's own follower who turned Keynesian) both of whom exposed the internal contradictions of his analysis.

The empirical record backs our critique of the Austrian claims on the stability of capitalism and unemployment. Throughout the nineteenth century there were a continual economic booms and slumps. This was the case in the USA, often pointed to as an approximately lassiez-faire economy, where the last third of the 19th century (often considered as a heyday of private enterprise) was a period of profound instability and anxiety. Between 1867 and 1900 there were 8 complete business cycles. Over these 396 months, the economy expanded during 199 months and contracted during 197. Hardly a sign of great stability (since the end of world war II, only about a fifth of the time has spent in periods of recession or depression, by way of comparison). Overall, the economy went into a slump, panic or crisis in 1807, 1817, 1828, 1834, 1837, 1854, 1857, 1873, 1882, and 1893 (in addition, 1903 and 1907 were also crisis years). Full employment, needless to say, was not the normal situation (during the 1890s, for example, the unemployment rate exceeded 10% for 6 consecutive years, reaching a peak of 18.4% in 1894, and was under 4% for just one, 1892). So much for temporary and mild slumps, prices adjusting fast and markets clearing quickly in pre-Keynesian economies!

Luckily, though, the Austrian school's methodology allows it to ignore such irritating constrictions as facts, statistics, data, history or experimental confirmation. While neoclassical economics at least **pretends** to be scientific, the Austrian school displays its deductive (i.e. prescientific) methodology as a badge of pride along side its fanatical love of free market capitalism. For the Austrians, in the words of von Mises, economic theory *"is not derived from experience; it is prior to experience"* and *"no kind of experience can ever force us to discard or modify **a priori** theorems; they are logically prior to it and cannot be either proved by corroborative experience or disproved by experience to the contrary."* And if this does not do justice to a full exposition of the phantasmagoria of von Mises' **a priorism**, the reader may take some joy (or horror) from the following statement:

> *"If a contradiction appears between a theory and experience, **we must always assume** that a condition pre-supposed by the theory was not present, or else there is some error in our observation. The disagreement between the theory and the facts of experience frequently forces us to think through the problems of the theory again. **But so long as a rethinking of the theory uncovers no errors in our thinking, we are not entitled to doubt its truth**"* [emphasis added, quoted by Homa Katouzian, **Ideology and Method in Economics**, pp. 39–40]

In other words, if reality is in conflict with your ideas, do not adjust your views because reality must be at fault! The scientific method would be to revise the theory in light of the facts. It is not scientific to reject the facts in light of the theory! Without experience, any theory is just a flight of fantasy. For the higher a deductive edifice is built, the more likely it is that errors will creep in and these can only be corrected by checking the analysis against reality. Starting assumptions and trains of logic may contain inaccuracies so small as to be undetectable, yet will yield entirely false conclusions. Similarly, trains of logic may miss things which are only brought to light by actual experiences or be correct, but incomplete or concentrate on or stress inappropriate factors. To ignore actual experience is to loose that input when evaluating a theory.

Ignoring the obvious problems of the empirical record, as any consistent Austrian would, the question does arise why does the Austrian school make exceptions to its disequilibrium analysis for these two markets. Perhaps this is a case of political expediency, allowing the ideological

supporters of free market capitalism to attack the notion of equilibrium when it clearly clashes with reality but being able to return to it when attacking, say, trade unions, welfare programmes and other schemes which aim to aid working class people against the ravages of the capitalist market? Given the self-appointed role of Austrian economics as the defender of "pure" (and, illogically, not so pure) capitalism that conclusion is not hard to deny.

Rejecting equilibrium is not as straightforward as the Austrians hope, both in terms of logic and in justifying capitalism. Equilibrium plays a role in neo-classical economics for a reason. A disequilibrium trade means that people on the winning side of the bargain will gain real income at the expense of the losers. In other words, Austrian economics is rooted (in most markets, at least) in the idea that trading benefits one side more than the other which flies in the face of the repeated dogma that trade benefits both parties. Moreover, rejecting the idea of equilibrium means rejecting any attempt to claim that workers' wages equal their just contribution to production and so to society. If equilibrium does not exist or is never actually reached then the various economic laws which "prove" that workers are not exploited under capitalism do not apply. This also applies to accepting that any real market is unlike the ideal market of perfect competition. In other words, by recognising and taking into account reality capitalist economics cannot show that capitalism is stable, non-exploitative or that it meets the needs of all.

Given that they reject the notion of equilibrium as well as the concept of empirical testing of their theories and the economy, their defence of capitalism rests on two things: "freedom" and anything else would be worse. Neither are particularly convincing.

Taking the first option, this superficially appears appealing, particularly to anarchists. However this stress on "freedom" — the freedom of individuals to make their own decisions — flounders on the rocks of capitalist reality. Who can deny that individuals, when free to choose, will pick the option they consider best for themselves? However, what this praise for individual freedom ignores is that capitalism often reduces choice to picking the lesser of two (or more) evils due to the inequalities it creates (hence our reference to the **quality** of the decisions available to us). The worker who agrees to work in a sweatshop does "maximise" her "utility" by so doing — after all, this option is better than starving to death — but only an ideologue blinded by capitalist economics will think that she is free or that her decision is not made under (economic) compulsion.

The Austrian school is so in love with markets they even see them where they do not exist, namely inside capitalist firms. There, hierarchy reigns and so for all their talk of "liberty" the Austrian school at best ignores, at worse exalts, factory fascism (see section F.2.1) For them, management is there to manage and workers are there to obey. Ironically, the Austrian (like the neo-liberal) ethic of "freedom" is based on an utterly credulous faith in authority in the workplace. Thus we have the defenders of "freedom" defending the hierarchical and autocratic capitalist managerial structure, i.e. "free" workers subject to a relationship distinctly **lacking** freedom. If your personal life were as closely monitored and regulated as your work life, you would rightly consider it oppression.

In other words, this idealisation of freedom through the market completely ignores the fact that this freedom can be, to a large number of people, very limited in scope. Moreover, the freedom associated with capitalism, as far as the labour market goes, becomes little more than the freedom to pick your master. All in all, this defence of capitalism ignores the existence of economic inequality (and so power) which infringes the freedom and opportunities of others. Social inequalities can ensure that people end up *"wanting what they get"* rather than *"getting what*

they want" simply because they have to adjust their expectations and behaviour to fit into the patterns determined by concentrations of economic power. This is particularly the case within the labour market, where sellers of labour power are usually at a disadvantage when compared to buyers due to the existence of unemployment as we have discussed.

As such, their claims to be defenders of "liberty" ring hollow in anarchist ears. This can be seen from the 1920s. For all their talk of "freedom", when push came to shove, they end up defending authoritarian regimes in order to save capitalism when the working classes rebel against the "natural" order. Thus we find von Mises, for example, arguing in the 1920s that it *"cannot be denied that Fascism and similar movements aiming at the establishment of dictatorships are full of the best intentions and that their intervention has, for the moment, saved European civilisation. The merit that Fascism has thereby won for itself will live eternally in history."* [**Liberalism**, p. 51] Faced with the Nazis in the 1930s, von Mises changed his tune somewhat as, being Jewish, he faced the same state repression he was happy to see inflicted upon rebellious workers the previous decade. Unsurprisingly, he started to stress that Nazi was short for "National Socialism" and so the horrors of fascism could be blamed on "socialism" rather than the capitalists who funded the fascist parties and made extensive profits under them once the labour, anarchist and socialist movements had been crushed.

Similarly, when right-wing governments influenced by the Austrian school were elected in various countries in the 1980s, those countries saw an increase in state authoritarianism and centralisation. In the UK, for example, Thatcher's government strengthened the state and used it to break the labour movement (in order to ensure management authority over their workers). In other words, instead of regulating capital and the people, the state just regulates the people. The general public will have the freedom of doing what the market dictates and if they object to the market's "invisible hand", then the very visible fist of the state (or private defence companies) will ensure they do. We can be sure if a large anarchist movement developed the Austrian economists will, like von Mises in the 1920s, back whatever state violence was required to defend "civilisation" against it. All in the name of "freedom," of course.

Then there is the idea that anything else that "pure" capitalism would be worse. Given their ideological embrace of the free market, the Austrians attack those economists (like Keynes) who tried to save capitalism from itself. For the Austrian school, there is only capitalism or "socialism" (i.e. state intervention) and they cannot be combined. Any attempt to do so would, as Hayek put it in his book **The Road to Serfdom**, inevitably lead to totalitarianism. Hence the Austrians are at the forefront in attacking the welfare state as not only counterproductive but inherently leading to fascism or, even worse, some form of state socialism. Needless to say, the state's role in creating capitalism in the first place is skilfully ignored in favour of endless praise for the "natural" system of capitalism. Nor do they realise that the victory of state intervention they so bemoan is, in part, necessary to keep capitalism going and, in part, a consequence of attempts to approximate their utopia (see section D.1 for a discussion).

Not that Hayek's thesis has any empirical grounding. No state has ever become fascist due to intervening in the economy (unless a right-wing coup happens, as in Chile, but that was not his argument). Rather, dictatorial states have implemented planning rather than democratic states becoming dictatorial after intervening in the economy. Moreover, looking at the Western welfare states, the key compliant by the capitalist class in the 1960s and 1970s was not a lack of general freedom but rather too much. Workers and other previously oppressed but obedient sections of society were standing up for themselves and fighting the traditional hierarchies within

society. This hardly fits in with serfdom, although the industrial relations which emerged in Pinochet's Chile, Thatcher's Britain and Reagan's America does. The call was for the state to defend the *"management's right to manage"* against rebellious wage slaves by breaking their spirit and organisation while, at the same time, intervening to bolster capitalist authority in the workplace. That this required an increase in state power and centralisation would only come as a surprise to those who confuse the rhetoric of capitalism with its reality.

Similarly, it goes without saying Hayek's thesis was extremely selectively applied. It is strange to see, for example, Conservative politicians clutching Hayek's **Road to Serfdom** with one hand and using it to defend cutting the welfare state while, with the other, implementing policies which give billions to the Military Industrial Complex. Apparently "planning" is only dangerous to liberty when it is in the interests of the many. Luckily, defence spending (for example) has no such problems. As Chomsky stresses, *"the 'free market' ideology is very* ***useful*** *— it's a weapon against the general population ... because it's an argument against social spending, and it's a weapon against poor people abroad ... But nobody [in the ruling class] really pays attention to this stuff when it comes to actual planning — and no one ever has."* [**Understanding Power**, p. 256] That is why anarchists stress the importance of reforms from **below** rather than from above – as long as we have a state, any reforms should be directed first and foremost to the (much more generous) welfare state for the rich rather than the general population (the experience of the 1980s onwards shows what happens when reforms are left to the capitalist class).

This is not to say that Hayek's attack upon those who refer to totalitarian serfdom as a "new freedom" was not fully justified. Nor is his critique of central planning and state "socialism" without merit. Far from it. Anarchists would agree that any valid economic system must be based on freedom and decentralisation in order to be dynamic and meet needs, they simply apply such a critique to capitalism **as well as** state socialism. The ironic thing about Hayek's argument is that he did not see how his theory of tacit knowledge, used to such good effect against state socialist ideas of central planning, were just as applicable to critiquing the highly centralised and top-down capitalist company and economy. Nor, ironically enough, that it was just as applicable to the price mechanism he defended so vigorously (as we note in section I.1.2, the price system hides as much, if not more, necessary information than it provides). As such, his defence of capitalism can be turned against it and the centralised, autocratic structures it is based on.

To conclude, while its open and extreme support for free market capitalism and its inequalities is, to say the least, refreshing, it is not remotely convincing or scientific. In fact, it amounts to little more than a vigorous defence of business power hidden behind a thin rhetoric of "free markets." As it preaches the infallibility of capitalism, this requires a nearly unyielding defence of corporations, economic and social power and workplace hierarchy. It must dismiss the obvious fact that allowing big business to flourish into oligopoly and monopoly (as it does, see section C.4) reduces the possibility of competition solving the problem of unethical business practices and worker exploitation, as they claim. This is unsurprising, as the Austrian school (like economics in general) identifies "freedom" with the "freedom" of private enterprise, i.e. the lack of accountability of the economically privileged and powerful. This simply becomes a defence of the economically powerful to do what they want (within the laws specified by their peers in government).

Ironically, the Austrian defence of capitalism is dependent on the belief that it will remain close to equilibrium. However, as seems likely, capitalism is endogenously unstable, then any real "pure" capitalism will be distant from equilibrium and, as a result, marked by unemployment

and, of course, booms and slumps. So it is possible to have a capitalist economics based on non-equilibrium, but it is unlikely to convince anyone that does not already believe that capitalism is the best system ever unless they are unconcerned about unemployment (and so worker exploitation) and instability. As Steve Keen notes, it is *"an alternative way to ideologically support a capitalist economy ... If neoclassical economics becomes untenable for any reason, the Austrians are well placed to provide an alternative religion for believers in the primacy of the market over all other forms of social organisation."* [Keen, **Debunking Economics**, p. 304]

Those who seek freedom for all and want to base themselves on more than faith in an economic system marked by hierarchy, inequality and oppression would be better seeking a more realistic and less apologetic economic theory.

C.2 Why is capitalism exploitative?

For anarchists, capitalism is marked by the exploitation of labour by capital. While this is most famously expressed by Proudhon's ***"property is theft,"*** this perspective can be found in all forms of anarchism. For Bakunin, capitalism was marked by an *"economic relationship between the exploiter and exploited"* as it meant the few have *"the power and right to live by exploiting the labour of someone else, the right to exploit the labour of those who possess neither property nor capital and who thus are forced to sell their productive power to the lucky owners of both."* [**The Political Philosophy of Bakunin**, p. 183] This means that when a worker *"sells his labour to an employee ... some part of the value of his produce will be unjustly taken by the employer."* [Kropotkin, **Anarchism and Anarchist-Communism**, p. 52]

At the root this criticism is based, ironically enough, on the **capitalist** defence of private property as the product of labour. As noted in section B.4.2, Locke defended private property in terms of labour yet allowed that labour to be sold to others. This allowed the buyers of labour (capitalists and landlords) to appropriate the product of other people's labour (wage workers and tenants) and so, in the words of dissident economist David Ellerman, *"capitalist production, i.e. production based on the employment contract denies workers the right to the (positive and negative) fruit of their labour. Yet people's right to the fruits of their labour has always been the natural basis for private property appropriation. Thus capitalist production, far from being founded on private property, in fact denies the natural basis for private property appropriation."* [**The Democratic worker-owned firm**, p. 59] This was expressed by Proudhon in the following way:

> *"Whoever labours becomes a proprietor — this is an inevitable deduction from the principles of political economy and jurisprudence. And when I say proprietor, I do not mean simply (as do our hypocritical economists) proprietor of his allowance, his salary, his wages, — I mean proprietor of the value his creates, and by which the master alone profits ...* ***The labourer retains, even after he has received his wages, a natural right in the thing he was produced.***" [**What is Property?**, pp. 123–4]

In other words, taking the moral justification for capitalism, anarchists argue that it fails to meet its own criteria (*"With me who, as a labourer, have a right to the possession of the products of Nature and my own industry — and who, as a proletaire [wage labourer], enjoy none of them."* [Proudhon, **Op. Cit.**, p. 65]). Whether this principle should be applied in a free society is a moot point within anarchism. Individualist and mutualist anarchists argue it should be and, therefore, say that individual workers should receive the product of their toil (and so argue for distribution according to deed). Communist-anarchists argue that *"social ownership and sharing according to need ... would be the best and most just economic arrangement."* This is for two reasons. Firstly, because *"in modern industry"* there is *"no such thing"* as an individual product as *"all labour and the products of labour are social."* [Berkman, **What is Anarchism?**, pp. 169–70] Secondly, in terms of simple justice need is not related to the ability to work and, of course, it would be wrong

to penalise those who cannot work (i.e. the sick, the young and the old). Yet, while anarchists disagree over exactly how this should be most justly realised, they all agree that labour should control **all** that it produces (either individually or collectively) and, consequently, non-labour income is exploitation (it should be stressed that as both schemes are voluntary, there is no real contradiction between them). Anarchists tend to call non-labour income "surplus-value" or "usury" and these terms are used to group together profits, rent and interest (see section C.2.1 for details).

That this critique is a problem for capitalism can be seen from the many varied and wonderful defences created by economists to justify non-labour income. Economists, at least in the past, saw the problem clear enough. John Stuart Mill, the final great economist of the classical school, presented the typical moral justification of capitalism, along with the problems it causes. As he explains in his classic introduction to economics, the *"institution of property, when limited to its essential elements, consists in the recognition, in each person, of a right to the exclusive disposal of what he or she have produced by their own exertions ... The foundation of the whole is, the right of producers to what they themselves have produced."* He then notes the obvious contradiction — workers do **not** receive what they have produced. Thus it *"may be objected"* that capitalist society *"recognises rights of property in individuals over which they have not produced,"* for example *"the operatives in a manufactory create, by their labour and skill, the whole produce; yet, instead of it belonging to them, the law gives them only their stipulated hire [wages], and transfers the produce to someone who has merely supplied the funds, without perhaps contributing to the work itself."* [**Principles of Political Economy**, p. 25] With the rise of neoclassical economics, the problem remained and so did need to justify capitalism continued to drive economics. J. B. Clark, for example, knew what was at stake and, like Mill, expressed it:

> *"When a workman leaves the mill, carrying his pay in his pocket, the civil law guarantees to him what he thus takes away; but before he leaves the mill he is the rightful owner of a part of the wealth that the day's industry has brought forth. Does the economic law which, in some way that he does not understand, determines what his pay shall be, make it to correspond with the amount of his portion of the day's product, or does it force him to leave some of his rightful share behind him? A plan of living that should force men to leave in their employer's hands anything that by right of creation is theirs, would be an institutional robbery — a legally established violation of the principle on which property is supposed to rest."* [**The Distribution of Wealth**, pp. 8–9]

Why should the owners of land, money and machinery get an income in the first place? Capitalist economics argues that everything involves a cost and, as such, people should be rewarded for the sacrifices they suffer when they contribute to production. Labour, in this schema, is considered a cost to those who labour and, consequently, they should be rewarded for it. Labour is thought of a disutility, i.e. something people do not want, rather than something with utility, i.e. something people do want. Under capitalism (like any class system), this perspective makes some sense as workers are bossed about and often subject to long and difficult labour. Most people will happily agree that labour is an obvious cost and should be rewarded.

Economists, unsurprisingly, have tended to justify surplus value by arguing that it involves as much cost and sacrifice as labour. For Mill, labour *"cannot be carried on without materials and machinery ... All these things are the fruits of previous production. If the labourers possessed*

of them, they would not need to divide the produce with any one; but while they have them not, an equivalent must be given to those who have." [**Op. Cit.**, p. 25] This rationale for profits is called the "abstinence" or "waiting" theory. Clark, like Mill, expressed a defence of non-labour income in the face of socialist and anarchist criticism, namely the idea of marginal productivity to explain and justify non-labour income. Other theories have been developed as the weaknesses of previous ones have been exposed and we will discuss some of them in subsequent sections.

The ironic thing is that, well over 200 years after it came of age with Adam Smith's **Wealth of Nations**, economics has no agreed explanation for the source of surplus value. As dissident economists Michele I. Naples and Nahid Aslanbeigui show, introductory economics texts provide *"no consistent, widely accepted theory"* on the profit rate. Looking at the top three introductions to economics, they discovered that there was a *"strange amalgam"* of theories which is *"often confusing, incomplete and inconsistent."* Given that internal consistency is usually heralded as one of the hallmarks of neoclassical theory, *"the theory must be questioned."* This *"failure ... to provide a coherent theory of the rate of profit in the short run or long run"* is damning, as the *"absence of a coherent explanation for the profit rate represents a fundamental failure for the neoclassical model."* [*"What **does** determine the profit rate? The neoclassical theories present in introductory textbooks,"* pp. 53–71, **Cambridge Journal of Economics**, vol. 20, p. 53, p. 54, p. 69 and p. 70]

As will become clear, anarchists consider defences of *"surplus value"* to be essentially ideological and without an empirical base. As we will attempt to indicate, capitalists are not justified in appropriating surplus value from workers for no matter how this appropriation is explained by capitalist economics, we find that inequality in wealth and power are the real reasons for this appropriation rather than some actual productive act on the part of capitalists, investors or landlords. Mainstream economic theories generally seek to justify the distribution of income and wealth rather than to understand it. They are parables about what should be rather than what is. We argue that any scientific analysis of the source of *"surplus value"* cannot help conclude that it is due, primarily, to inequalities of wealth and, consequently, inequalities of power on the market. In other words, that Rousseau was right:

> *"The terms of social compact between these two estates of men may be summed up in a few words: 'You have need of me, because I am rich and you are poor. We will therefore come to an agreement. I will permit you to have the honour of serving me, on condition that you bestow on me that little you have left, in return for the pains I shall take to command you.'"* [**The Social Contract and Discourses**, p. 162]

This is the analysis of exploitation we present in more detail in section C.2.2. To summarise it, labour faces social inequality when it passes from the market to production. In the workplace, capitalists exercise social power over how labour is used and this allows them to produce more value from the productive efforts of workers than they pay for in wages. This social power is rooted in social dependence, namely the fact that workers have little choice but to sell their liberty to those who own the means of life. To ensure the creation and appropriation of surplus-value, capitalists must not only own the production process and the product of the workers' labour, they must own the labour of the workers itself. In other words, they must control the workers. Hence capitalist production must be, to use Proudhon's term, *"despotism."* How much surplus-value can be produced depends on the relative economic power between bosses and workers as this determines the duration of work and the intensity of labour, however its roots are the same — the hierarchical and class nature of capitalist society.

C.2.1 What is *"surplus value"*?

Before discussing how surplus-value exists and the flaws in capitalist defences of it, we need to be specific about what we mean by the term

"surplus value." To do this we must revisit the difference between possession and private property we discussed in section B.3. For anarchists, private property (or capital) is *"the power to produce without labour."* [Proudhon, **What is Property?**, p. 161] As such, surplus value is created when the owners of property let others use them and receive an income from so doing. Therefore something only becomes capital, producing surplus value, under specific social relationships.

Surplus value is *"the difference between the value produced by the workers and the wages they receive"* and is *"appropriated by the landlord and capitalist class ... absorbed by the non-producing classes as profits, interest, rent, etc."* [Charlotte Wilson, **Anarchist Essays**, pp. 46–7] It basically refers to any non-labour income (some anarchists, particularly individualist anarchists, have tended to call *"surplus value"* usury). As Proudhon noted, it *"receives different names according to the thing by which it is yielded: if by land, **ground-rent**; if by houses and furniture, **rent**; if by life-investments, **revenue**; if by money, **interest**; if by exchange, **advantage**, **gain**, **profit** (three things which must not be confounded with the wages of legitimate price of labour)."* [**Op. Cit.**, p. 159]

For simplicity, we will consider *"surplus value"* to have three component parts: profits, interest and rent. All are based on payment for letting someone else use your property. Rent is what we pay to be allowed to exist on part of the earth (or some other piece of property). Interest is what we pay for the use of money. Profit is what we pay to be allowed to work a farm or use piece of machinery. Rent and interest are easy to define, they are obviously the payment for using someone else's property and have existed long before capitalism appeared. Profit is a somewhat more complex economic category although, ultimately, is still a payment for using someone else's property.

The term "profit" is often used simply, but incorrectly, to mean an excess over costs. However, this ignores the key issue, namely how a workplace is organised. In a co-operative, for example, while there is a surplus over costs, *"there is no profit, only income to be divided among members. Without employees the labour-managed firm does not have a wage bill, and labour costs are not counted among the expenses to be extracted from profit, as they are in the capitalist firm."* This means that the *"**economic category of profit does not exist in the labour-managed firm,** as it does in the capitalist firm where wages are a cost to be subtracted from gross income before a residual profit is determined ... Income shared among all producers is net income generated by the firm: the total of value added by human labour applied to the means of production, less payment of all costs of production and any reserves for depreciation of plant and equipment."* [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, p. 41 and p. 45] Gunn, it should be noted, follows both Proudhon and Marx in his analysis (*"Let us suppose the workers are themselves in possession of their respective means of production and exchange their commodities with one another. These commodities would not be products of capital."* [Marx, **Capital**, vol. 3, p. 276]).

In other words, by profits we mean income that flows to the owner of a workplace or land who hires others to do the work. As such returns to capital are as unique to capitalism as unemployment is. This means that a farmer who works their own land receives a labour income when they sell the crop while one who hires labourers to work the land will receives a non-labour

income, profit. Hence the difference between ***possession*** and ***private property*** (or ***capital***) and anarchist opposition to *"capitalist property, that is, property which allows some to live by the work of others and which therefore presupposes a class of ... people, obliged to sell their labour power to the property-owners for less than its value."* [Malatesta, **Errico Malatesta: His Life and Ideas**, p. 102]

Another complication arises due to the fact that the owners of private property sometimes do work on them (i.e. be a boss) or hire others to do boss-like work on their behalf (i.e. executives and other managerial staff). It could be argued that bosses and executives are also *"workers"* and so contribute to the value of the commodities produced. However, this is not the case. Exploitation does not just happen, it needs to be organised and managed. In other words, exploitation requires labour (*"There is work and there is work,"* as Bakunin noted, *"There is productive labour and there is the labour of exploitation."* [**The Political Philosophy of Bakunin**, p. 180]). The key is that while a workplace would grind to a halt without workers, the workers could happily do without a boss by organising themselves into an association to manage their own work. As such, while bosses may work, they are not taking part in productive activity but rather exploitative activity.

Much the same can be said of executives and managers. Though they may not own the instruments of production, they are certainly buyers and controllers of labour power, and under their auspices production is still **capitalist** production. The creation of a "salary-slave" strata of managers does not alter the capitalist relations of production. In effect, the management strata are **de facto** capitalists and they are like "working capitalist" and, consequently, their "wages" come from the surplus value appropriated from workers and realised on the market. Thus the exploitative role of managers, even if they can be fired, is no different from capitalists. Moreover, *"shareholders and managers/technocrats share common motives: to make profits and to reproduce hierarchy relations that exclude most of the employees from effective decision making"* [Takis Fotopoulos, *"The Economic Foundations of an Ecological Society"*, pp. 1–40, **Society and Nature**, No.3, p. 16] In other words, the high pay of the higher levels of management is a share of profits **not** a labour income based on their contribution to production but rather due to their position in the economic hierarchy and the power that gives them.

So management is paid well because they monopolise power in the company and can get away with it. As Bakunin argued, within the capitalist workplace *"administrative work ... [is] monopolised ... if I concentrate in my hands the administrative power, it is not because the interests of production demand it, but in order to serve my own ends, the ends of exploitation. As absolute boss of my establishment I get for my labours [many] ... times more than my workers get for theirs."* [**Op. Cit.**, p. 186] Given this, it is irrelevant whether those in the hierarchy simply control (in the case of managers) or actually own the means of production. What counts is that those who do the actual work are excluded from the decision making process.

This is not to say that 100 percent of what managers do is exploitative. The case is complicated by the fact that there is a legitimate need for co-ordination between various aspects of complex production processes — a need that would remain under libertarian socialism and would be filled by elected and recallable (and in some cases rotating) managers (see section I.3). But under capitalism, managers become parasitic in proportion to their proximity to the top of the pyramid. In fact, the further the distance from the production process, the higher the salary; whereas the closer the distance, the more likely that a "manager" is a worker with a little more power than average. In capitalist organisations, the less you do, the more you get. In practice, executives typically call upon subordinates to perform managerial (i.e. co-ordinating) functions and restrict

themselves to broader policy-making decisions. As their decision-making power comes from the hierarchical nature of the firm, they could be easily replaced if policy making was in the hands of those who are affected by it. As such, their role as managers do not require them to make vast sums. They are paid that well currently because they monopolise power in the company and can, consequently, get away with deciding that they, unsurprisingly, contribute most to the production of useful goods rather than those who do the actual work.

Nor are we talking, as such, of profits generated by buying cheap and selling dear. We are discussing the situation at the level of the economy as a whole, **not** individual transactions. The reason is obvious. If profits could just explained in terms of buying cheap in order to sell dear then, over all, such transactions would cancel each other out when we look at the market as a whole as any profit will cancel any loss. For example, if someone buys a product at, say, £20 and sells it at £25 then there would be no surplus overall as someone else will have to pay £20 for something which cost £25. In other words, what one person gains as a seller, someone else will lose as a buyer and no net surplus has been created. Capitalists, in other words, do not simply profit at each other's expense. There is a creation of surplus rather than mere redistribution of a given product. This means that we are explaining why production results in a aggregate surplus and why it gets distributed between social classes under capitalism.

This means that capitalism is based on the creation of surplus rather than mere redistribution of a given sum of products. If this were not the case then the amount of goods in the economy would not increase, growth would not exist and all that would happen is that the distribution of goods would change, depending on the transactions made. Such a world would be one without production and, consequently, not realistic. Unsurprisingly, as we noted in section C.1, this is the world of neoclassical economics. This shows the weakness of attempts to explain the source of profits in terms of the market rather than production. While the market can explain how, perhaps, a specific set of goods and surplus is distributed, it cannot explain how a surplus is generated in the first place. To understand how a surplus is created we need to look at the process of value creation. For this, it is necessary to look at production to see if there is something which produces more than it gets paid for. Anarchists, like other socialists, argue that this is labour and, consequently, that capitalism is an exploitative system. We discuss why in the next section.

Obviously, pro-capitalist economics argues against this theory of how a surplus arises and the conclusion that capitalism is exploitative. We will discuss the more common arguments below. However, one example will suffice here to see why labour is the source of a surplus, rather than (say) "waiting", risk or the productivity of capital (to list some of the more common explanations for capitalist appropriation of surplus value). This is a card game. A good poker-player uses equipment (capital), takes risks, delays gratification, engages in strategic behaviour, tries new tricks (innovates), not to mention cheats, and can make large winnings. However, no surplus product results from such behaviour; the gambler's winnings are simply redistributions from others with no new production occurring. For one to win, the rest must lose. Thus risk-taking, abstinence, entrepreneurship, and so on might be necessary for an individual to receive profits but they are far from sufficient for them not to be the result a pure redistribution from others.

In short, our discussion of exploitation under capitalism is first and foremost an economy-wide one. We are concentrating on how value (goods and services) and surplus value (profits, rent and interest) are produced rather than how they are distributed. The distribution of goods between people and the division of income into wages and surplus value between classes is a secondary concern as this can only occur under capitalism if workers produce goods and services

to sell (this is the direct opposite of mainstream economics which assumes a static economy with almost no discussion of how scarce means are organised to yield outputs, the whole emphasis is on exchanges of ready made goods).

Nor is this distribution somehow fixed. As we discuss in section C.3, how the amount of value produced by workers is divided between wages and surplus value is source of much conflict and struggle, the outcome of which depends on the balance of power between and within classes. The same can be said of surplus value. This is divided between profits, interest and rent — capitalists, financiers and landlords. This does not imply that these sections of the exploiting class see eye to eye or that there is not competition between them. Struggle goes on within classes and well as between classes and this applies at the top of the economic hierarchy as at the bottom. The different sections of the ruling elite fight over their share of surplus value. This can involve fighting over control of the state to ensure that their interests are favoured over others. For example, the Keynesian post-war period can be considered a period when industrial capitalists shaped state policy while the period after 1973 represents a shift in power towards finance capital.

We must stress, therefore, that the exploitation of workers is not defined as payment less than competitive ("free market") for their labour. Rather, exploitation occurs even if they are paid the market wage. This is because workers are paid for their ability to labour (their *"labour-power,"* to use Marx's term) rather the labour itself. This means that for a given hour's work (labour), the capitalist expects the worker to produce more than their wage (labour power). How much more is dependent on the class struggle and the objective circumstances each side faces. Indeed, a rebellious workforce willing to take direct action in defence of their interests will not allow subjection or its resulting exploitation.

Similarly, it would be wrong to confuse exploitation with low wages. Yes, exploitation is often associated with paying low wages but it is more than possible for real wages to go up while the rate of exploitation falls or rises. While some anarchists in the nineteenth century did argue that capitalism was marked by falling real wages, this was more a product of the time they were living through rather than an universal law. Most anarchists today argue that whether wages rise or fall depends on the social and economic power of working people and the historic context of a given society. This means, in other words, that labour is exploited not because workers have a low standard of living (although it can) but because labour produces the whole of the value created in any process of production or creation of a service but gets only part of it back.

As such, it does not matter **if** real wages do go up or not. Due to the accumulation of capital, the social and economic power of the capitalists and their ability to extract surplus-value can go up at a higher rate than real wages. The key issue is one of freedom rather than the possibility of consuming more. Bosses are in a position, due to the hierarchical nature of the capitalist workplace, to make workers produce more than they pay them in wages. The absolute level of those wages is irrelevant to the creation and appropriation of value and surplus-value as this happens at all times within capitalism.

As an example, since the 1970s American workers have seen their wages stagnate and have placed themselves into more and more debt to maintain an expected standard of living. During this time, productivity has increased and so they have been increasingly exploited. However, between 1950s and 1970s wages did increase along with productivity. Strong unions and a willingness to strike mitigated exploitation and increased living standards but exploitation continued. As Doug Henwood notes, while *"average incomes have risen considerably"* since 1945, *"the amount of work necessary to earn those incomes has risen with equal relentlessness ... So, despite the fact that*

productivity overall is up more than threefold" over this time *"the average worker would have to toil six months longer to make the average family income."* [**After the New Economy**, pp. 39–40] In other words, rising exploitation **can** go hand in hand with rising wages.

Finally, we must stress that we are critiquing economics mostly in its own terms. On average workers sell their labour-power at a "fair" market price and still exploitation occurs. As sellers of a commodity (labour-power) they do not receive its full worth (i.e. what they actually produce). Even if they did, almost all anarchists would still be against the system as it is based on the worker becoming a wage-slave and subject to hierarchy. In other words, they are not free during production and, consequently, they would still being robbed, although this time it is as human beings rather than a factor of production (i.e. they are oppressed rather than exploited). As Bookchin put it:

> *"To the modern mind, labour is viewed as a rarefied, abstract activity, a process extrinsic to human notions of genuine self-actualisation. One usually 'goes to work' the way a condemned person 'goes' to a place of confinement: the workplace is little more than a penal institution in which mere existence must a penalty in the form of mindless labour ... We 'measure' labour in hours, products, and efficiency, but rarely do we understand it as a concrete human activity. Aside from the earnings it generates, labour is normally alien to human fulfilment ... [as] the rewards one acquires by submitting to a work discipline. By definition, these rewards are viewed as incentives for submission, rather than for the freedom that should accompany creativity and self-fulfilment. We commonly are 'paid' for supinely working on our knees, not for heroically standing in our feet."* [**The Ecology of Freedom**, p. 308]

Almost all anarchists seek to change this, combat oppression and alienation as well as exploitation (some individualist anarchists are the exception on this issue). Needless to say, the idea that we could be subject to oppression during working hours and ***not*** be exploited is one most anarchists would dismiss as a bad joke and, as a result, follow Proudhon and demand the abolition of wage labour (most take it further and advocate the abolition of the wages system as well, i.e. support libertarian communism).

C.2.2 How does exploitation happen?

In order to make more money, money must be transformed into capital, i.e., workplaces, machinery and other *"capital goods."* By itself, however, capital (like money) produces nothing. While a few even talk about *"making money work for you"* (as if pieces of paper can actually do any form of work!) obviously this is not the case — human beings have to do the actual work. As Kropotkin put it, *"if [the capitalist] locks [his money] up, it will not increase, because [it] does not grow like seed, and after a lapse of a twelve month he will not find £110 in his drawer if he only put £100 into it.* [**The Place of Anarchism in Socialistic Evolution**, p. 4] Capital only becomes productive in the labour process when workers use it:

> *"Values created by net product are classed as savings and capitalised in the most highly exchangeable form, the form which is freest and least susceptible of depreciation, — in a word, the form of specie, the only constituted value. Now, if capital leaves this state*

> *of freedom and **engages itself**, — that is, takes the form of machines, buildings, etc., — it will still be susceptible of exchange, but much more exposed than before to the oscillations of supply and demand. Once engaged, it cannot be **disengaged** without difficulty; and the sole resource of its owner will be exploitation. Exploitation alone is capable of maintaining engaged capital at its nominal value."* [**System of Economical Contradictions**, p. 291]

Under capitalism, workers not only create sufficient value (i.e. produced commodities) to maintain existing capital and their own existence, they also produce a surplus. This surplus expresses itself as a surplus of goods and services, i.e. an excess of commodities compared to the number a workers' wages could buy back. The wealth of the capitalists, in other words, is due to them *"accumulating the product of the labour of others."* [Kropotkin, **Op. Cit.**, p. 3] Thus Proudhon:

> *"The working man cannot ... repurchase that which he has produced for his master. It is thus with all trades whatsoever... since, producing for a master who in one form or another makes a profit, they are obliged to pay more for their own labour than they get for it."* [**What is Property**, p. 189]

In other words, the price of all produced goods is greater than the money value represented by the workers' wages (plus raw materials and overheads such as wear and tear on machinery) when those goods were produced. The labour contained in these "surplus-products" is the source of profit, which has to be realised on the market (in practice, of course, the value represented by these surplus-products is distributed throughout all the commodities produced in the form of profit — the difference between the cost price and the market price). In summary, surplus value is unpaid labour and hence capitalism is based on exploitation. As Proudhon noted, *"**Products,** say economists, **are only bought by products**. This maxim is property's condemnation. The proprietor producing neither by his own labour nor by his implement, and receiving products in exchange for nothing, is either a parasite or a thief."* [**Op. Cit.**, p. 170]

It is this appropriation of wealth from the worker by the owner which differentiates capitalism from the simple commodity production of artisan and peasant economies. All anarchists agree with Bakunin when he stated that:

> *"**what is property, what is capital in their present form?** For the capitalist and the property owner they mean the power and the right, guaranteed by the State, to live without working ... [and so] the power and right to live by exploiting the work of someone else ... those ... [who are] forced to sell their productive power to the lucky owners of both."* [**The Political Philosophy of Bakunin**, p. 180]

It is the nature of capitalism for the monopolisation of the worker's product by others to exist. This is because of private property in the means of production and so in *"consequence of [which] ... [the] worker, when he is able to work, finds no acre to till, no machine to set in motion, unless he agrees to sell his labour for a sum inferior to its real value."* [Peter Kropotkin, **Anarchism**, p. 55]

Therefore workers have to sell their labour on the market. However, as this "commodity" *"cannot be separated from the person of the worker like pieces of property. The worker's capacities are developed over time and they form an integral part of his self and self-identity; capacities are internally not externally related to the person. Moreover, capacities or labour power cannot be used*

without the worker using his will, his understanding and experience, to put them into effect. The use of labour power requires the presence of its 'owner'... To contract for the use of labour power is a waste of resources unless it can be used in the way in which the new owner requires ... The employment contract must, therefore, create a relationship of command and obedience between employer and worker." So, *"the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself... The characteristics of this condition are captured in the term* ***wage slave.****"* [Carole Pateman, **The Sexual Contract**, pp. 150–1]

Or, to use Bakunin's words, *"the worker sells his person and his liberty for a given time"* and so *"concluded for a term only and reserving to the worker the right to quit his employer, this contract constitutes a sort of* ***voluntary*** *and* ***transitory*** *serfdom."* [**The Political Philosophy of Bakunin**, p. 187] This domination is the source of the surplus, for *"wage slavery is not a consequence of exploitation – exploitation is a consequence of the fact that the sale of labour power entails the worker's subordination. The employment contract creates the capitalist as master; he has the political right to determine how the labour of the worker will be used, and — consequently – can engage in exploitation."* [Pateman, **Op. Cit.**, p. 149]

So profits exist because the worker sells themselves to the capitalist, who then owns their activity and, therefore, controls them (or, more accurately, **tries** to control them) like a machine. Benjamin Tucker's comments with regard to the claim that capital is entitled to a reward are of use here. He notes that some *"combat... the doctrine that surplus value — oftener called profits — belong to the labourer because he creates it, by arguing that the horse... is rightly entitled to the surplus value which he creates for his owner. So he will be when he has the sense to claim and the power to take it... Th[is] argument .. is based upon the assumption that certain men are born owned by other men, just as horses are. Thus its* ***reductio ad absurdum*** *turns upon itself."* [**Instead of a Book**, pp. 495–6] In other words, to argue that capital should be rewarded is to implicitly assume that workers are just like machinery, another "factor of production" rather than human beings and the creator of things of value. So profits exists because during the working day the capitalist controls the activity and output of the worker (i.e. owns them during working hours as activity cannot be separated from the body and *"[t]here is an integral relationship between the body and self. The body and self are not identical, but selves are inseparable from bodies."* [Carole Pateman, **Op. Cit.**, p. 206]).

Considered purely in terms of output, this results in, as Proudhon noted, workers working *"for an entrepreneur who pays them and keeps their products."* [quoted by Martin Buber, **Paths in Utopia**, p. 29] The ability of capitalists to maintain this kind of monopolisation of another's time and output is enshrined in *"property rights"* enforced by either public or private states. In short, therefore, property *"is the right to enjoy and dispose at will of another's goods — the fruit of an other's industry and labour."* [P-J Proudhon, **What is Property**, p. 171] And because of this "right," a worker's wage will always be less than the wealth that he or she produces.

The surplus value produced by labour is divided between profits, interest and rent (or, more correctly, between the owners of the various factors of production other than labour). In practice, this surplus is used by the owners of capital for: (a) investment (b) to pay themselves dividends on their stock, if any; (c) to pay for rent and interest payments; and (d) to pay their executives and managers (who are sometimes identical with the owners themselves) much higher salaries than workers. As the surplus is being divided between different groups of capitalists, this means that there can be clashes of interest between (say) industrial capitalists and finance capitalists.

For example, a rise in interest rates can squeeze industrial capitalists by directing more of the surplus from them into the hands of rentiers. Such a rise could cause business failures and so a slump (indeed, rising interest rates is a key way of regulating working class power by generating unemployment to discipline workers by fear of the sack). The surplus, like the labour used to reproduce existing capital, is embodied in the finished commodity and is realised once it is sold. This means that workers do not receive the full value of their labour, since the surplus appropriated by owners for investment, etc. represents value added to commodities by workers — value for which they are not paid nor control.

The size of this surplus, the amount of unpaid labour, can be changed by changing the duration and intensity of work (i.e. by making workers labour longer and harder). If the duration of work is increased, the amount of surplus value is increased absolutely. If the intensity is increased, e.g. by innovation in the production process, then the amount of surplus value increases relatively (i.e. workers produce the equivalent of their wage sooner during their working day resulting in more unpaid labour for their boss). Introducing new machinery, for example, increases surplus-value by reducing the amount of work required per unit of output. In the words of economist William Lazonick:

> *"As a general rule, all market prices, including wages, are given to the particular capitalist. Moreover, in a competitive world a particular capitalist cannot retain privileged access to process or product innovations for any appreciable period of time. But the capitalist does have privileged access to, and control over, the workers that he employs. Precisely because the work is not perfectly mobile but is dependent on the capitalist to gain a living, the capitalist is not subject to the dictates of market forces in dealing with the worker in the production process. The more dependent the worker is on his or her particular employer, the more power the capitalist has to demand longer and harder work in return for a day's pay. The resultant unremunerated increase in the productivity of the worker per unit of time is the source of surplus-value.*
>
> *"The measure of surplus-value is the difference between the value-added by and the value paid to the worker. As owner of the means of production, the industrial capitalist has a legal right to keep the surplus-value for himself."* [**Competitive Advantage on the Shop Floor**, p. 54]

Such surplus indicates that labour, like any other commodity, has a use value and an exchange value. Labour's exchange value is a worker's wages, its use value their ability to work, to do what the capitalist who buys it wants. Thus the existence of "surplus products" indicates that there is a difference between the exchange value of labour and its use value, that labour can **potentially** create **more** value than it receives back in wages. We stress potentially, because the extraction of use value from labour is not a simple operation like the extraction of so many joules of energy from a ton of coal. Labour power cannot be used without subjecting the labourer to the will of the capitalist — unlike other commodities, labour power remains inseparably embodied in human beings. Both the extraction of use value and the determination of exchange value for labour depends upon — and are profoundly modified by — the actions of workers. Neither the effort provided during an hours work, nor the time spent in work, nor the wage received in exchange for it, can be determined without taking into account the worker's resistance to being turned into a commodity, into an order taker. In other words, the amount of "surplus

products" extracted from a worker is dependent upon the resistance to dehumanisation within the workplace, to the attempts by workers to resist the destruction of liberty during work hours.

Thus unpaid labour, the consequence of the authority relations explicit in private property, is the source of profits. Part of this surplus is used to enrich capitalists and another to increase capital, which in turn is used to increase profits, in an endless cycle (a cycle, however, which is not a steady increase but is subject to periodic disruption by recessions or depressions — "The business cycle." The basic causes for such crises will be discussed later, in sections C.7 and C.8).

It should be noted that few economists deny that the "value added" by workers in production must exceed the wages paid. It has to, if a profit is to be made. As Adam Smith put it:

> *"As soon as stock has accumulated in the hands of particular persons, some of them will naturally employ it in setting to work industrious people, whom they will supply with materials and subsistence, in order to make a profit by the sale of their work, or by what their labour adds to the value of the materials ... The value which the workmen add to the materials, therefore, resolves itself in this case into two parts, of which one pays their wages, the other the profits of their employer upon the whole stock of materials and wages which he advanced. He could have no interest to employ them, unless he expected from the sale of their work something more than what was sufficient to replace his stock to him."* [**The Wealth of Nations**, p. 42]

That surplus value consists of unpaid labour is a simple fact. The difference is that non-socialist economists refuse to explain this in terms of exploitation. Like Smith, David Ricardo argued in a similar manner and justified surplus value appropriation in spite of this analysis. Faced with the obvious interpretation of non-labour income as exploitation which could easily be derived from classical economics, subsequent economists have sought to obscure this fact and have produced a series of rationales to justify the appropriation of workers labour by capitalists. In other words, to explain and justify the fact that capitalism is not based on its own principle that labour creates and justifies property. These rationales have developed over time, usually in response to socialist and anarchist criticism of capitalism and its economics (starting in response to the so-called Ricardian Socialists who predated Proudhon and Marx and who first made such an analysis commonplace). These have been based on many factors, such as the abstinence or waiting by the capitalist, the productivity of capital, "time-preference," entrepreneurialism and so forth. We discuss most rationales and indicate their weaknesses in subsequent sections.

C.2.3 Is owning capital sufficient reason to justify profits?

No, it does not. To understand why, we must first explain the logic behind this claim. It is rooted in what is termed "marginal productivity" theory. In the words of one of its developers:

> *"If each productive function is paid for according to the amount of its product, then each man get what he himself produces. If he works, he gets what he creates by working; if he provides capital, he gets what his capital produces; and if, further, he renders service by co-ordinating labour and capital, he gets the product that can be separately traced to that function. Only in one of these ways can a man produce anything. If he receives all that he brings into existence through any one of these three functions, he receives all that he creates at all."* [John Bates Clark, **The Distribution of Wealth**, p.7]

Needless to say, this analysis was based on the need to justify the existing system, for it was *"the purpose of this work to show that the distribution of income to society is controlled by a natural law, and that this law, if it worked without friction, would give to every agent of production the amount of wealth which that agent creates."* In other words, *"what a social class gets is, under natural law, what it contributes to the general output of industry."* [Clark, **Op. Cit.**, p. v and p. 313] And only mad people can reject a *"natural law"* like gravity — or capitalism!

Most schools of capitalist economics, when they bother to try and justify non-labour income, hold to this theory of productivity. Unsurprisingly, as it proves what right-wing economist Milton Friedman called the *"capitalist ethic"*: *"To each according to what he and the instruments he owns produces."* [**Capitalism and Freedom**, pp. 161–162] As such, this is one of the key defences of capitalism, based as it is on the productive contribution of each factor (labour, land and capital). Anarchists as unconvinced.

Unsurprisingly, this theory took some time to develop given the theoretical difficulties involved. After all, you need all three factors to produce a commodity, say a bushel of wheat. How can we determine that percentage of the price is due to the land, what percentage to labour and what percentage to capital? You cannot simply say that the "contribution" of each factor just happens to be identical to its cost (i.e. the contribution of land is what the market rent is) as this is circular reasoning. So how is it possible to specify contribution of each factor of production independently of the market mechanism in such a way as to show, firstly, that the contributions add up to 100 percent and, secondly, that the free market will in fact return to each factor its respective contribution?

This is where marginal productivity theory comes in. In neo-classical theory, the contribution of a specific factor is defined as the marginal product of that factor when the other factors are left constant. Take, as an example, a hundred bushels of wheat produced by X acres of land being worked by Y workers using £Z worth of capital. The contribution of land can then be defined as the increase in wheat that an extra acre of land would produce (X+1) if the same number of workers employed the same capital worked it. Similarly, the contribution of a worker would be the increase that would result if an addition worker was hired (Y + 1) to work the same land (X) with the same capital (£Z). The contribution of capital, obviously, would be the increase in wheat produced by the same number of workers (X) working the same amount of land (Y) using one more unit of capital (£Z+1). Then mathematics kicks in. If enough assumptions are made in terms of the substitutability of factors, diminishing returns, and so forth, then a mathematical theorem (Euler's Theorem) can be used to show that the sum of these marginal contributions would be a hundred bushels. Applying yet more assumptions to ensure "perfect competition" it can be mathematically proven that the rent per acre set by this perfect market will be precisely the contribution of the land, that the market wage will be the contribution of the worker, and the market interest rate will be the contribution of capital. In addition, it can be shown that any monopoly power will enable a factor owner to receive more than it contributes, so exploiting the others.

While this is impressive, the problems are obvious. As we discuss in section C.2.5, this model does not (indeed, cannot) describe any actual real economy. However, there is a more fundamental issue than mere practicality or realism, namely that it confuses a **moral** principle (that factors should receive in accordance with their productive contributions) with an ownership issue. This is because even if we want to say that land and capital "contribute" to the final product, we cannot say the same for the landowner or the capitalist. Using our example above, it should

be noted that neither the capitalist nor the landowner actually engages in anything that might be called a productive activity. Their roles are purely passive, they simply allow what they own to be used by the people who do the actual work, the labourers.

Marginal productivity theory shows that with declining marginal productivity, the contribution of labour is less than the total product. The difference is claimed to be precisely the contribution of capital and land. But what is this "contribution" of capital and land? Without any labourers there would be no output. In addition, in physical terms, the marginal product of, say, capital is simply the amount by which production would decline is one piece of capital were taken out of production. It does not reflect any productive activity whatsoever on the part of the owner of said capital. **It does not, therefore, measure his or her productive contribution.** In other words, capitalist economics tries to confuse the owners of capital with the machinery they own. Unlike labour, whose "ownership" cannot be separated from the productive activities being done, capital and land can be rewarded without their owners actually doing anything productive at all.

For all its amazing mathematics, the neo-classical solution fails simply because it is not only irrelevant to reality, it is not relevant ethically.

To see why, let us consider the case of land and labour (capital is more complex and will be discussed in the next two sections). Marginal productivity theory can show, given enough assumptions, that five acres of land can produce 100 bushels of wheat with the labour of ten men and that the contribution of land and labour are, respectively, 40 and 60 bushels each. In other words, that each worker receives a wage representing 6 bushels of wheat while the landlord receives an income of 40 bushels. As socialist David Schweickart notes, *"we have derived both the contribution of labour and the contribution of land from purely technical considerations. We have made no assumptions about ownership, competition, or any other social or political relationship. No covert assumptions about capitalism have been smuggled into the analysis."* [**After Capitalism**, p. 29]

Surely this means that economics has produced a defence of non-labour income? Not so, as it ignores the key issue of what represents a valid contribution. The conclusion that the landlord (or capitalist) is entitled to their income *"in no way follows from the technical premises of the argument. Suppose our ten workers had cultivated the five acres* ***as a worker collective.*** *In this, they would receive the entire product, all one hundred bushels, instead of sixty. Is this unfair? To whom should the other forty bushels go? To the land, for its 'contribution'? Should the collective perhaps burn forty bushels as an offering to the Land-God? (Is the Land-Lord the representative on Earth of this Land-God?)."* [**Op. Cit.**, p. 30] It should be noted that Schweickart is echoing the words of Proudhon:

> *"How much does the proprietor increase the utility of his tenant's products? Has he ploughed, sowed, reaped, mowed, winnowed, weeded? ... I admit that the land is an implement; but who made it? Did the proprietor? Did he — by the efficacious virtue of the right of property, by this* ***moral quality*** *infused into the soil — endow it with vigour and fertility? Exactly there lies the monopoly of the proprietor, though he did not make the implement, he asks pay for its use. When the Creator shall present himself and claim farm-rent, we will consider the matter with him; or even when the proprietor — his pretended representative — shall exhibit his power of attorney."* [**What is Property?**, pp. 166–7]

In other words, granting permission cannot be considered as a "contribution" or a "productive" act:

> *"We can see that a moral sleight-of-hand has been performed. A technical demonstration has passed itself off as a moral argument by its choice of terminology, namely, by calling a marginal product a 'contribution.' The 'contribution = ethical entitlement' of the landowner has been identified with the 'contribution = marginal product' of the land ... What is the nature of the landowner's 'contribution' here? We can say that the landlord* ***contributed the land*** *to the workers, but notice the qualitative difference between his 'contribution' and the contribution of his workforce. He 'contributes' his land — but the land remains intact and remains his at the end of the harvest, whereas the labour contributed by each labourer is gone. If the labourers do not expend* ***more*** *labour next harvest, they will get nothing more, whereas the landowner can continue to 'contribute' year after year (lifting not a finger), and be rewarded year after year for doing so."* [Schweickart, **Op. Cit.**, p. 30]

As the examples of the capitalist and co-operative farms shows, the "contribution" of land and capital can be rewarded without their owners doing anything at all. So what does it mean, "capital's share"? After all, no one has ever given money to a machine or land. That money goes to the owner, not the technology or resource used. When "land" gets its "reward" it involves money going to the landowner **not** fertiliser being spread on the land. Equally, if the land and the capital were owned by the labourers then "capital" and "land" would receive nothing despite both being used in the productive process and, consequently, having "aided" production. Which shows the fallacy of the idea that profits, interest and rent represent a form of "contribution" to the productive process by land and capital which needs rewarded. They only get a "reward" when they hire labour to work them, i.e. they give permission for others to use the property in question in return for telling them what to do and keeping the product of their labour.

As Proudhon put it, *"[w]ho is entitled to the rent of the land? The producer of the land, without doubt. Who made the land? God. Then, proprietor, retire!"* [**Op. Cit.**, p. 104] Much the same can be said of "capital" (workplaces, machinery, etc.) as well. The capitalist, argued Berkman, *"gives you a job; that is permission to work in the factory or mill which was not built by him but by other workers like yourself. And for that permission you help to support him for the rest of your life or as long as you work for him."* [**What is Anarchism?**, p. 14]

So non-labour income exists **not** because of the owners of capital and land "contribute" to production but because they, as a class, **own** the means of life and workers have to sell their labour and liberty to them to gain access:

> *"We cry shame on the feudal baron who forbade the peasant to turn a clod of earth unless he surrendered to his lord a fourth of his crop. We called those the barbarous times, But if the forms have changed, the relations have remained the same, and the worker is forced, under the name of free contract, to accept feudal obligations."* [Kropotkin, **The Conquest of Bread**, pp. 31–2]

It is capitalist property relations that allow this monopolisation of wealth by those who own (or boss) but do not produce. The workers do not get the full value of what they produce, nor

do they have a say in how the surplus value produced by their labour gets used (e.g. investment decisions). Others have monopolised both the wealth produced by workers and the decision-making power within the company. This is a private form of taxation without representation, just as the company is a private form of statism.

Therefore, providing capital is **not** a productive act, and keeping the profits that are produced by those who actually do use capital is an act of theft. This does not mean, of course, that creating capital goods is not creative nor that it does not aid production. Far from it! But owning the outcome of such activity and renting it does not justify capitalism or profits. In other words, while we need machinery, workplaces, houses and raw materials to produce goods we do **not** need landlords and capitalists.

The problem with the capitalists' "contribution to production" argument is that one must either assume (a) a strict definition of who is the producer of something, in which case one must credit only the worker(s), or (b) a looser definition based on which individuals have contributed to the circumstances that made the productive work possible. Since the worker's productivity was made possible in part by the use of property supplied by the capitalist, one can thus credit the capitalist with "contributing to production" and so claim that he or she is entitled to a reward, i.e. profit.

However, if one assumes (b), one must then explain why the chain of credit should stop with the capitalist. Since all human activity takes place within a complex social network, many factors might be cited as contributing to the circumstances that allowed workers to produce — e.g. their upbringing and education, the contribution of other workers in providing essential products, services and infrastructure that permits their place of employment to operate, and so on (even the government, which funds infrastructure and education). Certainly the property of the capitalist contributed in this sense. But his contribution was less important than the work of, say, the worker's mother. Yet no capitalist, so far as we know, has proposed compensating workers' mothers with any share of the firm's revenues, and particularly not with a **greater** share than that received by capitalists! Plainly, however, if they followed their own logic consistently, capitalists would have to agree that such compensation would be fair.

In summary, while some may consider that profit is the capitalist's "contribution" to the value of a commodity, the reality is that it is nothing more than the reward for owning capital and giving permission for **others** to produce using it. As David Schweickart puts it, *"'providing capital' means nothing more than 'allowing it to be used.' But an act of granting permission, in and of itself, is not a productive activity. If labourers cease to labour, production ceases in any society. But if owners cease to grant permission, production is affected only if their **authority** over the means of production is respected."* [**Against Capitalism**, p. 11]

This authority, as discussed earlier, derives from the coercive mechanisms of the state, whose primary purpose is to ensure that capitalists have this ability to grant or deny workers access to the means of production. Therefore, not only is "providing capital" not a productive activity, it depends on a system of organised coercion which requires the appropriation of a considerable portion of the value produced by labour, through taxes, and hence is actually parasitic. Needless to say, rent can also be considered as "profit", being based purely on "granting permission" and so not a productive activity. The same can be said of interest, although the arguments are somewhat different (see section C.2.6).

So, even if we assume that capital and land **are** productive, it does not follow that owning those resources entitles the owner to an income. However, this analysis is giving too much credit to

capitalist ideology. The simple fact is that capital is **not** productive at all. Rather, *"capital"* only contributes to production when used by labour (land does produce use values, of course, but these only become available once labour is used to pick the fruit, reap the corn or dig the coal). As such, profit is not the reward for the productivity of capital. Rather **labour** produces the marginal productivity of capital. This is discussed in the next section.

C.2.4 Is profit the reward for the productivity of capital?

In a word, no. As Proudhon pointed out, *"Capital, tools, and machinery are likewise unproductive... The proprietor who asks to be rewarded for the use of a tool or for the productive power of his land, takes for granted, then, that which is radically false; namely, that capital produces by its own effort — and, in taking pay for this imaginary product, he literally receives something for nothing."* [**What is Property?**, p. 169] In other words, only labour is productive and profit is not the reward for the productivity of capital.

Needless to say, capitalist economists disagree. *"Here again the philosophy of the economists is wanting. To defend usury they have pretended that capital was productive, and they have changed a metaphor into a reality,"* argued Proudhon. The socialists had *"no difficulty in overturning their sophistry; and through this controversy the theory of capital has fallen into such disfavour that today, in the minds of the people, **capitalist** and **idler** are synonymous terms."* [**System of Economical Contradictions**, p. 290]

Sadly, since Proudhon's time, the metaphor has become regained its hold, thanks in part to neo-classical economics and the "marginal productivity" theory. We explained this theory in the last section as part of our discussion on why, even if we assume that land and capital **are** productive this does not, in itself, justify capitalist profit. Rather, profits accrue to the capitalist simply because he or she gave their permission for others to use their property. However, the notion that profits represent that "productivity" of capital is deeply flawed for other reasons. The key one is that, by themselves, capital and land produce nothing. As Bakunin put it, *"neither property nor capital produces anything when not fertilised by labour."* [**The Political Philosophy of Bakunin**, p. 183]

In other words, capital is "productive" simply because people use it. This is hardly a surprising conclusion. Mainstream economics recognises it in its own way (the standard economic terminology for this is that *"factors usually do not work alone"*). Needless to say, the conclusions anarchists and defenders of capitalism draw from this obvious fact are radically different.

The standard defence of class inequalities under capitalism is that people get rich by producing what other people want. That, however, is hardly ever true. Under capitalism, people get rich by hiring other people to produce what other people want or by providing land, money or machinery to those who do the hiring. The number of people who have became rich purely by their own labour, without employing others, is tiny. When pressed, defenders of capitalism will admit the basic point and argue that, in a free market, everyone gets in income what their contribution in producing these goods indicates. Each factor of production (land, capital and labour) is treated in the same way and their marginal productivity indicates what their contribution to a finished product is and so their income. Thus wages represent the marginal productivity of labour, profit the marginal productivity of capital and rent the marginal productivity of land. As we have used land and labour in the previous section, we will concentrate on land and "capital" here.

We must note, however, that marginal productivity theory has immense difficulties with capital and has been proven to be internally incoherent on this matter (see next section). However, as mainstream economics ignores this, so will we for the time being.

So what of the argument that profits represent the contribution of capital? The reason why anarchists are not impressed becomes clear when we consider ten men digging a hole with spades. Holding labour constant means that we add spades to the mix. Each new spade increases productivity by the same amount (because we assume that labour is homogenous) until we reach the eleventh spade. At that point, the extra spade lies unused and so the marginal contribution of the spade ("capital") is zero. This suggests that the socialists are correct, capital **is** unproductive and, consequently, does not deserve any reward for its use.

Of course, it will be pointed out that the eleventh spade cost money and, as a result, the capitalist would have stopped at ten spades and the marginal contribution of capital equals the amount the tenth spade added. Yet the only reason that spade added anything to production was because there was a worker to use it. In other words, as economist David Ellerman stresses, the *"point is that capital itself does not 'produce' at all; capital is used by Labour to produce the outputs ... Labour produces the marginal product* ***of capital.***" [**Property and Contract in Economics**, p. 204] As such, to talk of the "marginal product" of capital is meaningless as holding labour constant is meaningless:

> *"Consider, for example, the 'marginal product of a shovel' in a simple production process wherein three workers use two shovels and a wheelbarrow to dig out a cellar. Two of the workers use two shovels to fill the wheelbarrow which the third worker pushes a certain distance to dump the dirt. The marginal productivity of a shovel is defined as the extra product produced when an extra shovel is added and the other factors, such as labour, are held constant. The labour is the human activity of carrying out this production process. If labour was held 'constant' is the sense of carrying out the same human activity, then any third shovel would just lie unused and the extra product would be identically zero.*
>
> *"'Holding labour constant' really means reorganising the human activity in a more capital intensive way so that the extra shovel will be optimally utilised. For instance, all three workers could use the three shovels to fill the wheelbarrow and then they could take turns emptying the wheelbarrow. In this manner, the workers would use the extra shovel and by so doing they would produce some extra product (additional earth moved during the same time period). This extra product would be called the 'marginal product of the shovel, but in fact it is produced by the workers who are also using the additional shovel ... [Capital] does not 'produce' its marginal product. Capital does not 'produce' at all. Capital is used by Labour to produce the output. When capital is increased, Labour produces extra output by using up the extra capital . .. In short,* ***Labour produced the marginal product of capital*** *(and used up the extra capital services)."* [**Op. Cit.**, pp. 207–9]

Therefore, the idea that profits equals the marginal productivity of capital is hard to believe. Capital, in this perspective, is not only a tree which bears fruit even if its owner leaves it uncultivated, it is a tree which also picks its own fruit, prepares it and serves it for dinner! Little wonder the classical economists (Smith, Ricardo, John Stuart Mill) considered capital to be unproductive and explained profits and interest in other, less obviously false, means.

Perhaps the "marginal productivity" of capital is simply what is left over once workers have been paid their "share" of production, i.e. once the marginal productivity of labour has been rewarded. Obviously the marginal product of labour and capital are related. In a production process, the contribution of capital will (by definition) be equal to total price minus the contribution of labour. You define the marginal product of labour, it is necessary to keep something else constant. This means either the physical inputs other than labour are kept constant, or the rate of profit on capital is kept constant. As economist Joan Robinson noted:

> *"I found this satisfactory, for it destroys the doctrine that wages are regulated by marginal productivity. In a short-period case, where equipment is given, at full-capacity operation the marginal physical product of labour is indeterminate. When nine men with nine spades are digging a hole, to add a tenth man could increase output only to the extent that nine dig better if they have a rest from time to time. On the other hand, to subtract the ninth man would reduce output by more or less the average amount. The wage must lie somewhere between the average value of output per head and zero, so that marginal product is greater or much less than the wage according as equipment is being worked below or above its designed capacity."* [**Contributions to Modern Economics**, p. 104]

If wages are not regulated by marginal productivity theory, then neither is capital (or land). Subtracting labour while keeping capital constant simply results in unused equipment and unused equipment, by definition, produces nothing. What the "contribution" of capital is dependent, therefore, on the economic power the owning class has in a given market situation (as we discuss in section C.3). As William Lazonick notes, the neo-classical theory of marginal productivity has two key problems which flow from its flawed metaphor that capital is "productive":

> *"The first flaw is the assumption that, at any point in time, the productivity of a technology is given to the firm, irrespective of the social context in which the firm attempts to utilise the technology .. . this assumption, typically implicit in mainstream economic analysis and [is] derived from an ignorance of the nature of the production process as much as everything else ..."*
>
> *"The second flaw in the neo-classical theoretical structure is the assumption that factor prices are independent of factor productivities. On the basis of this assumption, factor productivities arising from different combinations of capital and labour can be taken as given to the firm; hence the choice of technique depends only on variations in relative factor prices. It is, however, increasingly recognised by economists who speak of 'efficiency wages' that factor prices and factor productivities may be linked, particularly for labour inputs ... the productivity of a technology depends on the amount of effort that workers choose to supply."* [**Competitive Advantage on the Shop Floor**, p. 130 and pp. 133–4]

In other words, neo-classical economics forgets that technology has to be used by workers and so its "productivity" depends on how it is applied. If profit did flow as a result of some property of machinery then bosses could do without autocratic workplace management to ensure profits. They would have no need to supervise workers to ensure that adequate amounts of work are

done in excess of what they pay in wages. This means the idea (so beloved by pro-capitalist economics) that a worker's wage **is** the equivalent of what she produces is one violated everyday within reality:

> *"Managers of a capitalist enterprise are not content simply to respond to the dictates of the market by equating the wage to the value of the marginal product of labour. Once the worker has entered the production process, the forces of the market have, for a time at least, been superseded. The effort-pay relation will depend not only on market relations of exchange but also... on the hierarchical relations of production — on the relative power of managers and workers within the enterprise."* [William Lazonick, **Business Organisation and the Myth of the Market Economy**, pp. 184–5]

But, then again, capitalist economics is more concerned with justifying the status quo than being in touch with the real world. To claim that a workers wage represents her contribution and profit capital's is simply false. Capital cannot produce anything (never mind a surplus) unless used by labour and so profits do not represent the productivity of capital. In and of themselves, fixed costs do not create value. Whether value is created depends on how investments are developed and used once in place. Which brings us back to labour (and the social relationships which exist within an economy) as the fundamental source of surplus value.

Then there is the concept of profit sharing, whereby workers are get a share of the profits made by the company. Yet profits are the return to capital. This shatters the notion that profits represent the contribution of capital. **If** profits were the contribution of the productivity of equipment, then sharing profits would mean that capital was not receiving its full *"contribution"* to production (and so was being exploited by labour!). It is unlikely that bosses would implement such a scheme unless they knew they would get more profits out of it. As such, profit sharing is usually used as a technique to **increase** productivity and profits. Yet in neo-classical economics, it seems strange that such a technique would be required if profits, in fact, **did** represent capital's "contribution." After all, the machinery which the workers are using is the same as before profit sharing was introduced — how could this unchanged capital stock produce an increased "contribution"? It could only do so if, in fact, capital was unproductive and it was the unpaid efforts, skills and energy of workers' that actually was the source of profits. Thus the claim that profit equals capital's "contribution" has little basis in fact.

As capital is not autonomously productive and goods are the product of human (mental and physical) labour, Proudhon was right to argue that *"Capital, tools, and machinery are likewise unproductive ... The proprietor who asks to be rewarded for the use of a tool or for the productive power of his land, takes for granted, then, that which is radically false; namely, that capital produces by its own effort — and, in taking pay for this imaginary product, he literally receives something for nothing."* [**What is Property?**, p. 169]

It will be objected that while capital is not productive in itself, its use does make labour more productive. As such, surely its owner is entitled to some share of the larger output produced by its aid. Surely this means that the owners of capital deserve a reward? Is this difference not the "contribution" of capital? Anarchists are not convinced. Ultimately, this argument boils down to the notion that giving permission to use something is a productive act, a perspective we rejected in the last section. In addition, providing capital is unlike normal commodity production. This is because capitalists, unlike workers, get paid multiple times for one piece of work (which, in all likelihood, they paid others to do) and **keep** the result of that labour. As Proudhon argued:

> *"He [the worker] who manufactures or repairs the farmer's tools receives the price **once**, either at the time of delivery, or in several payments; and when this price is once paid to the manufacturer, the tools which he has delivered belong to him no more. Never can he claim double payment for the same tool, or the same job of repairs. If he annually shares in the products of the farmer, it is owing to the fact that he annually does something for the farmer.*
>
> *"The proprietor, on the contrary, does not yield his implement; eternally he is paid for it, eternally he keeps it."* [**Op. Cit.**, pp. 169–170]

While the capitalist, in general, gets their investment back plus something extra, the workers can never get their time back. That time has gone, forever, in return for a wage which allows them to survive in order to sell their time and labour (i.e. liberty) again. Meanwhile, the masters have accumulated more capital and their the social and economic power and, consequently, their ability to extract surplus value goes up at a higher rate than the wages they have to pay (as we discuss in section C.7, this process is not without problems and regularly causes economic crisis to break out).

Without labour nothing would have been produced and so, in terms of justice, **at best** it could be claimed that the owners of capital deserve to be paid only for what has been used of their capital (i.e. wear and tear and damages). While it is true that the value invested in fixed capital is in the course of time transferred to the commodities produced by it and through their sale transformed into money, this does not represent any actual labour by the owners of capital. Anarchists reject the ideological sleight-of-hand that suggests otherwise and recognise that (mental and physical) labour is the **only** form of contribution that can be made by humans to a productive process. Without labour, nothing can be produced nor the value contained in fixed capital transferred to goods. As Charles A. Dana pointed out in his popular introduction to Proudhon's ideas, *"[t]he labourer without capital would soon supply his wants by its production ... but capital with no labourers to consume it can only lie useless and rot."* [**Proudhon and his "Bank of the People"**, p. 31] If workers do not control the full value of their contributions to the output they produce then they are exploited and so, as indicated, capitalism is based upon exploitation.

Of course, as long as "capital" **is** owned by a different class than as those who use it, this is extremely unlikely that the owners of capital will simply accept a "reward" of damages. This is due to the hierarchical organisation of production of capitalism. In the words of the early English socialist Thomas Hodgskin *"capital does not derive its utility from previous, but present labour; and does not bring its owner a profit because it has been stored up, but because it is a means of obtaining a command over labour."* [**Labour Defended against the Claims of Capital**] It is more than a strange coincidence that the people with power in a company, when working out who contributes most to a product, decide it is themselves!

This means that the notion that labour gets its "share" of the products created is radically false for, as *"a description of **property rights**, the distributive shares picture is quite misleading and false. The simple fact is that one legal party owns all the product. For example, General Motors doesn't just own 'Capital's share' of the GM cars produced; it owns all of them."* [Ellerman, **Op. Cit.**, p. 27] Or as Proudhon put it, *"Property is the right to enjoy and dispose of another's goods, — the fruit of another's industry and labour."* The only way to finally abolish exploitation is for workers to manage their own work and the machinery and tools they use. This is implied, of course, in the argument that labour is the source of property for *"if labour is the sole basis of property, I*

cease to be a proprietor of my field as soon as I receive rent for it from another ... It is the same with all capital." Thus, *"all production being necessarily collective"* and *"all accumulated capital being social property, no one can be its exclusive proprietor."* [**What is Property?**, p. 171, p. 133 and p. 130]

The reason why capital gets a "reward" is simply due to the current system which gives capitalist class an advantage which allows them to refuse access to their property except under the condition that they command the workers to make more than they have to pay in wages and keep their capital at the end of the production process to be used afresh the next. So while capital is not productive and owning capital is not a productive act, under capitalism it is an enriching one and will continue to be so until such time as that system is abolished. In other words, profits, interest and rent are not founded upon any permanent principle of economic or social life but arise from a specific social system which produce specific social relationships. Abolish wage labour by co-operatives, for example, and the issue of the "productivity" of "capital" disappears as "capital" no longer exists (a machine is a machine, it only becomes capital when it is used by wage labour).

So rather that the demand for labour being determined by the technical considerations of production, it is determined by the need of the capitalist to make a profit. This is something the neo-classical theory implicitly admits, as the marginal productivity of labour is just a roundabout way of saying that labour-power will be bought as long as the wage is not higher than the profits that the workers produce. In other words, wages do not rise above the level at which the capitalist will be able to produce and realise surplus-value. To state that workers will be hired as long as the marginal productivity of their labour exceeds the wage is another way of saying that workers are exploited by their boss. So even if we do ignore reality for the moment, this defence of profits does **not** prove what it seeks to — it shows that labour **is** exploited under capitalism.

However, as we discuss in the next section, this whole discussion is somewhat beside the point. This is because marginal productivity theory has been conclusively proven to be flawed by dissident economics and has been acknowledged as such by leading neo-classical economists.

C.2.5 Do profits represent the contribution of capital to production?

In a word, no. While we have assumed the validity of "marginal productivity" theory in relation to capital in the previous two sections, the fact is that the theory is deeply flawed. This is on two levels. Firstly, it does not reflect reality in any way. Secondly, it is logically flawed and, even worse, this has been known to economists for decades. While the first objection will hardly bother most neo-classical economists (what part of that dogma **does** reflect reality?), the second should as intellectual coherence is what replaces reality in economics. However, in spite of "marginal productivity" theory being proven to be nonsense and admitted as such by leading neo-classical economists, it is still taught in economic classes and discussed in text books as if it were valid.

We will discuss each issue in turn.

The theory is based on a high level of abstraction and the assumptions used to allow the mathematics to work are so extreme that no real world example could possibly meet them. The first problem is determining the level at which the theory should be applied. Does it apply to individ-

uals, groups, industries or the whole economy? For depending on the level at which it is applied, there are different problems associated with it and different conclusions to be drawn from it. Similarly, the time period over which it is to be applied has an impact. As such, the theory is so vague that it would be impossible to test as its supporters would simply deny the results as being inapplicable to **their** particular version of the model.

Then there are problems with the model itself. While it has to assume that factors are identical in order to invoke the necessary mathematical theory, none of the factors used are homogenous in the real world. Similarly, for Euler's theory to be applied, there must be constant returns to scale and this does not apply either (it would be fair to say that the assumption of constant returns to scale was postulated to allow the theorem to be invoked in the first place rather than as a result of a scientific analysis of real industrial conditions). Also, the model assumes an ideal market which cannot be realised and any real world imperfections make it redundant. In the model, such features of the real world as oligopolistic markets (i.e. markets dominated by a few firms), disequilibrium states, market power, informational imperfections of markets, and so forth do not exist. Including any of these real features invalidates the model and no "factor" gets its just rewards.

Moreover, like neo-classical economics in general, this theory just assumes the original distribution of ownership. As such, it is a boon for those who have benefited from previous acts of coercion — their ill-gotten gains can now be used to generate income for them!

Finally, "marginal productivity" theory ignores the fact that most production is collective in nature and, as a consequence, the idea of subtracting a single worker makes little or no sense. As soon as there is *"a division of labour and an interdependence of different jobs, as is the case generally in modern industry,"* its *"absurdity can immediately be shown."* For example, *"[i]f, in a coal-fired locomotive, the train's engineer is eliminated, one does not 'reduce a little' of the product (transportation), one eliminates it completely; and the same is true if one eliminates the fireman. The 'product' of this indivisible team of engineer and fireman obeys a law of all or nothing, and there is no 'marginal product' of the one that can be separated from the other. The same thing goes on the shop floor, and ultimately for the modern factory as a whole, where jobs are closely interdependent."* [Cornelius Castoriadis, **Political and Social Writings**, vol. 3, p. 213] Kropotkin made the same point, arguing it *"is utterly impossible to draw a distinction between the work"* of the individuals collectively producing a product as all *"contribute ... in proportion to their strength, their energy, their knowledge, their intelligence, and their skill."* [**The Conquest of Bread**, p. 170 and p. 169]

This suggests another explanation for the existence of profits than the "marginal productivity" of capital. Let us assume, as argued in marginal productivity theory, that a worker receives exactly what she has produced because if she ceases to work, the total product will decline by precisely the value of her wage. However, this argument has a flaw in it. This is because the total product will decline by more than that value if two or more workers leave. This is because the wage each worker receives under conditions of perfect competition is assumed to be the product of the **last** labourer in neo-classical theory. The neo-classical argument presumes a "declining marginal productivity," i.e. the marginal product of the last worker is assumed to be less than the second last and so on. In other words, in neo-classical economics, all workers bar the mythical "last worker" do not receive the full product of their labour. They only receive what the **last** worker is claimed to produce and so everyone **bar** the last worker does not receive exactly what he or she produces. In other words, all the workers are exploited bar the last one.

However, this argument forgets that co-operation leads to increased productivity which the capitalists appropriate for themselves. This is because, as Proudhon argued, *"the capitalist has paid as many times one day's wages"* rather than the workers collectively and, as such, *"he has paid nothing for that immense power which results from the union and harmony of labourers, and the convergence and simultaneousness of their efforts. Two hundred grenadiers stood the obelisk of Luxor upon its base in a few hours; do you suppose that one man could have accomplished the same task in two hundred days? Nevertheless, on the books of the capitalist, the amount of wages would have been the same."* Therefore, the capitalist has *"paid all the individual forces"* but *"the collective force still remains to be paid. Consequently, there remains a right of collective property"* which the capitalist *"enjoy[s] unjustly."* [**What is Property?**, p. 127 and p. 130]

As usual, therefore, we must distinguish between the ideology and reality of capitalism. As we indicated in section C.1, the model of perfect competition has no relationship with the real world. Unsurprisingly, marginal productivity theory is likewise unrelated to reality. This means that the assumptions required to make "marginal productivity" theory work are so unreal that these, in themselves, should have made any genuine scientist reject the idea out of hand. Note, we are **not** opposing abstract theory, **every** theory abstracts from reality is some way. We are arguing that, to be valid, a theory has to reflect the real situation it is seeking to explain in some meaningful way. Any abstractions or assumptions used must be relatively trivial and, when relaxed, not result in the theory collapsing. This is not the case with marginal productivity theory. It is important to recognise that there are degrees of abstraction. There are *"negligibility assumptions"* which state that some aspect of reality has little or no effect on what is being analysed. Sadly for marginal productivity theory, its assumptions are not of this kind. Rather, they are *"domain assumptions"* which specify *"the conditions under which a particular theory will apply. If those conditions do not apply, then neither does the theory."* [Steve Keen, **Debunking Economics**, p. 151] This is the case here.

However, most economists will happily ignore this critique for, as noted repeatedly, basing economic theory on reality or realistic models is not considered a major concern by neoclassical economists. However, "marginal productivity" theory applied to capital is riddled with logical inconsistencies which show that it is simply wrong. In the words of the noted left-wing economist Joan Robinson:

> *"The neo-classicals evidently had not been told that the neo-classical theory did not contain a solution of the problems of profits or of the value of capital. They have erected a towering structure of mathematical theorems on a foundation that does not exist. Recently [in the 1960s, leading neo-classical economist] Paul Samuelson was sufficiently candid to admit that the basis of his system does not hold, but the theorems go on pouring out just the same."* [**Contributions to Modern Economics**, p. 186]

If profits **are** the result of private property and the inequality it produces, then it is unsurprising that neoclassical theory would be as foundationless as Robinson argues. After all, this is a **political** question and neo-classical economics was developed to ignore such questions. Marginal productivity theory has been subject to intense controversy, precisely because it claims to show that labour is not exploited under capitalism (i.e. that each factor gets what it contributes to production). We will now summarise this successful criticism.

The first major theoretical problem is obvious: how do you measure capital? In neoclassical economics, capital is referred to as machinery of all sorts as well as the workplaces that house

them. Each of these items is, in turn, made up of a multitude of other commodities and many of these are assemblies of other commodities. So what does it mean to say, as in marginal productivity theory, that "capital" is varied by one unit? The only thing these products have in common is a price and that is precisely what economists **do** use to aggregate capital. Sadly, though, shows *"that there is no meaning to be given to a 'quantity of capital' apart from the rate of profit, so that the contention that the 'marginal product of capital' determines the rate of profit is meaningless."* [Robinson, **Op. Cit.**, p. 103] This is because argument is based on circular reasoning:

> *"For long-period problems we have to consider the meaning of the rate of profit on capital ... the value of capital equipment, reckoned as its future earnings discounted at a rate of interest equal to the rate of profit, is equal to its initial cost, which involves prices including profit at the same rate on the value of the capital involved in producing it, allowing for depreciation at the appropriate rate over its life up to date.*
>
> *"The value of a stock of capital equipment, therefore, involves the rate of profit. There is no meaning in a 'quantity of capital' apart from the rate of profit."* [**Collected Economic Papers**, vol. 4, p. 125]

Looking at it another way, neo-classical economics seeks to simultaneously solve the problems of production and income distribution. It attempts to show how the level of employment of capital and labour is determined as well as how national income is divided between the two. The latter is done by multiplying the quantities of labour and capital by the equilibrium wage and interest rate, respectively. In the long term, equilibrium conditions are governed by the net marginal productivity of each factor, with each supplied until its net marginal revenue is zero. This is why the market rate of interest is used as capital is assumed to have marginal productivity and the existing market interest reflects that.

Yet in what sense can we say that capital has marginal productivity? How is the stock of capital to be measured? One measure is to take the present value of the income stream expected to accrue to capital owners. However, where does this discount rate and net income stream come from? To find a value for these, it is necessary to estimate a national income and the division of income between labour and capital but that is what the analysis was meant to produce. In other words, the neo-classical theory requires assumptions which are, in fact, the solution. This means that value of capital is dependent on the distribution of income. As there is no rationale offered for choosing one income distribution over another, the neo-classical theory does not solve the problem it set out to investigate but rather simply assumes it away. It is a tautology. It asks how the rate of profit is determined and answers by referencing the quantity of capital and its marginal revenue product. When asked how these are determined, the reply is based on assuming a division of future income and the discounting of the returns of capital with the market rate of interest. That is, it simply says that the market rate of interest is a function of the market rate of interest (and an assumed distribution of income).

In other words, according to neoclassical theory, the rate of profit and interest depends on the amount of capital, and the amount of capital depends on the rate of profit and interest. One has to assume a rate of profit in order to demonstrate the equilibrium rate of return is determined. This issue is avoided in neo-classical economics simply by ignoring it (it must be noted that the same can be said of the "Austrian" concept of *"roundaboutness"* as *"it is impossible to define one way of producing a commodity as 'more roundabout' than another independently of the rate of profit*

... Therefore the Austrian notion of roundaboutness is as internally inconsistent as the neoclassical concept of the marginal productivity of capital." [Steve Keen, **Debunking Economics**, p. 302]).

The next problem with the theory is that "capital" is treated as something utterly unreal. Take, for example, leading neoclassical Dennis Robertson's 1931 attempt to explain the marginal productivity of labour when holding "capital" constant:

> *"If ten men are to be set out to dig a hole instead of nine, they will be furnished with ten cheaper spades instead of nine more expensive ones; or perhaps if there is no room for him to dig comfortably, the tenth man will be furnished with a bucket and sent to fetch beer for the other nine."* [*"Wage-grumbles"*, **Economic Fragments**, p. 226]

So to work out the marginal productivity of the factors involved, *"ten cheaper spades"* somehow equals nine more expensive spades? How is this keeping capital constant? And how does this reflect reality? Surely, any real world example would involve sending the tenth digger to get another spade? And how do nine expensive spades become nine cheaper ones? In the real world, this is impossible but in neoclassical economics this is not only possible but required for the theory to work. As Robinson argued, in neo-classical theory the *"concept of capital all the man-made factors are boiled into one, which we may call* ***leets*** *... [which], though all made up of one physical substance, is endowed with the capacity to embody various techniques of production ... and a change of technique can be made simply by squeezing up or spreading out leets, instantaneously and without cost."* [**Contributions to Modern Economics**, p. 106]

This allows economics to avoid the obvious aggregation problems with "capital", make sense of the concept of adding an extra unit of capital to discover its "marginal productivity" and allows capital to be held "constant" so that the "marginal productivity" of labour can be found. For when *"the stock of means of production in existence can be represented as a quantity of ectoplasm, we can say, appealing to Euler's theorem, that the rent per unit of ectoplasm is equal to the marginal product of the given quantity of ectoplasm when it is fully utilised. This does seem to add anything of interest to the argument."* [**Op. Cit.**, p. 99] This ensures reality has to be ignored and so economic theory need not discuss any practical questions:

> *"When equipment is made of leets, there is no distinction between long and short-period problems ... Nine spades are lumps of leets; when the tenth man turns up it is squeezed out to provide him with a share of equipment nine-tenths of what each man had before ... There is no room for imperfect competition. There is no possibility of disappointed expectations ... There is no problem of unemployment ... Unemployed workers would bid down wages and the pre-existing quantity of leets would be spread out to accommodate them."* [**Op. Cit.**, p. 107]

The concept that capital goods are made of ectoplasm and can be remoulded into the profit maximising form from day to day was invented in order to prove that labour and capital both receive their contribution to society, to show that labour is not exploited. It is not meant to be taken literally, it is only a parable, but without it the whole argument (and defence of capitalism) collapses. Once capital equipment is admitted to being actual, specific objects that cannot be squeezed, without cost, into new objects to accommodate more or less workers, such comforting notions that profits equal the (marginal) contribution of "capital" or that unemployment is caused by wages being too high have to be discarded for the wishful thinking they most surely are.

The last problem arises when ignore these issues and assume that marginal productivity theory is correct. Consider the notion of the short run, where at least one factor of production cannot be varied. To determine its marginal productivity then capital has to be the factor which is varied. However, common sense suggests that capital is the least flexible factor and if that can be varied then every other one can be as well? As dissident economist Piero Sraffa argued, when a market is defined broadly enough, then the key neoclassical assumption that the demand and supply of a commodity are independent breaks down. This was applied by another economist, Amit Bhaduri, to the "capital market" (which is, by nature, a broadly defined industry). Steve Keen usually summarises these arguments, noting that *"at the aggregate level [of the economy as a whole], the desired relationship — the rate of profit equals the marginal productivity of capital — will not hold true"* as it only applies *"when the capital to labour ratio is the same in all industries — which is effectively the same as saying there is only one industry."* This *"proves Sraffa's assertion that, when a broadly defined industry is considered, changes in its conditions of supply and demand will affect the distribution of income."* This means that a *"change in the capital input will change output, but it also changes the wage, and the rate of profit ... As a result, the distribution of income is neither meritocratic nor determined by the market. The distribution of income is to some significant degree determined independently of marginal productivity and the impartial blades of supply and demand ... To be able to work out prices, it is first necessary to know the distribution of income ... There is therefore nothing sacrosanct about the prices that apply in the economy, and equally nothing sacrosanct about the distribution of income. It reflects the relative power of different groups in society."* [**Op. Cit.**, p. 135]

It should be noted that this critique bases itself on the neoclassical assumption that it is possible to define a factor of production called capital. In other words, even if we assume that neo-classical economics theory of capital is not circular reasoning, it's theory of distribution is still logically wrong.

So mainstream economics is based on a theory of distribution which is utterly irrelevant to the real world and is incoherent when applied to capital. This would not be important except that it is used to justify the distribution of income in the real world. For example, the widening gap between rich and poor (it is argued) simply reflects a market efficiently rewarding more productive people. Thus the compensation for corporate chief executives climbs so sharply because it reflects their marginal productivity. Except, of course, the theory supports no such thing — except in a make believe world which cannot exist (lassiez fairy land, anyone?).

It must be noted that this successful critique of neoclassical economics by dissident economists was first raised by Joan Robinson in the 1950s (it usually called the Cambridge Capital Controversy). It is rarely mentioned these days. While most economic textbooks simply repeat the standard theory, the fact is that this theory has been successfully debunked by dissident economists over four decades go. As Steve Keen notes, while leading neoclassical economists admitted that the critique was correct in the 1960s, today *"economic theory continues to use exactly the same concepts which Sraffa's critique showed to be completely invalid"* in spite the *"definitive capitulation by as significant an economist as Paul Samuelson."* As he concludes: *"There is no better sign of the intellectual bankruptcy of economics than this."* [**Op. Cit.**, p. 146, p. 129 and p. 147]

Why? Simply because the Cambridge Capital Controversy would expose the student of economics to some serious problems with neo-classical economics and they may start questioning the internal consistency of its claims. They would also be exposed to alternative economic theories and start to question whether profits **are** the result of exploitation. As this would put

into jeopardy the role of economists as, to quote Marx, the *"hired prize-fighters"* for capital who replace *"genuine scientific research"* with *"the bad conscience and evil intent of apologetics."* Unsurprisingly, he characterised this as *"vulgar economics."* [**Capital**, vol. 1, p. 97]

C.2.6 Does interest represent the "time value" of money?

One defence of interest is the notion of the "time value" of money, that individuals have different "time preferences." Most individuals prefer, it is claimed, to consume now rather than later while a few prefer to save now on the condition that they can consume more later. Interest, therefore, is the payment that encourages people to defer consumption and so is dependent upon the subjective evaluations of individuals. It is, in effect, an exchange over time and so surplus value is generated by the exchange of present goods for future goods.

Based on this argument, many supporters of capitalism claim that it is legitimate for the person who provided the capital to get back **more** than they put in, because of the "time value of money." This is because investment requires savings and the person who provides those had to postpone a certain amount of current consumption and only agree to do this only if they get an increased amount later (i.e. a portion, over time, of the increased output that their saving makes possible). This plays a key role in the economy as it provide the funds from which investment can take place and the economy grow.

In this theory, interest rates are based upon this "time value" of money and the argument is rooted in the idea that individuals have different "time preferences." Some economic schools, like the Austrian school, argue that the actions by banks and states to artificially lower interest rates (by, for example, creating credit or printing money) create the business cycle as this distorts the information about people's willingness to consume now rather than later leading to over investment and so to a slump.

That the idea of doing nothing (i.e. not consuming) can be considered as productive says a lot about capitalist theory. However, this is beside the point as the argument is riddled with assumptions and, moreover, ignores key problems with the notion that savings always lead to investment.

The fundamental weakness of the theory of time preference must be that it is simply an unrealistic theory and does not reflect where the supply of capital does come from. It **may** be appropriate to the decisions of households between saving and consumption, but the main source of new capital is previous profit under capitalism. The motivation of making profits is not the provision of future means of consumption, it is profits for their own sake. The nature of capitalism requires profits to be accumulated into capital for if capitalists **did** only consume the system would break down. While from the point of view of the mainstream economics such profit-making for its own sake is irrational in reality it is imposed on the capitalist by capitalist competition. It is only by constantly investing, by introducing new technology, work practices and products, can the capitalists keep their capital (and income) intact. Thus the motivation of capitalists to invest is imposed on them by the capitalist system, not by subjective evaluations between consuming more later rather than now.

Ignoring this issue and looking at the household savings, the theory still raises questions. The most obvious problem is that an individual's psychology is conditioned by the social situation they find themselves in. Ones "time preference" is determined by ones social position. If one

has more than enough money for current needs, one can more easily "discount" the future (for example, workers will value the future product of their labour less than their current wages simply because without those wages there will be no future). We will discuss this issue in more detail later and will not do so here (see section C.2.7).

The second thing to ask is why should the supply price of waiting be assumed to be positive? If the interest rate simply reflects the subjective evaluations of individuals then, surely, it could be negative or zero. Deferred gratification is as plausible a psychological phenomenon as the overvaluation of present satisfactions, while uncertainty is as likely to produce immediate consumption as it is to produce provision for the future (saving). Thus Joan Robinson:

> *"The rate of interest (excess of repayment over original loan) would settle at the level which equated supply and demand for loans. Whether it was positive or negative would depend upon whether spendthrifts or prudent family men happened to predominate in the community. There is no* ***a priori*** *presumption in favour of a positive rate. Thus, the rate of interest cannot be account for as the 'cost of waiting.'*
>
> *"The reason why there is always a demand for loans at a positive rate of interest, in an economy where there is property in the means of production and means of production are scarce, is that finance expended now can be used to employ labour in productive processes which will yield a surplus in the future over costs of production. Interest is positive because profits are positive (though at the same time the cost and difficulty of obtaining finance play a part in keeping productive equipment scarce, and so contribute to maintaining the level of profits)."* [**Contributions to Modern Economics**, p. 83]

It is only because money provides the authority to allocate resources and exploit wage labour that money now is more valuable (*"we know that mere saving itself brings in nothing, so long as the pence saved are not used to exploit."* [Kropotkin, **The Conquest of Bread**, p. 59]). The capitalist does not supply "time" (as the "time value" theory argues), the loan provides authority/power and so the interest rate does not reflect "time preference" but rather the utility of the loan to capitalists, i.e. whether it can be used to successfully exploit labour. If the expectations of profits by capitalists are low (as in, say, during a depression), loans would not be desired no matter how low the interest rate became. As such, the interest rate is shaped by the general profit level and so be independent of the "time preference" of individuals.

Then there is the problem of circularity. In any real economy, interest rates obviously shape people's saving decisions. This means that an individual's "time preference" is shaped by the thing it is meant to explain:

> *"But there may be some savers who have the psychology required by the text books and weigh a preference for present spending against an increment of income (interest, dividends and capital gains) to be had from an increment of wealth. But what then? Each individual goes on saving or dis-saving till the point where his individual subjective rate of discount is equal to the market rate of interest. There has to be a market rate of interest for him to compare his rate of discount to."* [Joan Robinson, **Op. Cit.**, pp. 11–12]

Looking at the individuals whose subjective evaluations allegedly determine the interest rate, there is the critical question of motivation. Looking at lenders, do they **really** charge interest

because they would rather spend more money later than now? Hardly, their motivation is far more complicated than that. It is doubtful that many people actually sit down and work out how much their money is going to be "worth" to them a year or more from now. Even if they did, the fact is that they really have no idea how much it will be worth. The future is unknown and uncertain and, consequently, it is implausible that "time preference" plays the determining role in the decision making process.

In most economies, particularly capitalism, the saver and lender are rarely the same person. People save and the banks use it to loan it to others. The banks do not do this because they have a low "time preference" but because they want to make profits. They are a business and make their money by charging more interest on loans than they give on savings. Time preference does not enter into it, particularly as, to maximise profits, banks loan out more (on credit) than they have in savings and, consequently, make the actual interest rate totally independent of the rate "time preference" would (in theory) produce.

Given that it would be extremely difficult, indeed impossible, to stop banks acting in this way, we can conclude that even if "time preference" were true, it would be of little use in the real world. This, ironically, is recognised by the same free market capitalist economists who advocate a "time preference" perspective on interest. Usually associated with the "Austrian" school, they argue that banks should have 100% reserves (i.e. they loan out only what they have in savings, backed by gold). This implicitly admits that the interest rate does not reflect "time preference" but rather the activities (such as credit creation) of banks (not to mention other companies who extend business credit to consumers). As we discuss in section C.8, this is not due to state meddling with the money supply or the rate of interest but rather the way capitalism works.

Moreover, as the banking industry is marked, like any industry, by oligopolistic competition, the big banks will be able to add a mark up on services, so distorting any interest rates set even further from any abstract "time preference" that exists. Therefore, the structure of that market will have a significant effect on the interest rate. Someone in the same circumstances with the same "time preference" will get radically different interest rates depending on the "degree of monopoly" of the banking sector (see section C.5 for "degree of monopoly"). An economy with a multitude of small banks, implying low barriers of entry, will have different interest rates than one with a few big firms implying high barriers (if banks are forced to have 100% gold reserves, as desired by many "free market" capitalists, then these barriers may be even higher). As such, it is highly unlikely that "time preference" rather than market power is a more significant factor in determining interest rates in any **real** economy. Unless, of course, the rather implausible claim is made that the interest rate would be the same no matter how competitive the banking market was — which, of course, is what the "time preference" argument does imply.

Nor is "time preference" that useful when we look at the saver. People save money for a variety of motives, few (if any) of which have anything to do with "time preference." A common motive is, unsurprisingly, uncertainty about the future. Thus people put money into savings accounts to cover possible mishaps and unexpected developments (as in *"saving for a rainy day"*). Indeed, in an uncertain world future money may be its own reward for immediate consumption is often a risky thing to do as it reduces the ability to consumer in the future (for example, workers facing unemployment in the future could value the same amount of money more then than now). Given that the future is uncertain, many save precisely for precautionary reasons and increasing current consumption is viewed as a disutility as it is risky behaviour. Another common reason would be to save because they do not have enough money to buy what they want now. This is

particularly the case with working class families who face stagnating or falling income or face financial difficulties.[Henwood, **Wall Street**, p. 65] Again, "time preference" does not come into it as economic necessity forces the borrowers to consume more now in order to be around in the future.

Therefore, money lending is, for the poor person, not a choice between more consumption now/less later and less consumption now/more later. If there is no consumption now, there will not be any later. So not everybody saves money because they want to be able to spend more at a future date. As for borrowing, the real reason for it is necessity produced by the circumstances people find themselves in. As for the lender, their role is based on generating a current and future income stream, like any business. So if "time preference" seems unlikely for the lender, it seems even more unlikely for the borrower or saver. Thus, while there is an element of time involved in decisions to save, lend and borrow, it would be wrong to see interest as the consequence of "time preference." Most people do not think in terms of it and, therefore, predicting their behaviour using it would be silly.

At the root of the matter is that for the vast majority of cases in a capitalist economy, an individual's "time preference" is determined by their social circumstances, the institutions which exist, uncertainty and a host of other factors. As inequality drives "time preference," there is no reason to explain interest rates by the latter rather than the former. Unless, of course, you are seeking to rationalise and justify the rich getting richer. Ultimately, interest is an expression of inequality, **not** exchange:

> *"If there is chicanery afoot in calling 'money now' a different good than 'money later,' it is by no means harmless, for the intended effect is to subsume money lending under the normative rubric of exchange ... [but] there are obvious differences ... [for in normal commodity exchange] both parties have something [while in loaning] he has something you don't ... [so] inequality dominates the relationship. He has more than you have now, and he will get back more than he gives."* [Schweickart, **Against Capitalism**, p. 23]

While the theory is less than ideal, the practice is little better. Interest rates have numerous perverse influences in any real economy. In neo-classical and related economics, saving does not have a negative impact on the economy as it is argued that non-consumed income must be invested. While this could be the case when capitalism was young, when the owners of firms ploughed their profits back into them, as financial institutions grew this became less so. Saving and investment became different activities, governed by the rate of interest. If the supply of savings increased, the interest rate would drop and capitalists would invest more. If the demand for loans increased, then the interest rate would rise, causing more savings to occur.

While the model is simple and elegant, it does have its flaws. These are first analysed by Keynes during the Great Depression of the 1930s, a depression which the neo-classical model said was impossible.

For example, rather than bring investment into line with savings, a higher interest can cause savings to fall as *"[h]ousehold saving, of course, is mainly saving up to spend later, and ... it is likely to respond the wrong way. A higher rate of return means that 'less' saving is necessary to get a given pension or whatever."* [Robinson, **Op. Cit.**, p. 11] Similarly, higher interest rates need not lead to higher investment as higher interest payments can dampen profits as both consumers and industrial capitalists have to divert more of their finances away from real spending and towards

debt services. The former causes a drop in demand for products while the latter leaves less for investing.

As argued by Keynes, the impact of saving is not as positive as some like to claim. Any economy is a network, where decisions affect everyone. In a nutshell, the standard model fails to take into account changes of income that result from decisions to invest and save (see Michael Stewart's **Keynes and After** for a good, if basic, introduction). This meant that if some people do not consume now, demand falls for certain goods, production is turned away from consumption goods, and this has an effect on all. Some firms will find their sales failing and may go under, causing rising unemployment. Or, to put it slightly differently, aggregate demand — and so aggregate supply — is changed when some people postpone consumption, and this affects others. The decrease in the demand for consumer goods affects the producers of these goods. With less income, the producers would reduce their expenditure and this would have repercussions on other people's incomes. In such circumstances, it is unlikely that capitalists would be seeking to invest and so rising savings would result in falling investment in spite of falling interest rates. In an uncertain world, investment will only be done if capitalists think that they will end up with more money than they started with and this is unlikely to happen when faced with falling demand.

Whether rising interest rates do cause a crisis is dependent on the strength of the economy. During a strong expansion, a modest rise in interest rates may be outweighed by rising wages and profits. During a crisis, falling rates will not counteract the general economic despair. Keynes aimed to save capitalism from itself and urged state intervention to counteract the problems associated with free market capitalism. As we discuss in section C.8.1, this ultimately failed partly due to the mainstream economics gutting Keynes' work of key concepts which were incompatible with it, partly due to Keynes' own incomplete escape from neoclassical economics, partly due the unwillingness of rentiers to agree to their own euthanasia but mostly because capitalism is inherently unstable due to the hierarchical (and so oppressive and exploitative) organisation of production.

Which raises the question of whether someone who saves deserve a reward for so doing? Simply put, no. Why? Because the act of saving is no more an act of production than is purchasing a commodity (most investment comes from retained profits and so the analogy is valid). Clearly the reward for purchasing a commodity is that commodity. By analogy, the reward for saving should be not interest but one's savings — the ability to consume at a later stage. Particularly as the effects of interest rates and savings can have such negative impacts on the rest of the economy. It seems strange, to say the least, to reward people for helping do so. Why should someone be rewarded for a decision which may cause companies to go bust, so **reducing** the available means of production as reduced demand results in job loses and idle factories? Moreover, this problem *"becomes ever more acute the richer or more inegalitarian the society becomes, since wealthy people tend to save more than poor people."* [Schweickart, **After Capitalism**, p. 43]

Supporters of capitalists assume that people will not save unless promised the ability to consume **more** at a later stage, yet close examination of this argument reveals its absurdity. People in many different economic systems save in order to consume later, but only in capitalism is it assumed that they need a reward for it beyond the reward of having those savings available for consumption later. The peasant farmer "defers consumption" in order to have grain to plant next year, even the squirrel "defers consumption" of nuts in order to have a stock through winter. Neither expects to see their stores increase in size over time. Therefore, saving is rewarded by

saving, as consuming is rewarded by consuming. In fact, the capitalist "explanation" for interest has all the hallmarks of apologetics. It is merely an attempt to justify an activity without careful analysing it.

To be sure, there is an economic truth underlying this argument for justifying interest, but the formulation by supporters of capitalism is inaccurate and unfortunate. There is a sense in which 'waiting' is a condition for capital **increase**, though not for capital per se. Any society which wishes to increase its stock of capital goods may have to postpone some gratification. Workplaces and resources turned over to producing capital goods cannot be used to produce consumer items, after all. How that is organised differs from society to society. So, like most capitalist economics there is a grain of truth in it but this grain of truth is used to grow a forest of half-truths and confusion.

As such, this notion of "waiting" only makes sense in a 'Robinson Crusoe" style situation, **not** in any form of real economy. In a real economy, we do not need to "wait" for our consumption goods until investment is complete since the division of labour/work has replaced the succession in time by a succession in place. We are dealing with an already well developed system of **social** production and an economy based on a social distribution of labour in which there are available all the various stages of the production process. As such, the notion that "waiting" is required makes little sense. This can be seen from the fact that it is not the capitalist who grants an advance to the worker. In almost all cases the worker is paid by their boss **after** they have completed their work. That is, it is the worker who makes an advance of their labour power to the capitalist. This waiting is only possible because *"no species of labourer depends on any previously prepared stock, for in fact no such stock exists; but every species of labourer does constantly, and at all times, depend for his supplies on the co-existing labour of some other labourers."* [Thomas Hodgskin, **Labour Defended Against the Claims of Capital**] This means that the workers, as a class, creates the fund of goods out of which the capitalists pay them.

Ultimately, selling the use of money (paid for by interest) is not the same as selling a commodity. The seller of the commodity does not receive the commodity back as well as its price, unlike the typical lender of money. In effect, as with rent and profits, interest is payment for permission to use something and, therefore, not a productive act which should be rewarded. It is **not** the same as other forms of exchange. Proudhon pointed out the difference:

> *"Comparing a loan to a **sale**, you say: Your argument is as valid against the latter as against the former, for the hatter who sells hats does not **deprive** himself.*
>
> *"No, for he receives for his hats — at least he is reputed to receive for them — their exact value immediately, neither **more** nor **less**. But the capitalist lender not only is not deprived, since he recovers his capital intact, but he receives more than his capital, more than he contributes to the exchange; he receives in addition to his capital an interest which represents no positive product on his part. Now, a service which costs no labour to him who renders it is a service which may become gratuitous."* [**Interest and Principal: The Circulation of Capital, Not Capital Itself, Gives Birth to Progress**]

The reason why interest rates do not fall to zero is due to the class nature of capitalism, **not** "time preference." That it is ultimately rooted in social institutions can be seen from Böhm-

Bawerk's acknowledgement that monopoly can result in exploitation by increasing the rate of interest above the rate specified by "time preference" (i.e. the market):

> *"Now, of course, the circumstances unfavourable to buyers may be corrected by active competition among sellers ... But, every now and then, something will suspend the capitalists' competition, and then those unfortunates, whom fate has thrown on a local market ruled by monopoly, are delivered over to the discretion of the adversary. Hence direct usury, of which the poor borrower is only too often the victim; and hence the low wages forcibly exploited from the workers...*
>
> *"It is not my business to put excesses like these, where there actually is exploitation, under the aegis of that favourable opinion I pronounced above as to the essence of interest. But, on the other hand, I must say with all emphasis, that what we might stigmatise as 'usury' does not consist in the obtaining of a gain out of a loan, or out of the buying of labour, but in the immoderate extent of that gain ... Some gain or profit on capital there would be if there were no compulsion on the poor, and no monopolising of property; and some gain there must be. It is only the height of this gain where, in particular cases, it reaches an excess, that is open to criticism, and, of course, the very unequal conditions of wealth in our modern communities bring us unpleasantly near the danger of exploitation and of usurious rates of interest."* [**The Positive Theory of Capital**, p. 361]

Little wonder, then, that Proudhon continually stressed the need for working people to organise themselves and credit (which, of course, they would have done naturally, if it were not for the state intervening to protect the interests, income and power of the ruling class, i.e. of itself and the economically dominant class). If, as Böhm-Bawerk admitted, interest rates could be high due to institutional factors then, surely, they do not reflect the "time preferences" of individuals. This means that they could be lower (effectively zero) if society organised itself in the appropriate manner. The need for savings could be replaced by, for example, co-operation and credit (as already exists, in part, in any developed economy). Organising these could ensure a positive cycle of investment, growth and savings (Keynes, it should be noted, praised Proudhon's follower Silvio Gesell in **The General Theory**. For a useful discussion see Dudley Dillard's essay *"Keynes and Proudhon"* [**The Journal of Economic History**, vol. 2, No. 1, pp. 63–76]).

Thus the key flaw in the theory is that of capitalist economics in general. By concentrating on the decisions of individuals, it ignores the social conditions in which these decisions are made. By taking the social inequalities and insecurities of capitalism as a given, the theory ignores the obvious fact that an individual's "time preference" will be highly shaped by their circumstances. Change those circumstances and their "time preference" will also change. In other words, working people have a different "time preference" to the rich because they are poorer. Similarly, by focusing on individuals, the "time preference" theory fails to take into account the institutions of a given society. If working class people have access to credit in other forms than those supplied by capitalists then their "time preference" will differ radically. As an example, we need only look at credit unions. In communities with credit unions the poor are less likely to agree to get into an agreement from a loan shark. It seems unlikely, to say the least, that the "time preference" of those involved have changed. They are subject to the same income inequalities and pressures as before, but by uniting with their fellows they give themselves better alternatives.

As such, "time preference" is clearly not an independent factor. This means that it cannot be used to justify capitalism or the charging of interest. It simply says, in effect, that in a society marked by inequality the rich will charge the poor as much interest as they can get away with. This is hardly a sound basis to argue that charging interest is a just or a universal fact. It reflects social inequality, the way a given society is organised and the institutions it creates. Put another way, there is no "natural" rate of interest which reflects the subjective "time preferences" of abstract individuals whose decisions are made without any social influence. Rather, the interest rate depends on the conditions and institutions within the economy as a whole. The rate of interest is positive under capitalism because it is a class society, marked by inequality and power, **not** because of the "time preference" of abstract individuals.

In summary, providing capital and charging interest are not productive acts. As Proudhon argued, *"all rent received (nominally as damages, but really as payment for a loan) is an act of property — of robbery."* [**What is Property**, p. 171]

C.2.7 Are interest and profit not the reward for waiting?

Another defence of surplus value by capitalist economics is also based on time. This argument is related to the "time preference" one we have discussed in the last section and is, likewise, rooted in the idea that money now is different than money later and, as a consequence, surplus value represents (in effect) an exchange of present goods for future ones. This argument has two main forms, depending on whether it is interest or profits which are being defended, but both are based on this perspective. We will discuss each in turn.

One of the oldest defences of interest is the "abstinence" theory first postulated by Nassau Senior in 1836. For Senior, abstinence is a sacrifice of present enjoyment for the purpose achieving some distant result. This demands the same heavy sacrifice as does labour, for to *"abstain from the enjoyment which is in our power, or to seek distant rather than immediate results, are among the most painful exertions of the human will."* Thus wages and interest/profit *"are to be considered as the rewards of peculiar sacrifices, the former the remuneration for labour, and the latter for abstinence from immediate enjoyment."* [**An Outline of the Science of Political Economy**, p. 60 and p. 91]

Today, the idea that interest is the reward for "abstinence" on the part of savers is still a common one in capitalist economics. However, by the end of the nineteenth century, Senior's argument had become known as the "waiting" theory while still playing the same role in justifying non-labour income. One of the leading neo-classical economists of his day, Alfred Marshall, argued that *"[i]f we admit [a commodity] is the product of labour alone, and not of labour and waiting, we can no doubt be compelled by an inexorable logic to admit that there is no justification of interest, the reward for waiting."* [**Principles of Economics**, p. 587] While implicitly recognising that labour is the source of all value in capitalism (and that abstinence is not the **source** of profits), it is claimed that interest is a justifiable claim on the surplus value produced by a worker.

Why is this the case? Capitalist economics claims that by "deferring consumption," the capitalist allows new means of production to be developed and so should be rewarded for this sacrifice. In other words, in order to have capital available as an input — i.e. to bear costs now for returns in the future — someone has to be willing to postpone his or her consumption. That is a real cost, and one that people will pay only if rewarded for it:

> *"human nature being what it is, we are justified in speaking of the interest on capital as the reward of the sacrifice involved in waiting for the enjoyment of material resources, because few people would save much without reward; just as we speak of wages as the reward of labour, because few people would work hard without reward."* [**Op. Cit.**, p. 232]

The interest rate is, in neo-classical economic theory, set when the demand for loans meets the supply of savings. The interest rate stems from the fact that people prefer present spending over future spending. If someone borrows £200 for one year at 5%, this is basically the same as saying that there would rather have £200 now than £210 a year from now. Thus interest is the cost of providing a service, namely time. People are able to acquire today what they would otherwise not have until sometime in the future. With a loan, interest is the price of the advantage obtained from having money immediately rather than having to wait for.

This, on first appears, seems plausible. If you accept the logic of capitalist economics and look purely at individuals and their preferences independently of their social circumstances then it can make sense. However, once you look wider you start to see this argument start to fall apart. Why is it that the wealthy are willing to save and provide funds while it is the working class who do not save and get into debt? Surely a person's "time preference" is dependent on their socio-economic position? As we argued in the last section, this means that any subjective evaluation of the present and future is dependent on, not independent of, the structure of market prices and income distribution. It varies with the income of individual and their class position, since the latter will condition the degree or urgency of present wants and needs.

So this theory appears ludicrous to a critic of capitalism — simply put, does the mine owner really sacrifice more than a miner, a rich stockholder more than an autoworker working in their car plant, a millionaire investor more than a call centre worker? As such, the notion that "waiting" explains interest is question begging in the extreme as it utterly ignores inequality within a society. After all, it is far easier for a rich person to "defer consumption" than for someone on an average income. This is borne out by statistics, for as Simon Kuznets has noted, *"only the upper income groups save; the total savings of groups below the top decile are fairly close to zero."* [**Economic Growth and Structure**, p. 263] Obviously, therefore, in modern society it is the capitalist class, the rich, who refrain from expending their income on immediate consumption and *"abstain."* Astonishingly, working class people show no such desire to abstain from spending their wages on immediate consumption. It does not take a genius to work out why, although many economists have followed Senior in placing the blame on working class lack of abstinence on poor education rather than, say, the class system they live in (for Senior, *"the worse educated"* classes *"are always the most improvident, and consequently the least abstinent."* [**Op. Cit.**, p. 60]).

Therefore, the plausibility of interest as payment for the pain of deferring consumption rests on the premise that the typical saving unit is a small or medium-income household. But in contemporary capitalist societies, this is not the case. Such households are not the source of most savings; the bulk of interest payments do not go to them. As such, interest is the dependent factor and so "waiting" cannot explain interest. Rather, interest is product of social inequality and the social relationships produced by an economy. Lenders lend because they have the funds to do so while borrowers borrow because without money now they may not be around later. As those with funds are hardly going without by lending, it does not make much sense to argue that they would spend even more today without the temptation of more income later.

To put this point differently, the capitalist proponents of interest only consider "postponing consumption" as an abstraction, without making it concrete. For example, a capitalist may "postpone consumption" of his 10th Rolls Royce because he needs the money to upgrade some machinery in his factory; whereas a single mother may have to "postpone consumption" of food or adequate housing in order to attempt to better take care of her children. The two situations are vastly different, yet the capitalist equates them. This equation implies that "not being able to buy anything you want" is the same as "not being able to buy things you need", and is thus skewing the obvious difference in costs of such postponement of consumption!

Thus Proudhon's comments that the loaning of capital *"does not involve an actual sacrifice on the part of the capitalist"* and so *"does not deprive himself... of the capital which be lends. He lends it, on the contrary, precisely because the loan is not a deprivation to him; he lends it because he has no use for it himself, being sufficiently provided with capital without it; be lends it, finally, because he neither intends nor is able to make it valuable to him personally, — because, if he should keep it in his own hands, this capital, sterile by nature, would remain sterile, whereas, by its loan and the resulting interest, it yields a profit which enables the capitalist to live without working. Now, to live without working is, in political as well as moral economy, a contradictory proposition, an impossible thing."* [**Interest and Principal: A Loan is a Service**]

In other words, contra Marshall, saving is **not** a sacrifice for the wealthy and, as such, not deserving a reward. Proudhon goes on:

> *"The proprietor who possesses two estates, one at Tours, and the other at Orleans, and who is obliged to fix his residence on the one which he uses, and consequently to abandon his residence on the other, can this proprietor claim that he deprives himself of anything, because he is not, like God, ubiquitous in action and presence? As well say that we who live in Paris are deprived of a residence in New York! Confess, then, that the privation of the capitalist is akin to that of the master who has lost his slave, to that of the prince expelled by his subjects, to that of the robber who, wishing to break into a house, finds the dogs on the watch and the inmates at the windows."*

Given how much income this "abstinence" or "waiting" results in, we can only conclude that it is the most painful of decisions possible for a multi-millionaire to decide **not** to buy that fifth house and instead save the money. The effort to restrain themselves from squandering their entire fortunes all at once must be staggering. In the capitalist's world, an industrialist who decides not to consume a part of their riches "suffers" a cost equivalent to that of someone who postpones consumption of their meagre income to save enough to get something they need. Similarly, if the industrialist "earns" hundred times more in interest than the wage of the worker who toils in their workplace, the industrialist "suffers" hundred times more discomfort living in his palace than, say, the coal miner does working at the coal face in dangerous conditions or the worker stuck in a boring McJob they hate. The "disutility" of postponing consumption while living in luxury is obviously 100 times greater than the "disutility" of, say, working for a living and so should be rewarded appropriately.

As there is no direct relationship between interest received and the "sacrifice" involved (if anything, it is an **inverse** relationship), the idea that interest is the reward for waiting is simply nonsense. You need be no anarchist to come to this obvious conclusion. It was admitted as much by a leading capitalist economist and his argument simply echoes Proudhon's earlier critique:

> *"the existence and height of interest by no means invariably correspond with the existence and the height of a 'sacrifice of abstinence.' Interest, in exceptional cases, is received where there has been no individual sacrifice of abstinence. High interest is often got where the sacrifice of the abstinence is very trifling — as in the case of [a] millionaire — and 'low interest' is often got where the sacrifice entailed by the abstinence is very great. The hardly saved sovereign which the domestic servant puts in the savings bank bears, absolutely and relatively, less interest than the lightly spared thousands which the millionaire puts to fructify in debenture and mortgage funds. These phenomena fit badly into a theory which explains interest quite universally as a 'wage of abstinence.'"* [Eugen von Böhm-Bawerk, **Capital and Interest**, p. 277]

All in all, as Joan Robinson pointed out, *"that the rate of interest is the 'reward for waiting' but 'waiting' only means owning wealth ... In short, a man who refrains from blowing his capital in orgies and feasts can continue to get interest on it. This seems perfectly correct, but as a theory of distribution it is only a circular argument."* [**Contributions to Modern Economics**, p. 11] Interest is not the reward for "waiting," rather it is one of the (many) rewards for being rich. This was admitted as much by Marshall himself, who noted that the *"power to save depends on an excess of income over necessary expenditure; and this is greatest among the wealthy."* [**Op. Cit.**, p. 229]

Little wonder, then, that neo-classical economists introduced the term **waiting** as an "explanation" for returns to capital (such as interest). Before this change in the jargon of economics, mainstream economists used the notion of "abstinence" (the term used by Nassau Senior) to account for (and so justify) interest. Just as Senior's "theory" was seized upon to defend returns to capital, so was the term "waiting" after it was introduced in the 1880s. Interestingly, while describing **exactly** the same thing, "waiting" became the preferred term simply because it had a less apologetic ring to it. Both describe the *"sacrifice of present pleasure for the sake of future"* yet, according to Marshall, the term *"abstinence"* was *"liable to be misunderstood"* because there were just too many wealthy people around who received interest and dividends without ever having abstained from anything. As he admitted, the *"greatest accumulators of wealth are very rich persons, some [!] of whom live in luxury, and certainly do not practise abstinence in that sense of the term in which it is convertible with abstemiousness."* So he opted for the term "waiting" because there was *"advantage"* in its use to describe *"the accumulation of wealth"* as the *"result of a postponement of enjoyment."* [**Op. Cit.**, pp. 232–3] This is particularly the case as socialists had long been pointing out the obvious fact that capitalists do not *"abstain"* from anything.

The lesson is obvious, in mainstream economics if reality conflicts with your theory, do not reconsider the theory, change its name!

The problems of "waiting" and "abstinence" as the source of interest becomes even clearer when we look at inherited wealth. Talking about "abstinence" or "waiting" when discussing a capitalist inheriting a company worth millions is silly. Senior recognised this, arguing that income in this case is not profit, but rather *"has all the attributes of rent."* [**Op. Cit.**, p. 129] That such a huge portion of capitalist revenue would not be considered profit shows the bankruptcy of any theory which see profit as the reward for "waiting." However, Senior's argument does show that interest payments need not reflect any positive contribution to production by those who receive it. Like the landlord receiving payment for owning a gift of nature, the capitalist receives income for simply monopolising the work of previous generations and, as Smith put it,

the *"rent of land, considered as the price paid for the use of land, is naturally a monopoly price."* [**The Wealth of Nations**, p. 131]

Even capitalist economists, while seeking to justify interest, admit that it *"arises independently of any personal act of the capitalist. It accrues to him even though he has not moved any finger in creating it . .. And it flows without ever exhausting that capital from which it arises, and therefore without any necessary limit to its continuance. It is, if one may use such an expression in mundane matters, capable of everlasting life."* [Böhm-Bawerk, **Op. Cit.**, p. 1] Little wonder we argued in section C.2.3 that simply owning property does not justify non-labour income.

In other words, due to **one** decision not to do anything (i.e. **not** to consume), a person (and his or her heirs) may receive **forever** a reward that is not tied to any productive activity. Unlike the people actually doing the work (who only get a reward every time they "contribute" to creating a commodity), the capitalist will get rewarded for just **one** act of abstention. This is hardly a just arrangement. As David Schweickart has pointed out, *"Capitalism does reward some individuals perpetually. This, if it is to be justified by the canon of contribution, one must defend the claim that some contributions are indeed eternal."* [**Against Capitalism**, p. 17] As we noted in section C.1.1, current and future generations should not be dominated by the actions of the long dead.

The "waiting" theory, of course, simply seeks to justify interest rather than explain its origin. If the capitalist really **did** deserve an income as a reward for their abstinence, where does it come from? It cannot be created passively, merely by the decision to save, so interest exists because the exploitation of labour exists. As Joan Robinson summarised:

> *"Obviously, the reward of saving is owning some more wealth. One of the advantages, though by no means the only one, of owning wealth is the possibility of getting interest on it.*
>
> *"But why is it possible to get interest? Because businesses make profits and are willing to borrow."* [**Collected Economic Papers**, vol. 5, p. 36]

This is the key. If ones ability and willingness to "wait" is dependent on social facts (such as available resources, ones class, etc.), then interest cannot be based upon subjective evaluations, as these are not the independent factor. In other words, saving does not express "waiting", it simply expresses the extent of inequality and interest expresses the fact that workers have to sell their labour to others in order to survive:

> *"The notion that human beings discount the future certainly seems to correspond to everyone's subjective experience, but the conclusion drawn from it is a* ***non sequitor****, for most people have enough sense to want to be able to exercise consuming power as long as fate permits, and many people are in the situation of having a higher income in the present than they expect in the future (salary earners will have to retire, business may be better now than it seems likely to be later, etc.) and many look beyond their own lifetime and wish to leave consuming power to their heirs. Thus a great many ... are eagerly looking for a reliable vehicle to carry purchasing power into the future ... It is impossible to say what price would rule if there were a market for present* ***versus*** *future purchasing power, unaffected by any other influence except the desires of individuals about the time-pattern of their consumption. It might will be such a market would normally yield a negative rate of discount ...*

> *"The rate of interest is normally positive for a quite different reason. Present purchasing power is valuable partly because, under the capitalist rules of the game, it permits its owner ... to employ labour and undertake production which will yield a surplus of receipts over costs. In an economy in which the rate of profit is expected to be positive, the rate of interest is positive ... [and so] the present value of purchasing power exceeds its future value to the corresponding extent... This is nothing whatever to do with the subjective* ***rate of discount of the future*** *of the individual concerned..."* [**The Accumulation of Capital**, p. 395]

So, interest has little to do with "waiting" and a lot more to do with the inequalities associated with the capitalist system. In effect, the "waiting" theory assumes what it is trying to prove. Interest is positive simply because capitalists can appropriate surplus value from workers and so current money is more valuable than future money because of this fact. Ironically, therefore, the pro-capitalist theories of who abstains are wrong, *"since saving is mainly out of profits, and real wages tend to be lower the higher the rate of profit, the abstinence associated with saving is mainly done by the workers, who do not receive any share in the 'reward.'"* [Robinson, **Op. Cit.**, p. 393]

In other words, "waiting" does not produce a surplus, labour does. As such, to *"say that those who hold financial instruments can lay claim to a portion of the social product by abstaining or waiting provides no explanation of what makes the production process profitable, and hence to what extent interest claims or dividends can be paid. Reliance on a waiting theory of the return to capital represented nothing less than a reluctance of economists to confront the sources of value creation and analyse the process of economic development."* [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 267] This would involve having to analyse the social relations between workers and managers/bosses on the shop floor, which would be to bring into question the whole nature of capitalism and any claims it was based upon freedom.

To summarise, the idea that interest is the "reward" for waiting simply ignores the reality of class society and, in effect, rewards the wealthy for being wealthy. Neo-classical economics implies that being rich is the ultimate disutility. The hardships ("sacrifices") of having to decide to consume or invest their riches weighs as heavily on the elite as they do on the scales of utility. Compared to, say, working in a sweatshop, fearing unemployment (sorry, maximising "leisure") or not having to worry about saving (as your income just covers your out-goings) it is clear which are the greatest sacrifices and which are rewarded accordingly under capitalism.

Much the same argument can be applied to "time-preference" theories of profit. These argue that profits are the result of individuals preferring present goods to future ones. Capitalists pay workers wages, allowing them to consumer now rather than later. This is the providing of time and this is rewarded by profits. This principle was first stated clearly by Eugen von Böhm-Bawerk and has been taken as the basis of the "Austrian" school of capitalist economics (see section C.1.6). After rejecting past theories of interest (including, as noted above, "abstinence" theories, which he concluded the socialists were right to mock), Böhm-Bawerk argued that profits could only by explained by means of time preference:

> *"**The loan is a real exchange of present goods against future goods** ... present goods invariably possess a greater value than future goods of the same number and kind, and therefore a definite sum of present goods can, as a rule, only be purchased by a larger sum of future goods. Present goods possess an agio in future goods. **This agio***

> ***is interest.*** *It is not a separate equivalent for a separate and durable use of the loaned goods, for that is inconceivable; it is a part equivalent of the loaned sum, kept separate for practical reasons. The replacement of the capital + the interest constitutes the full equivalent."* [**Capital and Interest**, p. 259]

For him, time preference alone is the reason for profit/interest due to the relative low value of future goods, compared to present goods. Capital goods, although already present in their physical state, are really **future** goods in their *"economic nature"* as is labour. This means that workers are paid the amount their labour creates in terms of **future** goods, not **current** goods. This difference between the high value of current goods and low value of future goods is the source of surplus value:

> *"This, and nothing else, is the foundation of the so-called 'cheap' buying of production instruments, and especially of labour, which the Socialists rightly explain as the source of profit on capital, but wrongly interpret ... as the result of a robbery or exploitation of the working classes by the propertied classes."* [**The Positive Theory of Capital**, p. 301]

The capitalists are justified in keeping this surplus value because they provided the time required for the production process to occur. Thus surplus value is the product of an exchange, the exchange of present goods for future ones. The capitalist bought labour at its full present value (i.e. the value of its future product) and so there is no exploitation as the future goods are slowly maturing during the process of production and can then be sold at its full value as a present commodity. Profit, like interest, is seen as resulting from varying estimates of the present and future needs.

As should be obvious, our criticisms of the "waiting" theory of interest apply to this justification of profits. Money in itself does not produce profit any more than interest. It can only do that when invested in **actual** means of production which are put to work by actual people. As such, "time preference" only makes sense in an economy where there is a class of property-less people who are unable to "wait" for future goods as they would have died of starvation long before they arrived.

So it is the **class** position of workers which explains their time preferences, as Böhm-Bawerk **himself** acknowledged. Thus capitalism was marked by an *"enormous number of wage-earners who cannot employ their labour remuneratively by working on their own account, and are accordingly, as a body, inclined and ready to sell the future product of their labour for a considerably less amount of present goods."* So, being poor, meant that they lacked the resources to "wait" for "future" goods and so became dependent (as a class) on those who do. This was, in his opinion the *"sole ground of that much-talked-of and much-deplored dependence of labourer on capitalist."* It is *"only because the labourers cannot wait till the roundabout process ... delivers up its products ready for consumption, that they become economically dependent on the capitalists who already hold in their possession what we have called 'intermediate products.'"* [**Op. Cit.**, p. 330 and p. 83]

Böhm-Bawerk, ironically, simply repeats (although in different words) **and agrees** with the socialist critique of capitalism which, as we discussed in section C.2.2, is also rooted in the class dependence of workers to capitalists (Bakunin, for example, argued that the capitalists were *"profiting by the economic dependence of the worker"* in order to exploit them by *"turn[ing] the worker*

into a subordinate." [**The Political Philosophy of Bakunin**, p. 188]). The difference is that Böhm-Bawerk thinks that the capitalists deserve their income from wealth while anarchists, like other socialists, argue they do not as they simply are being rewarded for being wealthy. Böhm-Bawerk simply cannot bring himself to acknowledge that an individual's psychology, their subjective evaluations, are conditioned by their social circumstances and so cannot comprehend the **class** character of capitalism and profit. After all, a landless worker will, of course, estimate the "sacrifice" or "disutility" of selling their labour to a master as much less than the peasant farmer or artisan who possesses their own land or tools. The same can be said of workers organised into a union.

As such, Böhm-Bawerk ignores the obvious, that the source of non-labour income is not in individual subjective evaluations but rather the **social** system within which people live. The worker does not sell her labour power because she "underestimates" the value of future goods but because she lacks the means of obtaining any sort of goods at all except by the selling of her labour power. There is no real choice between producing for herself or working for a boss — she has no real opportunity of doing the former at all and so **has** to do the latter. This means that workers sells their labour (future goods) "voluntarily" for an amount less than its value (present goods) because their class position ensures that they cannot "wait." So, if profit is the price of time, then it is a monopoly price produced by the class monopoly of wealth ownership under capitalism. Needless to say, as capital is accumulated from surplus value, the dependence of the working class on the capitalists will tend to grow over time as the "waiting" required to go into business will tend to increase also.

An additional irony of Böhm-Bawerk's argument is that is very similar to the "abstinence" theory he so rightly mocked and which he admitted the socialists were right to reject. This can be seen from one of his followers, right-"libertarian" Murray Rothbard:

> *"What has been the contribution of these product-owners, or 'capitalists', to the production process? It is this: the saving and restriction of consumption, instead of being done by the owners of land and labour, has been done by the* ***capitalists.*** *The capitalists originally saved, say, 95 ounces of gold which they could have then spent on consumers' goods. They refrained from doing so, however, and, instead,* ***advanced*** *the money to the original owners of the factors. They* ***paid*** *the latter for their services while they were working, thus advancing them money before the product was actually produced and sold to the consumers. The capitalists, therefore, made an essential contribution to production. They relieved the owners of the original factors from the necessity of sacrificing present goods and waiting for future goods."* [**Man, Economy, and State**, pp. 294–95]

This meant that without risk, *"[e]ven if financial returns and consumer demand are certain,* ***the capitalists are still providing present goods to the owners of labour and land*** *and thus relieving them of the burden of waiting until the future goods are produced and finally transformed into consumers' goods."* [**Op. Cit.**, p. 298] Capitalists pay out, say, £100,000 this year in wages and reap £200,000 next year not because of exploitation but because both parties prefer this amount of money this year rather than next year. Capitalists, in other words, pay out wages in advance and then wait for a sale. They will only do so if compensated by profit.

Rothbard's argument simply assumes a **class** system in which there is a minority of rich and a majority of property-less workers. The reason why workers cannot "wait" is because if they did

they would starve to death. Unsurprisingly, then, they prefer their wages now rather than next year. Similarly, the reason why they do not save and form their own co-operatives is that they simply cannot "wait" until their workplace is ready and their products are sold before eating and paying rent. In other words, their decisions are rooted in their class position while the capitalists (the rich) have shouldered the "burden" of abstinence so that they can be rewarded with even more money in the future. Clearly, the time preference position and the "waiting" or "abstinence" perspective are basically the same (Rothbard even echoes Senior's lament about the improvident working class, arguing that *"the major problem with the lower-class poor is irresponsible present-mindedness."* [**For a New Liberty**, p. 154]). As such, it is subject to the same critique (as can be found in, say, the works of a certain Eugen von Böhm-Bawerk).

In other words, profit has a **social** basis, rooted in the different economic situation of classes within capitalism. It is not the fact of "waiting" which causes profits but rather the monopoly of the means of life by the capitalist class which is the basis of *"economic dependence."* Any economic theory which fails to acknowledge and analyse this social inequality is doomed to failure from the start.

To conclude, the arguments that "waiting" or "time preference" explain or justify surplus value are deeply flawed simply because they ignore the reality of class society. By focusing on individual subjective evaluations, they ignore the social context in which these decisions are made and, as a result, fail to take into account the class character of interest and profit. In effect, they argue that the wealthy deserve a reward for being wealthy. Whether it is to justify profits or interest, the arguments used simply show that we have an economic system that works only by bribing the rich!

C.2.8 Are profits the result of entrepreneurial activity and innovation?

One of the more common arguments in favour of profits is the notion that they are the result of innovation or entrepreneurial activity, that the creative spirit of the capitalist innovates profits into existence. This perspective is usually associated with the so-called "Austrian" school of capitalist economics but has become more common in the mainstream of economics, particularly since the 1970s.

There are two related themes in this defence of profits — innovation and entrepreneurial activity. While related, they differ in one key way. The former (associated with Joseph Schumpeter) is rooted in production while the former seeks to be of more general application. Both are based on the idea of "discovery", the subjective process by which people use their knowledge to identify gaps in the market, new products or services or new means of producing existing goods. When entrepreneurs discover, for example, a use of resources, they bring these resources into a new (economic) existence. Accordingly, they have created something **ex nihilo** (out of nothing) and therefore are entitled to the associated profit on generally accepted moral principle of *"finders keepers."*

Anarchists, needless to say, have some issues with such an analysis. The most obvious objection is that while *"finders keepers"* may be an acceptable ethical position on the playground, it is hardly a firm basis to justify an economic system marked by inequalities of liberty and wealth. Moreover, discovering something does **not** entitle you to an income from it. Take, for example,

someone who discovers a flower in a wood. That, in itself, will generate no income of any kind. Unless the flower is picked and taken to a market, the discoverer cannot "profit" from discovering it. If the flower is left untouched then it is available for others to appropriate unless some means are used to stop them (such as guarding the flower). This means, of course, limiting the discovery potential of others, like the state enforcing copyright stops the independent discovery of the same idea, process or product.

As such, "discovery" is not sufficient to justify non-labour income as an idea remains an idea unless someone applies it. To generate an income (profit) from a discovery you need to somehow take it to the market and, under capitalism, this means getting funds to invest in machinery and workplaces. However, these in themselves do nothing and, consequently, workers need to be employed to produce the goods in question. If the costs of producing these goods is less than the market price, then a profit is made. Does this profit represent the initial "discovery"? Hardly for without funds the idea would have remained just that. Does the profit represent the contribution of "capital"? Hardly, for without the labour of the workers the workplace would have remained still and the product would have remained an idea.

Which brings us to the next obvious problem, namely that "entrepreneurial" activity becomes meaningless when divorced from owning capital. This is because any action which is taken to benefit an individual and involves "discovery" is considered entrepreneurial. Successfully looking for a better job? Your new wages are entrepreneurial profit. Indeed, successfully finding **any** job makes the wages entrepreneurial profit. Workers successfully organising and striking to improve their pay and conditions? An entrepreneurial act whose higher wages are, in fact, entrepreneurial profit. Selling your shares in one company and buying others? Any higher dividends are entrepreneurial profit. Not selling your shares? Likewise. What income flow could **not** be explained by "entrepreneurial" activity if we try hard enough?

In other words, the term becomes meaningless unless it is linked to owning capital and so any non-trivial notion of entrepreneurial activity requires private property, i.e. property which functions as capital. This can be seen from an analysis of whether entrepreneurship which is **not** linked to owning capital or land creates surplus value (profits) or not. It is possible, for example, that an entrepreneur can make a profit by buying cheap in one market and selling dear in another. However, this simply redistributes existing products and surplus value, it does not **create** them. This means that the entrepreneur does not create something from nothing, he takes something created by others and sells it at a higher price and so gains a slice of the surplus value created by others. If buying high and selling low **was** the cause of surplus value, then profits overall would be null as any gainer would be matched by a loser. Ironically, for all its talk of being concerned about process, this defence of entrepreneurial profits rests on the same a **static** vision of capitalism as does neo-classical economics.

Thus entrepreneurship is inherently related to inequalities in economic power, with those at the top of the market hierarchy having more ability to gain benefits of it than those at the bottom. Entrepreneurship, in other words, rather than an independent factor is rooted in social inequality. The larger one's property, the more able they are to gather and act on information advantages, i.e. act in as an entrepreneur. Moreover the ability to exercise the entrepreneurial spirit or innovate is restricted by the class system of capitalism. To implement a new idea, you need money. As it is extremely difficult for entrepreneurs to act on the opportunities they have observed without the ownership of property, so profits due to innovation simply becomes yet another reward for already being wealthy or, at best, being able to convince the wealthy to loan

you money in the expectation of a return. Given that credit is unlikely to be forthcoming to those without collateral (and most working class people are asset-poor), entrepreneurs are almost always capitalists because of social inequality. Entrepreneurial opportunities are, therefore, not available to everyone and so it is inherently linked to private property (i.e. capital).

So while entrepreneurship in the abstract may help explain the distribution of income, it neither explains why surplus value exists in the first place nor does it justify the entrepreneur's appropriation of part of that surplus. To explain why surplus value exists and why capitalists may be justified in keeping it, we need to look at the other aspect of entrepreneurship, innovation as this is rooted in the actual production process.

Innovation occurs in order to expand profits and so survive competition from other companies. While profits can be redistributed in circulation (for example by oligopolistic competition or inflation) this can only occur at the expense of other people or capitals (see sections C.5 and C.7). Innovation, however, allows the generation of profits directly from the new or increased productivity (i.e. exploitation) of labour it allows. This is because it is in production that commodities, and so profits, are created and innovation results in new products and/or new production methods. New products mean that the company can reap excess profits until competitors enter the new market and force the market price down by competition. New production methods allow the intensity of labour to be increased, meaning that workers do more work relative to their wages (in other words, the cost of production falls relative to the market price, meaning extra profits).

So while competition ensures that capitalist firms innovate, innovation is the means by which companies can get an edge in the market. This is because innovation means that *"capitalist excess profits come from the production process... when there is an above-average rise in labour productivity; the reduced costs then enable firms to earn higher than average profits in their products. But this form of excess profits is only temporary and disappears again when improved production methods become more general."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 38] Capitalists, of course, use a number of techniques to stop the spread of new products or production methods in order to maintain their position, such as state enforced intellectual property rights.

Innovation as the source of profits is usually associated with economist Joseph Schumpeter who described and praised capitalism's genius for *"creative destruction"* caused by capitalists who innovate, i.e. introduce new goods and means of production. Schumpeter's analysis of capitalism is more realistic than the standard neo-classical perspective. He recognised that capitalism was marked by a business cycle which he argued flowed from cycles of innovation conducted by capitalists. He also rejected the neo-classical assumption of perfect competition, arguing that the *"introduction of new methods of production and new commodities is hardly compatible with perfect and perfectly prompt competition from the start ... As a matter of fact, perfect competition has always been temporarily stemmed whenever anything new is being introduced."* [**Capitalism, Socialism and Democracy**, p. 104]

This analysis presents a picture of capitalism more like it actually is rather than what economics would like it to be. However, this does not mean that its justification for profits is correct, far from it. Anarchists do agree that it is true that individuals do see new potential and act in innovative ways to create new products or processes. However, this is not the source of surplus value. This is because an innovation only becomes a source of profits once it actually produced, i.e. once workers have toiled to create it (in the case of new goods) or used it (in the case of new production techniques). An idea in and of itself produces nothing unless it is applied. The reason

why profits result from innovation is due to the way the capitalist firm is organised rather than any inherent aspect of innovation.

Ultimately, entrepreneurialism is just a fancy name for decision making and, as such, it is a **labour** income (labour refers to physical **and** mental activities). However, as noted above, there are two types of labour under capitalism, the labour of production and the labour of exploitation. Looking at entrepreneurialism in a workplace situation, it is obvious that it is **not** independent of owning or managing capital and so it is impossible to distinguish profits produced by "entrepreneurial" activity and profits resulting from a return on property (and so the labour of others). In other words, it is the labour of exploitation and any income from it is simply monopoly profit. This is because the capitalist or manager has a monopoly of power within the workplace and, consequently, can reap the benefits this privileged position ensures. The workers have their opportunities for entrepreneurialism restricted and monopolised by the few in power who, when deciding who contributes most to production, strangely enough decide it is themselves.

This can be seen from the fact that innovation in terms of new technology is used to help win the class war at the point of production for the capitalists. As the aim of capitalist production is to maximise the profits available for capitalists and management to control, it follows that capitalism will introduce technology that will allow more surplus value to be extracted from workers. As Cornelius Castoriadis argues, capitalism *"does not utilise a socially neutral technology for capitalist ends. Capitalism has created capitalist technology, which is by no means neutral. The real essence of capitalist technology is not to develop production for production's sake: It is to subordinate and dominate the producers."* [**Political and Social Writings**, vol. 2, p. 104] Therefore, "innovation" (technological improvement) can be used to increase the power of capital over the workforce, to ensure that workers will do as they are told. In this way innovation can maximise surplus value production by trying to increase domination during working hours as well as by increasing productivity by new processes.

These attempts to increase profits by using innovation is the key to capitalist expansion and accumulation. As such innovation plays a key role within the capitalist system. However, the source of profits does not change and remains in the labour, skills and creativity of workers in the workplace. As such, innovation results in profits because labour is exploited in the production process, **not** due to some magical property of innovation.

The question now arises whether profits are justified as a reward for those who made the decision to innovate in the first place. This, however, fails for the obvious reason that capitalism is marked by a hierarchical organisation of production. It is designed so that a few make all the decisions while the majority are excluded from power. As such, to say that capitalists or managers deserve their profits due to innovation is begging the question. Profits which are claimed to flow from innovation are, in fact, the reward for having a monopoly, namely the monopoly of decision making within the workplace, rather than some actual contribution to production. The only thing management does is decide which innovations to pursue and to reap the benefits they create. In other words, they gain a reward simply due to their monopoly of decision making power within a firm. Yet this hierarchy only exists because of capitalism and so can hardly be used to defend that system and the appropriation of surplus value by capitalists.

Thus, if entrepreneurial spirit is the source of profit then we can reply that under capitalism the means of exercising that spirit is monopolised by certain classes and structures. The monopoly of decision making power in the hands of managers and bosses in a capitalist firm ensure that they also monopolise the rewards of the entrepreneurialism their workforce produce. This, in

turn, reduces the scope for innovation as this division of society into people who do mental and physical labour *"destroy[s] the love of work and the capacity for invention"* and under such a system, the worker *"lose[s] his intelligence and his spirit of invention."* [Kropotkin, **The Conquest of Bread**, p. 183 and p. 181]

These issues should be a key concern **if** entrepreneurialism **really** were considered as the unique source of profit. However, such issues as management power is rarely, if ever, discussed by the Austrian school. While they thunder against state restrictions on entrepreneurial activity, boss and management restrictions are always defended (if mentioned at all). Similarly, they argue that state intervention (say, anti-monopoly laws) can only harm consumers as it tends to discourage entrepreneurial activity yet ignore the restrictions to entrepreneurship imposed by inequality, the hierarchical structure of the capitalist workplace and negative effects both have on individuals and their development (as discussed in section B.1.1).

This, we must stress, is the key problem with the idea that innovation is the root of surplus value. It focuses attention to the top of the capitalist hierarchy, to business leaders. This implies that they, the bosses, create "wealth" and without them nothing would be done. For example, leading "Austrian" economist Israel Kirzner talks of *"the necessarily indivisible entrepreneur"* who *"is responsible for the entire product, The contributions of the factor inputs, being without an entrepreneurial component, are irrelevant for the ethical position being taken."* [*"Producer, Entrepreneur, and the Right to Property,"* pp. 185–199, **Perception, Opportunity, and Profit**, p. 195] The workforce is part of the *"factor inputs"* who are considered *"irrelevant."* He quotes economist Frank Knight to bolster this analysis that the entrepreneur solely creates wealth and, consequently, deserves his profits:

> *"Under the enterprise system, a special social class, the businessman, direct economic activity:* ***they are in the strict sense the producers, while the great mass of the population merely furnishes them with productive services, placing their persons and their property at the disposal of this class.****"* [quoted by Kirzner, **Op. Cit.**, p. 189]

If, as Chomsky stresses, the capitalist firm is organised in a fascist way, the "entrepreneurial" defence of profits is its ideology, its **"Führerprinzip"** (the German for *"leader principle"*). This ideology sees each organisation as a hierarchy of leaders, where every leader (Führer, in German) has absolute responsibility in his own area, demands absolute obedience from those below him and answers only to his superiors. This ideology was most infamously applied by fascism but its roots lie in military organisations which continue to use a similar authority structure today.

Usually defenders of capitalism contrast the joys of "individualism" with the evils of "collectivism" in which the individual is sub-merged into the group or collective and is made to work for the benefit of the group. Yet when it comes to capitalist industry, they stress the abilities of the people at the top of the company, the owner, the entrepreneur, and treat as unpeople those who do the actual work (and ignore the very real subordination of those lower down the hierarchy). The entrepreneur is considered the driving force of the market process and the organisations and people they govern are ignored, leading to the impression that the accomplishments of a firm are the personal triumphs of the capitalists, as though their subordinates are merely tools not unlike the machines on which they labour.

The ironic thing about this argument is that if it were true, then the economy would grind to a halt (we discuss this more fully in our critique of Engels's diatribe against anarchism *"On*

Authority" in section H.4.4). It exposes a distinct contradiction within capitalism. While the advocates of entrepreneurialism assert that the entrepreneur is the only real producer of wealth in society, the fact is that the entrepreneurialism of the workforce industry is required to implement the decisions made by the bosses. Without this unacknowledged input, the entrepreneur would be impotent. Kropotkin recognised this fact when he talked of the workers *"who have added to the original invention"* little additions and contributions *"without which the most fertile idea would remain fruitless."* Nor does the idea itself develop out of nothing as *"every invention is a synthesis, the resultant of innumerable inventions which have preceded it."* [**Op. Cit.**, p. 30] Thus Cornelius Castoriadis:

> *"The capitalist organisation of production is profoundly contradictory ... It claims to reduce the worker to a limited and determined set of tasks, but it is obliged at the same time to rely upon the universal capacities he develops both as a function of and in opposition to the situation in which he is placed ... Production can be carried out only insofar as the worker himself organises his work and goes beyond his theoretical role of pure and simply executant,"* [**Political and Social Writings**, vol. 2, p. 181]

Moreover, such a hierarchical organisation cannot help but generate wasted potential. Most innovation is the cumulative effect of lots of incremental process improvements and the people most qualified to identify opportunities for such improvements are, obviously, those involved in the process. In the hierarchical capitalist firm, those most aware of what would improve efficiency have the least power to do anything about it. They also have the least incentive as well as any productivity increases resulting from their improvements will almost always enrich their bosses and investors, not them. Indeed, any gains may be translated into layoffs, soaring stock prices, and senior management awarding itself a huge bonus for "cutting costs." What worker in his right mind would do something to help their worst enemy? As such, capitalism hinders innovation:

> *"capitalism divides society into a narrow stratum of directors (whose function is to decide and organise everything) and the vast majority of the population, who are reduced to carrying out (executing) the decisions made by these directors. As a result of this very fact, most people experience their own lives as something alien to them ... It is nonsensical to seek to organise people ... as if they were mere objects ... In real life, capitalism is obliged to base itself on people's capacity for self-organisation, on the individual and collective creativity of the producers. Without making use of these abilities the system would not survive a day. But the whole 'official' organisation of modern society both ignores and seeks to suppress these abilities to the utmost. The result is not only an enormous waste due to untapped capacity. The system does more: It* ***necessarily*** *engenders opposition, a struggle against it by those upon whom it seeks to impose itself ... The net result is not only waste but perpetual conflict."* [Castoriadis, **Op. Cit.**, p. 93]

While workers make the product and make entrepreneurial decisions every day, in the face of opposition of the company hierarchy, the benefits of those decisions are monopolised by the few who take all the glory for themselves. The question now becomes, why should capitalists and managers have a monopoly of power and profits when, in practice, they do not and cannot have a monopoly of entrepreneurialism within a workplace? If the output of a workplace is the result

of the combined mental and physical activity (entrepreneurialism) of all workers, there is no justification either for the product or "innovation" (i.e. decision making power) to be monopolised by the few.

We must also stress that innovation itself is a form of labour — mental labour. Indeed, many companies have Research and Development groups in which workers are paid to generate new and innovative ideas for their employers. This means that innovation is not related to property ownership at all. In most modern industries, as Schumpeter himself acknowledged, innovation and technical progress is conducted by *"teams of trained specialists, who turn out what is required and make it work in predictable ways"* and so *"[b]ureau and committee work tends to replace individual action."* This meant that *"the leading man ... is becoming just another office worker — and one who is not always difficult to replace."* [**Op. Cit.**, p. 133] And we must also point out that many new innovations come from individuals who combine mental and physical labour outside of capitalist companies. Given this, it is difficult to argue that profits are the result of innovation of a few exceptional people rather than by workers when the innovations, as well as being worked or produced by workers are themselves are created by teams of workers.

As such, "innovation" and "entrepreneurialism" is not limited to a few great people but rather exists in all of us. While the few may currently monopolise "entrepreneurialism" for their own benefit, an economy does not need to work this way. Decision making need **not** be centralised in a few hands. Ordinary workers can manage their own productive activity, innovate and make decisions to meet social and individual needs (i.e. practice "entrepreneurialism"). This can be seen from various experiments in workers' control where increased equality within the workplace actually increases productivity and innovation. As these experiments show workers, when given the chance, can develop numerous "good ideas" **and**, equally as important, produce them. A capitalist with a "good idea," on the other hand, would be powerless to produce it without workers and it is this fact that shows that innovation, in and of itself, is not the source of surplus value.

So, contrary to much capitalist apologetics, innovation is not the monopoly of an elite class of humans. It is part of all of us, although the necessary social environment needed to nurture and develop it in all is crushed by the authoritarian workplaces of capitalism and the effects of inequalities of wealth and power within society as a whole. If workers were truly incapable of innovation, any shift toward greater control of production by workers should result in decreased productivity. What one actually finds, however, is just the opposite: productivity increased dramatically as ordinary people were given the chance, usually denied them, to apply their skills and talents. They show the kind of ingenuity and creativity people naturally bring to a challenging situation — if they are allowed to, if they are participants rather than servants or subordinates.

In fact, there is *"a growing body of empirical literature that is generally supportive of claims for the economic efficiency of the labour-managed firm. Much of this literature focuses on productivity, frequently finding it to be positively correlated with increasing levels of participation ... Studies that encompass a range of issues broader than the purely economic also tend to support claims for the efficiency of labour managed and worker-controlled firms ... In addition, studies that compare the economic preference of groups of traditionally and worker-controlled forms point to the stronger performance of the latter."* [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, pp. 42–3] This is confirmed by David Noble, who points out that *"the self-serving claim"* that *"centralised management authority is the key to productivity"* is *"belied by nearly every sociological study of work."* [**Progress without People**, p. 65]

During the Spanish Revolution of 1936–39, workers self-managed many factories following the principles of participatory democracy. Productivity and innovation in the Spanish collectives was exceptionally high (particularly given the difficult economic and political situation they faced). As Jose Peirats notes, industry was *"transformed from top to bottom ... there were achieved feats pregnant with significance for people who had always striven to deny the reality of the wealth of popular initiatives unveiled by revolutions."* Workers made suggestions and presented new inventions, *"offering the product of their discoveries, genius or imaginings."* [**The CNT in the Spanish Revolution**, vol. 2, p. 86]

The metal-working industry is a good example. As Augustine Souchy observes, at the outbreak of the Civil War, the metal industry in Catalonia was *"very poorly developed."* Yet within months, the Catalonian metal workers had rebuilt the industry from scratch, converting factories to the production of war materials for the anti-fascist troops. A few days after the July 19th revolution, the Hispano-Suiza Automobile Company was already converted to the manufacture of armoured cars, ambulances, weapons, and munitions for the fighting front. *"Experts were truly astounded,"* Souchy writes, *"at the expertise of the workers in building new machinery for the manufacture of arms and munitions. Very few machines were imported. In a short time, two hundred different hydraulic presses of up to 250 tons pressure, one hundred seventy-eight revolving lathes, and hundreds of milling machines and boring machines were built."* [**The Anarchist Collectives: Workers' Self-management in the Spanish Revolution, 1936–1939**, Sam Dolgoff (ed.), p. 96]

Similarly, there was virtually no optical industry in Spain before the July revolution, only some scattered workshops. After the revolution, the small workshops were voluntarily converted into a production collective. *"The greatest innovation,"* according to Souchy, *"was the construction of a new factory for optical apparatuses and instruments. The whole operation was financed by the voluntary contributions of the workers. In a short time the factory turned out opera glasses, telemeters, binoculars, surveying instruments, industrial glassware in different colours, and certain scientific instruments. It also manufactured and repaired optical equipment for the fighting fronts ... What private capitalists failed to do was accomplished by the creative capacity of the members of the Optical Workers' Union of the CNT."* [**Op. Cit.**, pp. 98–99]

More recently, the positive impact of workers' control has been strikingly confirmed in studies of the Mondragon co-operatives in Spain, where workers are democratically involved in production decisions and encouraged to innovate. As George Bennello notes, *"Mondragon productivity is very high — higher than in its capitalist counterparts. Efficiency, measured as the ratio of utilised resources — capital and labour — to output, is far higher than in comparable capitalist factories."* [*"The Challenge of Mondragon"*, **Reinventing Anarchy, Again**, p. 216]

The example of Lucas Aerospace, during the 1970s indicates well the creative potential waiting to be utilised and wasted due to capitalism. Faced with massive job cuts and restructuring, the workers and their Shop Stewards SSCC in 1976 proposed an alternative Corporate Plan to Lucas's management. This was the product of two years planning and debate among Lucas workers. Everyone from unionised engineers, to technicians to production workers and secretaries was involved in drawing it up. It was based on detailed information on the machinery and equipment that all Lucas sites had, as well as the type of skills that were in the company. The workers designed the products themselves, using their own experiences of work and life. While its central aim was to head off Lucas's planned job cuts, it presented a vision of a better world by arguing that the concentration on military goods and markets was neither the best use of resources nor in itself desirable. It argued that if Lucas was to look away from military production it could

expand into markets for socially useful goods (such as medical equipment) where it already had some expertise and sales. The management were not interested, it was their to "manage" Lucas and to decide where its resources would be used, including the 18,000 people working there. Management were more than happy to exclude the workforce from any say in such fundamental matter as implementing the workers' ideas would have shown how unnecessary they, the bosses, actually were.

Another example of wasted worker innovation is provided by the US car industry. In the 1960s, Walter Reuther, president of the United Auto Workers (UAW) had proposed to the Johnson Whitehouse that the government help the US car companies to produce small cars, competing with Volkswagen which had enjoyed phenomenal success in the U.S. market. The project, unsurprisingly, fell through as the executives of the car companies were uninterested. In the 1970s, higher petrol prices saw US buyers opt for smaller cars and the big US manufacturers were caught unprepared. This allowed Toyota, Honda and other Asian car companies to gain a crucial foothold in the American market. Unsurprisingly, resistance by the union and workforce were blamed for the industry's problems when, in fact, it was the bosses, not the unions, who were blind to a potential market niche and the industry's competitive challenges.

Therefore, far from being a threat to innovation, workers' self-management would increase it and, more importantly, direct it towards improving the quality of life for all as opposed to increasing the profits of the few (this aspect an anarchist society will be discussed in more detail in section I). This should be unsurprising, as vesting a minority with managerial authority and deciding that the others should be cogs results in a massive loss of social initiative and drive. In addition, see sections J.5.10, J.5.11 and J.5.12 for more on why anarchists support self-management and why, in spite of its higher efficiency and productivity, the capitalist market will select against it.

To conclude, capitalist workplace hierarchy actually hinders innovation and efficiency rather than fosters it. To defend profits by appealing to innovation is, in such circumstances, deeply ironic. Not only does it end up simply justifying profits in terms of monopoly power (i.e. hierarchical decision making rewarding itself), that power also wastes a huge amount of potential innovation in society — namely the ideas and experience of the workforce excluded from the decision making process. Given that power produces resistance, capitalism ensures that the *"creative faculties [the workers] are not allowed to exercise* ***on behalf*** *of a social order that rejects them (and which they reject) are now utilised* ***against*** *that social order"* and so *"work under capitalism"* is *"a perpetual waste of creative capacity, and a constant struggle between the worker and his own activity."* [Castoriadis, **Op. Cit.**, p. 93 and p. 94]

Therefore, rather than being a defence of capitalist profit taking (and the inequality it generates) innovation backfires against capitalism. Innovation flourishes best under freedom and this points towards libertarian socialism and workers' self-management. Given the chance, workers can manage their own work and this results in increased innovation and productivity, so showing that capitalist monopoly of decision making power hinders both. This is unsurprising, for only equality can maximise liberty and so workers' control (rather than capitalist power) is the key to innovation. Only those who confuse freedom with the oppression of wage labour would be surprised by this.

C.2.9 Do profits reflect a reward for risk?

Another common justification of surplus value is that of "risk taking", namely the notion that non-labour income is justified because its owners took a risk in providing money and deserve a reward for so doing.

Before discussing why anarchists reject this argument, it must be noted that in the mainstream neo-classical model, risk and uncertainty plays no role in generating profits. According to general equilibrium theory, there is no uncertainty (the present and future are known) and so there is no role for risk. As such, the concept of profits being related to risk is more realistic than the standard model. However, as we will argue, such an argument is unrealistic in many other ways, particularly in relation to modern-day corporate capitalism.

It is fair to say that the appeal of risk to explain and justify profits lies almost entirely in the example of the small investor who gambles their savings (for example, by opening a bar) and face a major risk if the investment does not succeed. However, in spite of the emotional appeal of such examples, anarchists argue that they are hardly typical of investment decisions and rewards within capitalism. In fact, such examples are used precisely to draw attention away from the way the system works rather than provide an insight into it. That is, the higher apparent realism of the argument hides an equally unreal model of capitalism as the more obviously unrealistic theories which seek to rationalise non-labour income.

So does "risk" explain or justify non-labour income? No, anarchists argue. This is for five reasons. Firstly, the returns on property income are utterly independent on the amount of risk involved. Secondly, all human acts involve risk of some kind and so why should property owners gain exclusively from it? Thirdly, risk as such it not rewarded, only **successful** risks are and what constitutes success is dependent on production, i.e. exploiting labour. Fourthly, most "risk" related non-labour income today plays **no** part in aiding production and, indeed, is simply not that risky due to state intervention. Fifthly, risk in this context is not independent of owning capital and, consequently, the arguments against "waiting" and innovation apply equally to this rationale. In other words, "risk" is simply yet another excuse to reward the rich for being wealthy.

The first objection is the most obvious. It is a joke to suggest that capitalism rewards in proportion to risk. There is little or no relationship between income and the risk that person faces. Indeed, it would be fairer to say that return is **inversely** proportional to the amount of risk a person faces. The most obvious example is that of a worker who wants to be their own boss and sets up their own business. That is a genuine risk, as they are risking their savings and are willing to go into debt. Compare this to a billionaire investor with millions of shares in hundreds of companies. While the former struggles to make a living, the latter gets a large regular flow of income without raising a finger. In terms of risk, the investor is wealthy enough to have spread their money so far that, in practical terms, there is none. Who has the larger income?

As such, the risk people face is dependent on their existing wealth and so it is impossible to determine any relationship between it and the income it is claimed to generate. Given that risk is inherently subjective, there is no way of discovering its laws of operation except by begging the question and using the actual rate of profits to measure the cost of risk-bearing.

The second objection is equally as obvious. The suggestion that risk taking is the source and justification for profits ignores the fact that virtually all human activity involves risk. To claim that capitalists should be paid for the risks associated with investment is to implicitly state that money is more valuable that human life. After all, workers risk their health and often their

lives in work and often the most dangerous workplaces are those associated with the lowest pay. Moreover, providing safe working conditions can eat into profits and by cutting health and safety costs, profits can rise. This means that to reward capitalist "risk", the risk workers face may actually increase. In the inverted world of capitalist ethics, it is usually cheaper (or more "efficient") to replace an individual worker than a capital investment. Unlike investors, bosses and the corporate elite, workers **do** face risk to life or limb daily as part of their work. Life is risky and no life is more risky that that of a worker who may be ruined by the "risky" decisions of management, capitalists and investors seeking to make their next million. While it is possible to diversify the risk in holding a stock portfolio that is not possible with a job. A job cannot be spread across a wide array of companies diversifying risk.

In other words, workers face much greater risks than their employers and, moreover, they have no say in what risks will be taken with their lives and livelihoods. It is workers who pay the lion's share of the costs of failure, not management and stockholders. When firms are in difficulty, it is the workers who are asked to pay for the failures of management though pay cuts and the elimination of health and other benefits. Management rarely get pay cuts, indeed they often get bonuses and "incentive" schemes to get them to do the work they were (over) paid to do in the first. When a corporate manager makes a mistake and their business actually fails, his workers will suffer far more serious consequences than him. In most cases, the manager will still live comfortably (indeed, many will receive extremely generous severance packages) while workers will face the fear, insecurity and hardship of having to find a new job. Indeed, as we argued in section C.2.1, it is the risk of unemployment that is a key factor in ensuring the exploitation of labour in the first place.

As production is inherently collective under capitalism, so must be the risk. As Proudhon put it, it may be argued that the capitalist *"alone runs the risk of the enterprise"* but this ignores the fact that capitalist cannot *"alone work a mine or run a railroad"* nor *"alone carry on a factory, sail a ship, play a tragedy, build the Pantheon."* He asked: *"Can anybody do such things as these, even if he has all the capital necessary?"* And so *"association"* becomes *"absolutely necessary and right"* as the *"work to be accomplished"* is *"the common and undivided property of all those who take part therein."* If not, shareholders would *"plunder the bodies and souls of the wage-workers"* and it would be *"an outrage upon human dignity and personality."* [**The General Idea of the Revolution**, p. 219] In other words, as production is collective, so is the risk faced and, consequently, risk cannot be used to justify excluding people from controlling their own working lives or the fruit of their labour.

This brings us to the third reason, namely how "risk" contributes to production. The idea that "risk" is a contribution to production is equally flawed. Obviously, no one argues that **failed** investments should result in investors being rewarded for the risks they took. This means that **successful** risks are what counts and this means that the company has produced a desired good or service. In other words, the argument for risk is dependent on the investor providing capital which the workers of the company used productivity to create a commodity. However, as we discussed in section C.2.4 capital is **not** productive and, as a result, an investor may expect the return of their initial investment but no more. At best, the investor has allowed others to use their money but, as section C.2.3 indicated, giving permission to use something is not a productive act.

However, there is another sense in which risk does not, in general, contribute to production within capitalism, namely finance markets. This bring us to our fourth objection, namely that

most kinds of "risks" within capitalism do **not** contribute to production and, thanks to state aid, not that risky.

Looking at the typical "risk" associated with capitalism, namely putting money into the stock market and buying shares, the idea that "risk" contributes to production is seriously flawed. As David Schweickart points out, *"[i]n the vast majority of cases, when you buy stock, you give your money not to the company but to another private individual. You buy your share of stock from someone who is cashing in his share. Not a nickel of your money goes to the company itself. The company's profits would have been exactly the same, with or without your stock purchase."* [**After Capitalism**, p. 37] In fact between 1952 and 1997, about 92% of investment was paid for by firms' own internal funds and so *"the stock market contributes virtually nothing to the financing of outside investment."* Even new stock offerings only accounted for 4% of non-financial corporations capital expenditures. [Doug Henwood, **Wall Street**, p. 72] *"In spite of the stock market's large symbolic value, it is notorious that it has relatively little to do with the production of goods and services,"* notes David Ellerman, *"The overwhelming bulk of stock transactions are in second-hand shares so the capital paid for shares usually goes to other stock traders, not to productive enterprises issuing new shares."* [**The Democratic worker-owned firm**, p. 199]

In other words, most investment is simply the "risk" associated with buying a potential income stream in an uncertain world. The buyer's action has not contributed to producing that income stream in any way whatsoever yet it results in a claim on the labour of others. At best, it could be said that a previous owner of the shares at some time in the past has *"contributed"* to production by providing money but this does not justify non-labour income. As such, investing in shares may rearrange existing wealth (often to the great advantage of the rearrangers) but it does produce anything. New wealth flows from production, the use of labour on existing wealth to create new wealth.

Ironically, the stock market (and the risk it is based on) harms this process. The notion that dividends represent the return for "risk" may be faulted by looking at how the markets operate in reality, rather than in theory. Stock markets react to recent movements in the price of stock markets, causing price movements to build upon price movements. According to academic finance economist Bob Haugen, this results in finance markets having endogenous instability, with such price-driven volatility accounting for over three-quarters of all volatility in finance markets. This leads to the market directing investments very badly as some investment is wasted in over-valued companies and under-valued firms cannot get finance to produce useful goods. The market's endogenous volatility reduces the overall level of investment as investors will only fund projects which return a sufficiently high level of return. This results in a serious drag on economic growth. As such, "risk" has a large and negative impact on the real economy and it seems ironic to reward such behaviour. Particularly as the high rate of return is meant to compensate for the risk of investing in the stock market, but in fact most of this risk results from the endogenous stability of the market itself. [Steve Keen, **Debunking Economics**, pp. 249–50]

Appeals to "risk" to justify capitalism are somewhat ironic, given the dominant organisational form within capitalism — the corporation. These firms are based on *"limited liability"* which was designed explicitly to reduce the risk faced by investors. As Joel Bakan notes, before this "no matter how much, or how little, a person had invested in a company, he or she was **personally** liable, without limit, for the company's debts. Investors' homes, savings, and other personal assess would be exposed to claims by creditors if a company failed, meaning that a person risked finance ruin simply by owning shares in a company. Stockholding could not becomes a truly

attractive option ... until that risk was removed, which it soon was. By the middle of the nineteenth century, business leaders and politicians broadly advocated changing the law to limit the liability of shareholders to the amounts they had invested in a company. If a person bought $100 worth of shares, they reasoned, he or she should be immune to liability for anything beyond that, regardless of what happened to the company." Limited liability's *"sole purpose ... is to shield them from legal responsibility for corporations' actions"* as well as reducing the risks of investing (unlike for small businesses). [**The Corporation**, p. 11 and p. 79]

This means that stock holders (investors) in a corporation hold no liability for the corporation's debts and obligations. As a result of this state granted privilege, potential losses cannot exceed the amount which they paid for their shares. The rationale used to justify this is the argument that without limited liability, a creditor would not likely allow any share to be sold to a buyer of at least equivalent creditworthiness as the seller. This means that limited liability allows corporations to raise funds for riskier enterprises by reducing risks and costs from the owners and shifting them onto other members of society (i.e. an externality). It is, in effect, a state granted privilege to trade with a limited chance of loss but with an unlimited chance of gain.

This is an interesting double-standard. It suggests that corporations are not, in fact, owned by shareholders at all since they take on none of the responsibility of ownership, especially the responsibility to pay back debts. Why should they have the privilege of getting profit during good times when they take none of the responsibility during bad times? Corporations are creatures of government, created with the social privileges of limited financial liability of shareholders. Since their debts are ultimately public, why should their profits be private?

Needless to say, this reducing of risk is not limited to within a state, it is applied internationally as well. Big banks and corporations lend money to developing nations but *"the people who borrowed the money [i.e. the local elite] aren't held responsible for it. It's the people . .. who have to pay [the debts] off ... The lenders are protected from risk. That's one of the main functions of the IMF, to provide risk free insurance to people who lend and invest in risky loans. They earn high yields because there's a lot of risk, but they don't have to take the risk, because it's socialised. It's transferred in various ways to Northern taxpayers through the IMP and other devices ... The whole system is one in which the borrowers are released from the responsibility. That's transferred to the impoverished mass of the population in their own countries. And the lenders are protected from risk."* [Noam Chomsky, **Propaganda and the Public Mind**, p. 125]

Capitalism, ironically enough, has developed precisely by externalising risk and placing the burden onto other parties — suppliers, creditors, workers and, ultimately, society as a whole. *"Costs and risks are socialised,"* in other words, *"and the profit is privatised."* [Noam Chomsky, **Op. Cit.**, p. 185] To then turn round and justify corporate profits in terms of risk seems to be hypocritical in the extreme, particularly by appealing to examples of small business people whom usually face the burdens caused by corporate externalising of risk! Doug Henwood states the obvious when he writes shareholder *"liabilities are limited by definition to what they paid for the shares"* and *"they can always sell their shares in a troubled firm, and if they have diversified portfolios, they can handle an occasional wipe-out with hardly a stumble. Employees, and often customers and suppliers, are rarely so well-insulated."* Given that the *"signals emitted by the stock market are either irrelevant or harmful to real economic activity, and that the stock market itself counts for little or nothing as a source of finance"* and the argument for risk as a defence of profits is extremely weak. [**Op. Cit.**, p. 293 and p. 292]

Lastly, the risk theory of profit fails to take into account the different risk-taking abilities of that derive from the unequal distribution of society's wealth. As James Meade puts it, while *"property owners can spread their risks by putting small bits of their property into a large number of concerns, a worker cannot easily put small bits of his effort into a large number of different jobs. This presumably is the main reason we find risk-bearing capital hiring labour"* and not vice versa. [quoted by David Schweickart, **Against Capitalism**, pp. 129–130]

It should be noted that until the early nineteenth century, self-employment was the normal state of affairs and it has declined steadily to reach, at best, around 10% of the working population in Western countries today. It would be inaccurate, to say the least, to explain this decline in terms of increased unwillingness to face potential risks on the part of working people. Rather, it is a product of increased costs to set up and run businesses which acts as a very effect **natural** barrier to competition (see section C.4). With limited resources available, most working people simply **cannot** face the risk as they do not have sufficient funds in the first place and, moreover, if such funds are found the market is hardly a level playing field.

This means that going into business for yourself is always a possibility, but that option is very difficult without sufficient assets. Moreover, even if sufficient funds are found (either by savings or a loan), the risk is extremely high due to the inability to diversify investments and the constant possibility that larger firms will set-up shop in your area (for example, Wal-Mart driving out small businesses or chain pubs, cafes and bars destroying local family businesses). So it is true that there is a small flow of workers into self-employment (sometimes called the petit bourgeoisie) and that, of these, a small amount become full-scale capitalists. However, these are the exceptions that prove the rule — there is a greater return into wage slavery as enterprises fail.

Simply put, the distribution of wealth (and so ability to take risks) is so skewed that such possibilities are small and, in spite being highly risky, do not provide sufficient returns to make most of them a success. That many people **do** risk their savings and put themselves through stress, insecurity and hardship in this way is, ironically, hardly a defence of capitalism as it suggests that wage labour is so bad that many people will chance everything to escape it. Sadly, this natural desire to be your own boss generally becomes, if successful, being someone else's boss! Which means, in almost all cases, it shows that to become rich you need to exploit other people's labour.

So, as with "waiting" (see section C.2.7), taking a risk is much easier if you are wealthy and so risk is simply another means for rewarding the wealthy for being wealthy. In other words, risk aversion is the dependent, not the independent, factor. The distribution of wealth determines the risks people willing to face and so cannot explain or justify that wealth. Rather than individual evaluations determining "risk", these evaluations will be dependent on the class position of the individuals involved. As Schweickart notes, *"large numbers of people simply do not have any discretionary funds to invest. They can't play at all ... among those who can play, some are better situated than others. Wealth gives access to information, expert advice, and opportunities for diversification that the small investor often lacks."* [**After Capitalism**, p. 34] As such, profits do not reflect the real cost of risk but rather the scarcity of people with anything to risk (i.e. inequality of wealth).

Similarly, given that the capitalists (or their hired managers) have a monopoly of decision making power within a firm, any risks made by a company reflects that hierarchy. As such, risk and the ability to take risks are monopolised in a few hands. If profit **is** the product of risk then,

ultimately, it is the product of a hierarchical company structure and, consequently, capitalists are simply rewarding themselves because they have power within the workplace. As with "innovation" and "entrepreneurialism" (see section C.2.8), this rationale for surplus value depends on ignoring how the workplace is structured. In other words, because managers monopolise decision making ("risk") they also monopolise the surplus value produced by workers. However, the former in no way justifies this appropriation nor does it create it.

As risk is not an independent factor and so cannot be the source of profit. Indeed other activities can involve far more risk and be rewarded less. Needless to say, the most serious consequences of "risk" are usually suffered by working people who can lose their jobs, health and even lives all depending on how the risks of the wealthy turn out in an uncertain world. As such, it is one thing to gamble your own income on a risky decision but quite another when that decision can ruin the lives of others. If quoting Keynes is not too out of place: *"Speculators may do no harm as bubbles on a steady stream of enterprise. But the position is serious when enterprise becomes the bubble on a whirlpool of speculation. When the capital development of a country becomes a by-product of the activities of a casino, the job is likely to be ill-done."* [**The General Theory of Employment, Interest and Money**, p. 159]

Appeals of risk to justify capitalism simply exposes that system as little more than a massive casino. In order for such a system to be fair, the participants must have approximately equal chances of winning. However, with massive inequality the wealthy face little chance of loosing. For example, if a millionaire and a pauper both repeatedly bet a pound on the outcome of a coin toss, the millionaire will always win as the pauper has so little reserve money that even a minor run of bad luck will bankrupt him.

Ultimately, *"the capitalist investment game (as a whole and usually in its various parts) is positive sum. In most years more money is made in the financial markets than is lost. How is this possible? It is possible only because those who engage in real productive activity receive less than that to which they would be entitled were they fully compensated for what they produce. The reward, allegedly for risk, derives from this discrepancy."* [David Schweickart, **Op. Cit.**, p. 38] In other words, people would not risk their money unless they could make a profit and the willingness to risk is dependent on current and expected profit levels and so cannot explain them. To focus on risk simply obscures the influence that property has upon the ability to enter a given industry (i.e. to take a risk in the first place) and so distracts attention away from the essential aspects of how profits are actually generated (i.e. away from production and its hierarchical organisation under capitalism).

So risk does not explain how surplus value is generated nor is its origin. Moreover, as the risk people face and the return they get is dependent on the wealth they have, it cannot be used to justify this distribution. Quite the opposite, as return and risk are usually inversely related. If risk was the source of surplus value or justified it, the riskiest investment and poorest investor would receive the highest returns and this is not the case. In summary, the "risk" defence of capitalism does not convince.

C.3 What determines the distribution between labour and capital?

In short, class struggle determines the distribution of income between classes (As Proudhon put it, the expression *"the relations of profits to wages"* means *"the war between labour and capital."* [**System of Economical Contradictions**, p. 130]). This, in turn, is dependent on the balance of power within any given economy at any given time.

Given our analysis of the source of surplus value in section C.2.2, this should come as no surprise. Given the central role of labour in creating both goods (things with value) and surplus value, production prices determine market prices. This means that market prices are governed, however indirectly, by what goes on in production. In any company, wages determine a large percentage of the production costs. Looking at other costs (such as raw materials), again wages play a large role in determining their price. Obviously the division of a commodity's price into costs and profits is not a fixed ratio, which mean that prices are the result of complex interactions of wage levels and productivity. Within the limits of a given situation, the class struggle between employers and employees over wages, working conditions and benefits determines the degree of exploitation within a society and so the distribution of income, i.e. the relative amount of money which goes to labour (i.e. wages) and capital (surplus value).

To quote libertarian socialist Cornelius Castoriadis:

> *"Far from being completely dominated by the will of the capitalist and forced to increase indefinitely the yield of labour, production is determined just as much by the workers' individual and collective resistance to such increases. The extraction of 'use value form labour power' is not a technical operation; it is a process of bitter struggle in which half the time, so to speak, the capitalists turn out to be losers.*
>
> *"The same thing holds true for living standards, i.e., real wage levels. From its beginnings, the working class has fought to reduce the length of the workday and to raise wage levels. It is this struggle that has determined how these levels have risen and fallen over the years .. .*
>
> *"Neither the actual labour rendered during an hour of labour time nor the wage received in exchange for this work can be determined by any kind of 'objective' law, norm, or calculation ... What we are saying does not mean that specifically economic or even 'objective' factors play no real in determining wage levels. Quite the contrary. At any given instant, the class struggle comes into play only within a given economic — and, more generally, objective — framework, and it acts not only directly but also through the intermediary of a series of partial 'economic mechanisms.' To give only one example among thousands, an economic victory for workers in one sector has a ripple effect on overall wage levels, not only because it can encourage other workers to be more combative, but also because sectors with lower wage levels will experience greater difficulties*

> *recruiting manpower. None of these mechanisms, however, can effectively act on its own and have its own significance if taken separately from the class struggle. And the economic context itself is always gradually affected one way or another by this struggle."* [**Political and Social Writings**, vol. 2, p. 248]

The essential point is that the extraction of surplus value from workers is not a simple technical operation, as implied by the neo-classical perspective (and, ironically, classical Marxism as Castoriadis explains in his classic work *"Modern Capitalism and Revolution"* [**Op. Cit.**, pp. 226–343]). As noted previously, unlike the extraction of so many joules from a ton of coal, extracting surplus value ("use value") from labour power involves conflict between people, between classes. Labour power is unlike all other commodities — it is and remains inseparably embodied in human beings. This means that the division of profits and wages in a company and in the economy as a whole is dependent upon and modified by the actions of workers (and capitalists), both as individuals and as a class. It is this struggle which, ultimately, drives the capitalist economy, it is this conflict between the human and commodity aspects of labour power that ultimately brings capitalism into repeated crisis (see section C.7).

From this perspective, the neo-classical argument that a factor in production (labour, capital or land) receives an income share that indicates its productive power "at the margin" is false. Rather, it is a question of power — and the willingness to use it. As Christopher Eaton Gunn points out, the neo-classical argument *"take[s] no account of power — of politics, conflict, and bargaining — as more likely indicators of relative shares of income in the real world."* [**Workers' Self-Management in the United States**, p. 185] Ultimately, working class struggle is an *"indispensable means of raising their standard of living or defending their attained advantages against the concerted measures of the employers."* It is *"not only a means for the defence of immediate economic interests, it is also a continuous schooling for their powers of resistance, showing them every day that every last right has to be won by unceasing struggle against the existing system."* [Rocker, **Anarcho-Syndicalism**, p. 78]

If the power of labour is increasing, its share in income will tend to increase and, obviously, if the power of labour decreased it would fall. And the history of the post-war economy supports such an analysis, with labour in the advanced countries share of income falling from 68% in the 1970s to 65.1% in 1995 (in the EU, it fell from 69.2% to 62%). In the USA, labour's share of income in the manufacturing sector fell from 74.8% to 70.6% over the 1979–89 period, reversing the rise in labour's share that occurred over the 1950s, 1960s and 1970s. The reversal in labour's share occurred at the same time as labour's power was undercut by right-wing governments who have pursued business friendly "free market" policies to combat "inflation" (an euphemism for working class militancy and resistance) by undermining working class power and organisation by generating high unemployment.

Thus, for many anarchists, the relative power between labour and capital determines the distribution of income between them. In periods of full employment or growing workplace organisation and solidarity, workers wages will tend to rise faster. In periods where there is high unemployment and weaker unions and less direct action, labour's share will fall. From this analysis anarchists support collective organisation and action in order to increase the power of labour and ensure we receive more of the value we produce.

The neo-classical notion that rising productivity allows for increasing wages is one that has suffered numerous shocks since the early 1970s. Usually wage increases lag behind productivity.

For example, during Thatcher's reign of freer markets, productivity rose by 4.2%, 1.4% higher than the increase in real earnings between 1980–88. Under Reagan, productivity increased by 3.3%, accompanied by a fall of 0.8% in real earnings. Remember, though, these are averages and hide the actual increases in pay differentials between workers and managers. To take one example, the real wages for employed single men between 1978 and 1984 in the UK rose by 1.8% for the bottom 10% of that group, for the highest 10%, it was a massive 18.4%. The average rise (10.1%) hides the vast differences between top and bottom. In addition, these figures ignore the starting point of these rises — the often massive differences in wages between employees (compare the earnings of the CEO of McDonalds and one of its cleaners). In other words, 2.8% of nearly nothing is still nearly nothing!

Looking at the USA again, we find that workers who are paid by the hour (the majority of employees) saw their average pay peak in 1973. Since then, it had declined substantially and stood at its mid-1960s level in 1992. For over 80 per cent of the US workforce (production and non-supervisory workers), real wages have fallen by 19.2 per cent for weekly earnings and 13.4 per cent for hourly earnings between 1973 and 1994. Productivity had risen by 23.2 per cent. Combined with this drop in real wages in the USA, we have seen an increase in hours worked. In order to maintain their current standard of living, working class people have turned to both debt and longer working hours. Since 1979, the annual hours worked by middle-income families rose from 3 020 to 3 206 in 1989, 3 287 in 1996 and 3 335 in 1997. In Mexico we find a similar process. Between 1980 and 1992, productivity rose by 48 per cent while salaries (adjusted for inflation) fell by 21 per cent.

Between 1989 to 1997, productivity increased by 9.7% in the USA while median compensation decreased by 4.2%. In addition, median family working hours grew by 4% (or three weeks of full-time work) while its income increased by only 0.6 % (in other words, increases in working hours helped to create this slight growth). If the wages of workers were related to their productivity, as argued by neo-classical economics, you would expect wages to increase as productivity rose, rather than fall. However, if wages are related to economic power, then this fall is to be expected. This explains the desire for "flexible" labour markets, where workers' bargaining power is eroded and so more income can go to profits rather than wages.

It is amazing how far the US in 2005, the paradigm for neo-liberalism, is from the predictions of neo-classical economic textbooks. Since the 1970s, there has only been one period of sustained good times for working people, the late 1990s. Before and after this period, there has been wage stagnation (between 2000 and 2004, for example, the real median family income **fell** by 3%). While the real income of households in the lowest fifth grew by 6.1% between 1979 and 2000, the top fifth saw an increase of 70% and the average income of the top 1% grew by 184%. This rising inequality was fuelled by the expansion of income from capital and an increased concentration of capital income in the top 1% (who received 57.5% of all capital income in 2003, compared to 37.8% in 1979). This reflected the increased share of income flowing to corporate profits (profits rates in 2005 were the highest in 36 years). If the pre-tax return to capital had remained at its 1979 level, then hourly compensation would have been 5% higher. In 2005 dollars, this represents an annual transfer of $235 billion from labour to capital. [Lawrence Mishel, Jered Bernstein, and Sylvia Allegretto, **The State of Working America 2006/7**, pp. 2–3]

Labour's share of income in the corporate sector fell from 82.1% in 179 to 81.1% in 1989, and then to 79.1% in 2005. However, this fall is even worse for labour as labour income *"includes the pay of Chief Executive Officers (CEOs), thereby overstating the income share going to 'workers' and*

understating 'profits,' since the bonuses and stock options given CEOs are more akin to profits than wages" and so *"some of the profits are showing up in CEO paychecks and are counted as worker pay."* [**Op. Cit.**, p. 83 and p. 84]

Unsurprisingly, there has been a *"stunning disconnect between the rapid productivity growth and pay growth,"* along with a *"tremendous widening of the wage gap between those at the top of the wage scale, particularly corporate chief executive officers [CEO], and other wage earners."* Between 1979 and 1995, wages *"were stagnant or fell for the bottom 60% of wage earners"* and grew by 5% for the 80th percentile. Between 1992 and 2005, saw median CEO pay rise by 186.2% while the media worker saw only a 7.2% rise in their wages. Wealth inequality was even worse, with the wealth share of the bottom 80% shrinking by 3.8 percentage points (which was gained by the top 5% of households). Using the official standard of poverty, 11.3% of Americans were in poverty in 2000, rising to 12.7% in 2004 (*"This is the first time that poverty rose through each of the first three years of a recovery"*). However, the official poverty line is hopelessly out of date (for a family of four it was 48% of median family income in 1960, in 2006 it is 29%). Using a threshold of twice the official value sees an increase in poverty from 29.3% to 31.2% [**Op. Cit.**, p. 4, p. 5, p. 7, p. 9 and p. 11]

Of course, it will be argued that only in a perfectly competitive market (or, more realistically, a truly "free" one) will wages increase in-line with productivity. However, you would expect that a regime of **freer** markets would make things better, not worse. This has not happened. The neo-classical argument that unions, struggling over wages and working conditions will harm workers in the "long run" has been dramatically refuted since the 1970s — the decline of the labour movement in the USA has been marked by falling wages, not rising ones, for example. Despite of rising productivity, wealth has **not** "trickled down" — rather it has flooded up (a situation only surprising to those who believe economic textbooks or what politicians say). In fact, between 1947 and 1973, the median family income rose by 103.9% while productivity rose by 103.7% and so wages and productivity went hand-in-hand. Since the mid-1970s this close mapping broke down. From 1973 to 2005, productivity rose by 75.5% while income increased by a mere 21.8%, less than one-third the rate of productivity (from 2000 to 2004, productivity rose by 14% while family income fell by 2.9%). This wedge is the source of rising inequality, with the upper classes claiming most of the income growth. [**Op. Cit.**, p. 46]

All of which refutes those apologists for capitalism who cite the empirical fact that, in a modern capitalist economy, a large majority of all income goes to "labour," with profit, interest and rent adding up to something under twenty percent of the total. Of course, even if surplus value were less than 20% of a workers' output, this does not change its exploitative nature (just as, for the capitalist apologist, taxation does not stop being "theft" just because it is around 10% of all income). However, this value for profit, interest and rent is based on a statistical sleight-of-hand, as "worker" is defined as including everyone who has a salary in a company, including managers and CEOs. The large incomes which many managers and all CEOs receive would, of course, ensure that a large majority of all income does go to "labour." Thus this "fact" ignores the role of most managers as de facto capitalists and their income represents a slice of surplus value rather than wages. This sleight-of-hand also obscures the results of this distribution for while the 70% of "labour" income goes into many hands, the 20% representing surplus value goes into the hands of a few. So even if we ignore the issue of CEO "wages", the fact is that a substantial amount of money is going into the hands of a small minority which will, obviously, skew income, wealth and economic power away from the vast majority.

To get a better picture of the nature of exploitation within modern capitalism we have to compare workers wages to their productivity. According to the World Bank, in 1966, US manufacturing wages were equal to 46% of the value-added in production (value-added is the difference between selling price and the costs of raw materials and other inputs to the production process). In 1990, that figure had fallen to 36% and by 1993, to 35%. Figures from the 1992 Economic Census of the US Census Bureau indicate it had reached 19.76% (39.24% if we take the **total** payroll which includes managers and so on). In the US construction industry, wages were 35.4% of value added in 1992 (with total payroll, 50.18%). Therefore the argument that because a large percentage of income goes to "labour" capitalism is fine hides the realities of that system and the exploitation its hierarchical nature creates.

Overall, since the 1970s working class America has seen stagnating income, rising working hours and falling social (i.e. income-class) mobility while, at the same time, productivity has been rising and inequality soaring. While this may come as a surprise (or be considered a paradox by capitalist economics, a paradox usually to be justified and rationalised id acknowledged at all) anarchists consider this to be a striking confirmation of their analysis. Unsurprisingly, in a hierarchical system those at the top do better than those at the bottom. The system is set up so that the majority enrich the minority. That is way anarchists argue that workplace organisation and resistance is essential to maintain — and even increase — labour's income. For if the share of income between labour and capital depends on their relative power — and it does — then only the actions of workers themselves can improve their situation and determine the distribution of the value they create.

This analysis obviously applied **within** classes as well. At any time, there is a given amount of unpaid labour in circulation in the form of goods or services representing more added value than workers were paid for. This given sum of unpaid labour (surplus value) represents a total over which the different capitalists, landlords and bankers fight over. Each company tries to maximise its share of that total, and if a company does realise an above-average share, it means that some other companies receive less than average.

The key to distribution within the capitalist class is, as between that class and the working class, power. Looking at what is normally, although somewhat inaccurately, called monopoly this is obvious. The larger the company with respect to its market, the more likely it is to obtain a larger share of the available surplus, for reasons discussed later (see section C.5). While this represents a distribution of surplus value **between** capitalists based on market power, the important thing to note here is that while companies compete on the market to realise their share of the total surplus (unpaid labour) the **source** of these profits does not lie in the market, but in production. One cannot buy what does not exist and if one gains, another loses.

Market power also plays a key role in producing inflation, which has its roots in the ability of firms to pass cost increases to consumers in the form of higher prices. This represents a distribution of income from lenders to borrowers, i.e. from finance capital to industrial capital and labour to capital (as capital "borrows" labour, i.e. the workers are paid **after** they have produced goods for their bosses). How able capitalists are to pass on costs to the general population depends on how able they are to withstand competition from other companies, i.e. how much they dominate their market and can act as a price setter. Of course, inflation is not the only possible outcome of rising costs (such as wage rises). It is always possible to reduce profits or increase the productivity of labour (i.e. increase the rate of exploitation). The former is rarely raised as a

possibility, as the underlying assumption seems to be that profits are sacrosanct, and the latter is dependent, of course, on the balance of forces within the economy.

In the next section, we discuss why capitalism is marked by big business and what this concentrated market power means to the capitalist economy.

C.4 Why does the market become dominated by Big Business?

As noted in section C.1.4, the standard capitalist economic model assumes an economy made up of a large number of small firms, none of which can have any impact on the market. Such a model has no bearing to reality:

> *"The facts show ... that capitalist economies tend over time and with some interruptions to become more and more heavily concentrated."* [M.A. Utton, **The Political Economy of Big Business**, p. 186]

As Bakunin argued, capitalist production *"must ceaselessly expand at the expense of the smaller speculative and productive enterprises devouring them."* Thus *"[c]ompetition in the economic field destroys and swallows up the small and even medium-sized enterprises, factories, land estates, and commercial houses for the benefit of huge capital holdings."* [**The Political Philosophy of Bakunin**, p. 182] The history of capitalism has proven him right. while the small and medium firm has not disappeared, economic life under capitalism is dominated by a few big firms.

This growth of business is rooted in the capitalist system itself. The dynamic of the "free" market is that it tends to becomes dominated by a few firms (on a national, and increasingly, international, level), resulting in oligopolistic competition and higher profits for the companies in question (see next section for details and evidence). This occurs because only established firms can afford the large capital investments needed to compete, thus reducing the number of competitors who can enter or survive in a given the market. Thus, in Proudhon's words, *"competition kills competition."* [**System of Economical Contradictions**, p. 242] In other words, capitalist markets evolve toward oligopolistic concentration.

This *"does not mean that new, powerful brands have not emerged [after the rise of Big Business in the USA after the 1880s]; they have, but in such markets... which were either small or non-existent in the early years of this century."* The dynamic of capitalism is such that the *"competitive advantage [associated with the size and market power of Big Business], once created, prove[s] to be enduring."* [Paul Ormerod, **The Death of Economics**, p. 55]

For people with little or no capital, entering competition is limited to new markets with low start-up costs (*"In general, the industries which are generally associated with small scale production... have low levels of concentration"* [Malcolm C. Sawyer, **The Economics of Industries and Firms**, p. 35]). Sadly, however, due to the dynamics of competition, these markets usually in turn become dominated by a few big firms, as weaker firms fail, successful ones grow and capital costs increase (*"Each time capital completes its cycle, the individual grows smaller in proportion to it."* [Josephine Guerts, **Anarchy: A Journal of Desire Armed** no. 41, p. 48]).

For example, between 1869 and 1955 *"there was a marked growth in capital per person and per number of the labour force. Net capital per head rose... to about four times its initial level ...*

at a rate of about 17% per decade." The annual rate of gross capital formation rose *"from $3.5 billion in 1869–1888 to $19 billion in 1929–1955, and to $30 billion in 1946–1955. This long term rise over some three quarters of a century was thus about nine times the original level"* (in constant, 1929, dollars). [Simon Kuznets, **Capital in the American Economy**, p. 33 and p. 394] To take the steel industry as an illustration: in 1869 the average cost of steel works in the USA was $156,000, but by 1899 it was $967,000 — a 520% increase. From 1901 to 1950, gross fixed assets increased from $740,201 to $2,829,186 in the steel industry as a whole, with the assets of Bethlehem Steel increasing by 4,386.5% from 1905 ($29,294) to 1950 ($1,314,267). These increasing assets are reflected both in the size of workplaces and in the administration levels in the company as a whole (i.e. **between** individual workplaces).

The reason for the rise in capital investment is rooted in the need for capitalist firms to gain a competitive edge on their rivals. As noted in section C.2, the source of profit is the unpaid labour of workers and this can be increased by one of two means. The first is by making workers work longer for less on the same machinery (the generation of absolute surplus value, to use Marx's term). The second is to make labour more productive by investing in new machinery (the generation of relative surplus value, again using Marx's terminology). The use of technology drives up the output per worker relative to their wages and so the workforce is exploited at a higher rate (how long before workers force their bosses to raise their wages depends on the balance of class forces as we noted in the last section). This means that capitalists are driven by the market to accumulate capital. The first firm to introduce new techniques reduces their costs relative to the market price, so allowing them to gain a surplus profit by having a competitive advantage (this addition profit disappears as the new techniques are generalised and competition invests in them).

As well as increasing the rate of exploitation, this process has an impact on the structure of the economy. With the increasing ratio of capital to worker, the cost of starting a rival firm in a given, well-developed, market prohibits all but other large firms from doing so (and here we ignore advertising and other distribution expenses, which increase start-up costs even more — *"advertising raises the capital requirements for entry into the industry"* [Sawyer, **Op. Cit.**, p. 108]). J. S. Bain (in **Barriers in New Competition**) identified three main sources of entry barrier: economies of scale (i.e. increased capital costs and their more productive nature); product differentiation (i.e. advertising); and a more general category he called *"absolute cost advantage."*

This last barrier means that larger companies are able to outbid smaller companies for resources, ideas, etc. and put more money into Research and Development and buying patents. Therefore they can have a technological and material advantage over the small company. They can charge "uneconomic" prices for a time (and still survive due to their resources) — an activity called *"predatory pricing"* — and/or mount lavish promotional campaigns to gain larger market share or drive competitors out of the market. In addition, it is easier for large companies to raise external capital, and risk is generally less.

In addition, large firms can have a major impact on innovation and the development of technology — they can simply absorb newer, smaller, enterprises by way of their economic power, buying out (and thus controlling) new ideas, much the way oil companies hold patents on a variety of alternative energy source technologies, which they then fail to develop in order to reduce competition for their product (of course, at some future date they may develop them when it becomes profitable for them to do so). Also, when control of a market is secure, oligopolies will usually delay innovation to maximise their use of existing plant and equipment or introduce spu-

rious innovations to maximise product differentiation. If their control of a market is challenged (usually by other big firms, such as the increased competition Western oligopolies faced from Japanese ones in the 1970s and 1980s), they can speed up the introduction of more advanced technology and usually remain competitive (due, mainly, to the size of the resources they have available).

These barriers work on two levels — **absolute** (entry) barriers and **relative** (movement) barriers. As business grows in size, the amount of capital required to invest in order to start a business also increases. This restricts entry of new capital into the market (and limits it to firms with substantial financial and/or political backing behind them):

> *"Once dominant organisations have come to characterise the structure of an industry, immense barriers to entry face potential competitors. Huge investments in plant, equipment, and personnel are needed ... [T]he development and utilisation of productive resources **within** the organisation takes considerable time, particularly in the face of formidable incumbents ... It is therefore one thing for a few business organisations to emerge in an industry that has been characterised by . .. highly competitive conditions. It is quite another to break into an industry... [marked by] oligopolistic market power."* [William Lazonick, **Business Organisation and the Myth of the Market Economy**, pp. 86–87]

Moreover, **within** the oligopolistic industry, the large size and market power of the dominant firms mean that smaller firms face expansion disadvantages which reduce competition. The dominant firms have many advantages over their smaller rivals — significant purchasing power (which gains better service and lower prices from suppliers as well as better access to resources), privileged access to financial resources, larger amounts of retained earnings to fund investment, economies of scale both within and **between** workplaces, the undercutting of prices to "uneconomical" levels and so on (and, of course, they can **buy** the smaller company — IBM paid $3.5 billion for Lotus in 1995. That is about equal to the entire annual output of Nepal, which has a population of 20 million). The large firm or firms can also rely on its established relationships with customers or suppliers to limit the activities of smaller firms which are trying to expand (for example, using their clout to stop their contacts purchasing the smaller firms products).

Little wonder Proudhon argued that *"[i]n competition... victory is assured to the heaviest battalions."* [**Op. Cit.**, p. 260]

As a result of these entry/movement barriers, we see the market being divided into two main sectors — an oligopolistic sector and a more competitive one. These sectors work on two levels — within markets (with a few firms in a given market having very large market shares, power and excess profits) and within the economy itself (some markets being highly concentrated and dominated by a few firms, other markets being more competitive). This results in smaller firms in oligopolistic markets being squeezed by big business along side firms in more competitive markets. Being protected from competitive forces means that the market price of oligopolistic markets is **not** forced down to the average production price by the market, but instead it tends to stabilise around the production price of the smaller firms in the industry (which do not have access to the benefits associated with dominant position in a market). This means that the dominant firms get super-profits while new capital is not tempted into the market as returns would not make the move worthwhile for any but the biggest companies, who usually get comparable

returns in their own oligopolised markets (and due to the existence of market power in a few hands, entry can potentially be disastrous for small firms if the dominant firms perceive expansion as a threat).

Thus whatever super-profits Big Business reap are maintained due to the advantages it has in terms of concentration, market power and size which reduce competition (see section C.5 for details).

And, we must note, that the processes that saw the rise of national Big Business is also at work on the global market. Just as Big Business arose from a desire to maximise profits and survive on the market, so *"[t]ransnationals arise because they are a means of consolidating or increasing profits in an oligopoly world."* [Keith Cowling and Roger Sugden, **Transnational Monopoly Capitalism**, p. 20] So while a strictly national picture will show a market dominated by, say, four firms, a global view shows us twelve firms instead and market power looks much less worrisome. But just as the national market saw a increased concentration of firms over time, so will global markets. Over time a well-evolved structure of global oligopoly will appear, with a handful of firms dominating most global markets (with turnovers larger than most countries GDP — which is the case even now. For example, in 1993 Shell had assets of US$ 100.8 billion, which is more than double the GDP of New Zealand and three times that of Nigeria, and total sales of US$ 95.2 billion).

Thus the very dynamic of capitalism, the requirements for survival on the market, results in the market becoming dominated by Big Business (*"the more competition develops, the more it tends to reduce the number of competitors."* [P-J Proudhon, **Op. Cit.**, p. 243]). The irony that competition results in its destruction and the replacement of market co-ordination with planned allocation of resources is one usually lost on supporters of capitalism.

C.4.1 How extensive is Big Business?

The effects of Big Business on assets, sales and profit distribution are clear. In the USA, in 1985, there were 14,600 commercial banks. The 50 largest owned 45.7 of all assets, the 100 largest held 57.4%. In 1984 there were 272,037 active corporations in the manufacturing sector, 710 of them (one-fourth of 1 percent) held 80.2 percent of total assets. In the service sector (usually held to be the home of small business), 95 firms of the total of 899,369 owned 28 percent of the sector's assets. In 1986 in agriculture, 29,000 large farms (only 1.3% of all farms) accounted for one-third of total farm sales and 46% of farm profits. In 1987, the top 50 firms accounted for 54.4% of the total sales of the **Fortune** 500 largest industrial companies. [Richard B. Du Boff, **Accumulation and Power**, p. 171] Between 1982 and 1992, the top two hundred corporations increased their share of global Gross Domestic Product from 24.2% to 26.8%, *"with the leading ten taking almost half the profits of the top two hundred."* This underestimates economic concentration as it *"does not take account of privately owned giants."* [Chomsky, **World Orders, Old and New**, p. 181]

The process of market domination is reflected by the increasing market share of the big companies. In Britain, the top 100 manufacturing companies saw their market share rise from 16% in 1909, to 27% in 1949, to 32% in 1958 and to 42% by 1975. In terms of net assets, the top 100 industrial and commercial companies saw their share of net assets rise from 47% in 1948 to 64% in 1968 to 80% in 1976 [R.C.O. Matthews (ed.), **Economy and Democracy**, p. 239]. Looking wider afield, we find that in 1995 about 50 firms produce about 15 percent of the manufactured

goods in the industrialised world. There are about 150 firms in the world-wide motor vehicle industry. But the two largest firms, General Motors and Ford, together produce almost one-third of all vehicles. The five largest firms produce half of all output and the ten largest firms produce three-quarters. Four appliance firms manufacture 98 percent of the washing machines made in the United States. In the U. S. meatpacking industry, four firms account for over 85 percent of the output of beef, while the other 1,245 firms have less than 15 percent of the market.

While the concentration of economic power is most apparent in the manufacturing sector, it is not limited to that sector. We are seeing increasing concentration in the service sector — airlines, fast-food chains ,and the entertainment industry are just a few examples. In America Coke, Pepsi, and Cadbury-Schweppes dominate soft drinks while Budweiser, Miller, and Coors share the beer market. Nabisco, Keebler and Pepperidge Farms dominate the cookie industry. Expansions and mergers play their role in securing economic power and dominance. In 1996 the number three company in the US cookie industry was acquired by Keebler, which (in turn) was acquired by Kellogg in 2000. Nabisco is a division of Kraft/Philip Morris and Pepperidge Farm is owned by relatively minor player Campbell. Looking at the US airline industry, considered the great hope for deregulation in 1978, it has seen the six largest companies control of the market rise from 73% in 1978 to 85% in 1987 (and increasing fares across the board). [*"Unexpected Result of Airline Decontrol is Return to Monopolies,"* **Wall Street Journal**, 20/07/1987] By 1998, the top six's share had increased by 1% but control was effectively higher with three code-sharing alliances now linking all six in pairs.[Amy Taub, *"Oligopoly!"* **Multinational Monitor**, November 1998, p. 9]

This process of concentration is happening in industries historically considered arenas of small companies. In the UK, a few big supermarkets are driving out small corner shops (the four-firm concentration ratio of the supermarket industry is over 70%) while the British brewing industry has a staggering 85% ratio. In American, the book industry is being dominated by a few big companies, both in production and distribution. A few large conglomerates publish most leading titles while a few big chains (Barnes & Nobles and Borders) have the majority of retail sales. On the internet, Amazon dominates the field in competition with the online versions of the larger bookshops. This process occurs in market after market. As such, it should be stressed that increasing concentration afflicts most, if not all sectors of the economy. There are exceptions, of course, and small businesses never disappear totally but even in many relatively de-centralised and apparently small-scale businesses, the trend to consolidation has unmistakable:

> *"The latest data available show that in the manufacturing sector the four largest companies in a given industry controlled an average of 40 percent of the industry's output in 1992, and the top eight had 52 percent. These shares were practically unchanged from 1972, but they are two percentage points higher than in 1982. Retail trade (department stores, food stores, apparel, furniture, building materials and home supplies, eating and drinking places, and other retail industries) also showed a jump in market concentration since the early 1980s. The top four firms accounted for an average of 16 percent of the retail industry's sales in 1982 and 20 percent in 1992; for the eight largest, the average industry share rose from 22 to 28 percent. Some figures now available for 1997 suggest that concentration continued to increase during the 1990s; of total sales receipts in the overall economy, companies with 2,500 employees or more took in 47 percent in 1997, compared with 42 percent in 1992.*

> *"In the financial sector, the number of commercial banks fell 30 percent between 1990 and 1999, while the ten largest were increasing their share of loans and other industry assets from 26 to 45 percent. It is well established that other sectors, including agriculture and telecommunications, have also become more concentrated in the 1980s and 1990s. The overall rise in concentration has not been great-although the new wave may yet make a major mark-but the upward drift has taken place from a starting point of highly concentrated economic power across the economy."* [Richard B. Du Boff and Edward S. Herman, *"Mergers, Concentration, and the Erosion of Democracy"*, **Monthly Review**, May 2001]

So, looking at the **Fortune** 500, even the 500th firm is massive (with sales of around $3 billion). The top 100 firms usually have sales significantly larger than bottom 400 put together. Thus the capitalist economy is marked by a small number of extremely large firms, which are large in both absolute terms and in terms of the firms immediately below them. This pattern repeats itself for the next group and so on, until we reach the very small firms (where the majority of firms are).

The other effect of Big Business is that large companies tend to become more diversified as the concentration levels in individual industries increase. This is because as a given market becomes dominated by larger companies, these companies expand into other markets (using their larger resources to do so) in order to strengthen their position in the economy and reduce risks. This can be seen in the rise of "subsidiaries" of parent companies in many different markets, with some products apparently competing against each other actually owned by the same company!

Tobacco companies are masters of this diversification strategy; most people support their toxic industry without even knowing it! Don't believe it? Well, if are an American and you ate any Jell-O products, drank Kool-Aid, used Log Cabin syrup, munched Minute Rice, quaffed Miller beer, gobbled Oreos, smeared Velveeta on Ritz crackers, and washed it all down with Maxwell House coffee, you supported the tobacco industry, all without taking a puff on a cigarette! Similarly, in other countries. Simply put, most people have no idea which products and companies are owned by which corporations, which goods apparently in competition with others in fact bolster the profits of the same transnational company.

Ironically, the reason why the economy becomes dominated by Big Business has to do with the nature of competition itself. In order to survive (by maximising profits) in a competitive market, firms have to invest in capital, advertising, and so on. This survival process results in barriers to potential competitors being created, which results in more and more markets being dominated by a few big firms. This oligopolisation process becomes self-supporting as oligopolies (due to their size) have access to more resources than smaller firms. Thus the dynamic of competitive capitalism is to negate itself in the form of oligopoly.

C.4.2 What are the effects of Big Business on society?

Unsurprisingly many pro-capitalist economists and supporters of capitalism try to downplay the extensive evidence on the size and dominance of Big Business in capitalism.

Some deny that Big Business is a problem — if the market results in a few companies dominating it, then so be it (the "Chicago" and "Austrian" schools are at the forefront of this kind of position — although it does seem somewhat ironic that "market advocates" should be, at best, indifferent, at worse, celebrate the suppression of market co-ordination by **planned** co-ordination

within the economy that the increased size of Big Business marks). According to this perspective, oligopolies and cartels usually do not survive very long, unless they are doing a good job of serving the customer.

We agree — it is oligopolistic **competition** we are discussing here. Big Business has to be responsive to demand (when not manipulating/creating it by advertising, of course), otherwise they lose market share to their rivals (usually other dominant firms in the same market, or big firms from other countries). However, the response to demand can be skewed by economic power and, while responsive to some degree, an economy dominated by big business can see super-profits being generated by externalising costs onto suppliers and consumers (in terms of higher prices). As such, the idea that the market will solve all problems is simply assuming that an oligopolistic market will respond "as if" it were made up of thousands and thousands of firms with little market power. An assumption belied by the reality of capitalism since its birth.

Moreover, the "free market" response to the reality of oligopoly ignores the fact that we are more than just consumers and that economic activity and the results of market events impact on many different aspects of life. Thus our argument is not focused on the fact we pay more for some products than we would in a more competitive market — it is the **wider** results of oligopoly we should be concerned with, not just higher prices, lower "efficiency" and other economic criteria. If a few companies receive excess profits just because their size limits competition the effects of this will be felt **everywhere.**

For a start, these "excessive" profits will tend to end up in few hands, so skewing the income distribution (and so power and influence) within society. The available evidence suggests that *"more concentrated industries generate a lower wage share for workers"* in a firm's value-added. [Keith Cowling, **Monopoly Capitalism**, p. 106] The largest firms retain only 52% of their profits, the rest is paid out as dividends, compared to 79% for the smallest ones and *"what might be called rentiers share of the corporate surplus — dividends plus interest as a percentage of pretax profits and interest — has risen sharply, from 20–30% in the 1950s to 60–70% in the early 1990s."* The top 10% of the US population own well over 80% of stock and bonds owned by individuals while the top 5% of stockowners own 94.5% of all stock held by individuals. Little wonder wealth has become so concentrated since the 1970s [Doug Henwood, **Wall Street**, p. 75, p. 73 and pp. 66–67]. At its most basic, this skewing of income provides the capitalist class with more resources to fight the class war but its impact goes much wider than this.

Moreover, the *"level of aggregate concentration helps to indicate the degree of centralisation of decision-making in the economy and the economic power of large firms."* [Malcolm C. Sawyer, **Op. Cit.**, p. 261] Thus oligopoly increases and centralises economic power over investment decisions and location decisions which can be used to play one region/country and/or workforce against another to lower wages and conditions for all (or, equally likely, investment will be moved away from countries with rebellious work forces or radical governments, the resulting slump teaching them a lesson on whose interests count). As the size of business increases, the power of capital over labour and society also increases with the threat of relocation being enough to make workforces accept pay cuts, worsening conditions, "down-sizing" and so on and communities increased pollution, the passing of pro-capital laws with respect to strikes, union rights, etc. (and increased corporate control over politics due to the mobility of capital).

Also, of course, oligopoly results in political power as their economic importance and resources gives them the ability to influence government to introduce favourable policies — either directly, by funding political parties or lobbying politicians, or indirectly by investment decisions (i.e.

by pressuring governments by means of capital flight — see section D.2). Thus concentrated economic power is in an ideal position to influence (if not control) political power and ensure state aid (both direct and indirect) to bolster the position of the corporation and allow it to expand further and faster than otherwise. More money can also be plowed into influencing the media and funding political think-tanks to skew the political climate in their favour. Economic power also extends into the labour market, where restricted labour opportunities as well as negative effects on the work process itself may result. All of which shapes the society we live in; the laws we are subject to; the "evenness" and "levelness" of the "playing field" we face in the market and the ideas dominant in society (see section D.3).

So, with increasing size, comes the increasing power, the power of oligopolies to *"influence the terms under which they choose to operate. Not only do they **react** to the level of wages and the pace of work, they also **act** to determine them... The credible threat of the shift of production and investment will serve to hold down wages and raise the level of effort [required from workers] ... [and] may also be able to gain the co-operation of the state in securing the appropriate environment ... [for] a redistribution towards profits"* in value/added and national income. [Keith Cowling and Roger Sugden, **Transnational Monopoly Capitalism**, p. 99]

Since the market price of commodities produced by oligopolies is determined by a mark-up over costs, this means that they contribute to inflation as they adapt to increasing costs or falls in their rate of profit by increasing prices. However, this does not mean that oligopolistic capitalism is not subject to slumps. Far from it. Class struggle will influence the share of wages (and so profit share) as wage increases will not be fully offset by price increases — higher prices mean lower demand and there is always the threat of competition from other oligopolies. In addition, class struggle will also have an impact on productivity and the amount of surplus value in the economy as a whole, which places major limitations on the stability of the system. Thus oligopolistic capitalism still has to contend with the effects of social resistance to hierarchy, exploitation and oppression that afflicted the more competitive capitalism of the past.

The distributive effects of oligopoly skews income, thus the degree of monopoly has a major impact on the degree of inequality in household distribution. The flow of wealth to the top helps to skew production away from working class needs (by outbidding others for resources and having firms produce goods for elite markets while others go without). The empirical evidence presented by Keith Cowling *"points to the conclusion that a redistribution from wages to profits will have a depressive impact on consumption"* which may cause depression. [**Op. Cit.**, p. 51] High profits also means that more can be retained by the firm to fund investment (or pay high level managers more salaries or increase dividends, of course). When capital expands faster than labour income over-investment is an increasing problem and aggregate demand cannot keep up to counteract falling profit shares (see section C.7 on more about the business cycle). Moreover, as the capital stock is larger, oligopoly will also have a tendency to deepen the eventual slump, making it last long and harder to recover from.

Looking at oligopoly from an efficiency angle, the existence of super profits from oligopolies means that the higher price within a market allows inefficient firms to continue production. Smaller firms can make average (non-oligopolistic) profits **in spite** of having higher costs, sub-optimal plant and so on. This results in inefficient use of resources as market forces cannot work to eliminate firms which have higher costs than average (one of the key features of capitalism according to its supporters). And, of course, oligopolistic profits skew allocative efficiency as a handful of firms can out-bid all the rest, meaning that resources do not go where they are most

needed but where the largest effective demand lies. This impacts on incomes as well, for market power can be used to bolster CEO salaries and perks and so drive up elite income and so skew resources to meeting their demand for luxuries rather than the needs of the general population. Equally, they also allow income to become unrelated to actual work, as can be seen from the sight of CEO's getting massive wages while their corporation's performance falls.

Such large resources available to oligopolistic companies also allows inefficient firms to survive on the market even in the face of competition from other oligopolistic firms. As Richard B. Du Boff points out, efficiency can also be *"impaired when market power so reduces competitive pressures that administrative reforms can be dispensed with. One notorious case was ... U.S. Steel [formed in 1901]. Nevertheless, the company was hardly a commercial failure, effective market control endured for decades, and above normal returns were made on the watered stock ... Another such case was Ford. The company survived the 1930s only because of cash reserves stocked away in its glory days. 'Ford provides an excellent illustration of the fact that a really large business organisation can withstand a surprising amount of mismanagement.'"* [**Accumulation and Power**, p. 174]

This means that the market power which bigness generates can counteract the costs of size, in terms of the bureaucratic administration it generates and the usual wastes associated with centralised, top-down hierarchical organisation. The local and practical knowledge so necessary to make sensible decision cannot be captured by capitalist hierarchies and, as a result, as bigness increases, so does the inefficiencies in terms of human activity, resource use and information. However, this waste that workplace bureaucracy creates can be hidden in the super-profits which big business generates which means, by confusing profits with efficiency, capitalism helps misallocate resources. This means, as price-setters rather than price-takers, big business can make high profits even when they are inefficient. Profits, in other words, do not reflect "efficiency" but rather how effectively they have secured market power. In other words, the capitalist economy is dominated by a few big firms and so profits, far from being a signal about the appropriate uses of resources, simply indicate the degree of economic power a company has in its industry or market.

Thus Big Business reduces efficiency within an economy on many levels as well as having significant and lasting impact on society's social, economic and political structure.

The effects of the concentration of capital and wealth on society are very important, which is why we are discussing capitalism's tendency to result in big business. The impact of the wealth of the few on the lives of the many is indicated in section D of the FAQ. As shown there, in addition to involving direct authority over employees, capitalism also involves indirect control over communities through the power that stems from wealth.

Thus capitalism is not the free market described by such people as Adam Smith — the level of capital concentration has made a mockery of the ideas of free competition.

C.4.3 What does the existence of Big Business mean for economic theory and wage labour?

Here we indicate the impact of Big Business on economic theory itself and wage labour. In the words of Michal Kalecki, perfect competition is "a most unrealistic assumption" and *"when its actual status of a handy model is forgotten becomes a dangerous myth."* [quoted by Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 8] Unfortunately mainstream capitalist eco-

nomics is **built** on this myth. Ironically, it was against a *"background [of rising Big Business in the 1890s] that the grip of marginal economics, an imaginary world of many small firms. .. was consolidated in the economics profession."* Thus, *"[a]lmost from its conception, the theoretical postulates of marginal economics concerning the nature of companies [and of markets, we must add] have been a travesty of reality."* [Paul Ormerod, **Op. Cit.**, pp. 55–56]

This can be seen from the fact that mainstream economics has, for most of its history, effectively ignored the fact of oligopoly for most of its history. Instead, economics has refined the model of "perfect competition" (which cannot exist and is rarely, if ever, approximated) and developed an analysis of monopoly (which is also rare). Significantly, an economist could still note in 1984 that *"traditional economy theory ... offers very little indeed by way of explanation of oligopolistic behaviour"* in spite (or, perhaps, **because**) it was *"the most important market situation today"* (as *"instances of monopoly"* are *"as difficult to find as perfect competition."*). In other words, capitalist economics does *"not know how to explain the most important part of a modern industrial economy."* [Peter Donaldson, **Economics of the Real World** p. 141, p. 140 and p. 142]

Over two decades later, the situation had not changed. For example, one leading introduction to economics notes *"the prevalence of oligopoly"* and admits it *"is far more common than either perfect competition or monopoly."* However, *"the analysis of oligopoly turns out to present some puzzles for which they is no easy solution"* as *"the analysis of oligopoly is far more difficult and messy than that of perfect competition."* Why? *"When we try to analyse oligopoly, the economists usual way of thinking — asking how self-interested individuals would behave, then analysing their interaction — does not work as well as we might hope."* Rest assured, though, there is not need to reconsider the *"usual way"* of economic analysis to allow it to analyse something as marginal as the most common market form for, by luck, *"the industry behaves 'almost' as if it were perfectly competitive."* [Paul Krugman and Robin Wells, **Economics**, p. 383, p. 365 and p. 383] Which is handy, to say the least.

Given that oligopoly has marked capitalist economics since, at least, the 1880s it shows how little concerned with reality mainstream economics is. In other words, neoclassicalism was redundant when it was first formulated (if four or five large firms are responsible for most of the output of an industry, avoidance of price competition becomes almost automatic and the notion that all firms are price takers is an obvious falsehood). That mainstream economists were not interested in including such facts into their models shows the ideological nature of the "science" (see section C.1 for more discussion of the non-scientific nature of mainstream economics).

This does not mean that reality has been totally forgotten. Some work was conducted on "imperfect competition" in the 1930s independently by two economists (Edward Chamberlin and Joan Robinson) but these were exceptions to the rule and even these models were very much in the traditional analytical framework, i.e. were still rooted in the assumptions and static world of neo-classical economics. These models assume that there are many producers and many consumers in a given market and that there are no barriers to entry and exit, that is, the characteristics of a monopolistically competitive market are almost exactly the same as in perfect competition, with the exception of heterogeneous products. This meant that monopolistic competition involves a great deal of non-price competition. This caused Robinson to later distance herself from her own work and look for more accurate (non-neoclassical) ways to analyse an economy.

As noted, neo-classical economics **does** have a theory on "monopoly," a situation (like perfect competition) which rarely exists. Ignoring that minor point, it is as deeply flawed as the rest of

that ideology. It argues that "monopoly" is bad because it produces a lower output for a higher price. Unlike perfect competition, a monopolist can set a price above marginal cost and so exploit consumers by over pricing. In contrast, perfectly competitive markets force their members to set price to be equal to marginal cost. As it is rooted in the assumptions we exposed as nonsense as section C.1, this neo-classical theory on free competition and monopoly is similarly invalid. As Steve Keen notes, there is *"no substance"* to the neo-classical *"critique of monopolies"* as it *"erroneously assumes that the perfectly competitive firm faces a horizontal demand curve,"* which is impossible given a downward sloping market demand curve. This means that *"the individual firm and the market level aspects of perfect competition are inconsistent"* and the apparent benefits of competition in the model are derived from *"a mathematical error of confusing a very small quantity with zero."* While *"there are plenty of good reasons to be wary of monopolies ... economic theory does not provide any of them."* [**Debunking Economics**, p. 108, p. 101, p. 99, p. 98 and p. 107]

This is not to say that economists have ignored oligopoly. Some have busied themselves providing rationales by which to defend it, rooted in the assumption that *"the market can do it all, and that regulation and antitrust actions are misconceived. First, theorists showed that efficiency gains from mergers might reduce prices even more than monopoly power would cause them to rise. Economists also stressed 'entry,' claiming that if mergers did not improve efficiency any price increases would be wiped out eventually by new companies entering the industry. Entry is also the heart of the theory of 'contestable markets,' developed by economic consultants to AT&T, who argued that the ease of entry in cases where resources (trucks, aircraft) can be shifted quickly at low cost, makes for effective competition."* By pure co-incidence, AT&T had hired economic consultants as part of their hundreds of millions of dollars antitrust defences, in fact some 30 economists from five leading economics departments during the 1970s and early 1980s. [Edward S. Herman, *"The Threat From Mergers: Can Antitrust Make a Difference?"*, **Dollars and Sense**, no. 217, May/June 1998]

Needless to say, these new "theories" are rooted in the same assumptions of neo-classical economists and, as such, are based on notions we have already debunked. As Herman notes, they *"suffer from over-simplification, a strong infusion of ideology, and lack of empirical support."* He notes that mergers *"often are motivated by factors other than enhancing efficiency — such as the desire for monopoly power, empire building, cutting taxes, improving stock values, and even as a cover for poor management (such as when the badly-run U.S. Steel bought control of Marathon Oil)."* The conclusion of these models is usually, by way of co-incidence, that an oligopolistic market acts "as if" it were a perfectly competitive one and so we need not be concerned by rising market dominance by a few firms. Much work by the ideological supporters of "free market" capitalism is based on this premise, namely that reality works "as if" it reflected the model (rather than vice versa, in a real science) and, consequently, market power is nothing to be concerned about (that many of these "think tanks" and university places happen to be funded by the super-profits generated by big business is, of course, purely a co-incidence as these "scientists" act "as if" they were neutrally funded). In Herman's words: *"Despite their inadequacies, the new apologetic theories have profoundly affected policy, because they provide an intellectual rationale for the agenda of the powerful."* [**Op. Cit.**]

It may be argued (and it has) that the lack of interest in analysing a real economy by economists is because oligopolistic competition is hard to model mathematically. Perhaps, but this simply shows the limitations of neo-classical economics and if the tool used for a task are unsuitable,

surely you should change the tool rather than (effectively) ignore the work that needs to be done. Sadly, most economists have favoured producing mathematical models which can say a lot about theory but very little about reality. That economics can become much broader and more relevant is always a possibility, but to do so would mean to take into account an unpleasant reality marked by market power, class, hierarchy and inequality rather than logical deductions derived from Robinson Crusoe. While the latter can produce mathematical models to reach the conclusions that the market is already doing a good job (or, at best, there are some imperfections which can be fixed by minor state interventions), the former cannot. Which, of course, is makes it hardly a surprise that neo-classical economists favour it so (particularly given the origins, history and role of that particular branch of economics).

This means that economics is based on a model which assumes that firms have no impact on the markets they operate it. This assumption is violated in most real markets and so the neo-classical conclusions regarding the outcomes of competition cannot be supported. That the assumptions of economic ideology so contradicts reality also has important considerations on the "voluntary" nature of wage labour. If the competitive model assumed by neo-classical economics held we would see a wide range of ownership types (including co-operatives, extensive self-employment and workers hiring capital) as there would be no "barriers of entry" associated with firm control. This is not the case – workers hiring capital is non-existent and self-employment and co-operatives are marginal. The dominant control form is capital hiring labour (wage slavery).

With a model based upon "perfect competition," supporters of capitalism could build a case that wage labour is a voluntary choice — after all, workers (in such a market) could hire capital or form co-operatives relatively easily. But the **reality** of the "free" market is such that this model does not exist — and as an assumption, it is seriously misleading. If we take into account the actuality of the capitalist economy, we soon have to realise that oligopoly is the dominant form of market and that the capitalist economy, by its very nature, restricts the options available to workers — which makes the notion that wage labour is a "voluntary" choice untenable.

If the economy is so structured as to make entry into markets difficult and survival dependent on accumulating capital, then these barriers are just as effective as government decrees. If small businesses are squeezed by oligopolies then chances of failure are increased (and so off-putting to workers with few resources) and if income inequality is large, then workers will find it very hard to find the collateral required to borrow capital and start their own co-operatives. Thus, looking at the **reality** of capitalism (as opposed to the textbooks) it is clear that the existence of oligopoly helps to maintain wage labour by restricting the options available on the "free market" for working people. Chomsky states the obvious:

> *"If you had equality of power, you could talk about freedom, but when all the power is concentrated in one place, then freedom's a joke. People talk about a 'free market.' Sure. You and I are perfectly free to set up an automobile company and compete with General Motors. Nobody's stopping us. That freedom is meaningless ... It's just that power happens to be organised so that only certain options are available. Within that limited range of options, those who have the power say, 'Let's have freedom.' That's a very skewed form of freedom. The principle is right. How freedom works depends on what the social structures are. If the freedoms are such that the only choices you have objectively are to conform to one or another system of power, there's no freedom."* [**Language and Politics**, pp. 641–2]

As we noted in section C.4, those with little capital are reduced to markets with low set-up costs and low concentration. Thus, claim the supporters of capitalism, workers still have a choice. However, this choice is (as we have indicated) somewhat limited by the existence of oligopolistic markets — so limited, in fact, that less than 10% of the working population are self-employed workers. Moreover, it is claimed, technological forces may work to increase the number of markets that require low set-up costs (the computing market is often pointed to as an example). However, similar predictions were made over 100 years ago when the electric motor began to replace the steam engine in factories. *"The new technologies [of the 1870s] may have been compatible with small production units and decentralised operations... That... expectation was not fulfilled."* [Richard B. Du Boff, **Op. Cit.**, p. 65] From the history of capitalism, we imagine that markets associated with new technologies will go the same way (and the evidence seems to support this).

The reality of capitalist development is that even **if** workers invested in new markets, one that require low set-up costs, the dynamic of the system is such that over time these markets will also become dominated by a few big firms. Moreover, to survive in an oligopolised economy small cooperatives will be under pressure to hire wage labour and otherwise act as capitalist concerns. Therefore, even if we ignore the massive state intervention which created capitalism in the first place (see section F.8), the dynamics of the system are such that relations of domination and oppression will always be associated with it — they cannot be "competed" away as the actions of competition creates and re-enforces them (also see sections J.5.11 and J.5.12 on the barriers capitalism places on co-operatives and self-management even though they are more efficient).

So the effects of the concentration of capital on the options open to us are great and very important. The existence of Big Business has a direct impact on the "voluntary" nature of wage labour as it produces very effective "barriers of entry" for alternative modes of production. The resultant pressures big business place on small firms also reduces the viability of co-operatives and self-employment to survive **as** co-operatives and non-employers of wage labour, effectively marginalising them as true alternatives. Moreover, even in new markets the dynamics of capitalism are such that **new** barriers are created all the time, again reducing our options.

Overall, the **reality** of capitalism is such that the equality of opportunity implied in models of "perfect competition" is lacking. And without such equality, wage labour cannot be said to be a "voluntary" choice between available options — the options available have been skewed so far in one direction that the other alternatives have been marginalised.

C.5 Why does Big Business get a bigger slice of profits?

As described in the last section, due to the nature of the capitalist market, large firms soon come to dominate. Once a few large companies dominate a particular market, they form an oligopoly from which a large number of competitors have effectively been excluded, thus reducing competitive pressures. In this situation there is a tendency for prices to rise above what would be the "market" level, as the oligopolistic producers do not face the potential of new capital entering "their" market (due to the relatively high capital costs and other entry/movement barriers).

The domination of a market by a few big firms results in exploitation, but of a different kind than that rooted in production. Capitalism is based on the extraction of surplus value of workers in the production process. When a market is marked by oligopoly, this exploitation is supplemented by the exploitation of **consumers** who are charged higher prices than would be the case in a more competitive market. This form of competition results in Big Business having an "unfair" slice of available profits as oligopolistic profits are *"created at the expense of individual capitals still caught up in competition."* [Paul Mattick, **Economics, Politics, and the Age of Inflation**, p. 38]

To understand why big business gets a bigger slice of the economic pie, we need to look at what neo-classical economics tries to avoid, namely production and market power. Mainstream economics views capitalism as a mode of distribution (the market), not a mode of production. Rather than a world of free and equal exchanges, capitalism is marked by hierarchy, inequality and power. This reality explains what regulates market prices and the impact of big business. In the long term, market price cannot be viewed independently of production. As David Ricardo put it:

> *"It is the cost of production which must ultimately regulate the price of commodities, and not, as has been often said, the proportion between the supply and demand: the proportion between supply and demand may, indeed, for a time, affect the market value of a commodity, until it is supplied in greater or less abundance, according as the demand may have increased or diminished; but this effect will be only of temporary duration."* [**The Principles of Political Economy and Taxation**, p. 260]

Market prices, in this (classical) analysis, are the prices that prevail at any given time on the market (and change due to transient and random variations). Natural prices are the cost of production and act as centres of gravitational attraction for market prices. Over time, market prices are tend towards natural prices but are considered unlikely to exactly meet them. Natural prices can only change due to changes in the productive process (for example, by introducing new, more productive, machinery and/or by decreasing the wages of the workforce relative to its output). Surplus value (the difference between market and natural prices) are the key to understanding how supply changes to meet demand. This produces the dynamic of market forces:

> *"Let us suppose that all commodities are at their natural price, and consequently that the profits of capital in all employments are exactly at the same rate ... Suppose now that a change of fashion should increase the demand for silks, and lessen that for woollens; their natural price, the quantity of labour necessary to their production, would continue unaltered, but the market price of silks would rise, and that of woollens would fall; and consequently the profits of the silk manufacturer would be above, whilst those of the woollen manufacturer would be below, the general and adjusted rate of profits ... This increased demand for silks would however soon be supplied, by the transference of capital and labour from the woollen to the silk manufacture; when the market prices of silks and woollens would again approach their natural prices, and then the usual profits would be obtained by the respective manufacturers of those commodities. It is then the desire, which every capitalist has, of diverting his funds from a less to a more profitable employment, that prevents the market price of commodities from continuing for any length of time either much above, or much below their natural price."* [**Op. Cit.**, p. 50]

This means that *"capital moves from relatively stagnating into rapidly developing industries ... The extra profit, in excess of the average profit, won at a given price level disappears again, however, with the influx of capital from profit-poor into profit-rich industries,"* so increasing supply and reducing prices, and thus profits. In other words, *"market relations are governed by the production relations."* [Paul Mattick, **Economic Crisis and Crisis Theory**, p. 49 and p. 51]

In a developed capitalist economy it is not as simple as this — there are various "average" profits depending on what Michal Kalecki termed the ***"degree of monopoly"*** within a market. This theory *"indicates that profits arise from monopoly power, and hence profits accrue to firms with more monopoly power ... A rise in the degree of monopoly caused by the growth of large firms would result in the shift of profits from small business to big business."* [Malcolm C. Sawyer, **The Economics of Michal Kalecki**, p. 36] This means that a market with a high "degree of monopoly" will have a few firms in it with higher than average profit levels (or rate of return) compared to the smaller firms in the sector or to those in more competitive markets.

The "degree of monopoly" reflects such factors as level of market concentration and power, market share, extent of advertising, barriers to entry/movement, collusion and so on. The higher these factors, the higher the degree of monopoly and the higher the mark-up of prices over costs (and so the share of profits in value added). Our approach to this issue is similar to Kalecki's in many ways although we stress that the degree of monopoly affects how profits are distributed **between** firms, **not** how they are created in the first place (which come, as argued in section C.2, from the *"unpaid labour of the poor"* — to use Kropotkin's words).

There is substantial evidence to support such a theory. J.S Bain in **Barriers in New Competition** noted that in industries where the level of seller concentration was very high and where entry barriers were also substantial, profit rates were higher than average. Research has tended to confirm Bain's findings. Keith Cowling summarises this later evidence:

> *"[A]s far as the USA is concerned... there are grounds for believing that a significant, but not very strong, relationship exists between profitability and concentration... [along with] a significant relationship between advertising and profitability [an important factor in a market's "degree of monopoly"]... [Moreover w]here the estimation is restricted to an appropriate cross-section [of industry] ... both concentration and advertising appeared significant [for the UK]. By focusing on the impact of changes in concentration*

> *overtime ... [we are] able to circumvent the major problems posed by the lack of appropriate estimates of price elasticities of demand ... [to find] a significant and positive concentration effect... It seems reasonable to conclude on the basis of evidence for both the USA and UK that there is a significant relationship between concentration and price-cost margins.*" [**Monopoly Capitalism**, pp. 109–110]

We must note that the price-cost margin variable typically used in these studies subtracts the wage and **salary** bill from the value added in production. This would have a tendency to reduce the margin as it does not take into account that most management salaries (particularly those at the top of the hierarchy) are more akin to profits than costs (and so should **not** be subtracted from value added). Also, as many markets are regionalised (particularly in the USA) nation-wide analysis may downplay the level of concentration existing in a given market.

The argument is not that big business charges "high prices" in respect to smaller competitors but rather they charge high prices in comparison to their costs. This means that a corporation can sell at the standard market price (or even undercut the prices of small business) and still make higher profits than average. In other words, market power ensures that prices do not fall to cost. Moreover, market power ensures that "costs" are often inflicted on others as big business uses its economic clout to externalise costs onto suppliers and its workers. For example, this means that farmers and other small producers will agree to lower prices for goods when supplying large supermarkets while the employees have to put up with lower wages and benefits (which extend through the market, creating lower wages and fewer jobs for retail workers in the surrounding area). Possibly, lower prices can be attributed to lower quality products (which workers are forced to buy in order to make their lower wages go further).

This means that large firms can maintain their prices and profits above "normal" (competitive) levels without the assistance of government simply due to their size and market power (and let us not forget the important fact that Big Business rose during the period in which capitalism was closest to "laissez faire" and the size and activity of the state was small). As much of mainstream economics is based on the idea of "perfect competition" (and the related concept that the free market is an efficient allocater of resources when it approximates this condition) it is clear that such a finding cuts to the heart of claims that capitalism is a system based upon equal opportunity, freedom and justice. The existence of Big Business and the impact it has on the rest of the economy and society at large exposes capitalist economics as a house built on sand.

Another side effect of oligopoly is that the number of mergers will tend to increase in the run up to a slump. Just as credit is expanded in an attempt to hold off the crisis (see section C.8), so firms will merge in an attempt to increase their market power and so improve their profit margins by increasing their mark-up over costs. As the rate of profit levels off and falls, mergers are an attempt to raise profits by increasing the degree of monopoly in the market/economy. However, this is a short term solution and can only postpone, but stop, the crisis as its roots lie in production, **not** the market (see section C.7) — there is only so much surplus value around and the capital stock cannot be wished away. Once the slump occurs, a period of cut-throat competition will start and then, slowly, the process of concentration will start again (as weak firms go under, successful firms increase their market share and capital stock and so on).

The development of oligopolies within capitalism thus causes a redistribution of profits away from small capitalists to Big Business (i.e. small businesses are squeezed by big ones due to the latter's market power and size). Moreover, the existence of oligopoly can and does result in

increased costs faced by Big Business being passed on in the form of price increases, which can force other companies, in unrelated markets, to raise **their** prices in order to realise sufficient profits. Therefore, oligopoly has a tendency to create price increases across the market as a whole and can thus be inflationary.

For these (and other) reasons many small businessmen and members of the middle-class wind up hating Big Business (while trying to replace them!) and embracing ideologies which promise to wipe them out. Hence we see that both ideologies of the "radical" middle-class — Libertarianism and fascism — attack Big Business, either as "the socialism of Big Business" targeted by Libertarianism or the "International Plutocracy" by Fascism. As Peter Sabatini notes:

> *"At the turn of the century, local entrepreneurial (proprietorship/partnership) business [in the USA] was overshadowed in short order by transnational corporate capitalism... . The various strata comprising the capitalist class responded differentially to these transpiring events as a function of their respective position of benefit. Small business that remained as such came to greatly resent the economic advantage corporate capitalism secured to itself, and the sweeping changes the latter imposed on the presumed ground rules of bourgeois competition. Nevertheless, because capitalism is liberalism's raison d'etre, small business operators had little choice but to blame the state for their financial woes, otherwise they moved themselves to another ideological camp (anti-capitalism). Hence, the enlarged state was imputed as the primary cause for capitalism's 'aberration' into its monopoly form, and thus it became the scapegoat for small business complaint."* [**Libertarianism: Bogus Anarchy**]

However, despite the complaints of small capitalists, the tendency of markets to become dominated by a few big firms is an obvious side-effect of capitalism itself. *"If the home of 'Big Business' was once the public utilities and manufacturing it now seems to be equally comfortable in any environment."* [M.A. Utton, **Op. Cit.**, p. 29] This is because in their drive to expand (which they must do in order to survive), capitalists invest in new machinery and plants in order to reduce production costs and so increase profits. Hence a successful capitalist firm will grow in size over time in order to squeeze out competitors and, in so doing, it naturally creates formidable natural barriers to competition — excluding all but other large firms from undermining its market position.

C.5.1 Aren't the super-profits of Big Business due to its higher efficiency?

Obviously the analysis of Big Business profitability presented in section C.5 is denied by supporters of capitalism. H. Demsetz of the pro-"free" market "Chicago School" of economists (which echoes the "Austrian" school's position that whatever happens on a free market is for the best) argues that **efficiency** (not degree of monopoly) is the cause of the super-profits for Big Business. His argument is that if oligopolistic profits are due to high levels of concentration, then the big firms in an industry will not be able to stop smaller ones reaping the benefits of this in the form of higher profits. So if concentration leads to high profits (due, mostly, to collusion between the dominant firms) then smaller firms in the same industry should benefit too.

However, his argument is flawed as it is not the case that oligopolies practice overt collusion. The barriers to entry/mobility are such that the dominant firms in a oligopolistic market do not have to compete by price and their market power allows a mark-up over costs which market forces cannot undermine. As their only possible competitors are similarly large firms, collusion is not required as these firms have no interest in reducing the mark-up they share and so they "compete" over market share by non-price methods such as advertising (advertising, as well as being a barrier to entry, reduces price competition and increases mark-up).

In his study, Demsetz notes that while there is a positive correlation between profit rate and market concentration, smaller firms in the oligarchic market are **not** more profitable than their counterparts in other markets. [M.A. Utton, **The Political Economy of Big Business**, p. 98] From this Demsetz concludes that oligopoly is irrelevant and that the efficiency of increased size is the source of excess profits. But this misses the point — smaller firms in concentrated industries will have a similar profitability to firms of similar size in less concentrated markets, **not** higher profitability. The existence of super profits across **all** the firms in a given industry would attract firms to that market, so reducing profits. However, because profitability is associated with the large firms in the market the barriers of entry/movement associated with Big Business stops this process happening. **If** small firms were as profitable, then entry would be easier and so the "degree of monopoly" would be low and we would see an influx of smaller firms.

While it is true that bigger firms may gain advantages associated with economies of scale the question surely is, what stops the smaller firms investing and increasing the size of their companies in order to reap economies of scale within and between workplaces? What is stopping market forces eroding super-profits by capital moving into the industry and increasing the number of firms, and so increasing supply? If barriers exist to stop this process occurring, then concentration, market power and other barriers to entry/movement (not efficiency) is the issue. Competition is a **process,** not a state, and this indicates that "efficiency" is not the source of oligopolistic profits (indeed, what creates the apparent "efficiency" of big firms is likely to be the barriers to market forces which add to the mark-up!).

It is important to recognise what is "small" and "big" is dependent on the industry in question and so size advantages obviously differ from industry to industry. The optimum size of plant may be large in some sectors but relatively small in others (some workplaces have to be of a certain size in order to be technically efficient in a given market). However, this relates to technical efficiency, rather than overall "efficiency" associated with a firm. This means that technological issues cannot, by themselves, explain the size of modern corporations. Technology may, at best, explain the increase in size of the factory, but it does not explain why the modern large firm comprises multiple factories. In other words, the company, the **administrative** unit, is usually much larger than the workplace, the **production** unit. The reasons for this lie in the way in which production technologies interacted with economic institutions and market power.

It seems likely that large firms gather "economies of scale" due to the size of the firm, not plant, as well as from the level of concentration within an industry: *"Considerable evidence indicates that economies of scale [at plant level] ... do not account for the high concentration levels in U.S. industry"* [Richard B. Du Boff, **Accumulation and Power**, p. 174] Further, *"the explanation for the enormous growth in aggregate concentration must be found in factors other than economies of scale at plant level."* [M.A. Utton, **Op. Cit.**, p. 44] Co-ordination of individual plants by the visible hand of management seems to play a key role in creating and maintaining dominant positions within a market. And, of course, these structures are costly to create and maintain as well as taking

time to build up. Thus the size of the firm, with the economies of scale **beyond** the workplace associated with the economic power this produces within the marke creates formidable barriers to entry/movement.

So an important factor influencing the profitability of Big Business is the clout that market power provides. This comes in two main forms — horizontal and vertical controls:

> *"Horizontal controls allow oligopolies to control necessary steps in an economic process from material supplies to processing, manufacturing, transportation and distribution. Oligopolies... [control] more of the highest quality and most accessible supplies than they intend to market immediately... competitors are left with lower quality or more expensive supplies... [It is also] based on exclusive possession of technologies, patents and franchises as well as on excess productive capacity ...*
>
> *"Vertical controls substitute administrative command for exchange between steps of economic processes. The largest oligopolies procure materials from their own subsidiaries, process and manufacture these in their own refineries, mills and factories, transport their own goods and then market these through their own distribution and sales network."* [Allan Engler, **Apostles of Greed**, p. 51]

Moreover, large firms reduce their costs due to their privileged access to credit and resources. Both credit and advertising show economies of scale, meaning that as the size of loans and advertising increase, costs go down. In the case of finance, interest rates are usually cheaper for big firms than small ones and while *"firms of all sizes find most [about 70% between 1970 and 1984] of their investments without having to resort to [financial] markets or banks"* size does have an impact on the *"importance of banks as a source of finance"*: *"Firms with assets under $100 million relied on banks for around 70% of their long-term debt... those with assets from $250 million to $1 billion, 41%; and those with over $1 billion in assets, 15%."* [Doug Henwood, **Wall Street**, p. 75] Also dominant firms can get better deals with independent suppliers and distributors due to their market clout and their large demand for goods/inputs, also reducing their costs.

This means that oligopolies are more "efficient" (i.e. have higher profits) than smaller firms due to the benefits associated with their market power rather than vice versa. Concentration (and firm size) leads to "economies of scale" which smaller firms in the same market cannot gain access to. Hence the claim that any positive association between concentration and profit rates is simply recording the fact that the largest firms tend to be most efficient, and hence more profitable, is wrong. In addition, *"Demsetz's findings have been questioned by non-Chicago [school] critics"* due to the inappropriateness of the evidence used as well as some of his analysis techniques. Overall, *"the empirical work gives limited support"* to this "free-market" explanation of oligopolistic profits and instead suggest market power plays the key role. [William L. Baldwin, **Market Power, Competition and Anti-Trust Policy**, p. 310, p. 315]

Unsurprisingly we find that the *"bigger the corporation in size of assets or the larger its market share, the higher its rate of profit: these findings confirm the advantages of market power... Furthermore, 'large firms in concentrated industries earn systematically higher profits than do all other firms, about 30 percent more... on average,' and there is less variation in profit rates too."* Thus, concentration, not efficiency, is the key to profitability, with those factors what create "efficiency" themselves being very effective barriers to entry which helps maintain the "degree of monopoly"

(and so mark-up and profits for the dominant firms) in a market. Oligopolies have varying degrees of administrative efficiency and market power, all of which consolidate its position. Thus the *"barriers to entry posed by decreasing unit costs of production and distribution and by national organisations of managers, buyers, salesmen, and service personnel made oligopoly advantages cumulative — and were as global in their implications as they were national."* [Richard B. Du Boff, **Accumulation and Power**, p. 175 and p. 150]

This explains why capitalists always seek to acquire monopoly power, to destroy the assumptions of neo-classical economics, so they can influence the price, quantity and quality of the product. It also ensures that in the real world there are, unlike the models of mainstream economics, entrenched economic forces and why there is little equal opportunity. Why, in other words, the market in most sectors is an oligopoly.

This recent research confirms Kropotkin's analysis of capitalism found in his classic work **Fields, Factories and Workshops**. Kropotkin, after extensive investigation of the actual situation within the economy, argued that *"it is not the superiority of the **technical** organisation of the trade in a factory, nor the economies realised on the prime-mover, which militate against the small industry ... but the more advantageous conditions for **selling** the produce and for **buying** the raw produce which are at the disposal of big concerns."* Since the *"manufacture being a strictly private enterprise, its owners find it advantageous to have all the branches of a given industry under their own management: they thus cumulate the profits of the successful transformations of the raw material... [and soon] the owner finds his advantage in being able to hold the command of the market. But from a **technical** point of view the advantages of such an accumulation are trifling and often doubtful."* He sums up by stating that *"[t]his is why the 'concentration' so much spoken of is often nothing but an amalgamation of capitalists for the purpose of **dominating the market,** not for cheapening the technical process."* [**Fields, Factories and Workshops Tomorrow**, p. 147, p. 153 and p. 154]

It should be stressed that Kropotkin, like other anarchists, recognised that technical efficiencies differed from industry to industry and so the optimum size of plant may be large in some sectors but relatively small in others. As such, he did not fetishise "smallness" as some Marxists assert (see section H.2.3). Rather, Kropotkin was keenly aware that capitalism operated on principles which submerged technical efficiency by the price mechanism which, in turn, was submerged by economic power. While not denying that "economies of scale" existed, Kropotkin recognised that what counts as "efficient" under capitalism is specific to that system. Thus whatever increases profits is "efficient" under capitalism, whether it is using market power to drive down costs (credit, raw materials or labour) or internalising profits by building suppliers. Under capitalism profit is used as a (misleading) alternative for efficiency (influenced, as it is, by market power) and this distorts the size of firms/workplaces. In a sane society, one based on economic freedom, workplaces would be re-organised to take into account technical efficiency and the needs of the people who used them rather than what maximises the profits and power of the few.

All this means is that the "degree of monopoly" within an industry helps determine the distribution of profits within an economy, with some of the surplus value "created" by other companies being realised by Big Business. Hence, the oligopolies reduce the pool of profits available to other companies in more competitive markets by charging consumers higher prices than a more competitive market would. As high capital costs reduce mobility within and exclude most competitors from entering the oligopolistic market, it means that only if the oligopolies raise their prices **too** high can real competition become possible (i.e. profitable) again and so *"it should not*

be concluded that oligopolies can set prices as high as they like. If prices are set too high, dominant firms from other industries would be tempted to move in and gain a share of the exceptional returns. Small producers — using more expensive materials or out-dated technologies — would be able to increase their share of the market and make the competitive rate of profit or better." [Allan Engler, **Op. Cit.**, p. 53]

Big Business, therefore, receives a larger share of the available surplus value in the economy, due to its size advantage and market power, not due to "higher efficiency".

C.6 Can market dominance by Big Business change?

Capital concentration, of course, does not mean that in a given market, dominance will continue forever by the same firms, no matter what. However, the fact that the companies that dominate a market can change over time is no great cause for joy (no matter what supporters of free market capitalism claim). This is because when market dominance changes between companies all it means is that **old** Big Business is replaced by **new** Big Business:

> *"Once oligopoly emerges in an industry, one should not assume that sustained competitive advantage will be maintained forever... once achieved in any given product market, oligopoly creates barriers to entry that can be overcome only by the development of even more powerful forms of business organisation that can plan and co-ordinate even more complex specialised divisions of labour."* [William Lazonick, **Business Organisation and the Myth of the Market Economy**, p. 173]

The assumption that the "degree of monopoly" will rise over time is an obvious one to make and, in general, the history of capitalism has tended to support doing so. While periods of rising concentration will be interspersed with periods of constant or falling levels, the general trend will be upwards (we would expect the degree of monopoly to remain the same or fall during booms and rise to new levels in slumps). Yet even if the "degree of monopoly" falls or new competitors replace old ones, it is hardly a great improvement as changing the company hardly changes the impact of capital concentration or Big Business on the economy. While the faces may change, the system itself remains the same. As such, it makes little real difference if, for a time, a market is dominated by 6 large firms rather than, say, 4. While the **relative** level of barriers may fall, the **absolute** level may increase and so restrict competition to established big business (either national or foreign) and it is the absolute level which maintains the class monopoly of capital over labour.

Nor should we expect the "degree of monopoly" to constantly increase, there will be cycles of expansion and contraction in line with the age of the market and the business cycle. It is obvious that at the start of a specific market, there will be a relative high "degree of monopoly" as a few pioneering create a new industry. Then the level of concentration will fall as competitors entry the market. Over time, the numbers of firms will drop due to failure and mergers. This process is accelerated during booms and slumps. In the boom, more companies feel able to try setting up or expanding in a specific market, so driving the "degree of monopoly" down. However, in the slump the level of concentration will rise as more and more firms go to the wall or try and merge to survive (for example, there were 100 car producers in the USA in 1929, ten years later there were only three). So our basic point is **not** dependent on any specific tendency of the degree of monopoly. It can fall somewhat as, say, five large firms come to dominate a market rather than, say, three over a period of a few years. The fact remains that barriers to competition

remain strong and deny any claims that any real economy reflects the "perfect competition" of the textbooks.

So even in a in a well-developed market, one with a high degree of monopoly (i.e. high market concentration and capital costs that create barriers to entry into it), there can be decreases as well as increases in the level of concentration. However, how this happens is significant. New companies can usually only enter under four conditions:

Usually some or all of these processes are at work at once and some can have contradictory results. Take, for example, the rise of "globalisation" and its impact on the "degree of monopoly" in a given national market. On the national level, "degree of monopoly" may fall as foreign companies invade a given market, particularly one where the national producers are in decline (which has happened to a small degree in UK manufacturing in the 1990s, for example). However, on the international level the degree of concentration may well have risen as only a few companies can actually compete on a global level. Similarly, while the "degree of monopoly" within a specific national market may fall, the balance of (economic) power within the economy may shift towards capital and so place labour in a weaker position to advance its claims (this has, undoubtedly, been the case with "globalisation" — see section D.5.3).

Let us consider the US steel industry as an example. The 1980s saw the rise of the so-called "mini-mills" with lower capital costs. The mini-mills, a new industry segment, developed only after the US steel industry had gone into decline due to Japanese competition. The creation of Nippon Steel, matching the size of US steel companies, was a key factor in the rise of the Japanese steel industry, which invested heavily in modern technology to increase steel output by 2,216% in 30 years (5.3 million tons in 1950 to 122.8 million by 1980). By the mid 1980s, the mini-mills and imports each had a quarter of the US market, with many previously steel-based companies diversifying into new markets.

Only by investing $9 billion to increase technological competitiveness, cutting workers wages to increase labour productivity, getting relief from stringent pollution control laws and (very importantly) the US government restricting imports to a quarter of the total home market could the US steel industry survive. The fall in the value of the dollar also helped by making imports more expensive. In addition, US steel firms became increasingly linked with their Japanese "rivals," resulting in increased centralisation (and so concentration) of capital.

Therefore, only because competition from foreign capital created space in a previously dominated market, driving established capital out, combined with state intervention to protect and aid home producers, was a new segment of the industry able to get a foothold in the local market. With many established companies closing down and moving to other markets, and once the value of the dollar fell which forced import prices up and state intervention reduced foreign competition, the mini-mills were in an excellent position to increase US market share. It should also be noted that this period in the US steel industry was marked by increased "co-operation" between US and Japanese companies, with larger companies the outcome. This meant, in the case of the mini-mills, that the cycle of capital formation and concentration would start again, with bigger companies driving out the smaller ones through competition.

Nor should we assume that an oligopolistic markets mean the end of all small businesses. Far from it. Not only do small firms continue to exist, big business itself may generate same scale industry around it (in the form of suppliers or as providers of services to its workers). We are not arguing that small businesses do not exist, but rather than their impact is limited compared to the giants of the business world. In fact, within an oligopolistic market, existing small firms always

present a problem as some might try to grow beyond their established niches. However, the dominant firms will often simply purchase the smaller one firm, use its established relationships with customers or suppliers to limit its activities or stand temporary losses and so cut its prices below the cost of production until it runs competitors out of business or establishes its price leadership, before raising prices again.

As such, our basic point is **not** dependent on any specific tendency of the degree of monopoly. It can fall somewhat as, say, six large firms come to dominate a market rather than, say, four. The fact remains that barriers to competition remain strong and deny any claims that any real economy reflects the "perfect competition" of the textbooks. So, while the actual companies involved may change over time, the economy as a whole will always be marked by Big Business due to the nature of capitalism. That's the way capitalism works — profits for the few at the expense of the many.

C.7 What causes the capitalist business cycle?

The business cycle is the term used to describe the boom and slump nature of capitalism. Sometimes there is full employment, with workplaces producing more and more goods and services, the economy grows and along with it wages. However, as Proudhon argued, this happy situation does not last:

> *"But industry, under the influence of property, does not proceed with such regularity... As soon as a demand begins to be felt, the factories fill up, and everybody goes to work. Then business is lively. .. Under the rule of property, the flowers of industry are woven into none but funeral wreaths. The labourer digs his own grave... [the capitalist] tries... to continue production by lessening expenses. Then comes the lowering of wages; the introduction of machinery; the employment of women and children ... the decreased cost creates a larger market... [but] the productive power tends to more than ever outstrip consumption... To-day the factory is closed. Tomorrow the people starve in the streets... In consequence of the cessation of business and the extreme cheapness of merchandise... frightened creditors hasten to withdraw their funds [and] Production is suspended, and labour comes to a standstill."* [**What is Property**, pp. 191–192]

Why does this happen? For anarchists, as Proudhon noted, it's to do with the nature of capitalist production and the social relationships it creates (*"the rule of property"*). The key to understanding the business cycle is to understand that, to use Proudhon's words, *"Property sells products to the labourer for more than it pays him for them; therefore it is impossible."* [**Op. Cit.**, p. 194] In other words, the need for the capitalist to make a profit from the workers they employ is the underlying cause of the business cycle. If the capitalist class cannot make enough surplus value (profit, interest, rent) then it will stop production, sack people, ruin lives and communities until such time as enough can once again be extracted from working class people. As Proudhon put it (using the term *"interest"* to cover all forms of surplus value):

> *"The primary cause of commercial and industrial stagnations is, then, interest on capital, — that interest which the ancients with one accord branded with the name of usury, whenever it was paid for the use of money, but which they did not dare to condemn in the forms of house-rent, farm-rent, or profit: as if the nature of the thing lent could ever warrant a charge for the lending; that is, robbery."* [**Op. Cit.**, p. 193]

So what influences the level of surplus value? There are two main classes of pressure on surplus value production, what we will call the ***"subjective"*** and ***"objective"*** (we will use the term profits to cover surplus value from now on as this is less cumbersome and other forms of surplus value depend on the amount extracted from workers on the shopfloor). The "subjective" pressures are to do with the nature of the social relationships created by capitalism, the relations of domination and subjection which are the root of exploitation and the resistance to them. In other words the

subjective pressures are the result of the fact that *"property is despotism"* (to use Proudhon's expression) and are a product of the class struggle. This will be discussed in section C.7.1. The objective pressures are related to how capitalism works and fall into two processes. The first is the way in which markets do not provide enough information to producers avoid disproportionalities within the market. In other words, that the market regularly produces situations where there is too much produced for specific markets leading to slumps The second objective factor is related to the process by which *"productive power tends more and more to outstrip consumption"* (to use Proudhon's words), i.e. over-investment or over-accumulation. These are discussed in sections C.7.2 and C.7.3, respectively.

Before continuing, we would like to stress here that all three factors operate together in a real economy and we have divided them purely to help explain the issues involved in each one. The class struggle, market "communication" creating disproportionalities and over-investment all interact. Due to the needs of the internal (class struggle) and external (inter-company) competition, capitalists have to invest in new means of production. As workers' power increases during a boom, capitalists innovate and invest in order to try and counter it. Similarly, to get market advantage (and so increased profits) over their competitors, a company invests in new machinery. While this helps increase profits for individual companies in the short term, it leads to collective over-investment and falling profits in the long term. Moreover, due to lack of effective communication within the market caused by the price mechanism firms rush to produce more goods and services in specific boom markets, so leading to over-production and the resulting gluts result in slumps. This process is accelerated by the incomplete information provided by the interest rate, which results in investment becoming concentrated in certain parts of the economy. Relative over-investment can occur, increasing and compounding any existing tendencies for over-production and so creating the possibility of crisis. In addition, the boom encourages new companies and foreign competitors to try and get market share, so decreasing the *"degree of monopoly"* in an industry, and so reducing the mark-up and profits of big business (which, in turn, can cause an increase in mergers and take-overs towards the end of the boom).

Meanwhile, as unemployment falls workers' power, confidence and willingness to stand up for their rights increases, causing profit margins to be eroded at the point of production. This has the impact of reducing tendencies to over-invest as workers resist the introduction of new technology and techniques. The higher wages also maintain and even increase demand for the finished goods and services produced, allowing firms to realise the potential profits their workers have created. Rising wages, therefore, harms the potential for **producing** profits by increasing costs yet it increases the possibility for **realising** profits on the market as firms cannot make profits if there is no demand for their goods and their inventories of unsold goods pile up. In other words, wages are costs for any specific firm but the wages other companies pay are a key factor in the demand for what it produces. This contradictory effect of class struggle matches the contradictory effect of investment. Just as investment causes crisis because it is useful, the class struggle both hinders over-accumulation of capital and maintains aggregate demand (so postponing the crisis) while at the same time eroding capitalist power and so profit margins at the point of production (so accelerating it).

And we should note that these factors work in reverse during a slump, creating the potential for a new boom. In terms of workers, rising unemployment empower the capitalists who take advantage of the weakened position of their employees to drive through wage cuts or increase productivity in order to improve the profitability of their companies (i.e. increase surplus value).

Labour will, usually, accept the increased rate of exploitation this implies to remain in work. This results in wages falling and so, potentially, allows profit margins to rise. However, wage cuts result in falling demand for goods and services and so, overall, the net effect of cutting wages may be an overall **drop** in demand which would make the slump worse. There is a contradictory aspect to the objective pressures as well during a slump. The price mechanism hinders the spread of knowledge required for production and investment decisions to be made. While collectively it makes sense for firms to start producing and investing more, individual firms are isolated from each other. Their expectations are negative, they expect the slump to continue and so will be unwilling to start investing again. In the slump, many firms go out of business so reducing the amount of fixed capital in the economy and so over-investment is reduced. As overall investment falls, so the average rate of profit in the economy can increase. Yet falling investment means that firms in that sector of the economy will face stagnant demand and in the face of an uncertain future will be a drag on other sectors. In addition, as firms go under the *"degree of monopoly"* of each industry increases which increases the mark-up and profits of big business yet the overall market situation is such that their goods cannot be sold.

Eventually, however, the slump will end (few anarchists accept the notion that capitalism will self-destruct due to internal economic processes). The increased surplus value production made possible by high unemployment is enough relative to the (reduced) fixed capital stock to increase the rate of profit. This encourages capitalists to start investing again and a boom begins (a boom which contains the seeds of its own end). How long this process takes cannot be predicted in advance (which is why Keynes stressed that in the long run we are all dead). It depends on objective circumstances, how excessive the preceding boom was, government policy and how willing working class people are to pay the costs for the capitalist crisis.

Thus subjective and objective factors interact and counteract with each other, but in the end a crisis will result simply because the system is based upon wage labour and the producers are not producing for themselves. Ultimately, a crisis is caused because capitalism is production for profit and when the capitalist class does not (collectively) get a sufficient rate of profit for whatever reason then a slump is the result. If workers produced for themselves, this decisive factor would not be an issue as no capitalist class would exist. Until that happens the business cycle will continue, driven by "subjective" and "objective" pressures — pressures that are related directly to the nature of capitalist production and the wage labour on which it is based. Which pressure will predominate in any given period will be dependent on the relative power of classes. One way to look at it is that slumps can be caused when working class people are "too strong" or "too weak." The former means that we are able to reduce the rate of exploitation, squeezing the profit rate by keeping an increased share of the surplus value we produce. The later means we are too weak to stop income distribution being shifted in favour of the capitalist class, which results in over-accumulation and rendering the economy prone to a failure in aggregate demand. The 1960s and 1970s are the classic example of what happens when "subjective" pressures predominate while the 1920s and 1930s show the "objective" ones at work.

Finally, it must be stressed that this analysis does **not** imply that anarchists think that capitalism will self-destruct. In spite of crises being inevitable and occurring frequently, revolution is not. Capitalism will only be eliminated by working class revolution, when people see the need for social transformation and not imposed on people as the by-product of an economic collapse.

C.7.1 What role does class struggle play in the business cycle?

At its most basic, the class struggle (the resistance to hierarchy in all its forms) is the main cause of the business cycle. As we argued in sections B.1.2 and C.2, capitalists in order to exploit a worker must first oppress them. But where there is oppression, there is resistance; where there is authority, there is the will to freedom. Hence capitalism is marked by a continuous struggle between worker and boss at the point of production as well as struggle outside of the workplace against other forms of hierarchy.

This class struggle reflects a conflict between workers attempts at liberation and self-empowerment and capital's attempts to turn the individual worker into a small cog in a big machine. It reflects the attempts of the oppressed to try to live a fully human life, when the *"worker claims his share in the riches he produces; he claims his share in the management of production; and he claims not only some additional well-being, but also his full rights in the higher enjoyment of science and art."* [Peter Kropotkin, **Anarchism**, pp. 48–49] As Errico Malatesta argued:

> *"If [workers] succeed in getting what they demand, they will be better off: they will earn more, work fewer hours and will have more time and energy to reflect on things that matter to them, and will immediately make greater demands and have greater needs ... [T]here exists no natural law (law of wages) which determines what part of a worker's labour should go to him [or her] ... Wages, hours and other conditions of employment are the result of the struggle between bosses and workers. The former try and give the workers as little as possible; the latter try, or should try to work as little, and earn as much, as possible. Where workers accept any conditions, or even being discontented, do not know how to put up effective resistance to the bosses demands, they are soon reduced to bestial conditions of life. Where, instead, they have ideas of how human beings should live and know how to join forces, and through refusal to work or the latent and open threat of rebellion, to win bosses respect, in such cases, they are treated in a relatively decent way ... Through struggle, by resistance against the bosses, therefore, workers can, up to a certain point, prevent a worsening of their conditions as well as obtaining real improvement."* [**Errico Malatesta: His Life and Ideas**, pp. 191–2]

It is this struggle that determines wages and indirect income such as welfare, education grants and so forth. This struggle also influences the concentration of capital, as capital attempts to use technology to get an advantage against their competitors by driving down prices by increasing the productivity of labour (i.e., to extract the maximum surplus value possible from employees). And, as will be discussed in section D.10, increased capital investment also reflects an attempt to increase the control of the worker by capital (or to replace them with machinery that cannot say "no") **plus** the transformation of the individual into "the mass worker" who can be fired and replaced with little or no hassle. For example, Proudhon quotes an *"English Manufacturer"* who states that he invested in machinery precisely to replace humans by machines because machines are easier to control:

> *"The insubordination of our workforce has given us the idea of dispensing with them. We have made and stimulated every imaginable effort of the mind to replace the service of men by tools more docile, and we have achieved our object. Machinery has delivered*

capital from the oppression of labour." [quoted by Proudhon, **System of Economical Contradictions**, p. 189]

(To which Proudhon replied *"[w]hat a misfortunate that machinery cannot also deliver capital from the oppression of consumers!"* The over-production and reductions in demand caused by machinery replacing people soon destroys these illusions of automatic production by a slump – see section C.7.3).

Therefore, class struggle influences both wages and capital investment, and so the prices of commodities in the market. It also, more importantly, determines profit levels and it is the rise and fall of profit levels that are the ultimate cause of the business cycle. This is because, under capitalism, production's *"only aim is to increase the profits of the capitalist. And we have, therefore, — the continuous fluctuations of industry, the crisis coming periodically."* [Kropotkin, **Op. Cit.**, p. 55]

A common capitalist myth, derived from neo-classical (and related) ideology, is that free-market capitalism will result in a continuous boom. Since the cause of slumps is allegedly state interference in the market (particularly in credit and money), eliminating such meddling will obviously bring reality into line with the textbooks and, consequently, eliminate such negative features of "actually existing" capitalism as the business cycle. Let us assume, for a moment, that this is the case (as will be discussed in section C.8, this is **not** the case). In the "boom economy" of capitalist dreams there will be full employment yet while this helps *"increase total demand, its fatal characteristic from the business view is that it keeps the reserve army of the unemployed low, thereby protecting wage levels and strengthening labour's bargaining power."* [Edward S. Herman, **Beyond Hypocrisy**, p. 93] This leads to the undermining of full employment as profit margins are placed under pressure (which explains why bosses have lead the fight against government full employment policies).

The process should be obvious enough. Full employment results in a situation where workers are in a very strong position, a strength which can undermine the system. This is because capitalism always proceeds along a tightrope. If a boom is to continue smoothly, real wages must develop within a certain band. If their growth is too low then capitalists will find it difficult to sell the products their workers have produced and so, because of this, face what is often called a *"realisation crisis"* (i.e. the fact that capitalists cannot make a profit if they cannot sell their products). If real wage growth is too high then the conditions for producing profits are undermined as labour gets more of the value it produces. This means that in periods of boom, when unemployment is falling, the conditions for realisation improve as demand for consumer goods increase, thus expanding markets and encouraging capitalists to invest. However, such an increase in investment (and so employment) has an adverse effect on the conditions for **producing** surplus value as labour can assert itself at the point of production, increase its resistance to the demands of management and, far more importantly, make its own.

If an industry or country experiences high unemployment, workers will put up with longer hours, stagnating wages, worse conditions and new technology in order to remain in work. This allows capital to extract a higher level of profit from those workers, which in turn signals other capitalists to invest in that area. As investment increases, unemployment falls. As the pool of available labour runs dry, then wages will rise as employers bid for scare resources and workers feel their power. As workers are in a better position they can go from resisting capital's agenda to proposing their own (e.g. demands for higher wages, better working conditions and even for

workers' control). As workers' power increases, the share of income going to capital falls, as do profit rates, and capital experiences a profits squeeze and so cuts down on investment and employment and/or wages. The cut in investment increases unemployment in the capital goods sector of the economy, which in turn reduces demand for consumption goods as jobless workers can no longer afford to buy as much as before. This process accelerates as bosses fire workers or cut their wages and the slump deepens and so unemployment increases, which begins the cycle again. This can be called "subjective" pressure on profit rates.

This interplay of profits and wages can be seen in most business cycles. As an example, let us consider the crisis which ended post-war Keynesianism in the early 1970's and paved the way for the neo-liberal reforms of Thatcher and Reagan. This crisis, which started in 1973, had its roots in the 1960s boom and the profits squeeze it produced. If we look at the USA we find that it experienced continuous growth between 1961 and 1969 (the longest in its history until then). From 1961 onwards, unemployment steadily fell, effectively creating full employment. From 1963, the number of strikes and total working time lost steadily increased (the number of strikes doubled from 1963 to 1970, with the number of wildcat strike rising from 22% of all strikes in 1960 to 36.5% in 1966). By 1965 both the business profit shares and business profit rates peaked. The fall in profit share and rate of profit continued until 1970 (when unemployment started to increase), where it rose slightly until the 1973 slump occurred. In addition, after 1965, inflation started to accelerate as capitalist firms tried to maintain their profit margins by passing cost increases to consumers (as we discuss section C.8.2, inflation has far more to do with capitalist profits than it has with money supply or wages). This helped to reduce real wage gains and maintain profitability over the 1968 to 1973 period above what it otherwise would have been, which helped postpone, but not stop, a slump.

Looking at the wider picture, we find that for the advanced capital countries as a whole, the product wage rose steadily between 1962 and 1971 while productivity fell. The growth of the product wage (the real cost to the employer of hiring workers) exceeded that of productivity growth in the late 1960s, slightly after the year in which profit share in national income and the rate of profit peaked. From then on, productivity continued to fall while the product wage continued to rise. This process, the result of falling unemployment and rising workers' power (expressed, in part, by an explosion in the number of strikes across Europe and elsewhere), helped to ensure that workers keep an increasing share of the value they produced. The actual post-tax real wages and productivity in the advanced capitalist countries increased at about the same rate from 1960 to 1968 but between 1968 and 1973 the former increased at a larger rate than the latter (hence the profits squeeze). Moreover, increased international competition meant that many domestic companies where limited in their responses to the profits squeeze as well as facing a global decrease in demand for their products. This resulted in profit shares and rates declining to around 80% of their previous peak levels across the advanced capitalist nations. [Philip Armstrong, Andrew Glyn and John Harrison, **Capitalism Since 1945**, pp. 178–80, pp. 182–4 and pp. 192–3]

It must be stressed that social struggle was not limited to the workplace. In the 1960s a *"series of strong liberation movements emerged among women, students and ethnic minorities. A crisis of social institutions was in progress, and large social groups were questioning the very foundations of the modern, hierarchical society: the patriarchal family, the authoritarian school and university, the hierarchical workplace or office, the bureaucratic trade union or party."* [Takis Fotopoulos, *"The Nation-state and the Market,"* pp. 37–80, **Society and Nature**, Vol. 2, No. 2, p. 58] In

stark contrast to the predictions of the right, state intervention within capitalism to maintain full employment and provide social services like health care had **not** resulted in a *"Road to Serfdom."* The opposite occurred, with previously marginalised sectors of the population resisting their oppression and exploitation by questioning authority in more and more areas of life — including, it must be stressed, within our own organisations as well (for example, the rank and file of trade unions had to rebel just as much against their own officials as they had against the bureaucracy of the capitalist firm).

These social struggles resulted in an economic crisis as capital could no longer oppress and exploit working class people sufficiently in order to maintain a suitable profit rate. This crisis was then used to discipline the working class and restore capitalist authority within and outside the workplace (see section C.8.2). We should also note that this process of social revolt in spite, or perhaps because of, the increase of material wealth was predicted by Malatesta. In 1922 he argued that:

> *"The fundamental error of the reformists is that of dreaming of solidarity, a sincere collaboration, between masters and servants, between proprietors and workers ...*
>
> *"Those who envisage a society of well stuffed pigs which waddle contentedly under the ferule of a small number of swineherd; who do not take into account the need for freedom and the sentiment of human dignity ... can also imagine and aspire to a technical organisation of production which assures abundance for all and at the same time materially advantageous both to bosses and the workers. But in reality 'social peace' based on abundance for all will remain a dream, so long as society is divided into antagonistic classes, that is employers and employees. And there will be neither peace nor abundance.*
>
> *"The antagonism is spiritual rather than material. There will never be a sincere understanding between bosses and workers for the better exploitation [sic!] of the forces of nature in the interests of mankind, because the bosses above all want to remain bosses and secure always more power at the expense of the workers, as well as by competition with other bosses, whereas the workers have had their fill of bosses and don't want more!"* [**Op. Cit.**, pp. 78–79]

The experience of the post-war compromise and social democratic reform shows that, ultimately, the social question is not poverty but rather freedom. However, to return to the impact of class struggle on capitalism.

It is the awareness that full employment is bad for business which is the basis of the so-called *"Non-Accelerating Inflation Rate of Unemployment"* (NAIRU). As we will discuss in more detail in section C.9, the NAIRU is the rate of unemployment for an economy under which inflation, it is claimed, starts to accelerate. While the basis of this "theory" is slim (the NAIRU is an invisible, mobile rate and so the "theory" can explain every historical event simply because you can prove anything when your datum cannot be seen by mere mortals) it is very useful for justifying policies which aim at attacking working people, their organisations and their activities. The NAIRU is concerned with a *"wage-price"* spiral caused by falling unemployment and rising workers' rights and power. Of course, you never hear of an *"interest-price"* spiral or a *"rent-price"* spiral or a *"profits-price"* spiral even though these are also part of any price. It is always a *"wage-price"* spiral, simply because interest, rent and profits are income to capital and so, by definition, above

reproach. By accepting the logic of NAIRU, the capitalist system implicitly acknowledges that it and full employment are incompatible and so with it any claim that it allocates resources efficiently or labour contracts benefit both parties equally.

For these reasons, anarchists argue that a continual "boom" economy is an impossibility simply because capitalism is driven by profit considerations, which, combined with the subjective pressure on profits due to the class struggle between workers and capitalists, **necessarily** produces a continuous boom-and-bust cycle. When it boils down to it, this is unsurprising, as *"industry is directed, and will have to be directed, not towards what is needed to satisfy the needs of all, but towards that which, at a given moment, brings in the greatest temporary profit to a few. Of necessity, the abundance of some will be based upon the poverty of others, and the straitened circumstances of the greater number will have to be maintained at all costs, that there may be hands to sell themselves for a part only of that which they are capable of producing, without which private accumulation of capital is impossible!"* [Kropotkin, **Op. Cit.**, p. 128]

Of course, when such "subjective" pressures are felt on the system, when private accumulation of capital is threatened by improved circumstances for the many, the ruling class denounces working class "greed" and "selfishness." When this occurs we should remember what Adam Smith had to say on this subject:

> *"In reality high profits tend much more to raise the price of work than high wages ... That part of the price of the commodity that resolved itself into wages would ... rise only in arithmetical proportion to the rise in wages. But if profits of all the different employers of those working people should be raised five per cent., that price of the commodity which resolved itself into profit would ... rise in geometrical proportion to this rise in profit ... Our merchants and master manufacturers complain of the bad effects of high wages in raising the price and thereby lessening the sale of their goods at home and abroad. They say nothing concerning the bad effects of high profits. They are silent with regard to the pernicious effects of their own gains. They complain only of those of other people."* [**The Wealth of Nations**, pp. 87–88]

As an aside, we must note that these days we would have to add economists to Smith's *"merchants and master manufacturers."* Not that this is surprising, given that economic theory has progressed (or degenerated) from Smith's disinterested analysis into apologetics for any action of the boss (a classic example, we must add, of supply and demand, with the marketplace of ideas responding to a demand for such work from *"our merchants and master manufacturers"*). Any "theory" which blames capitalism's problems on "greedy" workers will always be favoured over one that correctly places them in the contradictions created by wage slavery. Ultimately, capitalist economics blame every problem of capitalism on the working class refusing to kow-tow to the bosses (for example, unemployment is caused by wages being too high rather than bosses needing unemployment to maintain their power and profits — see section C.9.2 on empirical evidence that indicates that the first explanation is wrong).

Before concluding, one last point. While it may appear that our analysis of the "subjective" pressures on capitalism is similar to that of mainstream economics, this is not the case. This s because our analysis recognises that such pressures are inherent in the system, have contradictory effects (and so cannot be easily solved without making things worse before they get better) and hold the potential for creating a free society. Our analysis recognises that workers' power and

resistance **is** bad for capitalism (as for any hierarchical system), but it also indicates that there is nothing capitalism can do about it without creating authoritarian regimes (such as Nazi Germany) or by generating massive amounts of unemployment (as was the case in the early 1980s in both the USA and the UK, when right-wing governments mismanaged the economy into deep recessions) and even this is no guarantee of eliminating working class struggle as can be seen, for example, from 1930s America.

This means that our analysis shows the limitations and contradictions of the system as well as its need for workers to be in a weak bargaining position in order for it to "work" (which explodes the myth that capitalism is a free society). Moreover, rather than portray working people as victims of the system (as is the case in many Marxist analyses of capitalism) our analysis recognises that we, both individually and collectively, have the power to influence and **change** that system by our activity. We should be proud of the fact that working people refuse to negate themselves or submit their interests to that of others or play the role of order-takers required by the system. Such expressions of the human spirit, of the struggle of freedom against authority, should not be ignored or down-played, rather they should be celebrated. That the struggle against authority causes the system so much trouble is not an argument against social struggle, it is an argument against a system based on hierarchy, oppression, exploitation and the denial of freedom.

To sum up, in many ways, social struggle is the inner dynamic of the system, and its most basic contradiction: while capitalism tries to turn the majority of people into commodities (namely, bearers of labour power), it also has to deal with the human responses to this process of objectification (namely, the class struggle). However, it does not follow that cutting wages will solve a crisis — far from it, for, as we argue in section C.9.1, cutting wages will deepen any crisis, making things worse before they get better. Nor does it follow that, if social struggle were eliminated, capitalism would work fine. After all, if we assume that labour power is a commodity like any other, its price will rise as demand increases relative to supply (which will either produce inflation or a profits squeeze, probably both). Therefore, even without the social struggle which accompanies the fact that labour power cannot be separated from the individuals who sell it, capitalism would still be faced with the fact that only surplus labour (unemployment) ensures the creation of adequate amounts of surplus value.

Moreover, even assuming that individuals can be totally happy in a capitalist economy, willing to sell their freedom and creativity for a little more money, putting up, unquestioningly, with every demand and whim of their bosses (and so negating their own personality and individuality in the process), capitalism does have "objective" pressures limiting its development. So while social struggle, as argued above, can have a decisive effect on the health of the capitalist economy, it is not the only problem the system faces. This is because there are objective pressures within the system beyond and above the authoritarian social relations it produces and the resistance to them. These pressures are discussed next, in sections C.7.2 and C.7.3.

C.7.2 What role does the market play in the business cycle?

A major problem with capitalism is the working of the capitalist market itself. For the supporters of "free market" capitalism, the market provides all the necessary information required to make investment and production decisions. This means that a rise or fall in the price of a commodity

acts as a signal to everyone in the market, who then respond to that signal. These responses will be co-ordinated by the market, resulting in a healthy economy.

This perspective is expressed well by right-liberal, Frederick von Hayek in his *"The Uses of Knowledge in Society"* (reprinted in **Individualism and Economic Order**). Using the example of the tin market, he defends capitalism against central planning on its ability to handle the division of knowledge within society and its dynamic use of this dispersed knowledge when demand or supply changes. *"Assume,"* he argues, *"that somewhere in the world a new opportunity for the use of some raw material, say tin, has arisen, or that one of the sources of supply of tin has been eliminated. It does not matter for our purpose and it is very significant that it does not matter which of these two causes has made tin more scarce. All that the users of tin need to know is that some of the tin they used to consume is now more profitably employed elsewhere, and that in consequence they must economise tin. There is no need for the great majority of them even to know where the more urgent need has arisen, or in favour of what other uses they ought to husband the supply."* The subsequent rise in its price will result in reduced consumption as many users will economise on its use and so the information that tin has become (relatively) scarcer spreads throughout the economy and influences not only tin users, but also its substitutes and the substitutes of these substitutes and so on. This will move the economy towards equilibrium without the people informed knowing anything about the original causes for these changes. *"The whole acts as one market, not because any of its members survey the whole field, but because their limited individual fields of vision sufficiently overlap so that through many intermediaries the relevant information is communicated to all."* (*"The use of knowledge in society,"* pp. 519–30, **American Economic Review**, Vol. 35, No. 4, , p. 526)

While it can be granted that this account of the market is not without foundation, it is also clear that the price mechanism does not communicate all the relevant information needed by companies or individuals. This means that capitalism does not work in the way suggested in the economic textbooks. It is the workings of the price mechanism itself which leads to booms and slumps in economic activity and the resulting human and social costs they entail. This can be seen if we investigate the actual processes hidden behind the workings of the price mechanism.

The key problem with Hayek's account is that he does not discuss the **collective** results of the individual decisions he highlights. It is true that faced with a rise in the price of tin, individual firms will cut back on its use. Yet there is no reason to suppose that the net result of these actions will bring the demand and supply of tin back to equilibrium. In fact, it is just as likely that the reduction in demand for tin is such that its producers face falling sales and so cut back production even more. Similarly, a rising demand for tin could easily result in all tin producers increasing supply so much as to produce a glut on the market. Proudhon described this process well in the 1840s:

> *"A peasant who has harvested twenty sacks of wheat, which he with his family proposes to consume, deems himself twice as rich as if he had harvested only ten; likewise a housewife who has spun fifty yards of linen believes that she is twice as rich as if she had spun but twenty-five. Relatively to the household, both are right; looked at in their external relations, they may be utterly mistaken. If the crop of wheat is double throughout the whole country, twenty sacks will sell for less than ten would have sold for if it had been but half as great; so, under similar circumstances, fifty yards of linen will be worth less than twenty-five: so that value decreases as the production of utility*

increases, and a producer may arrive at poverty by continually enriching himself." [**The System of Economical Contradictions**, pp. 77–78]

He argued that this occurred due to the *"contradiction"* of *"the double character of value"* (i.e. between value in use and value in exchange). [**Op. Cit.**, p. 78]

As John O'Neill argues (basing himself on Marx rather than Proudhon), when producers *"make plans concerning future production, they are planning not with respect of demand at the present moment ... but with respect to expected demand at some future moment ... when their products reach the market."* The price mechanism provides information that indicates the relationship between supply and demand **now** and while this information **is** relevant to producers plans, it is not **all** the information that is relevant or is required by those involved. It cannot provide information which will allow producers to predict demand later. *"A major component of the information required for such a prediction is that of the plans of other producers which respond to that demand. This is information that the market, as a competitive system, fails to distribute."* It is this *"informational restriction"* which is one of the sources of why there is a business cycle. This is because each producer *"responds to the same signal the change in price. However, each agent acts independently of the response of other producers and consumers."* The result is *"an overproduction of goods in relation to effective demand for them. Goods cannot be sold. There is a realisation crisis: producers cannot realise the value of their products. Given this overproduction, demand falls against supply. There is a slump. This eventually leads to a rise in demand against supply, production expends leading to another boom, and so on."* [**The Market**, pp. 134–5]

This information cannot be supplied due to competition. Simply put, if A and B are in competition, if A informs B of her activities and B does not reciprocate, then B is in a position to compete more effectively than A. Hence communication within the market is discouraged and each production unit is isolated from the rest. In other words, each person or company responds to the same signal (the change in price) but each acts independently of the response of other producers and consumers. The result is often a slump in the market, causing unemployment and economic disruption. Thus the market *"blocks the communication of information and fails to co-ordinate plans for economic action."* [**Op. Cit.**, p. 137]

This, it should be noted, is not a problem of people making a series of unrelated mistakes. *"Rather, it is that the market imparts the same information to affected agents, and this information is such that the rational strategy for all agents is to expand production or contract consumption, while it is not rational for all agents to act in this manner collectively."* In other words, the information the market provides is not sufficient for rational decision making and naturally results in disproportionalities in the market. Thus the price mechanism actively encourages *"the suppression of the mutual exchange of information concerning planned responses"* to current prices and this *"leads to over production."* So it is **not** a question of inaccurate prediction (although given that the future is unknowable and unpredictable this is a factor). Instead, it is *"one of individually rational responses to the same signal resulting in collectively irrational responses."* [**Op. Cit.**, p. 135 and p. 197]

This means that prices in themselves do not provide adequate knowledge for rational decision making as they are not at their long-run equilibrium levels. This causes a problem for Hayek's account of the market process as he stresses that actual prices never are at this (purely theoretical) price. As we discuss in section C.8, Hayek's own theory of the business cycle shows the negative impact which the 'misinformation' conveyed by disequilibrium prices can cause on the economy.

In that analysis, the disequilibrium price that leads to very substantial macroeconomic distortions is the rate of interest but, obviously, the same argument applies for commodity prices as well. This means that the market process, based on the reactions of profit-maximising firms to the same (unsustainable) prices for a commodity can generating mal-investment and subsequent market distributions on a wide level. Simply put, the price mechanism may carry information regarding the terms on which various commodities may currently be exchanged but it does not follow that a knowledge of these exchange ratios enable agents to calculate the future profitability of their production decisions (social usefulness is, of course, of no concern).

It is this irrationality and lack of information which feed into the business cycle. *"These local booms and slumps in production ... are then amplified into general crises precisely through the interconnections in the market that Hayek highlights in his example of the production and consumption of tin."* [O'Neill, **Op. Cit.**, p. 136] The negative effects of over-production in one market will be passed on to those which supply it with goods in the shape of decreased demand. These firms will now experience relative over-production which, in turn, will affect their suppliers. Whatever benefits may accrue to consumers of these goods in the shape of lower prices will be reduced as demand for their products drops as more and more workers are made unemployed or their wages are cut (which means that **real** wages remain constant as prices are falling alongside money wages — see section C.9.1 for details). Firms will also seek to hoard money, leading to yet more falling demand for goods and so unemployed labour is joined by under-utilisation of capacity.

Which brings us to the issue of money and its role in the business cycle. "Free market" capitalist economics is based on Say's Law. This is the notion that supply creates its own demand and so general gluts of goods and mass unemployment are impossible. As we noted in section C.1.5, this vision of economic activity is only suited to precapitalist economies or ones without money for money is considered as nothing more than an aid to barter, a medium of exchange only. It ignores the fact that money is a store of value and, as such, can be held onto precisely for that reason. This means that Say's Law is invalid as its unity between sale and purchase can be disturbed so causing the chain of contractual relationships to be broken. Simply put, someone who sells a product need not spend their income on another product at the same time. Unlike barter, the sale of one commodity is an act distinct from the purchase of another. Money, in other words, *"brings in time"* into the market process and *"the possibility of hoarding."* Time *"because a good is usually sold some time after it is made, running the risk that its sale price could fall below the cost of production, wiping out the capitalist's expected profit."* Hoarding *"because income need not be spent but may merely be kept idle."* [Doug Henwood, **Wall Street**, p. 232]

This means that over-production becomes possible and bankruptcies and unemployment can become widespread and so a slump can start. *"As any Marxian or Keynesian crisis theorist can tell you,"* Henwood summarises, *"the separation of purchase and sale is one of the great flashpoints of capitalism; an expected sale that goes unmade can drive a capitalist under, and can unravel a chain of financial commitments. Multiply that by a thousand or two and you have great potential mischief."* Thus *"the presence of money as a store of value, the possibility of keeping wealth in financial form rather than spending it promptly on commodities, always introduces the possibility of crisis."* That is, the possibility *"of an excess of capital lacking a profitable investment outlet, and an excess of goods that couldn't be sold profitably on the open market."* [**Op. Cit.**, pp. 93–4 and p. 94]

So when the market prices of goods fall far below their cost prices then production and investment stagnate. This is because profits can only be transformed into capital at a loss and so it lies idle in banks. Thus unemployed labour is associated with unemployed capital, i.e. excess money. This desire for capitalists to increase their demand for storing their wealth in money rather than investing it is driven by the rate of profit in the economy. Bad times result in increased hoarding and so a general fall in aggregate demand. Lowering interest rates will not provoke a demand for such money hoards, as claimed in "free market" capitalist theory, as few capitalists will seek to invest in a recession as expected profits will be lower than the interest rate.

However, it should be stressed that disproportionalities of production between industries and the separation of production and sale do not **per se** result in a general crisis. If that were the case the capitalism would be in a constant state of crisis as markets are rarely in a state of equilibrium and sales do not instantly result in purchases. This means that market dislocations need not automatically produce a general crisis in the economy as the problems associated with localised slumps can be handled when the overall conditions within an economy are good. It simply provides the **potential** for crisis and a means of transmitting and generalising local slumps when the overall economic situation is weak. In other words, it is an accumulative process in which small changes can build up on each other until the pressures they exert become unstoppable. The key thing to remember is that capitalism is an inherently dynamic system which consists of different aspects which develop unevenly (i.e., disproportionately). Production, credit, finance markets, circulation of money and goods, investment, wages, profits as well as specific markets get out of step. An economic crisis occurs when this process gets too far out of line.

This process also applies to investment as well. So far, we have assumed that firms adjust to price changes without seeking new investment. This is, of course, unlikely to always be the case. As we discuss in section C.8, this analysis of the market providing incomplete information also applies to the market for credit and other forms of external financing. This results in a situation where the problems associated with over-production can be amplified by over-investment. This means that the problems associated with markets creating disproportionalities are combined with the problems resulting from increased productivity and capital investment which are discussed in the next section.

C.7.3 What role does investment play in the business cycle?

Other problems for capitalism arise due to the increases in productivity which occur as a result of capital investment or new working practices which aim to increase short term profits for the company. The need to maximise profits results in more and more investment in order to improve the productivity of the workforce (i.e. to increase the amount of surplus value produced). A rise in productivity, however, means that whatever profit is produced is spread over an increasing number of commodities. This profit still needs to be realised on the market but this may prove difficult as capitalists produce not for existing markets but for expected ones. As individual firms cannot predict what their competitors will do, it is rational for them to try to maximise their market share by increasing production (by increasing investment). As the market does not provide the necessary information to co-ordinate their actions, this leads to supply exceeding demand and difficulties realising sufficient profits. In other words, a period of over-production occurs due to the over-accumulation of capital.

Due to the increased investment in the means of production, variable capital (labour) uses a larger and larger constant capital (the means of production). As labour is the source of surplus value, this means that in the short term profits may be increased by the new investment, i.e. workers must produce more, in relative terms, than before so reducing a firms production costs for the commodities or services it produces. This allows increased profits to be realised at the current market price (which reflects the old costs of production). Exploitation of labour must increase in order for the return on total (i.e. constant **and** variable) capital to increase or, at worse, remain constant. However, while this is rational for one company, it is not rational when all firms do it (which they must in order to remain in business). As investment increases, the surplus value workers have to produce must increase faster. As long as the rate of exploitation produced by the new investments is high enough to counteract the increase in constant capital and keep the profit rate from falling, then the boom will continue. If, however, the mass of possible profits in the economy is too small compared to the total capital invested (both in means of production, fixed, and labour, variable) then the possibility exists for a general fall in the rate of profit (the ratio of profit to investment in capital and labour). Unless exploitation increases sufficiently, already produced surplus value earmarked for the expansion of capital may not be realised on the market (i.e. goods may not be sold). If this happens, then the surplus value will remain in its money form, thus failing to act as capital. In other words, accumulation will grind to a halt and a slump will start.

When this happens, over-investment has occurred. No new investments are made, goods cannot be sold resulting in a general reduction of production and so increased unemployment as companies fire workers or go out of business. This removes more and more constant capital from the economy, increasing unemployment which forces those with jobs to work harder, for longer so allowing the mass of profits produced to be increased, resulting (eventually) in an increase in the rate of profit. Once profit rates are high enough, capitalists have the incentive to make new investments and slump turns to boom. As we discuss in section C.8, the notion that investment will be helped by lowing interest rates in a slump fails to understand that *"the rate of investment decisions is an increasing function of the difference between the prospective rate of profit and the rate of interest."* [Michal Kalecki, quoted by Malcolm Sawyer, **The Economics of Michal Kalecki**, p. 98] If profit rates are depressed due to over-investment then even the lowest interest rates will have little effect. In other words, expectations of capitalists and investors are a key issue and these are shaped by the general state of the economy.

It could be argued that such an analysis is flawed as no company would invest in machinery if it would reduce its rate of profit. But such an objection is flawed, simply because (as we noted) such investment is perfectly sensible (indeed, a necessity) for a specific firm. By investing they gain (potentially) an edge in the market and so increased profits for a period. This forces their competitors to act likewise and **they** invest in new technology. Unfortunately, while this is individually sensible, collectively it is not as the net result of these individual acts is over-investment in the economy as a whole. Moreover, unlike the model of perfect competition, in a real economy capitalists have no way of knowing the future, and so the results of their own actions never mind the actions of their competitors. Thus over-accumulation of capital is the natural result of competition simply because even if we assume that the bosses of the firms are individually rational they are driven to make decisions which are collectively irrational to remain in business. The future is unknowable and so the capitalist has no idea what the net result of their decisions will be nor the state of the economy when their investment decisions are finally

active. Both of these factors ensure that firms act as they do, investing in machinery which, in the end, will result in a crisis of over-accumulation.

The logic is simple and is rooted in the concept of *"the fallacy of composition."* To use an analogy, if you attend a rock concert and take a box to stand on then you will get a better view. If others do the same, you will be in exactly the same position as before. Worse, even, as it may be easier to loose your balance and come crashing down in a heap (and, perhaps, bringing others with you). This analogy shows why introducing new machinery, which is profitable for an individual company, has such a potentially negative effect on the economy as a whole. While it is profitable for an individual company in the short term, its overall effect means that it is **not** profitable for all in the long run. As Kalecki put it, the *"tragedy of investment is that it causes crisis because it is useful. Doubtless many people will consider this theory paradoxical. But it is not the theory which is paradoxical, but its subject — the capitalist economy."* [quoted by Sawyer **Op. Cit.**, p. 156] This paradox applies to the issue of wages as well:

> *"What a system is that which leads a business man to think with delight that society will soon be able to dispense with men! **Machinery has delivered capital from the oppression of labour**! ... Fool! though the workmen cost you something, they are your customers: what will you do with your products, when, driven away by you, they shall consume them no longer? Thus machinery, after crushing the workmen, is not slow in dealing employers a counter-blow; for, if production excludes consumption, it is soon obliged to stop itself.*
>
> *[...]*
>
> *"These failures were caused by over-production, — that is, by an inadequate market, or the distress of the people. What a pity that machinery cannot also deliver capital from the oppression of consumers! What a misfortune that machines do not buy the fabrics which they weave! The ideal society will be reached when commerce, agriculture, and manufactures can proceed without a man upon earth!"* [Proudhon, **System of Economical Contradictions**, pp. 189–90]

So, if the profit rate falls to a level that does not allow capital formation to continue, a slump sets in. This general slump means that the rate of profit over the whole economy falls due to excessive investment. When one industry over-invests and over-produces, it cuts back production, introduces cost-cutting measures, fires workers and so on in order to try and realise more profits. These may spread if the overall economic is fragile as the reduced demand for industries that supplied the affected industry impacts on the **general** demand (via a fall in inputs as well as rising unemployment). The related industries now face over-production themselves and the natural response to the information supplied by the market is for individual companies to reduce production, fire workers, etc., which again leads to declining demand. This makes it even harder to realise profit on the market and leads to more cost cutting, deepening the crisis. While individually this is rational, collectively it is not and so soon all industries face the same problem. A local slump is propagated through the economy.

Cycles of prosperity, followed by over-production and then depression are the natural result of capitalism. Over-production is the result of over-accumulation, and over-accumulation occurs because of the need to maximise short-term profits in order to stay in business. So while the crisis appears as a glut of commodities on the market, as there are more commodities in circulation

that can be purchased by the aggregate demand (*"Property sells products to the labourer for more than it pays him for them,"* to use Proudhon's words), its roots are deeper. It lies in the nature of capitalist production itself.

"Over-production," we should point out, exists only from the viewpoint of capital, **not** of the working class:

> *"What economists call over-production is but a production that is above the purchasing power of the worker... this sort of over-production remains fatally characteristic of the present capitalist production, because workers cannot buy with their salaries what they have produced and at the same time copiously nourish the swarm of idlers who live upon their work."* [Kropotkin, **Op. Cit.**, pp. 127–128]

In other words, over-production and under-consumption reciprocally imply each other. There is no over production except in regard to a given level of solvent demand. There is no deficiency in demand except in relation to a given level of production. The goods "over-produced" may be required by consumers, but the market price is too low to generate a profit and so existing goods must be destroyed and production must be reduced in order to artificially increase it. So, for example, the sight of food and other products being destroyed while people are in need of them is a common one in depression years.

So, while the crisis appears on the market as a *"commodity glut"* (i.e. as a reduction in effective demand) and is propagated through the economy by the price mechanism, its roots lie in production. Until such time as profit levels stabilise at an acceptable level, thus allowing renewed capital expansion, the slump will continue. The social costs of the wage cutting this requires is yet another "externality," to be bothered with only if they threaten capitalist power and wealth.

There are means, of course, by which capitalism can postpone (but not stop) a general crisis developing. The extension of credit by banks to both investors and consumers is the traditional, and most common, way. Imperialism, by which markets are increased and profits are extracted from less developed countries and used to boost the imperialist countries profits, is another method (*"The workman being unable to purchase with their wages the riches they are producing, industry must search for markets elsewhere."* [Kropotkin, **Op. Cit.**, p. 55]). Another is state intervention in the economy (such as minimum wages, the incorporation of trades unions into the system, arms production, manipulating interest rates to maintain a *"natural"* rate of unemployment to keep workers on their toes, etc.). Another is state spending to increase aggregate demand, which can increase consumption and so lessen the dangers of over-production. However, these have (objective and subjective) limits and can never succeed in stopping depressions from occurring as they ultimately flow from capitalist production and the need to make profits.

A classic example of these "objective" pressures on capitalism is the "Roaring Twenties" that preceded the Great Depression of the 1930s. After the 1921 slump, there was a rapid rise in investment in the USA with investment nearly doubling between 1919 and 1927. Because of this investment in capital equipment, manufacturing production grew by 8.0% per annum between 1919 and 1929 and labour productivity grew by an annual rate of 5.6% (this is including the slump of 1921–22). With costs falling and prices comparatively stable, profits increased which in turn lead to high levels of capital investment (the production of capital goods increased at an average annual rate of 6.4%). [William Lazonick, **Competitive Advantage on the Shop Floor**, p. 241] The optimism felt by business as a result of higher profits was reflected in the wealthy sections

of America. In the 1920s prosperity was concentrated at the top. One-tenth of the top 1% of families received as much income as the bottom 42% and only 2.3% of the population enjoyed incomes over $100,00 (60% of families made less than $2,000 a year, 42% less than $1,000). While the richest 1% owned 40% of the nation's wealth by 1929 (and the number of people claiming half-million dollar incomes rose from 156 in 1920 to 1,489 in 1929) the bottom 93% of the population experienced a 4% drop in real disposable per-capita income between 1923 and 1929. However, in spite (or, perhaps, because) of this, US capitalism was booming and belief in capitalism was at its peak.

But by 1929 all this had changed with the stock market crash — followed by a deep depression. What was its cause? Given our analysis presented in section C.7.1, it may have been expected to have been caused by the "boom" decreasing unemployment, so increased working class power and leading to a profits squeeze but this was not the case. This slump was **not** the result of working class resistance, indeed the 1920s were marked by a labour market which was continuously favourable to employers. This was for two reasons. Firstly, the "Palmer Raids" at the end of the 1910s saw the state root out radicals in the US labour movement and wider society. Secondly, the deep depression of 1920–21 (during which national unemployment rates averaged over 9%, the highest level over any two-year period since the 1890s) changed the labour market from a seller's to a buyer's market. This allowed the bosses to apply what became to be known as *"the American Plan,"* namely firing workers who belonged to a union and forcing them to sign *"yellow-dog"* contracts (promises not to join a union) to gain or keep their jobs. Reinforcing this was the use of legal injunctions by employers against work protests and the use of industrial spies to identify and sack union members. This class war from above made labour weak, which is reflected in the influence and size of unions falling across the country. As union membership declined, the number of strilkes reached their lowest level since the early 1880s, falling to just over 700 per year between 1927 to 1930 (compared to 3,500 per year between 1916 and 1921). [Lazonick, **Op. Cit.**, pp. 249–251] The key thing to remember is that the impact of unemployment is not limited to the current year's figures. High unemployment rates have a sustained impact on the organisations, morale, and bargaining power of workers even if unemployment rates fall afterwards. This was the situation in the 1920s, with workers remembering the two years of record unemployment rates of 1921 and 1922 (in fact, the unemployment rate for manufacturing workers was close to the overall rate in 1933).

During the post-1922 boom, this position did not change. The national 3.3% unemployment rate hid the fact that non-farm unemployment averaged 5.5% between 1923 and 1929. Across all industries, the growth of manufacturing output did not increase the demand for labour. Between 1919 and 1929, employment of production workers fell by 1% and non-production employment fell by about 6% (during the 1923 to 29 boom, production employment only increased by 2%, and non-production employment remained constant). This was due to the introduction of labour saving machinery and the rise in the capital stock. In addition, the numbers seeking work were boosted by new immigrants and the unwillingness of existing ones to return home due to difficulties returning to America. Lastly, the greatest source of industrial labour supply came from the American farm — there was a flood of rural workers into the urban labour market over the 1920s. [Lazonick, **Op. Cit.**, pp. 252–5] It is interesting to note that even **with** a labour market favourable to employers for over 5 years, unemployment was still high. This suggests that the neo-classical "argument" (assertion would be more correct) that unemployment within capital-

ism is caused by strong unions or high real wages is somewhat flawed to say the least (see section C.9).

Facing high unemployment, workers' quit rates fell due to fear of loosing jobs (particularly those workers with relatively higher wages). This, combined with the steady decline of the unions and the very low number of strikes, indicates that labour was weak. This is reflected in the share of total manufacturing income going to wages fell from 57.5% in 1923–24 to 52.6% in 1928/29 (between 1920 and 1929, it fell by 5.7%). Productivity increased from an annual rate of 1.2% between 1909 and 1919 to 5.6% between 1919 and 1929. This increase in productivity was reflected in the fact that over the post-1922 boom, the share of manufacturing income paid in salaries rose from 17% to 18.3% and the share to capital rose from 25.5% to 29.1%. Managerial salaries rose by 21.9% and firm surplus by 62.6% between 1920 and 1929. [Lazonick, **Op. Cit.**, pp. 241–2] Any notion that the 1929 crash was the result of a rebellious working class is not applicable.

The key to understanding what happened lies in the contradictory nature of capitalist production. The "boom" conditions were the result of capital investment, which increased productivity thereby reducing costs and increasing profits. The large and increasing investment in capital goods was the principal device by which profits were spent. In addition, those sectors of the economy marked by big business (i.e. oligopoly, a market dominated by a few firms) placed pressures upon the more competitive ones. As big business, as usual, received a higher share of profits due to their market position (see section C.5), this lead to many firms in the more competitive sectors of the economy facing a profitability crisis during the 1920s.

The increase in investment, while directly squeezing profits in the more competitive sectors of the economy, also eventually caused the rate of profit to stagnate, and then fall, over the economy as a whole. While the mass of available profits in the economy grew, it eventually became too small compared to the total capital invested. Moreover, with the fall in the share of income going to labour and the rise of inequality, aggregate demand for goods could not keep up with production leading to unsold goods (which is another way of expressing the process of over-investment leading to over-production, as over-production implies under-consumption and vice versa). As expected returns (profitability) on investments hesitated, a decline in investment demand occurred and so a slump began (rising predominantly from the capital stock rising faster than profits). Investment flattened out in 1928 and turned down in 1929. With the stagnation in investment, a great speculative orgy occurred in 1928 and 1929 in an attempt to enhance profitability. This unsurprisingly failed and in October 1929 the stock market crashed, paving the way for the Great Depression of the 1930s.

This process of over-investment relative to consumption is based on rising labour productivity combined with stagnant wages or relative slow wage growth. This implies inadequate workers' consumption but rising profit rates. This is possible as long as aggregate demand remains sufficient, which it can as long as high profit rates stimulate investment (i.e., money is not saved or sufficient credit is generated to ensure that investment spending does not lag consumption). Investment creates new capacity and that implies the need for further increases in investment, capitalist luxury consumption, and credit-based consumption to maintain aggregate demand. This profit-led growth is hard to sustain as high profits rates are difficult to maintain due to low working class income as both investment and capitalist luxury consumption are more unstable. Investment is more volatile than consumption, so the average degree of instability increases which, in turn, means that the probability of a slump rises. Further, this type of growth creates

imbalances between sectors of the economy as firms rush to invest in profitable sections leading to relative over-production and over-investment in those areas (see last section). With the rise in unstable forms of demand, an economy becomes increasingly fragile and so increasingly vulnerable to "shocks." The stock market crash of 1929 was such a shock and the resulting panic and reduced demand for luxury goods and investment that it produced exposed the underlying weakness of the economy. After the Crash, restrictive fiscal and monetary policies and falling demand interacted to break this unstable prosperity and to accelerate the slump. This was reinforced by wage-cut induced under-consumption as well as debt deflation making over-investment worse in relation to over demand within the economy. So US prosperity was fragile long before late 1929, due to the process of over-investment relative to demand which lead the economy to be reliant on unstable forms of demand such as luxury consumption and investment.

The crash of 1929 indicates the "objective" limits of capitalism. Even with a very weak position of labour crisis still occurred and prosperity turned to "hard times." In contradiction to neo-classical economic theory, the events of the 1920s indicate that even if the capitalist assumption that labour is a commodity like all others **is** approximated in real life, capitalism is still subject to crisis (ironically, a militant union movement in the 1920s would have postponed crisis by shifting income from capital to labour, increasing aggregate demand, reducing investment and supporting the more competitive sectors of the economy!). Therefore, any neo-classical "blame labour" arguments for crisis (which were so popular in the 1930s and 1970s) only tells half the story (if that). Even if workers **do** act in a servile way to capitalist authority, capitalism will still be marked by boom and bust (as shown by the 1920s and 1980/90s).

To conclude, capitalism will suffer from a boom-and-bust cycle due to the above-mentioned objective pressures on profit production, even if we ignore the subjective revolt against authority by workers, explained earlier. In other words, even if the capitalist assumption that workers are not human beings but only "variable capital" **were** true, it would not mean that capitalism would be a crisis free system. However, for most anarchists, such a discussion is somewhat academic for human beings are not commodities, the labour "market" is not like the iron market, and the subjective revolt against capitalist domination will exist as long as capitalism does.

C.8 Is state control of money the cause of the business cycle?

As explained in the last section, capitalism will suffer from a boom-and-bust cycle due to objective pressures on profit production even if we ignore the subjective revolt against authority by working class people. It is this two-way pressure on profit rates, the subjective and objective, which causes the business cycle and such economic problems as *"stagflation."* However, for supporters of the free market, this conclusion is unacceptable and so they usually try to explain the business cycle in terms of **external** influences rather than those generated by the way capitalism works. Most pro-"free market" capitalists blame government intervention in the market, particularly state control over money, as the source of the business cycle. This analysis is defective, as will be shown below.

First it should be noted that many supporters of capitalism ignore the "subjective" pressures on capitalism that we discussed in section C.7.1. In addition, the problems associated with rising capital investment (as highlighted in section C.7.3) are also usually ignored, because they usually consider capital to be "productive" and so cannot see how its use could result in crises. This leaves them with the problems associated with the price mechanism, as discussed in section C.7.2. It is here, in the market for credit and money, that the role of the state comes into play, distorting the natural workings of the market and causing the ups and downs of business.

In pre-Keynesian bourgeois economics, the reason why Say's Law is applicable in a money economy is the interest rate. As we discussed in section C.2.6, this is claimed to reflect the *"time preference"* of individuals. While it is possible for sales not to be turned into purchases in the market, the money involved is not withdrawn from the economy. Rather, it is saved and made available to investors. The interest rate is the means by which savings and investment come into line. This means that Say's Law is maintained as savings are used to purchase capital goods and so demand and supply match. As long as interest rates are working as they should, the possibility of a general crisis is impossible. The problem is that the credit system does not work exactly as it claimed and this lies with the banks who introduce fractional reserve banking. This allows them to loan out more money than they have in savings in order to increase their profits. This lowers the rate of interest below its *"natural"* (or equilibrium) rate and thus firms get price signals which do not reflect the wishes of consumers for future goods rather than current ones. This causes over-investment and, ultimately, a crisis. This is because, eventually, interest rates must rise and projects which were profitable at the lower rate of interest will no longer be so. The moral of the theory is that if the actual rate of interest equalled the *"natural"* rate then a situation of *"neutral"* money would be achieved and so misdirections of production would be avoided, so ending the business cycle.

As far as capitalist economics had a theory of the business cycle, this was it and it was the dominant ideological position within the profession until publication of Keynes' **The General Theory of Employment, Interest and Money** in 1936. Politically, it was very useful as it

recommended that the state should do nothing during the crisis and this was the preferred position of right-wing governments in America and Britain. It was forcefully argued by "Austrian" economist Frederick von Hayek during the early 1930s, who was repeating the earlier arguments of his mentor Ludwig von Mises and has been repeated by their followers ever since. Yet, for some strange reason, they almost always fail to mention that Hayek was roundly defeated in the theoretical battles of the time by Keynesians. In fact, his former students (including John Hicks and Nicholas Kaldor) showed how Hayek's theory was flawed and he gave up business cycle research in the early 1940s for other work. Kaldor's first critique (*"Capital Intensity and the Trade Cycle"*), for example, resulted in Hayek completed rewriting his theory while Kaldor's second article (*"Professor Hayek and the Concertina-effect"*) showed that Hayek's Ricardo Effect was only possible under some very special circumstances and so highly unlikely. [Kaldor, **Essays on Economic Stability and Growth**, pp. 120–147 and pp. 148–176]

Kaldor's critique was combined with an earlier critique by Piero Sraffa who noted that Hayek's desire for *"neutral"* money was simply impossible in any real capitalist economy for *"a state of things in which money is 'neutral' is identical with a state in which there is no money at all."* Hayek *"completely ignored"* the fact that *"money is not only the medium of exchange, but also a store of value"* which *"amounts to assuming away the very object of the inquiry."* Sraffa also noted that the starting point of Hayek's theory was flawed: *"An essential confusion ... is the belief that the divergence of rates is a characteristic of a money economy ... If money did not exist, and loans were made in terms of all sorts of commodities, there would be a single rate which satisfies the conditions of equilibrium, but there might be at any moment as many 'natural' rates of interest as there are commodities, though they would not be 'equilibrium' rates. The 'arbitrary' action of the banks is by no means a necessary condition for the divergence; if loans were made in wheat and farmers (or for that matter the weather) 'arbitrarily changed' the quantity of wheat produced, the actual rate of interes on loans in terms of wheat would diverge from the rate on other commodities and there would be no single equilibrium rate."* [*"Dr. Hayek on Money and Capital,"* pp. 42–53, **The Economic Journal**, vol. 42, no. 165, p. 42, pp. 43–4 and p. 49] Hayek admitted that this was a possibility, to which Sraffa replied:

> *"only under conditions of equilibrium would there be a single rate, and that when saving was in progress there would be at any one moment be many 'natural' rates, possibly as many as there are commodities; so that it would be not merely difficult in practice, but altogether inconceivable, that the money rate would be equal to 'the' natural rate ... Dr. Hayek now acknowledges the multiplicity of the 'natural' rates, but he has nothing more to say on this specific point than that they 'all would be equilibrium rates.' The only meaning (if it be a meaning) I can attach to this is that his maxim of policy now requires that the money rate should be equal to all these divergent natural rates."* [*"A Rejoinder,"* pp. 249–251, **Op. Cit.** Vol. 42, No. 166, p. 251]

Then there was the practical suggestions that flowed from the analysis, namely do nothing. It also implied that the best thing to do in a recession or depression is not to spend, but rather to save as this will bring the savings and loans back into the equilibrium position. Economist R. F. Kahn recounted when Hayek presented his theory at a seminar in Cambridge University. His presentation was followed by silence. Then Kahn asked the obvious question: *"Is it your view that if I went out tomorrow and bought a new overcoat, that would increase unemployment?"* All

that Hayek could offer in reply was the unconvincing claim that to show why would require a complicated mathematical argument. The notion that reducing consumption in a depression was the best thing to do convinced few people and the impact of such saving should be obvious, namely a collapse in demand for goods and services. Any savings would, in the circumstances of a recession, be unlikely to be used for investing. After all, which company would start increasing its capital stock facing a fall in demand and which capitalist would venture to create a new company during a depression? Unsurprisingly, few economists thought that advocating a deflationary policy in the midst of the most severe economic crisis in history made much sense. It may have been economic orthodoxy but making the depression worse in order to make things better would have ensured either the victory of fascism or some-sort of socialist revolution.

Given these practical considerations and the devastating critiques inflicted upon it, Keynesian theory became the dominant theme in economics (particularly once it had been lobotomised of any ideas which threatened neo-classical supremacy — see section C.8.1). This has not, as noted, stopped Hayek's followers repeating his theory to this day (nor has its roots in equilibrium theory bothered them — see section C.1.6). Bearing this in mind, it is useful to discuss this theory because it reflects the pre-Keynesian orthodoxy although we must stress that our discussion of "Austrian" economics here should not be taken as suggesting that they are a significant school of thought or that their influence is large. Far from it — they still remain on the sidelines of economics where they were pushed after von Hayek's defeat in the 1930s. We use them simply because they are the only school of thought which still subscribes fully to the pre-Keynesian position. Most modern neo-classical economists pay at least lip-service to Keynes.

Take, for example, "Austrian" economist W. Duncan Reekie's argument that the business cycle *"is generated by monetary expansion and contraction ... When new money is printed it appears as if the supply of savings has increased. Interest rates fall and businessmen are misled into borrowing additional funds to finance extra investment activity."* This would be of *"no consequence"* if it had been the outcome of genuine saving *"but the change was government induced ... Capital goods industries will find their expansion has been in error and malinvestments have been incurred"* and so there has been *"wasteful mis-investment due to government interference with the market."* [**Markets, Entrepreneurs and Liberty**, pp. 68–9]

Yet the government does **not** force banks to make excessive loans and this is the first, and most obvious, fallacy of argument. After all, what Reekie is actually complaining about when he argues that *"state action"* creates the business cycle by creating excess money is that the state **allows** bankers to meet the demand for credit by creating it. This makes sense, for how could the state force bankers to expand credit by loaning more money than they have savings? This is implicitly admitted when Reekie argues that *"[o]nce fractional reserve banking is introduced, however, the supply of money substitutes will include fiduciary media. The ingenuity of bankers, other financial intermediaries and the endorsement and* ***guaranteeing of their activities by governments and central banks*** *has ensured that the quantity of fiat money is immense."* [**Op. Cit.**, p. 73] As we will discuss in detail below what is termed *"credit money"* (created by banks) is an essential part of capitalism and would exist without a system of central banks. This is because money is created from within the system, in response to the needs of capitalists. In a word, the money supply is endogenous.

The second fallacy of this theory of the business cycle lies with the assumption that the information provided by the interest rate itself is sufficient in itself to ensure rational investment decisions, it that provides companies and individuals with accurate information about how price

changes will affect future trends in production. Specifically, the claim is that changes in interest rates (i.e. changes in the demand and supply of credit) indirectly inform companies of the responses of their competitors. As John O'Neill argues, the argument assumes *"that information about the panned responses of producers in competition is indirectly distributed by changes in interest rates: the planned increase in production by separate producers is reflected in an increased demand for credit, and hence a rise in interest rates."* [**The Market**, p. 135]

For example, if the price of tin rises, this will lead to an expansion in investment in the tin industry to reap the higher profits this implies. This would lead to a rise in interest rates as more credit is demanded. This rise in interest rates lowers anticipated profits and dampens the expansion. The expansion of credit stops this process by distorting the interest rate and so stops it performing its economic function. This results in overproduction as interest rates do not reflect **real** savings and so capitalists over-invest in new capital, capital which appears profitable only because the interest rate is artificially low. When the rate inevitably adjusts upwards towards its "natural" value, the invested capital becomes unprofitable and so over-investment appears. Hence, according to the argument, by eliminating state control of money these negative effects of capitalism would disappear as the credit system, if working correctly, will communicate all the relevant information required by capitalists.

"However," argues O'Neil, *"this argument is flawed. It is not clear that the relevant information is communicated by changes in interest rates."* This is because interest rates reflect the general aggregate demand for credit in an economy. However, the information which a **specific** company requires *"if the over-expansion in the production of some good is to be avoided is not the general level of demand for credit, but the level of demand amongst competitors."* It does not provide the relative demands in different industries (the parallels with Sraffa's critique should be obvious). *"An increase in the planned production of some good by a group of competitors will be reflected in a proportional change in interest rates only if it is assumed that the change in demand for credit by that group is identical with that found in the economy as a whole, i.e. if rates of change in the demand for credit are even throughout an economy. However, there is no reason to suppose such an assumption is true, given the different production cycles of different industries."* This will produce differing needs for credit (in both terms of amount and of intensity). *"Assuming uneven changes in the demand for credit"* between industries reflecting uneven changes in their requirements it is quite possible for over-investment (and so over-production) to occur *"even if the credit system is working 'satisfactorily'"* (i.e., as it should in theory. The credit system, therefore, *"does not communicate the relevant information"* and for this reason *"it is not the case that we must look to a departure from an ideal credit system to explain the business cycle."* [**Op. Cit.**, pp. 135–6]

Another underlying assumption in this argument is that the economy is close to equilibrium (a concept which "Austrian" economists claim to reject). After all, rising interest rates will cause debt-servicing to become harder even if it reflects the *"natural"* rate. Equally, it also suggests that both banks and firms are capable of seeing into the future. For even **if** the credit market is working as postulated in the theory it does not mean that firms and banks do not make mistakes nor experience unexpected market situations. In such circumstances, firms may find it impossible to repay loans, credit chains may start to break as more and more firms find themselves in economic difficulties. Just because actual interest rates somehow equal the natural rate does not make the future any more certain nor does it ensure that credit is invested wisely. Crucially, it does not ensure that credit is not used to inflate a bubble or add to over-investment in a specific sector of the economy. To assume otherwise suggests the firms and banks rarely make mistakes and

that the accumulative impact of all decisions move an economy always towards, and never away from, equilibrium. As Post-Keynesian Paul Davidson dryly noted, *"Austrian subjectivists cannot have it both ways — they cannot argue for the importance of time, uncertainty, and money, and simultaneously presume that plan or pattern co-ordination must exist and is waiting to be discovered."* [*"The economics of ignorance or the ignorance of economics?"*, pp. 467–87, **Critical Review**, vol. 3, no. 3–4, p. 468]

In other words, the notion that if the actual interest rate somehow equalled the *"natural"* one is not only rooted in equilibrium but also the neo-classical notion of perfect knowledge of current and future events — all of which "Austrian" economists are meant to reject. This can be seen when Murray Rothbard states that entrepreneurs *"are trained to forecast the market correctly; they only make mass errors when governmental or bank intervention distorts the 'signals' of the market."* He even attacks Joseph Schumpeter's crisis theory because, in effect, Schumpeter does not show how entrepreneurs cannot predict the future (*"There is no explanation offered on the lack of accurate forecasting ... why were not the difficulties expected and discounted?"*). [**America's Great Depression**, p. 48 and p. 70] Rothbard does not ponder why bankers, who are surely entrepreneurs as well, make **their** errors nor why the foresight of business people in an uncertain and complex economy seems to fail them in the face of repeated actions of banks (which they could, surely, have *"expected and discounted"*). This means that the argument concerning distortions of the interest rate does not, as such, explain the occurrence of over-investment (and so the business cycle). Therefore, it cannot be claimed that removing state interference in the market for money will also remove the business-cycle.

However, these arguments do have an element of truth in them. Expansion of credit above the *"natural"* level which equates it with savings can and does allow capital to expand further than it otherwise would and so **encourages** over-investment (i.e. it builds upon trends already present rather than **creating** them). While we have ignored the role of credit expansion in our comments above to stress that credit is not fundamental to the business cycle, it is useful to discuss this as it is an essential factor in real capitalist economies. Indeed, without it capitalist economies would not have grown as fast as they have. Credit is fundamental to capitalism and this is the last fallacy in the pre-Keynesian argument. In a real economy, it is the most important. Even assuming that the actual rate of interest **could** always equal the equilibrium rate and that it reflected the natural rate of all commodities and all industries, it would not matter as banks would always seek to make profits by extending credit and so artificially lower the actual interest rate during booms. To understand why, we need to explain the flaws in the main laissez-faire approaches to money.

There are three main approaches to the question of eliminating state control of money in "free market" capitalist economics — Monetarism, the 100% gold reserve limit for banks and what is often called "free banking." All three are associated with the right and all three are wrong. The first two are easy to dismiss. Monetarism has been tried and has failed spectacularly in the early 1980s. As it was a key aspect of the neo-liberal war on working class people at this time we will discuss its limitations as part of our account of this period in section C.8.3.

The second option, namely imposing a 100% gold reserve limit for banks is highly interventionist and so not remotely laissez-faire (why should the banking industry be subject to state regulation unlike the rest?). Its logic is simple, namely to ensure that banks do not make loans unless they have sufficient savings to cover them all. In other words, it seeks to abolish the credit cycle by abolishing credit by making banks keep 100% gold reserves against notes. This, in ef-

fect, abolishes banking as an industry. Simply put (and it seems strange to have to point this out to supporters of capitalism) banks seek to make a profit and do so by providing credit. This means that any capitalist system will be, fundamentally, one with credit money as banks will always seek to make a profit on the spread between loan and deposit rates. It is a necessity for the banking system and so non-fractional banking is simply not possible. The requirement that banks have enough cash on hand to meet all depositors demand amounts to the assertion that banks do not lend any money. A 100% reserve system is not a reformed or true banking system. It is the abolition of the banking system. Without fractional reserves, banks cannot make any loans of any kind as they would not be in a position to give their clients their savings if they have made loans. Only someone completely ignorant of a real capitalist economy could make such a suggestion and, unsurprisingly, this position is held by members of the "Austrian" school (particularly its minimum state wing).

This leaves "free banking." This school of thought is, again, associated with the "Austrian" school of economics and right-wing "libertarians" in general. It is advocated by those who seek to eliminate fractional reserve banking but balk by the regulations required by a 100% gold standard (Rothbard gets round this by arguing this standard *"would be part and parcel of the general libertarian legal prohibition against fraud."* [**Op. Cit.**, p. 32]). It is based on totally privatising the banking system and creating a system in which banks and other private companies compete on the market to get their coins and notes accepted by the general population. This position, it must be stressed, is not the same as anarchist mutual banking as it is seen not as a way of reducing usury to zero but rather as a means of ensuring that interest rates work as they are claimed to do in capitalist theory.

The "free banking" school argues that under competitive pressures, banks would maintain a 100% ratio between the credit they provide and the money they issue with the reserves they actually have. They argue that under the present system, banks can create more credit than they have funds/reserves available as the state exists as lender of last resort and so banks will count on it to bail them out in bad times. Market forces would ensure the end of fractional reserve banking and stop them pushing the rate of interest below its "natural rate." So if banks were subject to market forces, it is argued, then they would not generate credit money, interest rates would reflect the real rate and so over-investment, and so crisis, would be a thing of the past. Knowing that the state would not step in to save them will also force banks to be prudent in their activities.

This analysis, however, is flawed. We have noted one flaw above, namely the problem that interest rates do not provide sufficient or correct information for investment decisions. Thus relative over-investment could still occur. Another problem is the endogenous nature of money and credit and the pressures this puts on banks. As Steve Keen notes, Austrian economists think that *"the current system of State money means that the money supply is entirely exogenous and under the control of the State authorities. They then attribute much of the cyclical behaviour of the economy to government meddling with the money supply and the rate of interest."* In contrast, Post-Keynesian economists argue that *"though it may appear that the State controls the money supply, the complex chain of causation in the finance sector actually works backwards"* with *"private banks and other credit-generating institutions largely forc[ing] the State's hand. Thus the money supply is largely endogenously determined by the market economy, rather than imposed upon it exogenously by the State."* He notes that the *"empirical record certainly supports Post-Keynesians rather than Austrians on this point. Statistical evidence about the leads and lags between the State-determined*

component of money supply and broad credit show that the latter 'leads' the former." [**Debunking Economics**, p. 303] Moreover, as our discussion of the failure of Monetarism will show, central banks could **not** control the money supply when they tried.

To understand why, we need to turn to the ideas of the noted Post-Keynesian economist Hyman Minsky. He created an analysis of the finance and credit markets which gives an insight into why it is doubtful that even a "free banking" system would resist the temptation to create credit money (i.e. loaning more money than available savings). This model is usually called *"The Financial Instability Hypothesis."*

Let us assume that the economy is going into the recovery period after a crash. Initially firms would be conservative in their investment while banks would lend within their savings limit and to low-risk investments. In this way the banks do ensure that the interest rate reflects the "natural" rate. However, this combination of a growing economy and conservatively financed investment means that most projects succeed and this gradually becomes clear to managers/capitalists and bankers. As a result, both managers and bankers come to regard the present risk premium as excessive. New investment projects are evaluated using less conservative estimates of future cash flows. This is the foundation of the new boom and its eventual bust. In Minsky's words, *"stability is destabilising."*

As the economy starts to grow, companies increasingly turn to external finance and these funds are forthcoming because the banking sector shares the increased optimism of investors. Let us not forget that banks are private companies too and so seek profits as well. As Minsky argues, *"bankers live in the same expectational climate as businessmen"* and so *"profit-seeking bankers will find ways of accommodating their customers ... Banks and bankers are not passive managers of money to lend or to invest; they are in business to maximise profits."* [quoted by L. Randall Wray, **Money and Credit in Capitalist Economies**, p. 85] Providing credit is the key way of doing this and so credit expansion occurs. If they did not, the boom would soon turn into slump as investors would have no funds available for them and interest rates would increase, thus forcing firms to pay more in debt repayment, an increase which many firms may not be able to do or find difficult. This in turn would suppress investment and so production, generating unemployment (as companies cannot "fire" investments as easily as they can fire workers), so reducing consumption demand along with investment demand, so deepening the slump.

To avoid this and to take advantage of the rising economy, bankers accommodate their customers and generate credit rather than rise interest rates. In this way they accept liability structures both for themselves and for their customers *"that, in a more sober expectational climate, they would have rejected."* [Minsky, **Inflation, Recession and Economic Policy**, p. 123] The banks innovate their financial products, in other words, in line with demand. Firms increase their indebtedness and banks are more than willing to allow this due to the few signs of financial strain in the economy. The individual firms and banks increase their financial liability, and so the whole economy moves up the liability structure. Like other businesses, banks operate in an uncertain environment and have no way of knowing whether their actions will increase the fragility within the economy or push it into crisis.

The central banks, meanwhile, accommodate the banks activity. They do not and cannot force them to create credit. Alan Holmes, a senior vice president at the New York Federal Reserve, put the process this way:

> *"In the real world, banks extend credit, creating deposits in the process, and look for the reserves later. The question then becomes one of whether and how the Federal Reserve will accommodate the demand for reserves. In the very short run, the Federal Reserve has little or no choice about accommodating that demand, over time, its influence can obviously be felt."* [quoted by Doug Henwood, **Wall Street**, p. 220]

As long as profits exceed debt servicing requirements, the system will continue to work. Eventually, though, interest rates rise as the existing extension of credit appears too high to the banks or the central bank. This affects all firms, from the most conservatively financed to the most speculative, and "pushes" them up even higher up the liability structure. Refinancing existing debts is made at the higher rate of interest, increasing cash outflows and reducing demand for investment as the debt burden increases. Conservatively financed firms can no longer can repay their debts easily, less conservative ones fail to pay them and so on. The margin of error narrows and firms and banks become more vulnerable to unexpected developments, such a new competitors, strikes, investments which do not generate the expected rate of return, credit becoming hard to get, interest rates increase and so on. In the end, the boom turns to slump and firms and banks fail. The state then intervenes to try and stop the slump getting worse (with varying degrees of success and failure).

Thus the generation of credit is a spontaneous process rooted in the nature of capitalism and is fundamentally endogenous in nature. This means that the business cycle is an inherent part of capitalism even if we assume that it is caused purely by disequilibrium in the credit market. In other words, it is more than likely that the credit market will be in disequilibrium like every other market in any real capitalist economy — and for the same reasons. As such, the natural rate of interest relies on concepts of equilibrium that are not only inconsistent with reality but also with the broader principles of "Austrian" economic ideology.

The "free banking" school reject this claim and argue that private banks in competition would **not** do this as this would make them appear less competitive on the market and so customers would frequent other banks (this is the same process by which inflation would be solved). However, it is **because** the banks are competing that they innovate — if they do not, another bank or company would in order to get more profits. Keynesian economist Charles P. Kindleburger comments:

> *"As a historical generalisation, it can be said that every time the authorities stabilise or control some quantity of money... in moments of euphoria more will be produced. Or if the definition of money is fixed in terms of particular assets, and the euphoria happens to 'monetise' credit in new ways that are excluded from the definition, the amount of money defined in the old way will not grow, but its velocity will increase ... fix any [definition of money] and the market will create new forms of money in periods of boom to get round the limit."* [**Manias, Panics and Crashes**, p. 48]

This can be seen from the fact that *"[b]ank notes ... and bills of exchange ... were initially developed because of an inelastic supply of coin."* Thus monetary expansion *"is systematic and endogenous rather than random and exogenous."* [Kindleburger, **Op. Cit.**, p. 51 and p. 150] This means that *"any shortage of commonly-used types [of money] is bound to lead to the emergence of new types; indeed, this is how, historically, first bank notes and the chequing account emerged."* If

the state tries to regulate one form of money, *"lending and borrowing is diverted to other sources."* [Nicholas Kaldor, *"The New Monetarism"*, **The Essential Kaldor**, p. 481 and p. 482] This means that the notion that abolishing central banking will result in the use of gold and 100% reverses and so eliminate the business cycle is misplaced:

> *"This view overlooks the fact that the **emergence** of money-substitutes — whether in the form of bank notes, bank accounts, or credit cards — was a spontaneous process, not planned or regulated 'from above' by some central authority, and for that reason alone it is impossible to treat some arbitrary definition of money (which included specific forms of such money-substitutes in the definition of money) as an exogenous variable. The emergence of surrogate money was a spontaneous process resulting from the development of the banking system; this development brought a steady increase in the ratio of money substitutes of 'real' money."* [Nicholas Kaldor, **The Scourge of Monetarism**, p. 44f]

This process can be seen at work in Adam Smith's time. Then Scotland was based on a competitive banking system in which baking firms issued their own money and maintained their own reverse of gold. Yet, as Smith notes, they issued more money than was available in the banks coffers:

> *"Though some of those notes [the banks issued] are continually coming back for payment, part of them continue to circulate for months and years together. Though he [the banker] has generally in circulation, therefore, notes to the extent of a hundred thousand pounds, twenty thousand pounds in gold and silver may frequently be a sufficient provision for answering occasional demands."* [**The Wealth of Nations**, pp. 257–8]

In other words, the competitive banking system did not, in fact, eliminate fractional reserve banking. Ironically enough, Smith noted that *"the Bank of England paid very dearly, not only for its own imprudence, but for the much greater imprudence of almost all of the Scotch [sic!] banks."* Thus the central bank was more conservative in its money and credit generation than the banks under competitive pressures! Indeed, Smith argues that the banking companies did not, in fact, act in line with their interests as assumed by the "free banking" school for *"had every particular banking company always understood and attended to its own particular interest, the circulation never could have been overstocked with paper money. But every particular baking company has not always understood and attended to its own particular interest, and the circulation has frequently been overstocked with paper money."* Thus we have reserve banking plus bankers acting in ways opposed to their *"particular interest"* (i.e. what economists consider to be their actual self-interest rather than what the bankers actually thought was their self-interest!) in a system of competitive banking. Why could this be the case? Smith mentions, in passing, a possible reason. He notes that *"the high profits of trade afforded a great temptation to over-trading"* and that while a *"multiplication of banking companies ... increases the security of the public"* by forcing them *"to be more circumspect in their conduct"* it also *"obliges all bankers to be more liberal in their dealings with their customers, lest their rivals should carry them away."* [**Op. Cit.**, p. 269, p. 267, p. 274 and p. 294]

Thus the banks were pulled in two directions at once, to accommodate their loan customers and make more profits while being circumspect in their activities to maintain sufficient reserves

for the demands of their savers. Which factor prevails would depend on the state of the economy, with up-swings provoking liberal lending (as described by Minsky). Moreover, given that credit generation is meant to produce the business cycle, it is clear from the case of Scotland that competitive banking would not, in fact, stop either. This also was the case with 19th century America, which did not have a central bank for most of that period and that *"left the volatile US financial system without any kind of lender of last resort, but in booms all kinds of funny money passed."* This lead to *"thousands of decentralised banks ... hoarding reserves"* and so *"starving the system of liquidity precisely at the moment it was most badly needed"* while *"the up cycles were also extraordinary, powered by loose credit and kinky currencies (like privately issued banknotes)."* [Doug Henwood, **Op. Cit.**, p. 93 and p. 94]

As Nicholas Kaldor argued, *"the essential function of banks in the creation of 'finance' (or credit) was well understood by Adam Smith, who ... regarded branch-banking as a most important invention for the enrichment of society. He described how, as a result of the finance banks were able to place at the disposal of producers, the real income of Scotland doubled or trebled in a remarkably short time. Expressed in Keynesian terms, the 'finance' provided by banks made it possible to increase investments ahead of income or savings, and to provide the savings counterpart of the investment out of the additional income generated through a multiplier process by the additional spending."* This process, however, was unstable which naturally lead to the rise of central banks. *"Since the notes issued by some banks were found more acceptable than those of others, giving rise to periodic payments crises and uncertainty, it was sooner or later everywhere found necessary to concentrate the right of issuing bank notes in the hands of a single institution."* [*"How Monetarism Failed,"* **Further Essays on Economic Theory and Policy**, p. 181] In addition, from an anarchist perspective, no ruling class wants economic instability to undermine its wealth and income generating ability (Doug Henwood provides a useful summary of this process, and the arguments used to justify it within the American ruling class, for the creation of the US Federal Reserve at the start of the 20th century. [**Wall Street**, pp. 92–5]). Nor would any ruling class want too easy credit undermining its power over the working class by holding down unemployment too long (or allowing working class people to create their own financial institutions).

Thus the over supply of credit, rather than being the **cause** of the crisis is actually a symptom. Competitive investment drives the business cycle expansion, which is allowed and encouraged by the competition among banks in supplying credit. Such expansion complements — and thus amplifies — other objective tendencies towards crisis, such as over-investment and disportionalities. In other words, a pure "free market" capitalism would still have a business cycle as this cycle is caused by the nature of capitalism, not by state intervention. In reality (i.e. in "actually existing" capitalism), state manipulation of money (via interest rates) is essential for the capitalist class as it allows indirect profit-generating activity, such as ensuring a "natural" level of unemployment to keep profits up, an acceptable level of inflation to ensure increased profits, and so forth, as well as providing a means of tempering the business cycle, organising bailouts and injecting money into the economy during panics. Ultimately, if state manipulation of money caused the problems of capitalism, we would not have seen the economic successes of the post-war Keynesian experiment or the business cycle in pre-Keynesian days and in countries which had a more free banking system (for example, nearly half of the late 19th century in the US was spent in periods of recession and depression, compared to a fifth since the end of World War II).

It is true that all crises have been preceded by a speculatively-enhanced expansion of production and credit. This does not mean, however, that crisis **results** from speculation and the

expansion of credit. The connection is not causal in free market capitalism. The expansion and contraction of credit is a mere symptom of the periodic changes in the business cycle, as the decline of profitability contracts credit just as an increase enlarges it. So while there are some similarities in the pre-Keynesian/"Austrian" theory and the radical one outlined here, the key differences are two-fold. Firstly, the pro-capitalist theory argues that it is possible for capitalist banks **not** to act, well, like capitalists if subject to competition (or regulated enough). This seems highly unlikely and fits as badly into their general theories as the notion that disequilibrium in the credit market is the root of the business cycle. Secondly, the radical position stresses that the role of credit reflect deeper causes. Paul Mattick gives the correct analysis:

> *"[M]oney and credit policies can themselves change nothing with regard to profitability or insufficient profits. Profits come only from production, from the surplus value produced by workers ... The expansion of credit has always been taken as a sign of a coming crisis, in the sense that it reflected the attempt of individual capital entities to expand despite sharpening competition, and hence survive the crisis... Although the expansion of credit has staved off crisis for a short time, it has never prevented it, since ultimately it is the real relationship between total profits and the needs of social capital to expand in value which is the decisive factor, and that cannot be altered by credit."* [**Economics, Politics and the Age of Inflation**, pp. 17–18]

In short, the apologists of capitalism confuse the symptoms for the disease.

The cyclical movements on the real side of the economy will be enhanced (both upwards and downwards) by events in its financial side and this may result in greater amplitudes in the cycle but the latter does not create the former. Where there *"is no profit to be had, credit will not be sought."* While extension of the credit system *"can be a factor deferring crisis, the actual outbreak of crisis makes it into an aggravating factor because of the larger amount of capital that must be devalued."* [Paul Mattick, **Economic Crisis and Crisis Theory**, p. 138] But this is also a problem facing competing private companies using the gold standard. The money supply reflects the economic activity within a country and if that supply cannot adjust, interest rates rise and provoke a crisis. Thus the need for a flexible money supply (as desired, for example, by Mutualists and the US Individualist Anarchists).

It must always be remembered that a loan is not like other commodities. Its exchange value is set by its use value. As its use value lies in investing and so generating a stream of income, the market rate of interest is governed by the average expectations of profits for the capitalist class. Thus credit is driven by its **perceived** use-value rather than its cost of production or the amount of money a bank has. Its possible use value reflects the prospective exchange-values (prices and profits) it can help produce. This means that uncertainty and expectations play a key role in the credit and financial markets and these impact on the real economy. This means that money can **never** be neutral and so capitalism will be subject to the business cycle and so unemployment will remain a constant threat over the heads of working class people. In such circumstances, the notion that capitalism results in a level playing field for classes is simply not possible and so, except in boom times, working class will be at a disadvantage on the labour market.

To sum up, *"[i]t is not credit but only the increase in production made possible by it that increases surplus value. It is then the rate of exploitation which determines credit expansion."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 18] Hence credit money would increase and

decrease in line with capitalist profitability, as predicted in capitalist economic theory. But this could not affect the business cycle, which has its roots in production for capital (i.e. profit) and capitalist authority relations, to which the credit supply would obviously reflect, and not vice versa.

C.8.1 Does this mean that Keynesianism works?

If state interference in credit generation does not cause the business cycle, does that mean Keynesianism capitalism can work? Keynesian economics, as opposed to free market capitalism, maintains that the state can and should intervene in the economy in order to stop economic crises from occurring. Can it work? To begin to answer that question, we must first quickly define what is meant by Keynesianism as there are different kinds of Keynesianist policies and economics.

As far as economics goes, Keynes' co-worker Joan Robinson coined the phrase *"Bastard Keynesianism"* to describe the vulgarisation of his economics and its stripping of all aspects which were incompatible with the assumptions of neo-classical economics. Thus the key notion of uncertainty was eliminated and his analysis of the labour market reduced to the position he explicitly rejected, namely that unemployment was caused by price rigidities. This process was aided by the fact that Keynes retained significant parts of the neo-classical position in his analysis and argued that the role of the state was limited to creating the overall conditions necessary to allow the neo-classical system to come *"into its own again"* and allow capitalism *"to realise the full potentialities of production."* [**The General Theory**, pp. 378–9] Unlike many of his more radical followers, Keynes was blind to real nature of capitalism as a class based system and so failed to understand the functional role that unemployment plays within it (see section C.1.5).

However, the context in which Keynes worked explains much. Faced with the dire situation capitalism faced during the 1930s, he presented a new theoretical analysis of capitalism that both explained the crisis and suggested policies that would, without interfering with its general principles, end it. Keynes' work was aided both by the practical failure of traditional solutions and growing fear of revolution and so even the most died-in-the-wool neo-classical economists could not keep his theory from being tried. When it appeared to work that, on one level, ended the argument. However, at a deeper level, at the level of theory, the struggle was just beginning. As the neo-classical (and Austrian) tradition is axiom-led rather than empirically-led (otherwise their axioms would have been abandoned long ago), the mere fact that capitalism was in crisis and that Keynes had presented a theory more in line with the reality was not enough to change mainstream economics. From the start, neo-classical economists began their counter-attack. Led by Paul Samuelson in the US and John Hicks in the UK, they set about making Keynes' theories safe for neo-classical economics. They did this by using mathematics on a part of his theory, leaving out all those bits that were inconsistent with neo-classical axioms. This bowdlerised version of Keynes soon became the standard in undergraduate courses.

The fate of Keynes reinforces the comment of French revolutionary Louis de Saint-Just that *"those who make revolution half way only dig their own graves."* Keynes ideas were only a partial break with the neo-classical orthodoxy and, as such, allowed the basis for the neo-classical-Keynesian synthesis which dominated post-war economics until the mid-1970s as well as giving the Monetarist counter-revolution space to grow. Perhaps this partial break is understandable,

given the dominance of neo-classical ideas in the economics profession it may have been too much to expect them to renounce all their dogmas yet it ensured that any developments towards an economics based on science rather than ideology would be resigned to the sidelines.

It is important to stress that Keynes was, first and foremost, a supporter of capitalism. He aimed to save it, not to end it. As he put it the *"**class war** will find me on the side of the educated bourgeoisie."* [quoted by Henwood, **Wall Street**, p. 212] That he presented a more accurate picture of capitalism and exposed some of the contradictions within neo-classical economics is part of the reason he was and is so hated by many on the right, although his argument that the state should limit some of the power of individual firms and capitalists and redistribute some income and wealth was a far more important source of that hatred. That he helped save capitalism from itself (and secure their fortunes) did not seem to concern his wealthy detractors. They failed to understand Keynes often sounded more radical than he actually was. Doug Henwood gives a good overview of Keynes' ideas (and limitations) in chapter 5 of his book **Wall Street**.

What of Keynesian policies? The *"Bastard Keynesianism"* of the post-war period (for all its limitations) did seem to have some impact on capitalism. This can be seen from comparing Keynesianism with what came before. The more laissez-faire period was nowhere near as stable as modern day supporters of free(r) market capitalists like to suggest. There were continual economic booms and slumps. The last third of the 19th century (often considered as the heyday of private enterprise) was a period of profound instability and anxiety as it *"was characterised by violent booms and busts, in nearly equal measure, since almost half the period was one of panic and depression."* American spent nearly half of the late 19th century in periods of recession and depression. By way of comparison, since the end of world war II, only about a fifth of the time has been. [Doug Henwood, **Wall Street**, p. 94 and p. 54] Between 1867 and 1900 there were 8 complete business cycles. Over these 396 months, the economy expanded during 199 months and contracted during 197. Hardly a sign of great stability. Overall, the economy went into a slump, panic or crisis in 1807, 1817, 1828, 1834, 1837, 1854, 1857, 1873, 1882, and 1893 (in addition, 1903 and 1907 were also crisis years).

Then there is what is often called the *"Golden Age of Capitalism,"* the boom years of (approximately) 1945 to 1975. This post-war boom presents compelling evidence that Keynesianism can effect the business cycle for the better by reducing its tendency to develop into a full depression. By intervening in the economy, the state would reduce uncertainty for capitalists by maintaining overall demand which will, in turn, ensure conditions where they will invest their money rather than holding onto it (what Keynes termed *"liquidity-preference"*). In other words, to create conditions where capitalists will desire to invest and ensure the willingness on the part of capitalists to act as capitalists.

This period of social Keynesianism after the war was marked by reduced inequality, increased rights for working class people, less unemployment, a welfare state you could actually use and so on. Compared to present-day capitalism, it had much going for it. However, Keynesian capitalism is still capitalism and so is still based upon oppression and exploitation. It was, in fact, a more refined form of capitalism, within which the state intervention was used to protect capitalism from itself while trying to ensure that working class struggle against it was directed, via productivity deals, into keeping the system going. For the population at large, the general idea was that the welfare state (especially in Europe) was a way for society to get a grip on capitalism by putting some humanity into it. In a confused way, the welfare state was promoted as an attempt to create a society in which the economy existed for people, not people for the economy.

While the state has always had a share in the total surplus value produced by the working class, only under Keynesianism is this share increased and used actively to manage the economy. Traditionally, placing checks on state appropriation of surplus value had been one of the aims of classical capitalist thought (simply put, cheap government means more surplus value available for capitalists to compete for). But as capital has accumulated, so has the state increased and its share in social surplus (for control over the domestic enemy has to be expanded and society protected from the destruction caused by free market capitalism). It must be stressed that state intervention was not **totally** new for *"[f]rom its origins, the United States had relied heavily on state intervention and protection for the development of industry and agriculture, from the textile industry in the early nineteenth century, through the steel industry at the end of the century, to computers, electronics, and biotechnology today. Furthermore, the same has been true of every other successful industrial society."* [Noam Chomsky, **World Orders, Old and New**, p. 101] The difference was that such state action was directed to social goals as well as bolstering capitalist profits (much to the hatred of the right).

The roots of the new policy of higher levels and different forms of state intervention lie in two related factors. The Great Depression of the 1930s had lead to the realisation that attempts to enforce widespread reductions in money wages and costs (the traditional means to overcome depression) simply did not work. As Keynes stressed, cutting wages reduced prices and so left real wages unaffected. Worse, it reduced aggregate demand and lead to a deepening of the slump (see section C.9.1 for details). This meant that leaving the market to solve its own problems would make things a lot worse before they became better. Such a policy would, moreover, be impossible because the social and economic costs would have been too expensive. Working class people simply would not tolerate more austerity imposed on them and increasingly took direct action to solve their problems. For example, America saw a militant strike wave involving a half million workers in 1934, with factory occupations and other forms of militant direct action commonplace. It was only a matter of time before capitalism was either ended by revolution or saved by fascism, with neither prospect appealing to large sections of the ruling class.

So instead of attempting the usual class war (which may have had revolutionary results), sections of the capitalist class thought a new approach was required. This involved using the state to manipulate demand in order to increase the funds available for capital. By means of demand bolstered by state borrowing and investment, aggregate demand could be increased and the slump ended. In effect, the state acts to encourage capitalists to act like capitalists by creating an environment when they think it is wise to invest again. As Paul Mattick points out, the *"additional production made possible by deficit financing does appear as additional demand, but as demand unaccompanied by a corresponding increase in total profits... [this] functions immediately as an increase in demand that stimulates the economy as a whole and can become the point for a new prosperity"* if objective conditions allow it. [**Economic Crisis and Crisis Theory**, p. 143]

State intervention can, in the short term, postpone crises by stimulating production. This can be seen from the in 1930s New Deal period under Roosevelt when the economy grew five years out of seven compared to it shrinking every year under the pro-laissez-faire Republican President Herbert Hoover (under Hoover, the GNP shrank an average of -8.4 percent a year, under Roosevelt it grew by 6.4 percent). The 1938 slump after 3 years of growth under Roosevelt was due to a decrease in state intervention:

> *"The forces of recovery operating within the depression, as well as the decrease in unemployment via public expenditures, increased production up to the output level of 1929. This was sufficient for the Roosevelt administration to drastically reduce public works … in a new effort to balance the budget in response to the demands of the business world. .. The recovery proved to be short-lived. At the end of 1937 the Business Index fell from 110 to 85, bringing the economy back to the state in which it had found itself in 1935 … Millions of workers lost their jobs once again."* [Paul Mattick, **Economics, Politics and the Age of Inflation**, p. 138]

The rush to war made Keynesian policies permanent. With the success of state intervention during the second world war, Keynesianism was seen as a way of ensuring capitalist survival. The resulting boom is well known, with state intervention being seen as the way of ensuring prosperity for all sections of society. It had not fully recovered from the Great Depression and the boom economy during the war had obviously contrasted deeply with the stagnation of the 1930s. Plus, of course, a militant working class, which had put up with years of denial in the struggle against fascist-capitalism would not have taken lightly to a return to mass unemployment and poverty. Capitalism had to turn to continued state intervention as it is not a viable system. So, politically and economically a change was required. This change was provided by the ideas of Keynes, a change which occurred under working class pressure but in the interests of the ruling class.

So there is no denying that for a considerable time, capitalism has been able to prevent the rise of depressions which so plagued the pre-war world and that this was accomplished by government interventions. This is because Keynesianism can serve to initiate a new prosperity and postpone crisis by state intervention to bolster demand and encourage profit investment. This can mitigate the conditions of crisis, since one of its short-term effects is that it offers private capital a wider range of action and an improved basis for its own efforts to escape the shortage of profits for accumulation. In addition, Keynesianism can fund Research and Development in new technologies and working methods (such as automation) which can increase profits, guarantee markets for goods as well as transferring wealth from the working class to capital via indirect taxation and inflation. In the long run, however, Keynesian *"management of the economy by means of monetary and credit policies and by means of state-induced production must eventually find its end in the contradictions of the accumulation process."* [Paul Mattick, **Op. Cit.**, p. 18] This is because it cannot stop the tendency to (relative) over-investment, disproportionalities and profits squeeze we outlined in section C.7. In fact, due to its maintenance of full employment it increases the possibility of a crisis arising due to increased workers' power at the point of production.

So, these interventions did not actually set aside the underlying causes of economic and social crisis. The modifications of the capitalist system could not totally countermand the subjective and objective limitations of a system based upon wage slavery and social hierarchy. This can be seen when the rosy picture of post-war prosperity changed drastically in the 1970s when economic crisis returned with a vengeance, with high unemployment occurring along with high inflation. This soon lead to a return to a more "free market" capitalism with, in Chomsky's words, *"state protection and public subsidy for the rich, market discipline for the poor."* This process and its aftermath are discussed in the next section.

C.8.2 What happened to Keynesianism in the 1970s?

Basically, the subjective and objective limitations to Keynesianism we highlighted in the last section were finally reached in the early 1970s. It, in effect, came into conflict with the reality of capitalism as a class and hierarchical system. It faced either revolution to increase popular participation in social, political and economic life (and so eliminate capitalist power), an increase in social democratic tendencies (and so become some kind of democratic state capitalist regime) or a return to free(r) market capitalist principles by increasing unemployment and so placing a rebellious people in its place. Under the name of fighting inflation, the ruling class unsurprisingly picked the latter option.

The 1970s are a key time in modern capitalism. In comparison to the two previous decades, it suffered from high unemployment and high inflation rates (the term stagflation is usually used to describe this). This crisis was reflected in mass strikes and protests across the world. Economic crisis returned, with the state interventions that for so long kept capitalism healthy either being ineffective or making the crisis worse. In other words, a combination of social struggle and a lack of surplus value available to capital resulted in the breakdown of the successful post-war consensus. Both subjected the *"Bastard Keynesianism"* of the post-war period to serious political and ideological challenges. This lead to a rise in neo-classical economic ideology and the advocating of free(r) market capitalism as the solution to capitalism's problems. This challenge took, in the main, the form of Milton Friedman's Monetarism.

The roots and legacy of this breakdown in Keynesianism are informative and worth analysing. The post-war period marked a distinct change for capitalism, with new, higher levels of state intervention. The mix of intervention obviously differed from country to country, based upon the needs and ideologies of the ruling parties and social elites as well as the impact of social movements and protests. In Europe, nationalisation was widespread as inefficient capital was taken over by the state and reinvigorated by state funding while social spending was more important as Social Democratic parties attempted to introduce reforms. Chomsky describes the process in the USA:

> *"Business leaders recognised that social spending could stimulate the economy, but much preferred the military Keynesian alternative — for reasons having to do with privilege and power, not 'economic rationality.' This approach was adopted at once, the Cold War serving as the justification... . The Pentagon system was considered ideal for these purposes. It extends well beyond the military establishment, incorporating also the Department of Energy... and the space agency NASA, converted by the Kennedy administration to a significant component of the state-directed public subsidy to advanced industry. These arrangements impose on the public a large burden of the costs of industry (research and development, R&D) and provide a guaranteed market for excess production, a useful cushion for management decisions. Furthermore, this form of industrial policy does not have the undesirable side-effects of social spending directed to human needs. Apart from unwelcome redistributive effects, the latter policies tend to interfere with managerial prerogatives; useful production may undercut private gain, while state-subsidised waste production... is a gift to the owner and manager, to whom any marketable spin-offs will be promptly delivered. Social spending may also arouse public interest and participation, thus enhancing the threat of democracy... The defects*

of social spending do not taint the military Keynesian alternative. For such reasons, ***Business Week*** *explained, 'there's a tremendous social and economic difference between welfare pump-priming and military pump-priming,' the latter being far preferable."* [**World Orders, Old and New**, pp. 100–1]

Over time, social Keynesianism took increasing hold even in the USA, partly in response to working class struggle, partly due to the need for popular support at elections and partly due to *"[p]opular opposition to the Vietnam war [which] prevented Washington from carrying out a national mobilisation ... which might have made it possible to complete the conquest without harm to the domestic economy. Washington was forced to fight a 'guns-and-butter' war to placate the population, at considerable economic cost."* [Chomsky, **Op. Cit.**, pp. 157–8]

Social Keynesianism directs part of the total surplus value to workers and unemployed while military Keynesianism transfers surplus value from the general population to capital and from capital to capital. This allows R&D and capital to be publicly subsidised, as well as essential but unprofitable capital to survive. As long as real wages did not exceed a rise in productivity, Keynesianism would continue. However, both functions have objective limits as the transfer of profits from successful capital to essential, but less successful, or long term investment can cause a crisis is there is not enough profit available to the system as a whole. The surplus value producing capital, in this case, would be handicapped due to the transfers and cannot respond to economic problems as freely as before. This was compounded by the world becoming economically "tripolar," with a revitalised Europe and a Japan-based Asian region emerging as major economic forces. This placed the USA under increased pressure, as did the Vietnam War. Increased international competition meant the firms were limited in how they could adjust to the increased pressures they faced in the class struggle.
